On Sunday his Highness took part in the celebrations of the Prince of Wales's birthday, which, though of an informal character, were doubtless none the less enjoyable to both hosts and guests on that account. He also paid a visit to Eton College, and was escorted over one of the Houses, where he displayed the keenest interest in all the arrangements. On Monday he returned to town, travelling to Paddington with the King and Queen, when, in view of their departure for Wales, he took final leave of their Majesties and returned to Claridge's. In the evening he honoured Lord Redesdale with his presence at dinner, and afterwards attended the International Horse Show at Olympia. On Tuesday he visited Queen Alexandra at Marlborough House, and also called at the Foreign Office in the afternoon. In the evening he witnessed a performance of "Mrs. Dane's Defence" at the New Theatre.

There has been a very large number of callers at Claridge's Hotel, including, naturally, many distinguished Anglo-Egyptians, who have taken the opportunity to pay their respects to his Highness. Amongst others have been the Duke of Argyll, Sir Felix and Lady Semon, Major-General Sir John and Lady Maxwell, Sir Arthur Chitty, the Hon. Sir A. Walsh, Sir C. Rivers Wilson, Colonel Sir C. M. Watson, and Sir John Aird.

The Khedive's visit has indeed been one perpetual round of visiting and receiving visitors, as his Highness naturally has a large number of friends in the capital. On Wednesday night he honoured Sir Ernest Cassel with his presence at dinner, and yesterday he lunched with Major-General Sir John Maxwell, the Officer Commanding the British troops in Egypt, and in the evening dined with the Turkish Ambassador at the Embassy. His Highness is leaving London to-morrow, and will return to Egypt for the Fast of Ramadan.

THE MOSLEM UNIVERSITY FUND.

The *Times* has received the following telegram from the Secretary of the Mohammedan College at Aligarh with regard to the Maharaja of Durbhanga's visit:

Maharaja Durbhanga, on a visit to college, was received with great enthusiasm by trustees, who welcomed him in public meeting attended by staff, students, and district gentry. Speeches by trustees and Maharaja Durbhanga laid great stress on common interests of sister universities. The decision was unanimous of devoted loyalty to H.M. the King for gracious message of hope in support of higher education, gratitude to H.E. the Viceroy and Sir Harcourt Butler for their real sympathy with both Universities schemes. Maharaja Durbhanga paid Rs.20,000 at once for Moslem University Fund.

LETTRE D'ATHENES.

(De Notre Correspondant Particulier.)

Athenes, le 21 juin 1912.

Affaires crétoises.

La réunion de l'assemblée revolutionnaire a abouti à la resolution de former un gouvernement permanent composé de tous les partis, comme je le faisais pressentir dans ma dernière lettre. Ce n'est pourtant pas sans peine qu'on a pu arriver à ce bon résultat. Les délégués extrêmistes se sont réunis séparément dimanche dernier à la Canée et ont adopté, au milieu d'un tapage indescriptible, une motion tendant à supprimer le gouvernement et toutes les autorités constituées. Ensuite ils se sont rendus chez M. Michélidakis, le président de l'assemblée révolutionnaire, et l'ont forcé à descendre de son hôtel et à présider leur réunion pour ratifier les décisions prises. M. Michélidakis, enlevé ainsi de sa maison, a dû les suivre au jardin municipal, où bientôt après sont arrivés tous les autres délégués présents à la Canée. Là l'extrêmiste, M. Catsourakis, préconisa la suppression des autorités. Par contre M. Michélidakis, ayant à ce qu'il paraît changé d'attitude, s'est efforcé de leur faire comprendre les conséquences fâcheuses d'une telle mesure et conseilla la formation d'un gouvernement stable composé de représentants de tous les partis. M. Coundouros a également appuyé ces propositions. Cependant, comme les candidats étaient trop nombreux, plus d'une quinzaine, et qu'il était impossible de satisfaire toutes les ambitions, l'accord n'a pu se faire et l'idée de supprimer les autorités semblait gagner du terrain et devoir l'emporter sur toute autre. Devant une situation si périlleuse les membres les plus modérés de l'assemblée, et tout particulièrement MM. Michélidakis et Coundouros, ont proposé et fait accepter la constitution d'une commission de trente délégués qui, élue incontinent, a été chargée de trouver une solution. Cette commission s'est réunie la même soirée dans la salle du tribunal de première instance. MM. Michélikakis et Coundouros ont fait de nouveaux efforts pour démontrer que les circonstances actuelles ne sont point favorables, M. Coundouros ayant même révélé que les puissances sont allées jusqu'à refuser leur consentement au renouvellement du haut commissariat et du droit du roi de Grèce d'en nommer le titulaire. Mais leurs paroles n'ont eu aucun effet et la séance a été levée au milieu d'un grand tapage sans qu'on ait pu arriver à s'entendre. Au moment du plus grand tumulte, la foule qui s'était rassemblée dehors, indignée de la conduite de l'assemblée, a tenté d'envahir la salle des délibérations mais elle fut refoulée par la force armée. A la suite de cet incident, le lendemain (lundi), la gendarmerie a cerné le tribunal, mais au lieu de la commission des trente, ce furent tous les membres de l'assemblée, s'élevant environ à deux ou trois cents, qui se sont réunis en plein air dans le jardin municipal. Le résultat de cette séance a été tout différent de l'autre. Un vent de sagesse paraissait avoir soufflé sur cette réunion et, malgré les protestations des groupes subversifs, la majorité des délégués a fini par voter la formation d'une commission administrative révolutionnaire dont feraient partie le vétéran Hatzi-Michalis-Yannaris et MM. Michélidakis, Jean Sfakianakis, l'éminent politicien crétois, qui a joué un rôle prépondérant dans la dernière révolution contre les Turcs (1897), Coundouros et le général Limbritis, politicien grec, qui était à la tête des députés crétois venus à Athènes. Cette commission a été chargée par l'assemblée de gouverner le pays conformément aux lois en vigueur jusqu'au 15 (28) octobre, époque à laquelle se réunira la chambre grecque. La motion votée établit en outre que des circonstances exceptionnelles ne rendent nécessaire sa convocation avant cette date. L'autorité des personnalités appelées à former ce nouveau gouvernement a sans doute beaucoup influé sur les décisions de l'assemblée. Cette mesure sauvera le pays de l'anarchie qui serait la conséquence inévitable de la suppression des autorités et qui compromettrait gravement la sécurité des Musulmans, provoquant ainsi la réoccupation de l'île.

MM. Michélidakis, Hazzi-Michalis-Yannaris et Coundouros ayant accepté ce mandat, ont prêté serment au nom du roi de Grèce entre les mains du vice-président de l'assemblée révolutionnaire. Mais les deux autres, à savoir, M. Sfakianakis et le général Limbritis, ont décliné ce mandat, alléguant des raisons de santé. Leur refus a découragé les trois premiers membres, qui disent que, si MM. Sfakianakis et Limbritis persistent tous les deux dans leur refus, ils se retireront également, dans lequel cas les extrêmistes reprendront le dessus et, restant maîtres de la situation, pourrount alors réaliser leurs projets subversifs. Il paraît cependant qu'à la suite des démarches faites auprès d'eux, le général Limbritis aurait fini par accepter. Ainsi, si M. Sfakiankis persiste dans son refus la commission se composera de quatre membres. Mais d'autre part, d'après un télégramme reçu de la Canée, le consul d'Angleterre aurait déclaré à M. Coundouros que le général Limbritis, qui est un officier de l'armée hellénique et ancien ministre de la guerre, ne saurait être admis par les puissances à faire partie du gouvernement crétois, si sa nomination provoquait des protestations de la part de la Turquie. Cette nouvelle complique la situation et rend de nouveau incertaine la formation définitive du gouvernement. Quoiqu'il en soit, en supposant même que ce gouvernement soit définitivement formé il restera à voir quelle attitude vont prendre ceux qui se sont opposés à cette mesure. Parmi ces derniers il y a tous les représentants de la province d'Apocorona qui, au nombre de 64, adressèrent au bureau de l'assemblée révolutionnaire une vigoureuse protestation contre la formation de la commission administrative et la qualifiant d'arbitraire, la considèrent comme étant en opposition avec les principes de la révolution et déclarent ne pas la reconnaître, menaçant de prendre des mesures qui seront dictées par les circonstances pour donner suite à leur résolution. Il faut espérer qu'ils s'abstiendront de toute action qui pourrait troubler l'ordre et provoquer la réoccupation.

Il résultérait des faits relatés plus haut que M. Michélidakis, après avoir encouragé par sa participation le mouvement révolutionnaire, maintenant paraît s'être ravisé et avoir compris son inopportunité.

Une exposition de l'industrie de la soie.

Dimanche dernier, au palais du Zappeion, a été inaugurée une exposition de sériciculture et de l'industrie de la soie organisée par la fédération panhellénique des quatre-vingt douze associations agricoles et industrielles qui existent dans le royaume et dans les pays grecs irrédimés.

Le roi, la reine, le prince André et la princesse ont visité l'exposition et examiné attentivement tous les objets exposés. Les souverains ont exprimé leur haute satisfaction pour les progrès réalisés et ont félicité Mme. Zlatanou pour ses efforts persévérants, qui ont donné une si grande impulsion au développement de la sériciculture en Grèce, et M. J. Damvergi, l'écrivain distingué, président du comité d'organisation, dont l'œuvre infatigable et intelligente a assuré l'éclatant succès de l'exposition.

Cette exposition, qui est la première dans son genre, sera suivie d'une série d'autres que la fédération précitée compte organiser pour les produits de la vigne, de l'olivier et pour les céréales, etc.; elle formera ainsi un musée commercial des produits grecs qui servira à la production nationale de nouveau débouchés à l'étranger.

Divers.

Le baron de Wanghenheim, ex-ministre d'Allemagne à Athènes, est parti lundi dernier pour rejoindre son nouveau poste d'ambassadeur à Constantinople.

Le même jour est parti en congé le baron de Braun, ministre d'Autriche à Athènes.

Monsieur D. Caclamanos, premier secrétaire de la légation grecque à Paris, a été accrédité en qualité de chargé d'affaires de Grèce à Rome.

Le comte de Clinchamp, chambellan du roi de Bulgarie, retournant à Sofia, a fait un court séjour à Athènes.

NOTES FROM PERSIA.

(From Our Own Correspondent.)

Teheran, June 10.

The Salar-ed-Dowleh.

The discomfiture of the Salar-ed-Dowleh for the moment appears to be complete. The advantage gained by the Government forces at Shurijieh was wisely followed up. This is the first recorded instance during the Royalist rebellions that the enemy has, after being defeated, been kept on the run. A series of minor engagements, concluding with a final action at Bisutum, twenty miles to the east of Kermanshah, has resulted in the dispersal of the rebel forces and the reoccupation of the Kurdistan capital. The Salar-ed-Dowleh, who has never once led his troops into action, has retired to a safe distance in the direction of the Turkish frontier, and is now reported to be at Maidasht, on the Baghdad road. This move was carried out almost immediately after the fight at Shurijieh. No one seems to have any notion of what the plans of the Prince are, but he is said to be in constant touch with Russian agents. The Firman Firma has now arrived in Kermanshah, and is acting in the capacity of Governor of Kurdistan and Luristan, though his hold on the latter province can be but slight. He is receiving the submission of the Kurdish chiefs, many of whom have taken part in the recent rebellion.

The Government troops are now resting, but are expected to move out of Kermanshah again in the course of a few days, with the object of securing the person of the rebel Prince. It is, however, too much to hope that they will be able to do more than control the direction of his flight.

The New Cabinet.

The new Cabinet has now been formed, and has settled down to work. Its constitution can, however, give little cause for satisfaction. It practically amounts to a redistribution of portfolios, with the introduction of one new member. The Kawam-es-Sultaneh, who did really good work in the last Cabinet as Minister of the Interior, is not included in the present Ministry. He is too energetic; moreover, one somehow suspects that his dismissal is the price paid for the return of the Amir Muffakham. It will be remembered that the feud between the Kawam-es-Sultaneh and the Amir Muffakham originated in the discovery and subsequent arrest of the Amir's brother-in-law at a royalist secret meeting. The Amir at once demanded the release of his relative, and, on this being refused, the Kawam was seized and conveyed to the Bakhtiari chief's house, where he suffered considerable indignity. The forces of law and order, such as they are in this country, were set to work, and the Kawam was released. The Amir, fearing the consequences of his action, then hurriedly left the capital and retired to his lands at Kamarij, near to Burujird. Whilst there he entered into negotiation with the Salar-ed-Dowleh and became a rebel, and in this capacity he occupied Sultanabad. This was about a month ago, when the Salar's chances of ever reaching Teheran were rapidly diminishing. The Amir evidently decided that the game was up; for he was easily prevailed upon by his brother chiefs to return to the capital, where all would be forgiven. It is said that he stipulated for the dismissal of the Kawam-es-Sultaneh from the Ministry of the Interior, but whether this condition has anything to do with the fact that the latter is no longer in the Cabinet it is quite impossible to say definitely.

THE PERSIAN ARMY.

(From a Persian Correspondent.)

Hamadan, May 20.

Yeprem Khan.

Yeprem is dead! Yeprem, the renowned leader of Persia's armies, the famous fighter, the fearless warrior, the bone, blood, and muscle of the Persian Constitution, the life and soul of the victorious Bakhtiari cavalry, the revolutionist, the democrat, the hero! Yeprem is dead? Certainly not: men die when they are forgotten, but will history forget Yeprem? Will the history of the Persian Constitution, written in blood, fire, and the dethronement of a king, ever forget Yeprem and his services in the cause of freedom—of Persia's freedom from bondage, despotism, and superstition? His memory will not die as long as the memory of Napoleon, Cromwell, and Washington survives. It will remain as long as Persian history remains.

Yeprem fell on the battle-field—the place where a soldier would most gladly die. He was shot in the mouth, the bullet passing out through the neck, and, the spinal cord having been cut, death was, of course, instantaneous. Yeprem was fighting against Salar-ed-Dowleh, the brother of Mohammed Ali Shah, and, with 600 men, was operating against a force of Salar's numbering 1,500 men, who were entrenched behind the walls of a village called Shurisieh, which is, I am informed, about nine *parsakhs*, or forty-five English miles, from Hamadan. Getting tired of fighting from a distance and firing only at mud walls, the gallant leader gave the order to take the village by storm. According to trustworthy reports, the battle commenced in the morning, but the storming of the village took place in the afternoon at 4.30. The attack was led by Yeprem Khan in person, and he was accompanied by his faithful Armenian "boys," by his aide-de-camp, and by his surgeon, who always accompanied him on his expeditions, and was a staunch companion, a sincere patriot, and a fellow-fighter with Yeprem. The only thing that used to distinguish this *fedai* doctor from the other *fedais* was a red cross that he wore on his arm, although he was a Persian and a Moslem.

Yeprem's Successor.

When Yeprem fell lifeless to the ground from his beautiful blue "Tsolag," his surgeon, his aide-de-camp, and most of the other "boys" were shot down at the same time; but this did not stop the progress of the battle. Keri—put a Scotch burr on the "r"—the "uncle" (so named on account of his popularity with his men), the first lieutenant and right-hand man of Yeprem, at once stepped into the fallen leader's place, took command of the army, and continued the battle. Gathering round their late commander's body in a circle, with their rifles pointed downwards as a sign of great mourning, the whole army—Persian, Armenian, and Bakhtiari—swore to avenge his blood upon the enemy, as, indeed, they did, and as they will do still further.

Here I may say that "Keri" is not an unknown *fedai* chief in Persia. During the Tabriz revolution, when the famous Sattar Khan Sardar Milli was fighting for the Constitution two and a-half years ago, and Tabriz was besieged by Mohammed Ali Shah's troops, Keri was the first of Sattar Khan's men, his trusted counsellor, and the leader of the Armenians. Two years ago, when Yeprem was in the province of Azerbaijan, he brought Keri with him to Teheran, and on taking up the command of the entire army he appointed Keri as chief of the Armenian *fedais*. Keri accompanied Yeprem in all his expeditions against Mohammed Ali as well as against Salar-ed-Dowleh.

On the present occasion Keri continued the fighting, defeated Salar-ed-Dowleh, and pursued the enemy as far as the town of Kengawar, which lies south of Hamadan and east of Kermanshah. Enraged by the death of their commander, the victorious army captured and destroyed two villages and killed over 250 of the enemy. There is also a wild rumour to the effect that Salar-ed-Dowleh himself has been wounded, and has fled to the Turkish frontier. His defeat is all the more creditable to Keri's men, because the Salar-ed-Dowleh's forces were commanded and led by several Turkish officers, and it is even reported that the Prince had some paid Turkish regulars in his army of Kurds, Giarruses, and other nomads. But the victory of the Government's troops and *fedais* is, after all, but poor compensation for the death of Yeprem. Indeed, the loss of that great leader turns the scale in favour of Prince Malik Mansur Mirza, the Salar-ed-Dowleh, and it is a heavy blow for the Persian "Army."

A Heterogeneous Army.

Really there has been of late no Persian Army, properly speaking. The collection of men known as the Government Army has consisted of Persian, Armenian, and Georgian *fedais* and Bakhtiari horsemen, lacking military uniforms, lacking military drill, lacking military rations. They have been referred to as an "army" simply because their rifles and ammunition were Government property and they were paid by, and fighting for,

Digitized by Google

the Government. The uniform of each individual horseman is—what he can find to clothe himself in, what he can afford to buy, or what happens to take his fancy! The result is that in the "Army" there are as many different uniforms as there are men. Some men wear short European coats, some long Persian "gayama"; some have flat caps of Persian lambskin, others round cylindrical white caps made of felt (of camel's hair), while yet others have caps of the same shape and material, but black in colour; some have long Russian boots, reaching up to the knee, others anything they manage to pick up, provided they keep the soles of the feet from contact with the ground. But they all have the same pay, the same kind of rifles, and the same Mauser revolvers; and this similarity in arms and the fighting spirit that is common to them all make them an army—and a good army, too! After all, it is not the uniform that makes the soldier a good shot; it is the individual ability; and it is the individual spirit of patriotism that makes the soldier ready to fight and to die. And the Armenians and the white-capped Bakhtiari have made excellent soldiers. They have fought gallantly on every occasion, and have come out victorious; and, when death was inevitable, they have died honourably, like soldiers, scorning surrender. So, long live the Persian Constitutional Army! "TOURIST."

NOTES FROM ODESSA.

(FROM OUR OWN CORRESPONDENT.)

ODESSA, June 23.

The Russian Consul-General at Teheran.

M. Pokhitonoff, the Russian Consul-General at Teheran, arrived in St. Petersburg on Tuesday last, and has since been in daily attendance at the Persian Department of the Foreign Office. A telegram from the St. Petersburg correspondent of the *Odesski Listok* yesterday stated that M. Pokhitonoff will not return to Teheran, but will be appointed to another consular post in Persia, as yet unnamed. In an editorial comment on its correspondent's telegram the Odessa paper hints that it were as well if M. Pokhitonoff's peculiar activities were transferred to some other country than Persia.

German Gunboat at Odessa.

The German gunboat "Loreley" arrived here the other day from the Bosphorus, where she acts as guardship (stationnaire) to the German Embassy. The "Loreley" every year makes a round cruise of several of the Russian Black Sea ports, and is always accorded a cordial reception by the port authorities. Among her other duties is the registration and medical examination of young Germans resident in these places for military service in the Vaterland.

It is not a little strange that the British guardship in the Bosphorus does not more frequently make a similar cruise to the Russian Black Sea ports, where it would certainly be received *à bras ouverts* by the local and naval authorities. It is thirteen years since the "Melita," the then British stationnaire, visited Odessa, Nicolaieff, and Sevastopol, and on that occasion the commander and officers were magnificently entertained in each port of call. Under the ægis of the Anglo-Russian entente such a round of visits to these ports would now be thrice welcome, and the commander and staff of the British guardship would find much to interest them in the naval shipbuilding operations at Nicolaieff and Sevastopol.

THE CYPRUS AGITATION.

The *Stambul*, a Constantinople journal, states that some time ago the Greek inhabitants of Cyprus sent one of their representatives, M. D. Stavridis, to England to endeavour to obtain the acceptance of the Colonial Office of the demands that they had formulated on the resignation of the Greek members of the Legislative Council, including the appointment of a Commission of Inquiry. M. Stavridis has now telegraphed stating that he has seen the Colonial Secretary, who, however, declined to entertain any of the demands put forward, and told him that so far from having been moved by the demonstration of the Greek members he had telegraphed instruction to the Governor to order new elections. The Cyprus Press, adds the *Stambul*, has published this telegram in the form of a special supplement, and is commenting upon it in excited terms.

THE BEYROUT PRESS.

SUPPRESSION OF THREE PAPERS.

(FROM OUR OWN CORRESPONDENT.)

BEYROUT, June 18.

The court-martial at Beyrout lately came in for a large share of criticism for having ordered the suppression of three well-known local papers, the *Reveil*, a triweekly French publication; the *Bachir*, an Arabic weekly organ of the Jesuit Fathers; and the *Mufid*, a Moslem daily of uncompromising nationalism. The first two papers were suppressed simultaneously for having published a map of the Dardanelles, and the *Mufid* for having reproduced from the London *Times* the intelligence of the transport of troops to Mitylene. But the semi-official *Tanin* is said to have published a similar map of the Dardanelles, wherefore some political speculators wished to see in this suppression an attempt on the part of the more conservative members of the Court at putting down Christian influence, and, incidentally, of French influence also, which is supposed to have shown itself rather obtrusively of late. The same political speculators seem to find confirmatory evidence of their diagnosis in the fact that since Suleiman Effendi Bustani no Christian deputy has been returned from this vilayet, in spite of the importance of the Christian element, numerically and financially.

The *Reveil* had, indeed, evident French sympathies, and the *Bachir* had, of course, a strong French and Catholic colouring, since it was edited by the Jesuit Fathers; and the recent revival of French activities was certainly not calculated to find much favour with a Government labouring under the nervous tension of a war arrogantly declared by a Catholic Power. It must be admitted, however, that the *Reveil* has throughout sought to maintain a very correct attitude of Ottoman loyalty, and often usefully championed the Unionist cause. It is said, indeed, that the Vali, who is known for his intelligent liberalism, openly disavowed the action of the Court in this instance—for in other instances it has rendered useful service to the town. As to the *Bachir*, it may have offended Moslem susceptibilities by its scathing criticism of a scurrilous pamphlet, in which the author indulged in an indecent and fanatical attack on Christian men and women and Christian social morality.

The *Mufid* was not long in reappearing under the name of the *Echo of the Mufid*, thanks to the generous zeal of a few Moslem notables, who helped to find the £T50 fine and £T100 deposit required by the Press Law by way of guarantee for a new publication. This is an eloquent illustration of Moslem solidarity. The *Mufid* is an essentially Moslem and Arabian organ, and although some of its methods are not altogether to be approved, yet it cannot be denied that it has proved a powerful instrument for kindling and keeping awake the national conscience and a zealous champion of Moslem interests. The Christians of Turkey do not require such championing. Where help is possible they get it from such of the European Powers as claim a right of protecting them, and as to the religious side it is not so intimately bound up with the political one as is the case, unfortunately, perhaps, with the Moslems.

Those who are prone to speculate and criticise fail to realise that the Government, being Moslem, cannot divest itself of Moslem sympathies or count unreservedly on the support of the Christians so long as these have been and are still worked upon, through moral channels it is true, by their respective patron Powers—witness the example of the British Druse, the French Maronite, the Russian Orthodox—who compete with the Ottomans for their share of their affections.

The suppression of the *Mufid* did not deter those malcontents from interpreting this as a diplomatic stroke on the part of the Court to mask their real motive and appease French feeling. Meantime the *Bachir*, thanks to Jesuit financial backing, has also reappeared, rising from its ashes as the *Echo of the Bachir*. The "echo" of the *Reveil* will not, however, be heard just yet; for the court-martial has rescinded its judgment, owing no doubt to French representations, and the paper has reappeared under its old title.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, June 22.

The Harvest and the Army.

This year's harvest in Bulgaria promises to be excellent, and many workmen will be required to gather it, which will necessarily raise the price of labour. In order to help the farmers and the peasantry the War Office has decided to grant the soldiers short leave of fifteen days in small parties, so that when one party returns another may go, and so on. By this measure the War Office is providing the country with 60,000 workmen, who will help their own families during the harvest. Such a measure is possible in Bulgaria, because, although military service is obligatory, the territorial system is in vogue, and the peasants who serve in the army have their barracks not far from their own villages, where the lands are cultivated by their families. Thus every soldier can reach his home or return to his regiment in a single day.

Italian Emigrants in Bulgaria.

Since the expulsion of the Italian subjects from Turkey began, many of them, especially those living in the Adrianople vilayet, have passed into Bulgaria, where they have been most hospitably received. Many Italian families belonging to the commercial class have found business in Philippopolis, Varna, and Bourgas sufficient to meet their present requirements. Others, such as workmen and masons, have found good employment on the railways which are now under construction. On the whole the Italian emigrants find the conditions of living in this country very favourable, and many of them are trying to obtain permanent positions, desiring to remain in Bulgaria rather than return to Turkey.

ALEXANDRETTA IMPROVEMENTS.

(From Our Own Correspondent.)

Beyrout, June 18.

The ceremony of inauguration of the Harbour Works and of the Toprak Kalé branch of the Baghdad Railway, which took place at Alexandretta on Monday, the 10th inst., marks an era in the economic and perhaps also in the political history of Northern Syria. Not only the civil and military authorities, the Consular corps, and the religious dignitaries of different sects attended the ceremony, but practically the whole of the population of Alexandretta; and well may the inhabitants of this fallen port feel jubilant over this event, for it means the beginning of a fresh life, which is destined to transform their town and to place it among the great ports of the Mediterranean.

The crowd was massed principally on the spot where the passenger station is to be erected. The engineers of the Construction Company of the port and railway began by informing the public of the object of the ceremony, after which speeches were delivered by Mr. Naar on behalf of the *Baghdadbahn*, Noury Bey representing the municipality, the Commissaire Imperial on behalf of the Government, and Mr. Victor Balit, manager of the leading firm of Messrs. Belfante and Catoni, on behalf of the traders of Alexandretta. Finally, the Mufti, in accordance with Islamic tradition, uttered the usual prayer, and the Governor, after a few apt words, gave some strokes of the pickaxe and declared the works begun. Then, preceded by a regiment of soldiers and the military band, the crowd repaired to the spot where the harbour works are to start, and after a second prayer from the Mufti the engineers, accompanied by the Governor, the Consular body, and the religious authorities, proceeded in a motor launch to a spot about 1,300 metres from the shore, where they boarded a beflagged and decorated pontoon. This spot is to mark the entrance of the future harbour, and here the Governor threw the first stone. Then a few sheep were immolated and distributed among the poor and the prisoners. Finally, the distinguished members of the attendance returned in the motor launch to the inauguration spot of the harbour works, where refreshments were served in a large marquee and toasts were drunk to the prosperity of the Ottoman nation and the Port of Alexandretta.

AGRICULTURAL SYNDICATES IN EGYPT.

Co-operative agricultural activity in Egypt is at least three years old. It is the outcome of the 1907 and 1908 crises, which showed the small landowners the necessity for a thorough reorganisation of credit.

The aim of the originators of the idea was to protect the fellah from his own short-sightedness and from the grip of the usurer, also to prevent him selling his standing crops at low, and buying his seed, fertilisers, etc., at exorbitant prices. Incidentally it was intended to free the Egyptian cultivator from advances made by foreign capitalists.

The Agricultural Bank, according to the opinion of those interested in the welfare of the fellaheen, had not rendered the latter any great services. The institution in question lent money practically only on land, and not on crops, because unable to control the solvency of the borrower. Moreover, it was stated that these loans, officially at 8 per cent., cost the borrower, together with incidental expenditure, at least 12 or 15 per cent. Finally, it must be admitted that a considerable part of the millions lent by the bank were spent on unproductive expenditures.

Mutual credit establishments are not exposed to these dangers, because the borrower is jointly responsible with the lender and intimately associated with him. This was pointed out by the Financial Adviser in his note on the Budget for 1910, and it was also stated that co-operative credit societies would act as excellent intermediaries between the Agricultural Bank and the fellaheen.

Towards the end of 1908 the movement in favour of the syndicates received a new and definite impulse. H.H. Prince Hussein Pasha Kamel, the Khedive's uncle, took the initiative in the matter, and the staunchest champion of the cause was Omar Bey Loutfi, a lawyer, who organised an active campaign in the Press and in the lecture hall. He was aided in his arduous work by many far-seeing Europeans.

The first effective measure was the appointment by the Khedivial Agricultural Society of a special Commission for studying the means for introducing agricultural and co-operative syndicates in Egypt. The Commission indicated the following as the principal objects to be attained:—The common purchase and sale of agricultural products by the fellaheen and the struggle against the usurer by means of the creation of rural credit establishments. Statutes were drafted, and the Government's attention was drawn to the necessity for the introduction of new legislature.

The propaganda continued. Towards the beginning of 1910 the first syndicates were established by Omar Bey Loutfi. But before going into details, it may be mentioned that as early as in 1908 the National Bank of Egypt had lent £E3,500 to 170 fellaheen in Lower Egypt, who had joined together in several groups offering, each group, a common guarantee. A group of seventy villagers, for instance, borrowed collectively £E977. The experiment succeeded, and since then the National Bank has granted its material support to the syndicates, and other banks are now following its lead.

The syndical system introduced into Egypt is that obtaining in Italy, and known as the "Caisses rurales de M. Wollembourg." It enables the associations to act both as mutual credit establishments and agricultural syndicates. The legal form chosen is that of a co-partnership based on the divided responsibility of the members. The founders' shares are of P.T.20, 50, or 100. In the provincial capitals the system of the Italian *consorzii agrarii*, with varying capital, has been adopted, the members being collectively responsible. The founders' agreement, in order to avoid legal and travelling expenditures, is drawn up as a private document.

The syndicates can borrow from a bank within a limit determined by the statutes, the members of the board being jointly responsible for the loan, granted by the National Bank, for instance, at 6 per cent.

The first agricultural syndicate was that at Shoubra-el-Namla, created on April 26, 1910. It consisted of

Digitized by Google

sixty-six members, who, with shares at P.T.20, formed a capital of £E309; before the end of 1910 the capital had increased to £E371. To-day there are 120 members, and the capital has risen to £E700. In the two years since its formation it has lent its members £E2,400 at 7 per cent., borrowing annually £E600 from the National Bank.

Since April, 1910, sixteen syndicates have been created with a total of 2,650 members. The most important, at Kom-el-Nur, has 250, and the smallest, at Zagazig, forty members. The syndicates at Zagazig and Beni-Suef are of the mudiria type, and their capital, in £4 shares, is £E1,000 and £E2,000 respectively. Other syndicates have a much more limited capital, that at Namhul having a capital of £E144 and 115 members, and that at Shubra-Tana £E155 and 150 members.

The sixteen Egyptian agricultural syndicates controlled, on March 25, 1912, a total capital of £E8,821. Since their formation they have lent £E34,500 to their members, generally at the rate of 7 per cent. In 1911 the syndicates borrowed £E25,000 from the National Bank in loans of £E1,000 or £E2,000. In one case, Ezbet-Chezli, the loan was £E2,500.

A circumstance to be noted is that the loans thus concluded with the National Bank are, as a rule, repaid a fortnight before the term due. It can be mentioned, moreover, that the mudiria syndicates of Zagazig and Beni-Suef make loans to the smaller syndicates within their respective provinces.

The loans accorded by the syndicates to their members are often in the nature of cotton-seed, cereals, beans, and fertilisers. When value in cash constitutes the loan the money can only be used for agricultural purposes, and a strict inspection controls the uses to which it is put.

Only one case of a communal sale by the members of the syndicate is on record—namely, at Kom-el-Nur, where the cotton belonging to a member was sold. Many of the syndicates are in the habit of selling seed to their members. This is a most important feature, as it is well known that many a fellah when short of cash buys questionable seed on credit at ridiculous prices from local merchants, who also buy the crop in advance at infamous prices. The syndicates sell the seed at a maximum profit of 2 per cent. on the purchase price.

The Committee of the Khedivial Agricultural Society, of which previous mention has been made, proved the utility of establishing a central organisation occupying the position *vis-à-vis* the syndicates that these occupy *vis-à-vis* their members. This was realised by the creation last February of the *Syndicat Général des co-opératives agricoles et de consommation*.

This syndicate is a civil society with a capital of £E40,000 (not fully paid up) in £E4 shares. Qualified as members are cultivators, farm landowners, the members of agricultural or co-operative syndicates, or the syndicates themselves. The members are responsible to the amount of their contribution.

At the present moment the General Syndicate is composed of eighty individual members, eleven agricultural, and seven co-operative syndicates.

Since its creation it has sold 1,000 ardebs of cotton-seed. The purchase price per ardeb is P.T.92, and it is sold at P.T.94. It has sold 300 ardebs of wheat at P.T.121 (purchase price P.T.120). The market price (retail) of cotton-seed is P.T.110, and of wheat P.T.135 per ardeb.

The General Syndicate has borrowed £E4,600 from the National Bank in order to lend it to syndicates. In future the local syndicates, members of the General Syndicate, will borrow from the latter, and not from the National Bank.

From the foregoing paragraphs it will be seen that the whole movement has outgrown the period of propaganda, and frankly entered that of useful action. To understand the benefits accruing to the country from a thorough organisation of landowners need not be insisted upon, it is only necessary to compare the 7 per cent. rate of interest imposed by the syndicates with the 15, 20, and even 30 per cent. exacted previously by usurers.

PAUL TRIBIER.

NEAR EAST IN PARLIAMENT.

Moslems of Eastern Bengal. June 20.

In the House of Commons Mr. McCallum Scott asked the Under-Secretary for India whether he had received any protests which had been made in India against his references to the Mohammedans of Eastern Bengal; and, if so, whether he proposed to take any action.

Mr. Montagu: I am indebted to my hon. friend for the opportunity which his question affords me of expressing my regret that the remarks to which he refers should have given rise to misunderstanding and misapprehension among some of the Mohammedan people of India. My object was to point out that the Mohammedans of Eastern Bengal, in that to a great extent they were not the descendants of those with whose history Delhi was so intimately connected, deserved the especial and careful consideration which we claim they have received in the rearrangement of the Province in which they live. But I recognise, as I stated last year in this House, that the Mohammedans are animated by a religious feeling which produces a unity making them independent of geographical and racial separation. I should like to repeat that the history of India shows, and I doubt not will show, that the Government is not unmindful of the responsibility which is placed upon them by the unswerving confidence of the Mohammedans in India in British rule.

The Mediterranean Fleet. June 24.

Mr. Fell asked the First Lord of the Admiralty how many British battleships, cruisers, torpedo-boats, and submarines were now in the Mediterranean Sea east of Gibraltar.

Mr. Churchill replied: Battleships, 0; cruisers, 7; destroyers, 10; torpedo-boats, 6; submarines, 3.

Southern Persia. June 24.

Mr. Mitchell-Thompson asked the Secretary of State for Foreign Affairs whether he had any official information regarding the continued insecurity of the roads of Southern Persia; and would he say what steps His Majesty's Government proposed to take in the matter.

Mr. Acland, who replied, said: I have received no recent reports indicating any improvement in the state of the roads, but a detachment of the newly organised gendarmerie under Swedish officers has now reached Shiraz, and it may be hoped that the good effect of their presence will be felt immediately.

Colonel Yate asked whether there was any improvement on the Kerman roads.

Mr. Acland: I do not think we have any notice of improvement.

The Trans-Persian Railway. June 25.

Mr. Walter Guinness asked the Foreign Secretary whether he had consulted the Committee of Imperial Defence and the general staffs in India and in England as to the desirability of a railway linking Russia with India; and, if so, what opinion had they expressed as to the effect of the proposal upon the defence of India.

Sir E. Grey replied that competent military authorities both here and in India had been consulted, but it would be contrary to usage to make public their confidential views of strategical questions. The conditions for which His Majesty's Government might finally stipulate as essential to their support of any definite railway scheme would, of course, take account of this view.

Mr. W. Guinness asked whether, in view of the important military questions involved, and also the threatened injury to British and Indian interests, the right hon. gentleman would undertake that the Foreign Office would not allow this question to be decided before the House had had an opportunity of expressing its opinion upon it.

Sir E. Grey replied that there were two points—perhaps he ought to call them stages—connected with this question. The first was: What should be the general policy of the Government; whether it should be their policy to oppose now and always any scheme for the proposed Trans-Persian Railway? On that point the Government held that it was not a practicable or wise policy, for reasons which he could state to the House at any time. The point could be raised in the House on the Foreign Office vote or any other available opportunity. He could give an undertaking that before the House rose for the recess the Government's consent would not be given to any definite project. A further stage would be when a definite project was in existence, and what conditions the Government should stipulate for as necessary to their support of the scheme. On that he was, of course, unable to make a statement, because no definite project was before them.

Sir J. D. Rees asked whether the importance of keeping other nations out of the nominally neutral northern shores of the Persian Gulf in which British influence is, or was till lately, supreme would be recognised as an indispensable condition in all negotiations.

Sir E. Grey: The suggestion is that the railway should be an international railway, but we shall have to stipulate for certain conditions to safeguard our strategical and commercial interests. I cannot promise that we shall stipulate for more than would safeguard those.

Colonel Yate: Will the right hon. gentleman give an assurance that if this railway is constructed on the Russian and Indian gauges the condition will be made that Indian goods shall be carried from India right through to Ispahan and Yezd and other great commercial centres in Southern Persia without break of gauge and consequent necessity of transhipment?

Digitized by Google

Sir E. Grey: The hon. member is raising a point which is the most important one we have to consider. We have considered it provisionally already with the Government of India, but I should not be prepared to give a final opinion as to where the break of gauge should be until after we have had further consultation with the Government of India, of course taking into consideration the arguments raised by the hon. member.

Mr. Noel Buxton asked the Foreign Secretary whether he would now issue papers, with maps, showing the projected route of the Trans-Persian Railway, together with details of the other British projects now under discussion in Teheran for railways in Southern Persia and of the conditions imposed by the British and Indian Governments.

Sir E. Grey, in reply, said the position is that a Société d'Etudes, consisting of English, French, and Russian gentlemen in equal numbers, viz., eight in each case, has been formed to study the feasibility of a railway—that is to say, how and on what conditions a Trans-Persian railway could be made. There is, therefore, at present no definite project for a railway concession in existence. His Majesty's Government, however, after consulting the Government of India, have stated in advance that any countenance which they may give to such a railway must be subject to the observance of conditions acceptable to His Majesty's Government when the project is actually framed. I cannot therefore lay papers at present, because the matter has not reached a state at which the papers that the hon. member's question contemplates are in existence.

Mr. King also asked the Foreign Secretary whether he would state the conditions asked for by the British Government in considering the projected scheme for a Trans-Persian railway; and whether the Persian Government had been fully informed of the deliberations of the Société d'Etudes engaged in the consideration of this question.

Sir E. Grey referred the honourable gentleman to the answer given to Mr. Noel Buxton, and added that the Société d'Etudes has only been in existence for a few days, and has therefore not yet made progress in any deliberations on the question.

Mediterranean Defences. June 26.

Mr. Newman asked the Prime Minister whether the alteration in composition and base recently effected in respect of the Imperial Naval Force in Mediterranean waters was adopted after consultation and with the approval of general officers in command of the Mediterranean garrison; whether the Committee of Imperial Defence met to discuss such changes before they were carried out; and whether, in the event of the answer being in the affirmative, he was able to make any statement to the House.

Mr. Asquith: The arrangements as regards the Naval Force in Mediterranean waters are still under consideration. I can make no statement at present on the matter.

Mr. Newman: Did the Committee of Imperial Defence meet at all before these changes were carried out?

Mr. Asquith: I have said the changes are still under consideration.

Mr. Newman: The changes have been carried out.

Mr. Joynson-Hicks: May we ask that nothing shall be done until the matter has been considered by the Committee of Imperial Defence?

Mr. Asquith: Undoubtedly the Committee of Imperial Defence will consider the matter.

Viscount Helmsley addressed a question to the First Lord of the Admiralty, asking whether the heavy armament of the fixed defences of Malta consist only of 9.2-inch guns; whether, in view of the withdrawal of the battle fleet from the Mediterranean, the Government propose to substitute 14-inch guns for guns of the lesser calibre; if so, how many 14-inch guns it is proposed to mount; and what is the estimated cost per gun. Mr. Churchill, in a written reply, stated: "It is not customary nor is it desirable to discuss the armament of fortresses. I should have been glad to have been consulted privately before this question appeared on the Paper."

ALLIANCE

ASSURANCE COMPANY, LIMITED.

Head Office: BARTHOLOMEW LANE, LONDON, E.C.

Assets Exceed £23,000,000

Chairman: The Right Hon. LORD ROTHSCHILD, G.C.V.O.

Among the classes of Insurance Business transacted by the Company are the following:—

(1) **LIFE INSURANCE**, with and without Profits, with special provisions for the payment of Estate Duties.
(2) **FIRE INSURANCE** of every description.
(3) **INSURANCES TO COVER LOSS OF RENT, INTEREST AND PROFIT** consequent upon Fire damage to property.
(4) **MARINE INSURANCE.**
(5) **BURGLARY, THEFT, and PLATE GLASS INSURANCE.**
(6) **ACCIDENT**, including Personal Accident, Motor Car and Employers' Liability Insurance.

Fidelity Guarantee and Sinking Fund Policies are also granted.
Applications for Agencies are entertained, and Prospectuses with other papers may be had on written or personal application.

ROBERT LEWIS, General Manager.

LETTERS TO THE EDITOR.

TURKEY AND ENGLAND'S OPPORTUNITY.

To the Editor of THE NEAR EAST.

Sir,—The Eastern question, and that phase of it which includes the conditions prevailing in the Ottoman Empire at present, as well as that which relates to the sphere of influence of Great Britain, has been of special interest to me during some ten and a-half months' recent residence in the Sultan's—Padisha's—Empire.

England would decidedly receive and derive untold benefits by taking an immediate, active, and decisive hand in the present affairs and troubles. There exists to-day a very strong pro-British sentiment on the part of the Turks, and of residents in Turkey. This sentiment is not local, nor is it weak; neither is it hidden; it is prevalent.

The traditions of England and, *en passant*, those of France likewise, are excellent in Turkey, and the Turks are looking to England, to the powerful nation of the Occident, with its wide interests in the Orient, for relief, for protection, and practically at any cost.

England and France have together, for a long time, borne the burden of the Imperial Ottoman Debt, and these two nations can play, and should play, the strongest game in that portion of Europe and Asia. England, above all nations, has vast interests in that part of the world, interests which in one hundred years will be ten-fold greater, clearer, better defined than now, if the present auspicious occasion and opportunity is seized and its avenues followed to their ultimate issue. British shipping and commercial ventures in the Near East, as elsewhere, are uppermost. Seventy-five per cent. of the shipping interests along the Bosphorus and around that part of the world is British, and, consequently, 75 per cent. of the interest should be British, and British influence commensurate with the same.

For some years, for reasons best known, perhaps, to politicians and diplomats, both the British and the French influences or prestige had a set-back. This deplorable state of affairs seemed too evident, until quite recently, to escape the notice of even the most superficial observer of men and affairs, of nations and their interests in Constantinople, at Therapia and in other portions of the Padisha's Empire. Nor were these two nations or their representatives to blame. However, times have changed, and now is the special opportunity and time for England to play her part, to act at once, taking the initiative. Her vast interests there demand it—the situation itself can be made smooth by British demands for a cessation of hostilities at once. Or, if need be, in unison with France, or with Russia likewise, if deemed advisable and expedient, the whole phase of the Eastern question will trend Britain-wards for ever there, provided the step be taken. The pro-British sentiments and utterances in Turkey call loudly for Britain to speak out. Let us hear her voice in clear and unmistakable tones, and the world will gladly listen and feel relieved and rejoice.

Italy's uncalled-for action in Tripoli and Cyrenaica demands the interference of a strong Power, with interests such as Great Britain possesses, to re-establish an understanding and an equilibrium in that portion of the world. Let England speak and refer Italy to a tribunal where all parties interested shall receive "fair-play"; then and only then, but at once, if done quickly, the war is ended. The vast interests of Britain in Egypt, her great and good work in that promising country, the telling effect of British influences, of finance, education, and counsel, are everywhere patent in that portion of the Near East—leading to the Farther East where her influence is so beneficial.

The recent adoption on the part of the ruling party in Turkey of modern, up-to-date and occidental methods of governing their country—methods modelled after the British and French institutions as well—regarded as the highest expression of modern civilisation, appeals to the sympathies of every right-minded citizen of Britain and of France with much force and significance. These sympathies are reciprocated in Turkey, and the future safety of the world's commerce and its continuity in the East is indissolubly bound to the influence that Great Britain exerts along the great routes and highways of the Orient. British interests in the Persian Gulf were made secure two centuries ago, and must be maintained, whilst the intervening ground must be gained and won as a permissible highway, a route for commerce and its allied interests, as a *quid pro quo* for that protection which Britain alone can give to such a Power as Turkey—a moral and a substantial protection—especially during the present period of reform in that great Empire—engaged, as the Turks are at present, in the difficult task of grafting upon an Oriental system of government—more or less impractical for our times (though remarkably well suited to the tastes, desires, and aspira-

Digitized by Google

tions as well as culture of the 300,000,000 of souls in the faith of Islam), a Western system of constitutional government, with a view of forming a new Turkey, a modern Turkey, and a model Empire in the Near East.

It is during this period of reform that Turkey needs the hand and help of the strong and powerful nation of Britain, and for that matter needs the help of the civilised West.

Italy's action was ill-timed and upsetting to all the principles of reform and betterment in that portion of the world. The troubles of the East are many, but England could step in and help in restoring order, peace, and reform so that an equilibrium could be established, which, owing to the very absence of her influence, cannot to-day be obtained or maintained.

Following a rather long period of quiescence in British activities in the Near East, a forceful, decisive, and active interference on the part of England, by asserting her just rights and restoring her prestige, will win at once a position in respect of Turkey and the Turkish Empire which will be of enormous advantage. The former policy of England towards Turkey can now be resumed to much advantage to the Turk as well as to the Briton, and to all concerned. Thus and thus only can the highway to the East be paved with smooth stones, and difficulties removed—difficulties which might for ever bar the access to nations which both appreciate and need Britain's help and advice in a progressive policy.

Britain's foreign policy must be supreme everywhere. In order to re-establish England's prestige in Turkey and the Near East, to the great advantage of the honest Turk, the rising Turk, so that he can take his place, as he deserves, among the civilising and advancing forces of our globe, let there be a pact, an agreement made with Turkey—to which the assent of other nations can readily be obtained if necessary—in which the integrity of the Turkish Empire as it was previous to the Italian onslaught, as well as of the Persian Empire (as these countries are both being delimited at present), would be preserved. In return, privileges and concessions would be granted, and the Turks thus be enabled to carry out their righteous and progressive policy of Union and Progress in their Empire—where much has already been done, and where there exists an earnest desire for peace and prosperity as great and as sincere as it is here at home.

Yours faithfully,

HENRY M. AMI.

Royal Societies Club, London, S.W.

ITALY AND THE ÆGEAN.

To the Editor of THE NEAR EAST.

Sir,—In your issue of June 21, in commenting upon the hoisting of the flag of autonomy at Patmos by representatives of the twelve islands of the Archipelago, you seem to doubt as to whether General Ameglio's proclamation—similar to which the Italian Admirals Presbytero and Viale have been heralding on all the islands which they liberated from the dominion of the Turks—represented the carefully considered intentions of the Italian Government for the future of the islands.

General Ameglio, addressing the notables of Rhodes soon after the victory of Psithos, is reported to have pledged his word as a Christian gentleman and a soldier to the effect that the Turk would never again set his foot on the fair islands which he oppressed for four long centuries. Admiral Viale, in replying to the address—reported in your own columns on June 20—which the inhabitants of the island of Kalimnos, assembled at a solemn Te Deum ceremony, voted and humbly prayed to be transmitted to his Italian Majesty, publicly assured the islanders through the writer of these lines that "He would be pleased to transmit to Rome their wishes, and that he would do his best for their liberty and good fortune."

Now, although admirals are not always careful diplomatists—a fact for which God be thanked—yet we poor islanders cannot conceive how the noble soldiers and sailors of the great Italian nation—which fought for its own freedom and union not long ago—could have thought of resorting to that kind of self-gratification of posing for a moment as the liberators of the Christian peoples from the Turks, leaving the possibility of a rude awakening from the heavenly dreams of freedom, by the chance of diplomacy spoiling later on our hopes and enthusiasm. We firmly believe that the Italian general and admirals spoke to us as the representatives of the Italian nation and the Italian Government, and we are not afraid that we may see again the crescent flying where the tricolour and the white cross on deep blue—the symbol of our autonomous State—are now heralding a new life of freedom and civilisation.

The fact, Sir, that the British Government distinguishes between a military occupation and an annexation of the island does not much bear on the question. The British Government have been in military occupation in Egypt for the last thirty years without seeing the necessity of proclaiming the annexation of the Land of the Pharaohs. The Turks have gone from the islands, and this is a fact which the British Government is bound to consider as a weighty argument in the destiny of the Greek islands.

Will you, Sir, allow me to correct a serious mis-statement which has crept into your commentary. You state that "It must be clearly premature on the part of the islanders to decide that they have been freed for ever from even the *slight degree of Turkish sovereignty* that they have of late years been called upon to recognise." You must be under some misapprehension when you use the words *italicised* above. Perhaps you refer to Samos, the autonomous island Principality. But even there, under the tyrannical rule of the Governor Kopassis, who fell a victim to his pro-Turkish sentiments, the island was, and is even now, full of Turkish soldiers, in spite of the treaty of 1832, which granted complete autonomy to Samos, under the guarantee of the three great Powers, England, France, and Russia. As regards the other islands, the sovereignty of the Turks was of the heaviest, most oppressive, and paralysing kind ever known in the history of Mohammedan conquests. It is true that on some of the islands like Kalimnos, Patmos, Leros, Symi, some vestiges of autonomy were still left in their communal affairs, and the people of those islands, in spite of the Turkish rule, managed to keep up their schools and commerce; but the effect of the dominion of the Turk was so blasting that I am afraid it will take a good many years of enlightened government before the people of the fair Ægean islands enjoy again the full benefits of civilised administration in the free development of their bodies and minds in the pursuit of arts and commerce.

I am afraid I have taken too much of your valuable space, but you will show the kindly interest your paper and the British nation are taking in the cause of freedom in the isles of Greece by publishing this letter.—Yours truly,

G. ZERVOS
(of Kalimnos).

Liverpool, June 24, 1912.

"TRUTH AND RUMOURS."

To the Editor of THE NEAR EAST.

Sir,—I would be much obliged if you would publish the following reply to a letter published in your journal, under date June 7, and commenting on "Truth and Rumours."

I have lived in Turkey all my life, and have always thought that *only* the Turks could adopt those measures for suppressing facts given in their leading papers and recorded "in the interests of humanity." I am, therefore, astonished (to say the least of it) to read what Mr. Charles Rosher (an Englishman, I presume) has had to say on the subject of leading papers (English or otherwise) making clumsy efforts to suppress even the memory of the atrocities committed by the Italians in Tripoli. And this at the bidding of an Italian Ambassador.

If such a state of things as is hinted at by Mr. Rosher really exists, it would not be unreasonable to suppose that at the beginning of the war Turkey first adopted those efficacious though underhand means of placing Italy in the wrong light.

It is not so long ago that Lord Roberts, referring to the atrocities *(soi-disant)* committed by the Italians, pointed out that in fighting with the Arabs, who are renowned for their treachery, the most stringent measures had to be taken. These measures are often misconstrued by men who are not familiar with the necessities of war, and just retribution for treachery is taken for barbarity.

I ask myself whether the *influential* Italian Ambassador has exercised his influence in that direction as well, and, if so, with apparent success, why he never thought of applying the same methods to the Young Turks, who might have succumbed to his persuasiveness and surrendered Tripoli to Italy, in all but name, without having to go to war.

The European States interested in the partition of North Africa might, if successful, be tempted to go further and divide up Asia Minor as well.

Let them remember the French proverb of "*Qui trop embrasse mal étreint*," and be careful not to cultivate an apple of discord.—Yours faithfully,

GODFREY WHITTALL.

Dardanelles, June 18.

The ALIGARH INSTITUTE GAZETTE

A High-class Urdu-English Weekly Journal.

Founded by the Old Sage of Aligarh, the late Sir Syed Ahmad, in 1866 A.D.

It is now the leading and officially recognised Organ of the M. A. O. College, Aligarh, All-India Muhammadan Educational Conference, and All-India Moslem League, on politics, education, and society. An excellent medium of advertisement on account of its large circulation amongst educated and enlightened class of Muhammadans, gentry and nobility in all provinces of India and places beyond India. Annual subscription, 4s. Agents securing advertisements have good offers.

THE PRESS ON THE NEAR EAST.

Turkey and Europe.

L'Opinion of the 15th inst. contains an article, "La Vraie Question d'Orient," from the pen of M. Georges Gaulis. The writer thinks that the summoning of a conference with a view to settling the differences between Turkey and Italy would be attended by considerable risk; it would probably lead to an opening up of the entire Eastern Question; and Turkey and her friends know that the era of annexation begins, not at the hour of fighting, but with the meeting of congresses and conferences. The events of the past eight months are not calculated to inspire hope or confidence in any conference of the Powers. Perhaps the most interesting part of the article is that in which the writer defends Turkey against the charges brought against her of failing to put her house in order, and declares that such failure is due to the action of Europe, the jealousy of the Powers, rather than to the lack of endeavour on the part of the Turks themselves:—

Avez-vous bien considéré ce qui se passe en Turquie? Faites-le à loisir de peur d'être dupé par la grande intrigue qui règne sur l'Europe depuis 1908 et qui, depuis 1908, prépare le congrès où nous irons demain peut-être où l'on tentera de disséquer l'empire ottoman. L'intrigue a célébré la révolution à pleins poumons et la paradis de civilisation qui allait s'ouvrir sous la lumière du Croissant. Elle vous a préparé au miracle et comme le miracle ne s'est pas produit vous tenez que la Jeune-Turquie n'a rien fait de ses dix doigts. Prenez du loisir, je vous le répète, et allez-y voir. Vous mesurerez l'effort et vous verrez dans quel chaos de contradictions il s'est accompli. Ce chaos c'est l'Europe tutélaire et tyrannique qui l'a savamment créé en Turquie.

Turkey has been blamed (he continues) for her heavy expenditure on her army, but she has been forced into it by Austria-Hungary and Bulgaria, by her Cretan manœuvres, by Montenegrian and Italian machinations in Albania, by Russian agitation amongst the Kurds. She withdrew her troops from Tripoli and Cyrenaica, coveted by Italy, in order to cope with the situation forced upon her by Europe. Germany advised her to this action, thus furnishing her with a kind of guarantee against a *coup de main* on the part of Italy. . . . Turkey has not defended her islands. To defend them a naval force was necessary, and when Turkey wished to increase her navy all Europe was profoundly displeased: it would be a useless extravagance; for who would attack Turkey by sea? And behold Italy mistress of the Turkish Archipelago!

One cannot help feeling that M. Gaulis is justified in his observations.

The Trans-Persian Railway.

Wednesday's *Times* contained a long letter from Sir Valentine Chirol, pleading that public opinion in this country should not prejudge, or be induced to prejudge, the proposed Trans-Persian Railway. "The case in favour of it," he writes, "has, I admit, yet to be made out, but I hold very strongly that no *prima facie* against it can yet be established." In a leading article appearing on the same date we read:—

The general principles which we have stated dictate, in our opinion, a friendly, though not uncritical, attitude towards the scheme; but general principles will not build the line, and a final decision upon its merits must obviously depend upon many questions which the Société d'Etudes has yet to elucidate. We shall want much fuller information than is yet available upon its probable cost, its prospects in the matter of freight, and the return which it may reasonably be expected to give on the total capital charge. The prospects of local freight in Southern Persia will certainly be small for many years to come. Is it reasonable to hope that they will ever materially improve? If they will not, is there an adequate promise of through freight sufficiently light in bulk to enable the railway to compete with the sea route to Europe and to the head of the Gulf? And even if such freight may be expected, will it be possible, given the probable cost of construction, to carry it at rates which the sea route will not put out of court? These and many similar questions will have to be answered before any final opinion is formed upon the scheme.

Austrian Advice to Italy.

Under the title of "Die Aktien Italiens." *Danzers Armee Zeitung*, in its issue of June 20, discusses the military situation at some length:—

Nearly nine months (observes its contributor, F. L.) have passed since those days of suspense in September last when Italy translated into military action that lust for expansion which has been hers since the eighties. And yet, in spite of creditable performances on the part of her troops, she has not got much further as to these African provinces than she was at the beginning of the war. Turkey has once again proved herself most surprisingly tough—in fact, there is no blinking the fact that an appeal from the Caliph to war still carries with it its wonted and irresistible power, and Italy is forced again and again to acknowledge that Tripoli and Cyrenaica must continue to exact their toll of life and money as long as the defensive is maintained or until organised Turkey and the Caliph are forced to bow to Italy's will. The munitions of war flow in an uninterrupted stream through Tunis and Egypt into the debated country. Nor is Italy in a position to avert this; and it is becoming always more evident that what was said in the early days of this campaign as to the advantages to the enemy in that these African territories lie afar off and would therefore be more easily detached from the main Government, has not proved to be the case. Turkey, in fact, has not received any mortal blow, while, on the other hand, strength may be said to flow to her unhindered from the Mohammedan lands close by.

The writer then alludes to Italy's change of tactics, to the renewed activity in the matter of bombarding Tripoli, to the action in the Red Sea which raised the ire of the independent tribes inhabiting those regions, and finally to the system of pin-pricks instituted about the Dardanelles and the cannonade of Beyrout.

All these little methods were collectively intended not only to exasperate Turkey, but also to draw others into difficulties; and yet, in face of the unshaken calm of the Sublime Porte, these means have signally failed. Even the last threat—the occupation of Rhodes and the other islands—has been without effect, and must continue to be so, seeing that less than ever can Turkey now give way unless she be resolved to yield up her position as the foremost Power of Islam, as the valorous defender of Allah on Africa's burning soil. And would she not endanger her prestige in the Balkans, to say nothing of her many other more loosely attached subjects, who in the loss of Tripoli would read the fall from power of the Caliphate upon the African continent. And what about the great neutral Powers who, with all their divergent interests, are ever ready to interfere in the affairs of Turkey?

Referring to the loud complaints now heard in commercial quarters touching local hindrances to trade, he observes with some significance that "there are many roads which lead to Constantinople." "F. L." is, indeed, of opinion that both Italy and Turkey are more obstinately intent than ever on pursuing their quarrel, and observes that what began in the first place as a purely colonial campaign has developed into a war between two strong military states. Where and in what way, therefore, might Italy be able to take a really decisive step? Further action on land about Tripoli, he declares to be worse than useless; for here Turkey can always count on reinforcements; while operations among the islands would necessitate strong reinforcements for Italy. Therefore, he is of opinion that their only remaining "card" now is to concentrate their attention upon the Dardanelles—"that small, much-debated and undermined portion of European Turkey which separates her from that great reservoir of her strength, Turkey in Asia." Nor does the writer prescribe this measure in the form of a merely passing action.

Only the permanent hold in the narrow ways leading from the entrance to the Dardanelles on to Constantinople, the actual severance from Asia of European Turkey which would leave her in a strongly exposed situation is the *coup* likely to bring the Sublime Porte into the fatal position of necessary surrender.

Whether Italy be in a position to do this is a question upon which opinions appear to differ, although the strange and culpable neglect Turkey has shown as to her navy as well as her coastal defences would seem in her enemy's favour. Nevertheless this desultory campaign and the prolonged waiting for some easier solution has but served to make the soldiers' task a more arduous one.

Italy, concludes the article, is having the game to herself this time, without any allies, for the situation is totally different from what it was in 1859 and in 1866—she will have to make some blow of energy, for her international reputation is at stake.

NEAR EAST BOOKSHELF.

ISLAM AND WOMAN.*

This brochure is a reproduction in permanent form of a lecture delivered by the Right Honourable Ameer Ali, Syed, for the Faculty of Laws in the University of London. The author's exposé of Islamic law as affecting woman is of interest and useful, although of necessity somewhat summary in character. The book presents the most favourable aspects of the position of women in Mohammedan law, ignoring the fact that many of its most excellent provisions are in actual life stultified by practices which have grown up round the law, and which have acquired the often superior force of custom.

In dealing with this subject it must not be forgotten that the essential laws of Islam are not self-imposed ordinances elaborated by a people for themselves and subject to their eventual repeal or revision: the foundation of these laws lies in the Koran and in the Traditions, and, further, in such precepts and rules as may, under severe restrictions, be deduced therefrom. Anything which cannot be brought into conformity with these authorities can never become Moslem law, neither can anything contained in these authorities, whether of positive or negative nature, be revised or abrogated. At the present moment, whoever would in any way change or seek to change the principles of Moslem jurisprudence would *ipso facto* be no Moslem. These considerations raise questions of immense importance, on which we could not now appropriately venture.

With regard to the laws of property and inheritance, Syed Ameer Ali shows that the position of Moslem women compares favourably with that of women in the non-Moslem world generally. In respect to marriage and kindred subjects, which, after all, are of infinitely greater consequence to women than property rights, it is, however, impossible to entirely agree with the author's justifications. Polygamy, seclusion, divorce, slavery—these great enemies of Moslem progress—while authorised by the law, are yielding to the mere force of circumstances. To a scientific mind is offered one of the most engrossing spectacles life can present—the vital urge, the evolutionary necessity in struggle with the conscientious, though perhaps hardly fully conscious resistance of two hundred million souls. Even the unchanging laws of Islam cannot for ever evade the all-embracing inevitableness of social and moral evolution. In this lies our hope for Islam—that it may find a way, mystic or rational matters not at all, to conformity with the world's moral and material progress. We are not among those who would still like to see or prophesy the decline of the Islamic faith; on the contrary, we hold that its nature is pre-eminently adapted to a very great portion of the world's population, and accordingly we view its history, its theory, its practice, with fullest sympathy and respect. Still, we cannot close our eyes to certain matters which seem to us to be retarding the progress of Islam, and we believe that it is only by squarely facing and endeavouring to solve the problems involved that the faith can rise to that still more elevated plane which we ardently desire that it may one day occupy. In saying this we do not mean to imply that we consider the cardinal principles of Islam in any way inferior to those of any other religion. Indeed, in many respects the teachings of Mohammed (on him be peace!) are unsurpassably noble and sublime, of a lustre which no shadow can bedim.

We notice throughout this little book what appears to be a tinge of bitterness and bias against Christianity. It is a pity that this feeling has obtruded itself, for it cannot assist that rapprochement which we feel to be so imperative to-day.

On page 23 we observe once more the common error in the comparison of dates in the Mohammedan and Gregorian calendars. A.H. 524 is not A.D. 1146, but approximately A.D. 1130, and similarly A.H. 615 is not A.D 1237, but A.D. 1218; the Mohammedan year being a lunar year of 354 days. R. M.-S.

* "The Legal Position of Woman in Islam." By Ameer Ali, Syed, P.C., C.I.E., LL.D. (Hodder and Stoughton, 1s. 6d net.)

NEAR EAST BOOK NOTES.

Mrs. Drower is known to the reading public by her maiden name, "Miss E. S. Stevens," under which she published "The Veil" and other novels descriptive of life in the Near East. They indicate a rare capacity for divining the hidden sources of the attraction possessed by Hither Asia for Europeans who stray from beaten tracks and mingle freely with the native population. After travelling in the Sudan, Mrs. Drower has just completed a work dealing with that province, "its scenery, impressions, and deductions." Our readers will await its appearance with the certainty that this talented authoress will display the power of looking below the surface of things which characterised her earlier books.

Messrs. Macmillan and Co. announce the second edition of "Schools of Hellas," an essay on the practice and theory of ancient Greek education, 600 to 300 B.C., by Kenneth J. Freeman, edited by M. J. Kendall, with a preface by A. W. Verrall, Litt.D.

The subject of irrigation in the Near East is so much to the fore just now that the appearance of a second edition of Sir Hanbury Brown's "Irrigation: Its Principles and Practice as a Branch of Engineering" is sure to be welcome. The author's name is doubtless familiar to most of our readers. He has had charge of important irrigation works both in Egypt and in India, and he writes with real authority on his subject. The book conveys a lot of information that will prove of interest to the general reader as well as to the civil engineer, and it contains interesting photographs of some of the principal irrigation works in Egypt and in Spain. It is published by Messrs. Constable and Co., and the price is 16s. net.

Frederick Jones Bliss, Ph.D., has written an important work, entitled "The Religions of Modern Syria and Palestine." The work has peculiar value, because the author has gathered his material as nearly as possible at first hand. His sources were the priests and elders of the five Christian Churches that exist in modern Syria and Palestine, and of the Mohammedan Church, whom the author personally interviewed. Syria was Dr. Bliss' birthplace. He knows Arabic thoroughly, and was able to converse with the leaders of the various sects of the country. In his preface he says: "I had interviews with the Orthodox Patriarchs of Antioch and Jerusalem—Greek, Catholic, Syrian, Maronite—who imparted valuable information. Missionaries, Roman Catholic and Protestant, gave of their knowledge and experience. Moslems of all classes spoke freely of their religion."

CURRENT COMMENTS.

Bucharest is very far from being an ideal abode in July and August. The bare Danubian plain is then swept by fiery blasts; nor has domestic architecture adapted itself to tropical conditions. For King Charles and his courtiers the dog days have long lost their terrors. That astute sovereign owns a veritable fairy palace called Pelesh, which towers above the village of Sinaia, in a secluded valley of the Carpathians. Pelesh is a museum of paintings, statuary, ancient armour, and curios of every description, which rather add to than impair its charms as a stately home. His Majesty's zeal as a collector of rarities is admirably seconded by "Carmen Sylva," whose inborn artistic sense has educated him to appreciate things of beauty.

***

Pelesh was the first residence in Europe lighted by electricity. In the "eighties" a great London physician was summoned thither to assist at a royal accouchement. He arrived just in time for dinner, after which the King kept him for a couple of hours in friendly conversation. When etiquette permitted the doctor to seek his bedchamber he made all preparations for sleeping off the fatigues of his journey. But the room was ablaze with the new-fashioned light, which turned night into day at Pelesh. After vainly searching for means to extinguish it he rang for a servant, who informed him that the entire system was operated by a single lever, which no one dared to handle until His Majesty was comfortably tucked up for the night! The guest had to wait until the small hours ere darkness came to soothe him into slumber. They manage things better nowadays at Pelesh, which possesses all the material appliances of a refined English home.

***

It is common knowledge that the then Prince Charles of Hohenzollern-Sigmaringen came to his future kingdom in 1856 disguised as a servant of M. Bratiano, who played the part assumed by General Monk in the England of 1660. The newly established Chambers endowed him with extensive estates which, at that epoch, produced a very meagre revenue. Thanks to his keen business instincts, King Charles has made the desert blossom like a garden of roses. Dairy-farming, cattle-breeding, and every branch of agriculture are practised on the royal domains with zest tempered by science and an unfailing eye to the main chance. Quite recently the express trains to Bucharest used to be boarded by men who offered pats of butter, stamped with the royal arms, for sale at something like 2s. per pound.

***

His Roumanian Majesty has accumulated a private fortune running into millions sterling, and given his subjects the means of waxing rich in proportion. Herein he has acted wisely, for sensible people admit that civilisation must be built on a basis of £. s. d. Gambling is quite another matter; it adds nothing to the general stock of wealth—merely transferring money from one man's pocket to that of another who has done nothing to deserve the windfall. Monte Carlo is one of the plague-spots of Europe, a source of misery and moral degradation. We learn with deep regret that the horde of sharks and demireps who haunt it in winter will migrate to peaceful Sinaia during the summer months. Like his brother-sovereign of Monaco, King Charles has harkened to the voice of M. Blanc's successors, who offer him a princely revenue in return for permission to build a hotel and casino near his mountain retreat. Roumanian landlords who have made money from petroleum are inclined to welcome the new departure. Their joy will be turned to sorrow when wealth gained by honest enterprise passes into the hands of foreign intruders.

***

H.H. the Khedive, who arrived in London on Friday last, is a linguist as remarkable as the Emperor of Austria and King of Hungary. It is well known that the doyen of European sovereigns owes much of his prestige to the fact that he knows every dialect spoken throughout his heterogeneous dominions. The Khedive, too, can converse with English, French, and German diplomats; is equally at home in Arabic and Turkish, and is able to follow the libretto of any Italian opera. Of course, a capacity for assimilating foreign languages is no proof of great intellectual power, but in the case of the Khedive this gift is combined with other remarkable intellectual attainments. Cardinal Mezzofanti spoke no fewer than fifty-eight. He was styled by Lord Byron "a walking polyglot, and Briareus of parts of speech," yet apart from this amazing faculty he was a very ordinary person. For a sovereign, however, the gift of tongues is indispensable. It enables him to read human nature without the aid of interpreters, who often have their own axes to grind, and are interested in keeping him in ignorance of public opinion.

***

With crime in Egypt showing such an alarming tendency to increase, it is only natural that theories for the reduction of the statistics should be advanced almost daily. Some of the suggestions are, of course, impracticable to a degree; of others one is doubtful of their salutary effect, despite their feasibility. The most practical and efficacious proposition so far put forward is that now made by Loutfi Bey El Said, the editor of *El Garidah*, who advocates nothing more nor less than a revival of the use of the courbash—that strip of hippopotamus hide, tapering at the end, which was so much in vogue in the early days of the Occupation for the extraction of confessions and taxes.

***

At first sight this proposal strikes one with horror, for it savours of a retrograde step in the very country where the abolition of the dread courbash has been always cited as one of the benefits conferred by the Occupation. As a matter of fact, it commends itself to all those who have studied the Egyptian character, and we ourselves heartily approve of the revival, under certain conditions and guarantees. Further, this revival is no retrograde step in the sense that it is a return to despotic and oppressive rule. When Lord Dufferin came to Egypt he was so horrified at the brutal manner in which the courbash was used by the Pashas and officials that he ordered its abolition. For a country which had been ruled by the whip this was undoubtedly too sudden a development, and many, whilst applauding the excellent intentions of that able statesman and diplomat, considered that he made a mistake in making this wholesale prohibition. Lord Cromer himself appears to have doubted at times the wisdom of this total abolition.

***

What should have been done—and what is now advocated in many circles—was the prohibition of the use of the courbash by the general public and its retention as a form of punishment to be applied only in accordance with the decisions of the Law Courts. If flogging were added to the penalties attaching to certain crimes and misdemeanours, there is no shadow of doubt that the alarming increase which is now manifest would be at once arrested, and that a substantial reduction would very soon take place The average Egyptian dreads bodily pain, and the revival of the courbash would act as much as a deterrent as it would be an effectual punishment. We have let sentiment enter too much into our treatment of criminals, and we have, in a measure, only ourselves to thank for the present unsatisfactory state of public security in Egypt. It is universally conceded that some very drastic measures will have to be adopted, and we are of opinion that Loutfi Bey's suggestion is the one to be most strongly commended. With the British Administration of Egypt in its present efficient state, there seems to us to be little fear of the revival of the use of the courbash leading to a return to the abuses which were so general in 1882.

***

In perusing the last list of honours conferred by his Majesty on Anglo-Egyptians (writes a Cairo correspondent), one could not help feeling disappointed that the name of the British Consul at Cairo, Mr. A. D. Alban, was not included. If any man deserves recognition for services rendered—loyally but silently—to his Sovereign and fellow-countrymen, he does. For nine years now Mr. Alban has filled the difficult post of British Consul in Egypt's capital. It is generally admitted that his impartiality, his sense of public spirit, and his unrivalled knowledge of the Levant have conduced in no mean measure to the raising of the tone of the British Consular Courts to their present high level. The greatest compliment that can be paid him is the respect which the foreigners have for him—a respect which they do not always display towards their own consuls. More especially does the Anglo-Egyptian community owe him a great debt of gratitude for the fearless manner in which he has stood up for its rights on occasions when those rights were about to be sacrificed on the altar of political considerations. Because a man does valuable work silently and away from the blare of the lamps is no reason why he should be overlooked, and it is to be hoped that in the next list of honours this neglect will be repaired, for the rewarding of our public men, who keep the torch of British prestige flaring in foreign parts, is as much a national as it is a personal question.

***

The Palestine Exploration Fund, which dates from 1872, has been holding its annual general meeting under the presidency of the Bishop of London. Among the speakers was Colonel Sir Charles Watson, who served with distinction for twenty years in the Egyptian army, rising to the rank of Pasha. This gallant officer concluded his address by referring to the ancient remains at Damascus, which has a better claim than Rome to the proud title of "Eternal City." Its greatest marvel was a temple which covered one-fourteenth of the area within the walls, and was erected by an architect who is believed to have planned the Forum Trajanum in ancient Rome. In 379 A.D., the Emperor Theodosius converted it into a Christian church, which, strange to say, was shared by adherents of the rival cults for many years after Syria had been conquered by the sword of Islam. This amicable arrangement came to an end under Walid I., the sixth Caliph of the Ommiade Dynasty, who ruled a territory extending from Spain to the Indus (710-15 A.D.). He destroyed the mighty church, except its southern and western walls, and built the existing Mosque of the Ommiades on part of its site. The remainder was speedily covered with private dwellings, most of which have recently been destroyed by a conflagration. Sir Charles Watson expressed a hope that advantage might be taken of the clearance to delve for remains of Trajan's stupendous temple.

PERSONAL & SOCIAL

Prince Christopher of Greece visited the King and Queen on Sunday afternoon.

As we announced in March, Lord Kitchener will leave Egypt on the 4th prox. for England. He will be accompanied by his A.D.C., Captain Fitzgerald.

During the absence of Lord Kitchener, Mr. Milne Cheetham, First Secretary to the British Agency, will act as his Majesty's Diplomatic Agent in Egypt.

On Monday Baron Marschall von Bieberstein was received in audience by the King at Buckingham Palace, and presented his credentials.

Lieutenant Colonel A. Crawford has been appointed to act temporarily as an additional member of the Sudan Government Council.

The Hon. Mrs. Ronald Graham arrived at 34, Portland Place, on Monday from Cairo.

Mohammed Said Pasha last week sent a cable to King George thanking his Majesty for the honour conferred upon him.

Lord and Lady Oranmore and Browne left London on Sunday for Paris to attend the marriage of Viscount Duncannon and Mlle. de Neuflize.

Mme. Grouitch, wife of the Servian Chargé d'Affaires, has returned to the Legation from the country, where she had been recuperating since her severe illness.

Colonel J. H. Rivett-Carnac, C.I.E., late Aide-de-Camp to Queen Victoria and King Edward, has received the Grand Cordon of the Order of the Lion and the Sun from the Regent of Persia.

Major Hayes Sadler, Director of Customs, Sudan Government, is travelling to Europe on leave by the Austrian Lloyd s.s. "Helouan" on the 4th prox.

Riza Bey Tewfik, whose name is so familiar to our readers, is now in this country on a visit, and we understand that efforts are being made to obtain for him a readership at one of our leading universities.

Mrs. Myles Kennedy, who with her daughter spent the greater part of the winter in Khartoum, is at present staying at the Berkeley Hotel, Piccadilly, where she will remain until the end of the season. Mrs. Kennedy, who is a keen philanthropist, is assisting at the Gypsy Encampment of the Dumb Friends' League, and sold roses in Shaftesbury Avenue on Wednesday, Alexandra Day.

The King has been pleased to promote Major J. K. Watson, C.M.G., D.S.O., to be a Commander of the Royal Victorian Order.

His Majesty has also conferred a K.C.V.O. upon Youssouf Saddik Pasha, the Khedive's representative at Constantinople.

H.H. the Aga Khan, Prince George of Greece, and Prince Christopher of Greece, and Baron and Baroness Marschall von Bieberstein were amongst the guests at Lady Naylor-Leyland's dance at Hyde Park House, Albert Gate, on Wednesday night.

The Greek Minister and Mme. Gennadius, the Servian Chargé d'Affaires, and Djevad Bey attended the *matinee musicale* held at the French Embassy on Wednesday, in aid of the Société Française de Bienfaisance.

Alexandra Day, with its myriads of white-frocked ladies selling roses in London's thoroughfares, found Lady Maxwell with a band of helpers, stationed in the busy proximity of Piccadilly Hotel. Among those who, issuing from the Ritz, stopped to buy a flower from Lady Cunard, were Baron Marschall von Bieberstein (says a correspondent) and the Baroness.

The death of Sir Lawrence Alma-Tadema removes a friend from Sir Ernest Cassel's coterie. Sir Ernest is the owner of the painter's "Under the Roof of Blue Ionian Weather," just as Sir John Aird is the owner of his "The Finding of Moses." Though he had previously painted Egyptian scenes, Sir Lawrence did not visit Egypt until, a member of Sir John Aird's party, he went to Assouan for the ceremonies in connection with the opening of the Dam.

Acting upon the orders of his medical adviser, Sir Gerard Lowther, H.M. Ambassador at Constantinople, is absenting himself from his post for three weeks for the purpose of undergoing a cure. His Excellency will subsequently return to Constantinople, and, it is understood, has no intention of going on leave.

Prince and Princess Gikha—the former familiarly known to his many English friends as "Johnnie" Gikha—are now paying a round of visits in this country. Nor has Prince Gikha, who is an old Wellingtonian, neglected to look up his former school, for its associations link him to a people whose language he speaks with the ease and fluency of a native, and without even the faintest trace of accent.

Colonel Sir G. B. Macauley, Director-General of the Egyptian State Railways, goes on leave on July 1. During the first fifteen days of his absence Captain Hall will replace him until the arrival of Major Flakeney, who will then take charge of the work.

Paxton Bey, Deputy Commandant of the Cairo City Police, is going on three months' leave on July 1.

The King has been graciously pleased to appoint Mr. Newton Worrall to be Vice-Consul at Diarbekir.

During the presence in England of Mr. J. R. Holmes, President of the District Court, Nicosia, Cyprus, the duties of his office have been assumed by Mr. A. L. C. Short, President of the District Court, Limassol.

Mr. C. Sozos, Mayor of Limassol and a member of the Cyprus Legislative Council, is at present on a visit to London.

Ala-es-Sultaneh has accepted the portfolio of the Ministry for Foreign Affairs in the Persian Cabinet.

The Countess of Minto has consented to help the Duke of Portland in the unavoidable absence of the Duchess of Portland in receiving the guests at the Hotel Cecil before the dinner on behalf of the Queen Victoria's Jubilee Institute, which is to take place on July 3.

Sir H. Babington Smith and Lady Babington Smith attended the opening of the new works of the Marconi Wireless Telegraph Company at Chelmsford on Saturday.

The marriage took place on the 15th inst., at All Saints' Church, Ramleh, Egypt, of Mr. A. H. Reid, manager of the Mansourah branch of the Imperial Ottoman Bank, and Miss Nesta Dale, youngest daughter of the late Mr. A. Dale, Danish Vice-Consul at Mansourah.

Presiding at the annual meeting of the Jerusalem and the East Mission at Church House on Wednesday, the Bishop of London congratulated Bishop Blyth on the completion of twenty-five years' strenuous work in Jerusalem.

At a meeting of the African Society, to be held at the Trocadero Restaurant on July 5, Sir Clement Hill, K.C.B., M.P., presiding, Mr. P. Amaury Talbot will read a paper on his recent journey, entitled "From the Gulf of Guinea to the Central Sudan."

The death occurred last Saturday, at his residence, Hylton House, Petersfield, of Admiral Loftus Francis Jones. As acting mate of the "Tribune" in the Black Sea, the late officer took part in the Russian War in 1855, and he subsequently received the Crimean and Turkish medals with the Sebastopol clasp.

On Monday Lord Kitchener celebrated the 62nd anniversary of his birth, which occurred at Ballylongford, Kerry, in 1850.

It is expected that Earl Curzon and Viscount Milner will be present at a meeting at the Mansion House on July 22 in support of the National Service League, at which the Lord Mayor will preside.

Hazem Bey, Vali of Beyrout, of whom we gave a short biographical sketch last week, has lately received from the Société Académique d'Histoire Internationale a gold medal and diploma, and has also been appointed an honorary member of the Society, in recognition of his merits.

The visit of Prince Mohammed Ali to the States, under the name of Rustum Bey, has been the occasion of an exhibition of patriotic feelings on the part of the Syrian community in that country. The Prince will be entertained on July 25 to a banquet at the Waldorf-Astoria, to which a representative body of guests has been invited, and has also accepted an invitation to a private dinner given by Mr. K. Salbagh, a well-known New York Syrian merchant.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

LE POER TRENCH.—On June 25, 1912, at 77, Rathgar Road, Dublin, the wife of C. E. le Poer Trench, of the Egyptian Educational Department, of a daughter.

MIRZA.—On June 20, to Prince and Princess Nusrat Ali Mirza—a daughter.

MARRIAGE.

STEWARD—CARVER.—On the 18th inst., at St. Andrew's, Laverstock, Salisbury, by the Revd. Canon Steward, father of the bridegroom, assisted by the Revds. Prebendary Parsons and A. Aldworth, Vicar of the parish, the Revd. Arthur Amyot Steward, of St. Paul's, Hull, to Miriam Agnes, third daughter of the late Sidney Henton Carver, of Alexandria, and Mrs. Carver, of Laverstock Hall, Salisbury.

DEATH

HEREFORD.—On June 21, at 5, Eaton Crescent, Clifton, Salome, much-loved wife of George Hereford and youngest daughter of the late Right Reverend M. S. Alexander, D.D., first Anglican Bishop in Jerusalem, aged 69.

FRIDAY, JUNE 28, 1912.

COTTON GROWING IN THE SUDAN.

Almost as soon as the British and Egyptian Governments had taken over the administration of the Sudan far-sighted men in Egypt began to realise that the recovered territory might one day become an important cotton-producing country. Various concerns began cultivating small areas in a tentative way, and though the experiments conducted were not on a large scale, they sufficed to demonstrate that both the soil and the climate of the Sudan were suitable for cotton growing. Formerly the country had possessed a considerable population, and much of it had been under cultivation; but the wars of the Mahdi had reduced the population to a fraction of its former figure, and the land had gone out of cultivation. The early experiments referred to were, therefore, conducted in somewhat difficult circumstances. A certain amount of work was done near Berber, and as a result the Sudan Government decided to grant concessions for land with a view to encouraging further experiments. One of the first concessionaires was Mr. Leigh Hunt, who represented the Wernher Beit interests. He took up on favourable terms from the Sudan Government 10,000 acres at Zeidab, near Atbara, and a company was formed for the purpose of levelling, irrigating, and cultivating this area. The company was registered as far back as 1904, under the title of Sudan Plantations. A sum of about £40,000 was spent upon a pumping installation, and a large scheme of irrigation canals was inaugurated. This work has now been completed, and the land, which originally cost the Sudan Plantations about ten shillings an acre, has been brought in great part into a state of cultivation. The company works upon lines more or less similar to those followed by the Aboukir, Behera, and other well-known Egyptian land companies: it levels, cleans, and irrigates the ground, and when the soil is prepared it lets the land to the native. A portion is, however, farmed by the company itself.

The cotton grown at Zeidab proved to be of excellent quality, though the yield was variable in quantity. Various other concessions, based on terms similar to those of the one granted to Mr. Leigh Hunt, were discussed, and the Sudan Government issued a white paper setting forth the conditions upon which land could be acquired. The matter, however, was not carried further at that time. It was felt that Egypt proper had a prior claim upon the water of the Nile, and in those days it was not deemed advisable to give the Sudan cultivator a perennial supply. For this and various other reasons the schemes for the cultivation of Government land in the Sudan were left in abeyance. But in the meantime the Sudan Plantations were hard at work, and Lancashire was beginning to realise that the cotton from the Sudan was of excellent quality. Sir William Mather paid a visit to Khartum and collected much valuable information; and on his return to England he made, in Manchester, an important speech, in which he called attention to the possibilities of the Sudan as a cotton-growing country. Subsequently, the British Cotton Growing Association sent out a commission consisting of Mr. Hutton, Mr. Whiteley, and Mr. Clegg, who made a careful examination of the principal centres of the cotton-growing industry in the Sudan. The Commissioners visited the Tokar district, where from 40,000 to 50,000 acres are now irrigated annually, and produce from 8,000 to 12,000 bales of cotton, the quality of which is, however, only moderately good. They also went through the Khartum district, where they found a better quality of cotton, but where, owing partly to restrictions on irrigation and partly to climatic reasons, the crop has to be grown in the winter, with the result that one year it may be a great success and the next year a comparative failure. But the one place which appealed to Mr. Hutton and his colleagues was the level plain of the Gezira, which stretches southwards from Khartum, and is bounded on the east by the Blue Nile and on the west by the White Nile. This vast plain contains at least five million acres of first-class cotton soil; and here, at Taiba, near Wad Medani, the Sudan Plantations have begun cultivation in a small way on account of the Government. There is a big pumping station, a large main canal, about seven yards wide, with two subsidiary canals, each over a mile long, and at the present time 520 acres out of 1,000 are actually under crops. Mr. Hutton stated that in his opinion the average crop would be close upon four kantars per feddan, say 400 lbs. an acre. This is a most encouraging estimate; for the best Delta land during the past two years has only averaged 600 lbs. per acre, and it is stated that the Sudan cotton is of better quality than that of the Delta. In order to develop the Gezira, however, money is needed on a liberal scale. To irrigate 1,000,000 acres the irrigation works are estimated to cost five millions sterling, and the commercial side of the scheme would require three millions sterling additional capital. In the opinion of the British Cotton-Growing Association, if the work were taken in hand at once the Gezira Delta would in a few years' time produce 250,000 bales of cotton annually. There is a slight natural fall of the land from east to west which renders irrigation easy, for the water can be brought from the Blue Nile and discharged into the White Nile. At the present time the water from the Blue Nile at Taiba is pumped, which is a very expensive operation, as at low water the level of the river is 60 ft. below that of the land, and coal in the Sudan is dear. It is proposed to make a dam across the Blue Nile at Sennaar and to construct a high-level canal from which the water will be led across the plain.

The question now arises: How is the necessary money to be provided? At their last meeting the British Cotton-Growing Association passed a resolution requesting His Majesty's Government "to make a grant-in-aid to the Government of the Sudan of the sum of £200,000, to be spent in experimental and research work for the advancement of cotton-growing in that country," and another clause of the resolution requested the Government "to make arrangements for a loan of £1,000,000 to the Sudan Government for the construction of irrigation and other works necessary for the rapid development of the cotton-growing districts of the Anglo-Egyptian Sudan." This would be the first step towards the £8,000,000 referred to above as being required. For the rest, the financiers supporting the Sudan Plantations are apparently willing to assume financial responsibility for the commercial side of the scheme, and it is sincerely to be hoped that the British Government will favourably consider the proposal of the British Cotton-Growing Association. The Sudan is now peaceful and prosperous; the Gezira possesses good soil and a climate suitable in every way for cotton; all that is lacking is capital for development. At the present time, it is true, the labour question is a serious one; but the population is rapidly increasing, and we feel justified in taking a sanguine view of the position. The whole question of development is of imperial importance, for it is essential that the Empire should be able to obtain its supplies of cotton within its own borders. From this point of view the encouragement of cotton-growing in Uganda is distinctly a step in the right direction, and it is to be hoped that it may be regarded as a sign of the times. In the southern Sudan cotton similar to American cotton can be grown with the aid or rainfall alone; this cultivation could be increased indefinitely; and the Cotton Association experts consider that there is no reason why Egypt and the Sudan combined should not provide Lancashire with all the cotton she requires. If, therefore, the necessary funds can be provided, the Sudan should undoubtedly become in the near future one of the most valuable assets of the Empire. There appear to be very few risks on the financial side of the scheme, and on the Imperial side the importance and soundness of the proposals put forward are beyond question.

NEAR EAST STATESMEN.

1.—M. STAMBULOFF.

Stephan Stambuloff, to whose ability and force of character Bulgaria practically owes the independence which she enjoys to-day, was the son of a Tirnovo innkeeper, and was born in that old-world capital in 1854. In the stormy period of a nation's struggle for liberty, youth can seize the opportunity which in quieter times will be denied, and Stambuloff was not the man to throw away any advantage. From his early manhood he had been foremost in every conspiracy for the emancipation of his country. He was one of the select band of "apostles" to whose unceasing efforts can be traced the rising of '75, which, though abortive in itself, caused the Bulgarian atrocities and the Russo-Turkish war; whilst eleven years later he was Speaker of the Sobranje at the time of the Philippopolis rising, and it was due to his advice, now famous in history, that Alexander took the step of proclaiming the annexation. "The one road leads to Philippopolis and as far further as God may wish," he said; "the other to the Danube and Darmstadt." Stambuloff was right, but for the moment it seemed as if his ambition had carried him too far. The acquiescence of Turkey and the disastrous defeat of Servia at Slivnitza enraged the Russian intriguers, and by a daring plot Alexander was kidnapped. But Stambuloff was never the man to yield tamely. He outlawed the traitorous officers who had assisted in the conspiracy, and appealed to the loyalty of the country. Bulgaria rose with him to a man. Stambuloff was elected one of a dual Provisional Regency, and with great difficulty Alexander was discovered and restored. He owed his return to his devoted Minister; he owed his immediate downfall to his own folly. Unknown to all he despatched a telegram to the Tsar, and so played into the Russians' hands. The reply left him no option save to resign, and, though Stambuloff urged him to remain on in spite of all, he announced his abdication and left Bulgaria for ever.

With the ostensible object of assisting Bulgaria to find a new prince, General Kaulbars was despatched from Russia. His methods were unparalleled, and after a vain attempt to postpone the Sobranje election he stumped the country with a Russophil programme. As an election agent he was equally unsuccessful, for Stambuloff was returned with a sweeping majority, which, undaunted by plots and a demonstration of Russian warships off Varna, met at Tirnovo and proceeded with its election of a Prince. Considerable difficulty was experienced in filling the position, but at last Prince Ferdinand of Saxe-Coburg-Gotha was chosen. The regents who had acted with Stambuloff retired, but the Prince's first act after his accession was to request his one "strong man" to accept the post of Premier, and for the next seven years Stambuloff guided the destinies of the country; indeed, during that period the history of Bulgaria is little else than the story of his own career.

He was fortunate enough to win the firm support of England against Russia's hostility, which took the practical form of refusing to sanction Ferdinand's election. At one time the situation was so serious that it was even proposed to eject the Prince by force, but Bulgaria displayed every intention of resisting to the end, and the movement died out. The great statesman's next step was the establishment of a more friendly policy with Turkey. And here he succeeded beyond Europe's wildest dreams. Thanks largely to a somewhat indiscreet suggestion of M. Theotokis regarding a grand Balkan alliance, he was able to secure two *bérats* for the appointment of Bulgarian Bishops in Ochrida and Uskub—and shortly after of yet another two—the very favour which had previously been asked by Russia on Bulgaria's behalf, and refused.

In the meantime various plots and conspiracies had been discovered, in which there were ample signs of the working of Russia's hand. Stambuloff, however, was fearless; he insisted at all hazards upon the execution of the sentence, although, by such methods, as he knew too well, he was courting his own doom.

Unfortunately, the very genius and strength of the man was the cause of trouble with Ferdinand. The latter had an exaggerated idea of royal importance, and Stambuloff, who was too rugged and unpolished for Court etiquette, scarcely concealed his knowledge that the Prince was little else than a puppet. With more tact he might have retained his office and his life. The first great breach was forced by the squalid intrigues which centred round the religion of the heir, Boris. One of the clauses to the Constitution provided that the heir must be baptised in the Orthodox faith; whereas Ferdinand's father-in-law, the Duke of Parma, had only consented to the marriage on condition that the children should be Catholics. Stambuloff, however, who knew that the hand of an assassin might plunge the country into anarchy, recognised the pressing need for an heir, and was ready at the risk of his personal popularity to procure the revision of this clause.

But Ferdinand saw a chance of winning the Tsar's favour by allowing his son to be baptised into the Orthodox faith. A fruitless appeal was made to the Pope, and an unseemly controversy waged round this vexed question. The remaining months of Stambuloff resemble the downfall of Bismarck. The relations between Prince and Minister grew from bad to worse, and eventually Stambuloff resigned. He was soon to learn the ingratitude of the nation for which he had laboured so long. No steps were taken to secure him from the violence of his enemies, and embittered by this unceasing hostility he granted an interview to a German journalist. From that moment his life was made a torment. His lands were sequestrated; he was even forced to borrow money. He was refused a passport. The hands of the assassins who cut him down some weeks later did the kindest act of mercy. And so amid hatred, unpopularity, and every misery that malice could devise, the ablest of Bulgaria's sons, "*un géant dans un entresol*," passed away at the early age of forty-one.

From the very outset of his career he won the respect and admiration of Europe by his firmness and skill, however trying the circumstances, and there is no doubt but that he would have been one of the great men of history had he been born to play his part on a more extended stage. For sheer ability in diplomacy and statesmanship he stands unrivalled in modern Bulgarian history. That he was unscrupulous in his methods, that he manipulated elections, and would willingly barter the confidences of another country must be admitted, but his motive was patriotic, not personal. No sordid taint of self-advancement or bribery has touched his own honour; only when it came to furthering Bulgaria's ambitions he held that the end justified the means. Arbitrary and somewhat arrogant in his manner, he never lost the rugged brusqueness of the Bulgarian peasant, and to these failings can be traced the causes of the friction which embittered his last days. But with all his faults, and they were many, he gave without stint his life, his talents, and his intellect to his country; and when time has softened the hot passions of personal antagonism, Bulgaria will realise and appreciate the full worth of her first and greatest statesman.

SUN FIRE OFFICE

FOUNDED 1710.

THE OLDEST INSURANCE COMPANY IN THE WORLD.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Mesopotamian irrigation scheme seems to be as far from being settled as it was a year ago. Immediately after the elimination of Messrs. Pearson's scheme, about five weeks ago, I gave it as my opinion that the result of the adjudication would be the invitation for a new tender. This has now come about, Messrs. Jackson's scheme having been turned down. The new tender, restricted to the two mentioned firms, gave a money limit and debarred the tenderers from making any conditions. The definite and final adjudication was to have taken place yesterday; but, considering the onerous conditions imposed, I should be surprised if either of the two firms had sent in a tender. Because, after all, the new offer amounts to this: for a sum *x* the tenderer is to construct irrigation works on Sir William Willcocks' estimate without making any stipulations. What if the estimates are wrong? It will be clearly seen that the acceptance of the offer is rendered almost impossible.

***

The correspondent who writes on page 250 on the lack of British capital and enterprise in the Sudan makes a timely call for the British middleman—the agent, merchant, and trader. Our trade with the Sudan is important, is becoming more so year by year, and it would certainly be logical, not to say advantageous, if the men who are instrumental in bringing buyer and seller together were British (or Sudanese), and not exclusively Italian, Levantine, or German, the latter being, in view of excessive trade protection in German colonies, an even more bitter pill.

***

Personally, I am of the opinion that the small interest taken by us in the Sudan accounts for our "commercial indifference." The remedy, and the only remedy, is for us to be brought to realise that in the Sudan we are in the presence of one of the most promising trade propositions within the Empire—more so, I am inclined to believe, than Uganda. The latter was, it is true, until a few days ago, the Cinderella of our Colonies, but since the grant of £500,000 she relinquishes that title, which passes on to the Sudan.

***

In this week's leading article we analyse the cotton-growing proposition as offered by the Sudan. Why the British Government's recent (and surprising) fit of generosity should not have extended to the Sudan, especially in view of the recent offer of the B.C.G.A., is inexplicable. But I am inclined to the belief that more eggs are being hatched than we know of, and that one of them is labelled "For the Sudan." It is not only in Khartum that rumours are current to the effect that November will see the first steps taken in an elaborate irrigation scheme. As an investment—but why labour the point? The B.C.G.A.'s offer of a million is there to confound those who ridicule the idea of the Sudan's brilliant prospects.

***

Revenons à nos moutons—to the question of "commercial indifference." A grant-in-aid, as referred to in the previous paragraphs, would not only have the effect of developing the country's resources, but would, indirectly, bring the Sudan to the notice of the British investor and tradesman. A friend who has returned from Khartum tells me that conditions have improved, and that the swarm of Greek and Levantine traders, too numerous to be of any real use, has gradually thinned down, and is continuing to dwindle. The moment would, therefore, seem opportune for British capital and enterprise to step in and hasten the process of elimination. Perhaps, when the higher Sudanese officials are on summer leave in England they will point this out—judiciously, and in the proper quarters. Because there is no reason whatever why, having wrung the Sudan from the Mahdi, we should not assist directly, and at no loss to ourselves, the commercial development of the country. But, as I have indirectly pointed out, the success of the venture depends in a very large measure on the steps taken by the Sudan Government.

***

When British capital and enterprise do finally take a prominent part in the development of the Sudan, it is to be hoped that the basis on which they work will be more serious than that which has obtained in Egypt. British company record in Egypt is not, with but a few exceptions, brilliant. The fact is that more attention has been paid to the promoting of the company in London than to its ultimate success from the shareholders' point of view in Egypt. A glimmer of this procedure has already fallen, unasked, on the Sudan, in the form of a company whose prospectus was most alluring. It remains to be seen whether circumstances will bear out the promoters' prophecy. I may mention, however, that in urging the participation of British capital and enterprise in the development of the Sudan I have not had in mind any such company promoting schemes as that alluded to, the reason being that not only are they unnecessary, but harmful.

***

It is harmful in other countries as well. Speaking recently with a Balkan financier, I was informed that, up to the present, the participation of British capital in a country, for instance, like Servia, had been disastrous. French, Belgian, German and Austrian enterprises in the country flourished and were successful, so that the fault could not lie with the Servians. The truth was, he said, that, as a rule, British companies were purely promoting concerns, which took no interest in developing their concessions once they had been obtained. Under the circumstances, it is not to be wondered at that Britain's name, as regards financial enterprises, does not always enjoy an immaculate reputation. This is unfortunate, but as I have several such concerns on the tip of my pen, I understand the argument.

***

According to the *Morning Post*, Germany has just sold two flying machines to the Ottoman Government, and two German pilots have placed themselves at the disposal of the military authorities, one of them, Herr Leutnant Jahnow (a Prussian of the Imperial type) joining the Turkish Army as an officer. It is stated, moreover, that several German firms are at present negotiating with the Turkish Government for the sale of flying machines.

On the other hand, the *Frankfurter Zeitung* states that England is regaining her political authority in Turkey in a most remarkable way. Every word coming from London is "regarded as a revelation, and the Turkish statesmen and their journals simply hang on Sir Edward Grey's lips." I fail to see how we can reconcile this confession with the *Morning Post's* statement of facts.

***

Four hundred thousand pounds in gold were shipped from New York last week for Europe, in spite of the fact, says the *Financial News*, that "foreign exchange rates show a distinct loss to New York exporters." It is believed, though on no corroborated statement, that the gold is for Italy's scheme to water the Sahara.

***

Apropos, it is not generally known that £100,000 in gold were shipped from London to Turkey a week ago last Saturday. The consignment stood in no relation with the recent advance on Treasury Bills.

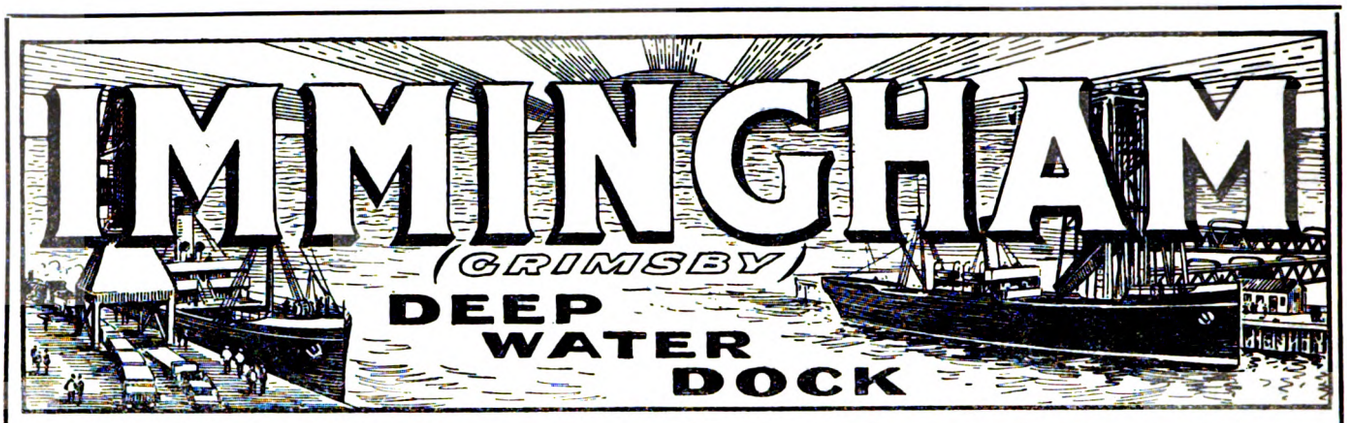
***

We refer in the Shipping Section to the North German Lloyd's reported intention to wrest the sceptre of supremacy in the Eastern Mediterranean from the Austrian Lloyd. The struggle would be a bitter one, and doubtless rates would drop—not to the public's sorrow. As it is, the Austrian Lloyd has greatly improved its Egyptian service, Thursday's Alexandria mail now being delivered in London on Tuesday morning. German competition would have the effect, however, of urging both companies to greater deeds of speed; it would, moreover, serve as a check to Austria's ambition to monopolise trade in the Levant.

***

Another point in connection with Austro-Egyptian relations can be mentioned here. With effect from July 1 next the postage on letters not exceeding twenty grammes in weight exchanged between Egypt and Austria will be at the rate of five milliemes, or ten deniers in Austrian currency. This means, of course, a rapid development of trade relations between both countries in the near future.

***



Mr. Consul Raymond, in his report on Corfu for 1911, has, I am afraid, been guilty of a practical joke. On one page he advises us to forward goods by the Cunard and Ellerman lines to Corfu; on another he informs us that since the beginning of the year the Cunard and Ellerman lines have ceased calling at Corfu. Under the circumstances, it is difficult to know exactly what to do.

***

The Council of the London Chamber of Commerce propose to make representations to the Government with a view to raising the status of the Board of Trade to that of a Ministry of Commerce, "in order that commercial matters may receive the full consideration to which they are entitled." I fail to see how the proposed reform will produce the desired result if, as is universally the case among politicians, "commercial matters" do not receive the full consideration to which they are entitled. The spirit is lacking, not the mechanism.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, June 22.

American Railway for Anatolia.

Mr. "Jack" Ridgely Carter, for some fifteen years a Secretary of the American Embassy in London, and who, a little more than a year ago, was Charge d'Affaires of the American Embassy in this city, is said to have abandoned the Diplomatic Service to negotiate with the Ottoman Government, representing Mr. Pierpont Morgan, for the realisation of the projected railway across Asia, from the Persian frontier in the neighbourhood of the Lake of Van, passing through Harput to Yumurtalik, in the Gulf of Alexandretta, which project is none other than the once much-talked-of "Chester" scheme. While the mineral wealth of the territory through which the proposed line will pass is still the basis of the new scheme, there is, however, this difference, that the broad gauge is again put forward, and, further, the Ottoman Government is expected to participate in the capital for the cost of construction. Mr. Carter made the best of impressions during his short stay in this city, and if personality will have any weight in bringing this scheme to a successful issue, it has a considerable asset in its present representative.

The resuscitation of this project has caused quite a flutter in the local Press, and in one case it is clearly stated that the intrusion will cause considerable trouble to another group which has obtained certain preferential rights in regard to East Anatolian lines.

The Anatolian Railway Company.

The increased traffic on the various sections of this railway during 1911, as compared with 1910, both in passengers and merchandise, is shown in the following figures:—

Passenger Traffic.	1911.	1910.
Haidar Pasha-Angora	2,703,276	2,508,560
Eski Chehir-Konia	212,535	157,547
Arifié-Ada Bazar	121,114	112,257
Merchandise Traffic.	**1911.**	**1910.**
	Tons.	Tons.
Haidar Pasha-Angora	425,027	307,333
Eski Chehir-Konia	216,509	148,834
Arifié-Ada Bazar	44,611	42,077

The traffic receipts of the main section, Haidar Pasha-Angora, for the first time exceeded the kilometric guarantee, and even on the Eski Chehir-Konia section the amount paid by the Government during 1911 was considerably less than one-half that paid during the preceding year.

Agricultural Reforms in Rumelia.

Amongst the various works it is proposed to undertake as a result of the recent journey of the Minister of the Interior are a model farm at Prizrend, together with a depot of agricultural implements, the construction of roads from Pristina to Rissa and Voutchitrina, from Kalkandelen to Gostivar, from Mitrovitza to Yeni-Bazar, from Salonika to Kassandra, and from Ortach to Serres.

Taxim-Sultan Bayazid Underground Railway.

The Council of State has not yet taken any decision in this matter, which it has under study, although certain proposed modifications have been accepted by the group represented by the Deutsche Bank. "The mills of the gods grind slowly," and in the meantime it is stated that a French group have applied for the same concession under more favourable conditions.

Autobus Service for Kadikeui-Scutari.

The exploitation of an autobus service between Kadikeui-Moda and Fenerbagtché, Scutari-Tchamlidja, eventually extending to Alemdagh, is about to be ceded to a private company. Tenders were invited for a concession to be granted for an electric tramway covering exactly the same territory, which adjudication closed on June 15. Three offers were presented, and a special commission of the Ministry of Public Works is now studying the financial capacity of the three competitors before the conditions of each are taken into consideration.

Increase of Acetylene Lighting.

The use of the acetylene light is coming more and more into use in this city. It was first introduced some six years ago by an American, who put in two automatic generating plants, called, if I remember correctly, the "Sun," or the "Sunlight." For some reason or another, this party did not follow up the market. Recently there has been established here a Comptoir Générale de l'Acétylène, working under the technical auspices of the Office Central de l'Acétylène de Paris, which imports all its material from France. There would appear, however, to be some difficulty in getting regular supplies of carbide of calcium, which is now imported from Germany. The above-mentioned company, although only recently started, has already made some sixty installations, of which not a few of considerable importance, including two hotels, a bank, a large pharmacy, and several private residences and villas. The company is in negotiation for the lighting of a city which will serve as a model of this system of lighting. There is a sale for small portable lights for various purposes. The Baghdad Railway Company have adopted acetylene for the lighting of its stations, as has also the Golden Horn Steamboat Company. British manufacturers would do well to turn their attention to this opening.

Ismidt Dry Docks.

The Ministry of Marine has prolonged the closing date for the receipt of tenders for the Admiralty dry docks to be built in the Gulf of Ismidt until the 23rd of this month. The following firms are believed to be taking part in the adjudication: Messrs. Jacksons, Pearsons, and Paulings (British), Holzmann and Co (German), and a local contractor (Foquiau) representing French interests.

Forests in Albania.

The Government has granted the concession for the exploitation of the Mirdite Forests to the Bishop of the Mirdites for a period of fifteen years. These are immense forests of oak and other woods of a superficial area of about 1½ million metres, which have never before been worked.

SYRIAN WOOL INDUSTRY.

Our Beyrout correspondent states that the total wool exports from the Syrian Coast last year were about 6,000 tons, including washed and unwashed wool. Of this total, about one-third, if not more, was shipped through Beyrout; one-third through Tripoli; and the remainder through Alexandretta, Caiffa, and Jaffa. About 80 per cent. of the wool exports of Syria are destined for the United States, principally New York, Boston, and Philadelphia. The remaining 20 per cent. are shipped to Italy, France, Germany, and Constantinople, about 10 per cent. of the total being destined for the Constantinople cloth and cap factories working for military supplies.

SERVIAN TRADE.

Recent Remarkable Growth.

(From Our Own Correspondent.)

Belgrade, June 15.

According to the statistics for the year 1911 the growth of trade, both in exports and imports has increased considerably. The imports show an increase of 30,729,774 frs., and the exports an increase of 18,528,324 frs. over the preceding year. The total imports for 1911 were 115,425,415 frs., as against 84,695,641 frs. in 1910, and the total exports for 1911 were 116,916,357 frs., as against 98,388,028 frs. in 1910.

There is an increase in the export of wheat, rye, prunes, tobacco, sheep, poultry, meat (fresh and salted), eggs, and copper, whilst there is a decrease in the exports of barley, maize, oats, fresh fruit, plum jam, cattle, pigs, flour, and silk cocoons. The large decrease in the export of maize was caused by the quantity required for feeding the pigs. On the other hand, the Convention with Austria-Hungary, which permits only slaughtered cattle to be exported there, is responsible for the increase of exported meat and the decrease of exported live cattle and pigs.

The following table shows in francs the value of the exports to Austria-Hungary, Germany, France, and Italy (increase), and to Great Britain, America, Belgium, Turkey, and Roumania (decrease):—

Exports to	1910.		1911.
Austria-Hungary	17,821,873	....	48,433,392
Germany	21,914,819	....	23,932,926
Turkey	23,470,922	....	11,983,916
Belgium	16,137,236	....	6,142,214
Roumania	8,570,705	....	6,140,596
Italy	1,069,617	....	4,394,056
France	1,191,095	....	3,811,714
America	3,387,370	....	3,600,310
Great Britain	1,672,290	....	86,793

There was an increase in the imports from Austria-Hungary, America, Belgium, Bulgaria, Italy, Russia, Roumania, and France, and a decrease in the imports from Great Britain, Germany, Turkey, Greece, Holland, and Switzerland.

Imports from	1910.		1911.
Austria-Hungary	16,144,247	....	47,447,981
Germany	31,975,825	....	31,346,860
Great Britain	11,424,905	....	9,524,278
France	3,603,633	....	5,745,815
Italy	3,644,945	....	4,860,833
Turkey	5,934,560	....	3,813,905
Russia	1,823,173	....	3,391,800
America	1,011,259	....	2,135,672
Belgium	899,847	....	2,080,671

The following products were chiefly imported from Great Britain:—Threshing machines for agricultural purposes, cotton yarns, cotton textiles, copper sheets and wire, iron and steel sheets. From Austria-Hungary: Mowers, binders, distributors, etc., for agricultural purposes, boots and shoes, cosmetics, cordage, dynamite, gloves, glass and manufactures of glass, indiarubber goods, jute bags, leather, malt, sugar, furniture and articles of wood. From Germany: Ploughs, rakes, cornshellers, and cutters for agricultural purposes, motor cars, bicycles, coal and coke, cutlery, electrical motors and accumulators, railway rails, cars and locomotives, iron bridges, gunpowder, telegraph and telephone apparatus.

Development of Industries.

The importation of sugar has decreased enormously, the manufacture of sugar having become one of the industries of Servia. The same remark applies to a limited extent to beer, wheat, flour, straw and felt hats, and cotton and woollen manufactures. The imports of machines and tools for the purposes of native industry increases from year to year with the development of the existing and the creation of new factories in various branches. Servia remains nevertheless an agricultural country, its chief products being wheat, maize, and other cereals, fruits, pigs, sheep, goats, and cattle.

The insufficiency of capital, the dearness of money (10 to 12 per cent. not being unusual), and the lack of skilled labour are the hindrances to a more rapid extension of the factories and manufactured products, and bad roads and insufficient railway communications have hitherto prevented the development of the mining industry. There is an abundance of mineral ore, such as copper, lead-quartz, antimony, etc., but only the copper mines have been successfully worked up to the present.

Openings for Business.

TRADE COMPETITION.

Foreign Sample Exhibits.

We have received from a reader the following communication concerning the suggestion outlined last week in these columns, to the effect that sample exhibits of foreign manufactured articles should be organised in the leading British industrial circles. The object is to enable British manufacturers to study those articles which compete successfully with ours—in the Near East, for instance.

"But will," writes our correspondent, "a change only in the construction or design of an article help competition? It may to a certain extent, because it will show that the foreign manufacturer studied the needs and tastes of the buyers, the conditions under which the article was to be used, and the climatic and financial conditions of the countries in question. Unfortunately, very few British manufacturers believe that a slight relaxation in their cast-iron rules of construction, especially in the case of machinery or tools, would make a difference in the sale abroad.

"The foreign manufacturer makes his articles to suit the country, and then makes his terms to suit the individual buyer. He is not fond of taking risks, but he has methods of investigation in order to satisfy himself that he is safe. As long as he sees prospects of his money coming in at a reasonable date he is open to a deal. He competes with the British manufacturer in British colonies, for he helps the colonist, i.e., by selling agricultural machinery on the instalment plan. Very few British firms have done this, and never voluntarily.

"It is with 'methods' in doing business that the foreign manufacturer and merchant competes with the British, and unless the latter changes his antiquated methods, the former will continue to progress at the Briton's expense. The collection and exhibition of foreign samples will not show the 'methods' that the makers adopt for increasing their sales abroad."

BULGARIAN OPPORTUNITIES.

Mr. H. Santi, the French Consul at Philippopolis, referring to opportunities for French trade in Bulgaria, says that a large number of articles consumed in Bulgaria are of foreign origin, but French merchants and manufacturers ought to compete. So far as alimentary products are concerned, sugar ought to receive their attention; in building construction, hydraulic lime and cement; in metals, iron, corrugated iron, plated metal, wire netting, joists, rails for railways, ironwork for doors and windows, nails, zinc, cast ironwork; in textile material and products, worsted, woollen goods, cotton thread of all kinds, catgut, gauze, lawn, muslin, calico, linen; in rolling material for railroads; locomotives, wagons; in agricultural machinery, thrashing machines, mowing machines, ploughs.

As regards hydraulic lime and French cements, the volume of our trade in these goods has been somewhat insignificant. The building industry is, however, very prosperous in the principal towns of the kingdom, and the construction material used comes in fairly large quantities from abroad. Locomotives and portable steam engines are principally supplied by Germany.

SUDAN DEVELOPMENT.

British Capital and Enterprise.

A correspondent in the Sudan writes:—An Englishman visiting the Sudan is struck by the absence not only of British traders, but also of British merchants and agents. He wonders why British capital and enterprise have not yet approached the Sudan, which is a country owing its development to British efforts. Within the past ten years imports and exports have increased in the most hopeful way, and yet there is only one British trading firm in Khartum, and one British shipping firm in Port Sudan—with the exception of one or two experimental plantation syndicates near Atbara and Khartum and a mining company at Nabardi. And this in a country where exports now exceed £1,500,000 per annum!

The remarkable progress of the Sudan is due to the fertility of the soil and to the development of the railways. Existing irrigation works are practically nil, though it is openly rumoured that in November an irrigation project is to be begun on a big scale, and that it will take ten years to be completed. Cultivation will thus receive a new impulse, and exports will increase even more rapidly than within the past few years.

No country has ever developed so quickly as the Sudan, nor has it presented more confident and promising results. The absence, therefore, of British capital and enterprise is not only inexplicable to every commercial man, but is also causing some annoyance to the Sudan Government, which is practically British, and which realises that it is spending money and time for the benefit and prosperity of foreigners alone. In fact, the trade is exclusively in the hands of foreign firms. Last year's produce, for instance, was purchased and exported by (approximately) twelve German firms, ten Greek, fifteen Syrian, and ten of other nationalities.

In Eritrea, the Italian colony, 80 per cent. of the working capital is Italian, and only a small portion of that country's trade is in foreign hands. The same happens in German East Africa, which is run by German capital, and where the totality of business is carried on by German companies.

BAGHDAD DRUG TRADE.

The total annual imports of drugs, chemical and pharmaceutical products into Baghdad amount to 800,000 frs., of which France's share is 300,000 frs., that of Germany 370,000 frs., and that of Great Britain 30,000 frs., says the French Consul at Baghdad.

France's imports consist principally of chemical products, such as sulphur, mercury, tartaric acid, etc. Twelve years ago she supplied the greater part of the pharmaceutical products, but the reduction in prices and greater facilities accorded for payment (three months after acceptance on production of documents) have enabled foreign houses to secure a foothold. The merchants interested declare that, as regards quality, French products have an indisputable value; but they are also of opinion that the economical situation compels the people to prefer inexpensive products.

The prices quoted include cost, freight, and insurance Basrah and even Baghdad, payment in three months, with a discount of 3 per cent. on all products with the exception of foreign specialities.

TENDERS INVITED.

EGYPT.

Wrought-iron or Steel Pale Fencing.—Tenders are invited by the Egyptian State Railways and Telegraphs Administration for the supply and delivery of 30,000 metres of wrought-iron or steel pale fencing. Tenders to be enclosed in two covers, the inner marked, "Tender for the supply of fencing," and the outer one addressed to the General Manager, Egyptian State Railways and Telegraphs, Cairo. Tenderers must also submit to the Chief Engineer (Way and Works), Egyptian State Railways, Cairo, a sample panel of the fencing they wish to supply. A deposit of 5 per cent. of the amount of the offer is required with each tender. Domicile (legal) in Egypt is necessary. Specifications with form of tender may be obtained, price 4s. each, from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, S.W. Date, July 29 (10 a.m.).

Supply of Covers.—Tenders will be received at the Economat Central of the Ministry of Finance for the supply of covers (Mahfazas) (*a*) in thin cardboard, (*b*) in cardboard (linen-covered). Persons wishing to tender should apply to the Economat Central at the Ministry of Finance in order to consult the conditions and specification of the supply. Date, July 6 (noon).

Supply of Photographic Material.—Tenders will be received by the Under-Secretary of State, Ministry of Interior, Cairo, for the supply of photographic material required for one year, commencing on July 15, 1912, and ending on July 14, 1913. Conditions of tender can be obtained on application to the Personnel and Equipment Department (Nizam and Ghafir Office), Ministry of Interior, Cairo. Tenders must be submitted on the printed form provided for the purpose, with a covering letter on stamped paper of 30 milliemes, and should be addressed to the Under-Secretary of State, Ministry of Interior, Cairo, enclosed in sealed envelopes, marked "Tender for the supply of photographic material." Date, July 13 (noon).

Supply for Material, Clothing, etc.—Tenders invited at the Central Administration, Department of Public Health, Cairo, for the supply of material, clothing, and various articles necessary for the Central Stores during the year 1913. Forms of tender and samples from the Director of Stores, Central Administration. Tenders (on special forms issued gratis by the Department of Public Health and accompanied by a stamped paper of 30 milliemes) should be addressed to the Director-General, Department of Public Health, Cairo, and marked in left-hand corner, "Tender for material, clothing, etc." Date, Sept. 15.

MALTA.

Mail Service between Malta and Syracuse.—Tenders invited by the Government of Malta for the conveyance of mails between Malta and Syracuse for a period of six years from August 19, 1913. The contract will provide for a daily voyage each way at a speed of not less than 11 knots per hour. Further particulars and a copy of the proposed contract may be obtained by British firms from the office of the Crown Agents for the Colonies, Whitehall Gardens, London, S.W. Tenders will be received at the office of the Receiver-General and Director of Contracts, Malta. Date, December 5.

With Near Eastern markets (says the "Manchester Guardian") the financial routine is disturbed owing to the long delays in getting goods bleached. When goods are kept a couple of months beyond the normal time it becomes a serious matter to finance them.

Engineering Notes.

Water Power in Egypt.

Referring to the announcement made by THE NEAR EAST, that the Egyptian Government are contemplating the use of two of the Assouan falls for working a nitrate factory, the *Nouvelles Egyptiennes* says :—

"It has not been possible so far to induce the Government to seriously study the question of water power, and yet there are few countries where it would be of more interest; Europe has only just begun the utilisation of this free force, and yet it is to be found all over the Continent already, and in places very little removed from one another. It is for this reason that falls have not yet been much used by big concerns, except under exceptionally favourable circumstances. In Germany, France, Switzerland, Italy, and Austria factories, are to be found worked solely by water power. The Americans have deigned to use smaller falls than those of Niagara. But at the side of big concerns such as these, there are also small crafts, carpentering, sawing, etc., which have found means of using all the streams and rivulets, without falls, without cascades, and almost without expense.

"Can we not do the same in Egypt?" asks the *Nouvelles Egyptiennes*, plaintively, in conclusion.

Baghdad Railway.

Referring to the Baghdad Railway, the commercial correspondent of the *Financier* says that "it is curious to observe how the route follows that of the great caravans that served the Syrians and Phœnicians, bringing to Egypt, Greece and the countries on the Mediterranean shore the productions of the Middle and Far East, till the Cape route was discovered and delivered merchants from the monopolistic exactions of the masters of the land routes, to be neutralised, in its turn, by the Suez Canal. Now the old route is to enjoy a fresh popularity.

The Baghdad Railway may be said to have been begun when the Turkish Government, in 1871-1873, made the Haidar Pasha-Ismid Railway 92 kilometres long, following plans drawn up by a German engineer named Pressel. It constituted the bait to the now ever-present Baghdad line, the head of which is at Haidar Pasha, on the Asiatic shore opposite Constantinople.

Egypt-Tripoli Railway.

Of late the rumour that the Govrenment intended to take over the Mariout line from the Khedive has been again revived, and it has been announced that this Highness would receive some valuable estates in exchange. As this rumour has not been denied, it is probable that it has some foundation. The Mariout Railway has grown considerably in importance since the war began, and, owing to the entirely new conditions that have arisen across the border, there is no doubt that it will be advisable for the Government to own the whole line and push it on to the frontier. Meanwhile the Italians have begun at the other side, and they have put in hand a railway enterprise which, in the not very distant future, should have a great bearing on the evolution of Northern Africa. Almost on the last day of last year they gave instructions to the Administration of the State Railways to proceed with the laying of a short 75 cm. gauge line for strategical purposes in Tripoli, and in a week steamers were leaving Italy carrying the necessary material for the purpose. No sooner had this arrived at its destination than it was decided that the gauge should be increased to 95 cm., and that commercial possibilities should be considered as well as immediate strategical requirements. We hope in an early issue to give some full particulars of this railway, which is destined eventually not only to penetrate the interior, but to link Egypt with Tunis, and thus complete a coast-line all along the north of Africa from Egypt to Morocco. The difficulties experienced by the Italians in disembarking their railway material has necessitated drastic improvements in the harbour at Tripoli, and already the advent of the Italians has had the effect of transforming this territory, which but twelve months ago was little more than a relic of primitive barbarism, into a modern inlet for the trade of the world with Africa.

"Jutlandia."

The second Diesel liner, the sister of the "Selandia," has been built by Messrs. Barclay, Curle, and Company, and has run her trials on the Clyde. She is to do her voyages to the East at a speed of from 10½ to 11 knots. The builders estimate that in regular service the amount necessary will be about ten tons for each day of twenty-four hours' continuous running. The starting, stopping, reversing, and manœuvring tests were equally satisfactory, each operation having been performed in a time that could not be approached by an installation of steam engines. She is a vessel of 5,300 tons gross and 7,400 carrying capacity, 370 ft. in length b.p., 53 ft. in beam, and 30 ft. in moulded depth. Her engines work on the four-cycle principle, and each shaft is driven by eight cylinders with a diameter of 20.87 ins. and a stroke of 28.74 ins. The engines are started and reversed by means of compressed air at 300 lbs. pressure. In connection with the compressors, there are two sets of auxiliary oil engines, each having four cylinders, and developing 250 i.h.p. at 230 r.p.m. Each set includes an electric generator for providing current for working the other auxiliaries, and a two-stage air compressor designed to compress air up to 300 lbs. The air, stored in four reservoirs, is used at this pressure for starting and reversing the main engines and for other purposes.

NEW BULGARIAN LOAN.

Proposed Railway Lines.

(FROM OUR OWN CORRESPONDENT.)

SOFIA, June 22.

The loan negotiated by M. Theodoroff is to serve: (1) for the conversion of the old 6 per cent. loan, contracted at Vienna by the Lander Bank, of which a sum amounting to 85 millions has still to be paid; (2) it will serve for the construction of new railway lines and the opening of new ports on the Danube; these works to be finished within two years.

Two new branch lines from the main line, Sofia-Varna in Northern Bulgaria, have already been surveyed, namely, one from Rahovo to Tcherven-Breg, and another from Silistra to Shumla.

In Southern Bulgaria two new branch lines will be opened from the main line Sofia-Bourgas, namely, one from Philippopolis to Karlovo, and another from Yambol to Shumla.

The new ports on the Danube will be those of Silistra, Toutrakan, and Lom-Palanko.

The objects of the new loan are very satisfactory, because, for the first time, nothing will be spent on armaments, and the whole sum will be used for the development of the resources of the country. The conditions of the loan, as known at present, are: It will be repaid in fifty years, bearing an annual interest of 4½ per cent., the price of issue vacillating between 88-90. The loan will be submitted to the Sobranje which meets in October. The contracting banks have proposed an advance should the work begin before the meeting of the Sobranje. But the Bulgarian Government is not inclined to profit by this offer, because, according to the law, it is necessary that in the case of the construction of new railways and ports two months should elapse between the invitation of tenders and the final adjudication.

The official Bulgarian Telégraph Agency states that on June 14, 1912, the total of the consolidated Bulgarian debt amounted to 602,443,686 frs. For redemption and interest due in 1912 the Bulgarian Exchequer has already deposited in Paris and Vienna 12,276,886 frs., to be apportioned as follows:—4,464,235 frs. on account of payments on the 1892 Loan due in July; 3,169,530 frs. due in August on the 1907 Loan: 2,904,638 frs. due in September on the 1902 Loan; and 2,738,483 frs. due in November on the 1904 Loan. These anticipated payments have been rendered possible by the increased Treasury receipts brought about by last year's excellent crops and the general prosperous state of the country. The receipts for the first four months of 1912 amount to 48,387,807 frs., as against 41,387.807 frs. for the corresponding period in 1911.

The Zentral-Anzeiger fuer das oeffentliche Lieferungswesen (Vienna), writing on June 16, states that the Bulgarian Minister of Railways is making arrangements to apply for an extraordinary credit with the object of providing funds for the construction of two new harbours on the Danube at Tutrakan and at Lom.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondents.)

Alexandria. June 21.

Owing to the drought and famine which are prevalent in certain parts of Palestine, a large number of Syrian nomads have arrived in Egypt, by way of Sinai. They come to help cultivators in the harvesting of the wheat crop.

Owing to the lateness of the Nile flood, it will be impossible to sow maize before next autumn. It will therefore be necessary to import large quantities of maize for home consumption. As is well known, maize takes the place of wheat as the staple food of the Egyptian fellaheen.

Our Beyrout correspondent, writing under date of June 10 (delayed in transmission), reviews the Syrian crop outlook as follows:—

Although the outlook for the crop is, in general, not very satisfactory, yet, compared with last year's, the forthcoming crops promise some improvement. Owing to the absence of an official bureau of information, the forecasts cannot be considered absolutely reliable, but as a point has been made of drawing the information from the best sources—viz., merchants of authority, long experience, and high standing—the risk of error is minimised. As the conditions vary with each district it becomes more necessary than ever to treat each separately, and in so doing the principal port is taken as heading.

Jaffa.

The orange crop, by far the most important, is estimated to be about 40 per cent. more than last year. This will mean a crop of about a million and a-half boxes. Wheat, a poor average; beans, very poor; lupines, a small crop; dariseed and sesame seed, good average; wine and melons, a small crop. As to the barley crop of Gaza, it is estimated at about 15,000 to 20,000 tons—i.e., the half of a good crop. Last year it was about a quarter of a crop.

Beyrout.

This port represents the districts of Hauran (although Caifia will, through the Hedjaz railway, get a share of the exports), as well as those of Damascus and the Bekaa. The estimates for grain and cereals are: Barley, 15 to 20 per cent. more than last year's crop of 2,500 tons; wheat, 20 to 30 per cent. more (last year, 500 tons); dariseed, 15 to 20 per cent. more (last year, 1,000 tons); beans, 30 to 40 per cent more. The yield of wool is about 50 per cent. more than last year.

Tripoli.

The figures in the preceding paragraph apply to this port, which represents the districts of Homs and Hama, and, to a certain extent, that of Aleppo now that the new railway facilitates the transport of grain and cereals. Practically all the grain destined for exportation from the Aleppo, Homs, and Hama districts will pass through Tripoli, but a good portion of the wool will still continue to pass through Beyrout for various commercial reasons.

Lattakia.

The estimates for beans, the principal grain product, are about 25 per cent. less than last year—i.e., 1,500 against 2,000 tons. Jebleh and Banias may be exporting about the same quantity, so that the total quantity for Lattakia and district will be about 3,000 tons. Wheat, about 60 per cent less than last year—i.e., 1,200 to 1,500 tons against about 4,000 tons. Barley and oats, the same as last year, total about 1,800 to 2,000 tons. Jebleh and Banias may be exporting about 2,000 to 3,000 tons of wheat, barley, and oats. As regards dariseed, the forthcoming crop seems to be very promising. Chickpeas are good. Estimated crop, 2,800 to 3,000 tons against 1,500 tons last year. Jebleh and Banias are expected to export about 1,500 tons. As regards tobacco, the principal article of export of the Lattakia district, the crop is estimated at about 10,000 to 11,000 bales, against 14,000 to 15,000 bales last year.

Alexandretta.

This port only represents the immediate surroundings, as the further hinterland of Aleppo now pours its products into Tripoli and Beyrout. The crop in Alexandretta district proper is considered to be so poor that hardly any exports will take place. Swedish, which used to export fair quantities of grain, may be exporting little or next to nothing this year. The Ayas orange crop is, however, thought to be as good, if not better, than last year.

Mersina.

The estimates are:—For barley, about 60 to 70 per cent. less than last year; wheat, about the same; and oats, about 60 per cent. less. All these crops were last year below the average. A satisfactory feature, however, is that the sowings of cotton and sesame seed are about 50 per cent. over those of last year, and, given proper conditions, the crops should show a correspondingly larger result. The cotton crop may even reach 200,000 bales. Further particulars of estimated quantity are shortly expected.

Caiffa.

A report just to hand contains the following information:—Beans, very poor crop; estimated quantity available for export hardly 500 to 600 tons. Barley insignificant—barley sufficient for local needs. Wheat, about two-thirds that of last year. With suitable prices in Europe the exports may reach 8,000 to 10,000 tons. Dariseed promises a good yield; no reliable forecast as to quantity can be made before July. Sesame seed, medium crop, probably 4,000 to 5,000 tons available for exportation, and locust beans, about 6,000 to 7,000 tons.

The following additional reports have since been received from our Beyrout correspondent, under date of June 18:—

Tyre and Sidon.

The fruit crop is estimated at about 25 per cent. more than last year. About 400,000 cases of oranges and 200,000 cases of lemons are expected to be shipped this year.

Unfortunately cereal and grain crops are deficient:—Lentils, about 70 per cent. less in Sidon and 20 per cent. less in Tyre than last year; beans, 20 per cent. less; peas, fairly good, an increase of 25 per cent.; vetches and millets, very poor, a decrease of 80 per cent; lupines, about 30 per cent. less; wheat, 40 per cent. less; and barley, 20 per cent. decrease. The locust bean crop, which never exceeded a few hundred tons, will probably be better than last year.

Famagusta (Cyprus).

The estimates just to hand show the following crop increases and decreases for 1912, as compared with 1911, the figures in parenthesis representing last year's crop:—

Wheat, 10 per cent. increase (718,000 kilos).
Barley, 4 „ „ (673,000 „).
Locust beans, 40 per cent. increase (15,000 cantars).
Vetches, 20 per cent. increase (75,000 cantars).
Oats 7 per cent. decrease (115,000 cantars).
Linseed, 50 per cent. decrease (100 tons).
(Nine kilos are, roughly, one-quarter.)

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

Mitylene. June 15.

During the past week 537 barrels of oil, valued at £10,250, and 680 bags of soap, valued at £T1,500, were shipped to Salonika, Constantinople, Bulgaria, and Roumania.

Imports were restricted to 100 bags of sugar for Trieste, and 20 bags of coffee.

Jaffa. June 12.

The prices of sesame and wheat are maintained. Dari at PJ22½ the kilo shows a rise, and barley at PJ16½-17½ the kilo a corresponding drop.

The imports of flour during the week are 800 bags "Roumanian," and 500 bags "Marseilles."

Sesame stocks are estimated at 60 tons. Sales during the week were 37,000 kilos, with destination to the interior at 58 frs. the 100 kilos.

157,850 okes of dari were shipped, of which 77,000 were for Liverpool, and 80,850 okes for Hull.

Beyrout. June 18.

The market is slowly improving. Daily transactions in manufactured articles and colonial produce are taking place, and local produce for the Lebanon is coming in.

Imports have not, however, improved to any extent. Trade, in view of the political situation, continues to buy in small quantities.

The prices of coffee and manufactured articles are steadily rising, but that of sugar is falling. Wheat is stationary.

As regards cocoons, there is no tendency to propose deliveries for Europe until the general results of the season are known. Quotations for cocoons are 50-54 piastres the oke.

Damascus. June 8.

The cold has damaged the vines, and no hopes are entertained for a favourable output of raisins.

Reports of the new wool clip are favourable. Almonds and dried apricots are arriving, but owing to there being no demand in Europe, prices are low.

As regards the imports of Manchester goods, the market is still precarious, and arrivals are nil.

Constantinople. June 15.

Opium prices have risen perceptibly, owing to the drought, which threatens the new crop.

In mohairs there has been a decided activity during the past week; prices have nevertheless been the same as last year.

The sugar market is quiet, expecting a drop in prices.

CONSULAR REPORTS.

Damascus.

Frost, following on a mild winter, has done much damage to the apricot crop, and the yield is only about one-half of last year's. The better qualities of apricots, "Hamawi," "Beledi," and "Klabi" produced unusually fine, large, and succulent fruit, however, which to some extent makes up for the diminished supply.

Jaffa.

Liverpool's imports of oranges from Jaffa last season amounted to 638,904 cases (averaging 150 oranges per case), or two-thirds of the total exports from Jaffa. The local production is sufficiently elastic to stand an increased demand should occasion arise.

Braila.

The area of the autumn sowings in this district amounted to 152,151 acres, composed of 144,228 acres under wheat, 3,183 acres under rapeseed, 2,417 acres under rye, 1,211 acres under barley, and 1,112 acres under maize. All sowings, excepting rapeseed, are reported to be in good condition, and crop prospects are very favourable. Harvesting, however, will probably be ten or twelve days later than in previous years, owing to the lateness of the spring.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending June 14:—We have had a very active market this week with several buyers for the consuming markets operating in conjunction with speculators at 21s. to 22s. 9d. as to quality. Some 34 cases changed hands at 21s. for 10 per cent., 22s. for 11 per cent., and 22s. 9d. for 11¼ to 11½ per cent. Our sellers, however, are tenacious, and it is only the need of ready cash which induces them to sell out part of their stocks. The interior continues to report unfavourably regarding the crop, but as yet we cannot fix the estimate. The arrivals amount to 41 cases, against 4 at same date last year.

EGYPTIAN COTTON MARKET.

(From Our Own Correspondent.)

Alexandria, June 20.

Prices of cotton during the past week have made a considerable advance. This is due to the recovery in American and to speculative operations, as our crop has never had better prospects. Although the acreage will not be so large as last year's, the yield of the crop would appear to be higher. The "spot" market is very active in spite of the small amount of cotton which remains in the country. As for "futures," business has never been better and the tendency so decidedly bullish. Cotton seed, on the other hand, is weak.

Liverpool Report.

Messrs. Reynolds and Gibson telegraph :—"We have again experienced a week entirely devoid of interesting features, and that the market generally seems to be most disinterested. Cloth.—Near Eastern markets buy on a normal scale. Yarn.—Egyptian spinnings continue quiet, manufacturers being apparently already well supplied or possessing but little faith in the present level of prices being maintained. In bumble yarns for export the demand is quiet, and shippers doubtless prefer to await developments before entering into further engagements. Quiet markets have been experienced during the week for Egyptian spot cotton, and the business done has been on a limited scale. Quotations for all Egyptians show a decline of 8d. per lb. Estimated sales are 1,700 bales.

EGYPTIAN COTTON FIGURES.

For 42nd week, ending June 21.

Supplied by Reynolds and Gibson.

P.S. The above figures vary owing to transhipments, corrections in stock, cotton burnt, and Egyptian consumption.

The figures marked thus (?) are postulates.

N.B. We have raised our crop estimate to 7,300,000 cantars, as our previous estimate of 7½ million cantars had been practically reached.

A Syrian is experimenting with cotton on a large scale in Cyprus, and, with this object in view, has acquired a considerable acreage of land, and has brought over from Egypt fifty fellah families to cultivate it.

PRODUCE MARKETS.

London, June 27.

The markets continue to show little activity owing to the continuance of the strike. The successful efforts, however, of bringing goods up the river by lighter has helped to relieve somewhat the general position. Sugar is easier. Coffee steady. Currants, sultanas, figs, and other dried fruits are in better demand and firm. Seeds are quiet. Oils easy. Petroleum oil depressed.

Sugar.

The demand has been on a very limited scale owing to the labour troubles. Deliveries from the docks progress slowly, being attended with risk and loss of time. Beet sugar continues to decline. New crop is more freely offered on the favourable reports received. Closing prices are :—June, 11s. 7d.; July, 11s. 6½d.; August, 11s. 7½d.; September, 11s. 1½d.; October-December, 9s. 10½d. f.o.b. Hamburg. Refined sugar :—English Tate's No. 1 cubes spot, 22s.; July-August, 22s.; September-October, 21s. 9d. Foreign, refined :—Say's cubes prompt to July-September, 19s. 1½d. f.o.b. Paris. Dutch cubes, 17s. 6d. to 17s. 9d. f.o.b. Amsterdam. German and Austrian cubes, prompt, 17s. 4½d f.o.b. Hamburg.

Coffee.

Very small quantities were offered. Costa Rica, fine ordinary to good bold, sold at 79s. to 86s.; Mexican bold fair greenish, 81s.; East Indian small to bold, 77s. 6d. to 80s. The export trade is very small, being almost at a standstill through the labour trouble.

Currants.

A better demand is experienced, for Provincial bags sold at 25s. and quarter cases at 26s.; Amalias at 27s., with Gulf and Patras at 29s.; Vostizza, 31s., with choice at 35s. Siftings are neglected.

Sultanas.

Sultanas are in good request, but stocks are nearly exhausted. Smyrna fruit is very firm, with limited business at prices for common, 48s. to 50s.; fair, 52s. to 54s.; good, 55s. to 56s.; fine, 58s. to 60s.; choice, 62s. to 64s.; old, 35s. to 45s. Persian and Samarkand sultanas move at 40s. to 42s.; small bags, 45s. to 46s.

Figs.

Bags and skeleton cases are unchanged in value with very few transactions in bags. Naturals, at 19s. to 25s.; good layers are quoted 38s. to 42s; common layers, 32s. to 35s.

Dates.

The only dates offered are Tafilat at 28s. to 40s. Persians are quoted, Sieh, 12s. to 30s.; Khadrowie, 17s. 6d.; Hallowie, 18s. 6d. Egyptian none.

Seeds.

Canary seed has been in active demand, and prices are in sellers' favour. Turkish, 52s. to 55s. per quarter; Spanish, 80s. to 90s.; linseed is in quiet demand at rather easier rates; Russian 72s. to 74s. per quarter; Calcutta, 68s. to 69s. Cotton seed is weak, spot, £8 12s. 6d. Locust beans, £5 17s. 6d. for old crop.

Oils.

Linseed oil : The demand is very quiet indeed at easier rates. Spot pipes, £43 to £43 10s.; barrels, £44 5s.; June, £41 5s.; July-August, £39. Cotton oil is dull and lower, ordinary pale refined, spot, £27 10s. to £29. Olive oil is firm at recent values.

Various.

Egyptian onions, 6s. 6d. to 7s. 6d. per bag. Split lentils, 11s. to 13s. per 100 lbs. Roumanian eggs, blues, 7s. to 7s. 6d. per 120; reds, 6s. 3d. to 6s. 6d.

The second consignment of 5,000 ardebs of Indian dura has arrived at Port Sudan, making a total of 10,000 ardebs. As the price of dura still continues high the Army is importing a further 5,000 ardebs during June, the cost of which delivered in Khartoum is far below the present market rate. The army is also importing all its barley and most of its wheat requirements from India.

NEWS FROM ALL SOURCES.

A start is being made to erect the new offices of the Sudan Government Finance Department at the War Office Buildings, Khartum. It is hoped to transfer the whole of the Cairo staff of the Finance Department to Khartum in the course of next year.

Messrs. Joly, Alevra and Co., shipbrokers, have been transformed into a limited liability company with a capital of £4,000 in £1 shares.

The centre of unrest in the South of Persia has shifted from Kerman to Yezd, which is now threatened by Arab tribes.

It is now considered as nearly certain that the Customs station at Khartum North above the bridge will be closed in the coming autumn, and that all works will be carried on at the Mogren Quays. This will no doubt be a great advantage both to Khartum and Omdurman merchants. Indeed (writes a Khartum contemporary) since the railway terminus left Khartum North, there is no advantage in keeping the Customs station there.

The Italian *Gazzetta Ufficiale* of June 14 contains a notice to the effect that a decree has been promulgated withdrawing the Turkish money in circulation in Tripoli and Cyrenaica, and making provision for the establishment of a new monetary system on a proper basis.

Ghazi Mukhtar Pasha, for many years Ottoman Commissioner at Cairo, and his son, General Mahmoud Mukhtar Pasha, have proposed to make the Ottoman Army a present of three aeroplanes.

The advisory committee of the Ministry of Marine at Athens has recommended that nine torpedo boats should be ordered from the German Vulkan Company.

On and after Monday, June 24, the offices of the Messageries Maritimes will be transferred to Dixon House, 72-75, Fenchurch Street, E.C. Telephone number, Avenue 5571.

A Tabriz telegram to St. Petersburg announces that a German joint-stock commercial company, with a capital of 38,000 tomans, in thousand-toman shares, will shortly be formed. Of the 38 shares issued, 23 have been taken up by Persians.

A large quantity of coffee and beeswax is expected to arrive shortly at Khartum from Gambela. There has been a scarcity of coffee lately on the local market, and prices have consequently gone up.

We are informed that the business of C. Whittall and Co., Smyrna, and J. W. Whittall and Co., Constantinople, hitherto carried on by J. C. Harter and Co., Manchester, has been taken over by Mr. J. Whittall and Mr. H. A. Whittall under the style of J. and H. Whittall and Co.

The Director-General of Turkish Customs has issued a notification in which it is requested that shippers of bale goods for Turkey should mark their bales with the gross and net weights in kilograms.

A German company has acquired land in Tabriz and is beginning the erection of a carpet factory. Machinery is being bought in Germany and wool in Choi; special workmen are also being engaged.

At a recent meeting of the merchants and residents of Atbara, it was decided to proceed immediately with the erection of a new mosque. £E85 were collected on the spot for this purpose.

Oil Topics.

Hungarian Petroleum Development.

A Buda-Pesth telegram to the *Kolnische Zeitung* announces that the Hungarian Government, according to a statement made by the Minister of Finance in the Lower House, has concluded a contract with the British and Foreign General Securities and Investment Trust, Limited, which aims at the development of the Hungarian Carpathian Petroleum Company. The capital of the latter is to be increased from 2,000,000 crowns to 5,500,000 crowns, and 3,000,000 crowns of the augmentation is to be provided by the trust and 500,000 crowns by the Hungarian State. The company will then take over all State prospecting and mining districts in the Iza valley, on the north-eastern frontier of Hungary. The Government hopes that petroleum sources will be found in this district of equal abundance to those existing in the adjoining part of Galicia.

Maikop Pipe Line.

The Maikop Pipe Line and Transport Company has issued its report for its first financial period of eight and a-half months. The figures show that £15,896 profit has been made. After writing off half the preliminary expenses, income-tax, and commission payable on profit, £11,122 is carried forward. From April 14 to December 31 6,144,276 poods were delivered to the Shirvansky pumping station, but during the first five months of the present year over 4,000,000 poods have been delivered, or about 12 per cent. increase. The rates for pumping vary with the price of oil, and they are, therefore, now higher than they were last year. With regard to the Tuapse traffic, pumping on this line was commenced on December 21, 1911, and the port was formerly inaugurated as an oil port at the end of April of this year. The board have made an arrangement with its competitor, the Maikop Mutual Oil Transport Company, with regard to the Tuapse traffic, and a joint management committee has been appointed to control both pipe lines. The arrangement appears to be a favourable one for the Maikop pipe line. The company has invested 24,000 in the Maikop refineries, which commenced working on September 25, 1911, and the directors believe that these refineries will show a substantial profit, and that a dividend will soon be declared. Including the profit on the refinery, the revenue for the first five months of 1912 is estimated at £40,000. This should give a gross revenue of £96,000 a year. Presuming that the expenses amount to £20,000—and they are hardly likely to be less, the income for the year would be £76,000, or, including the amount carried forward, £87,000. £28,400 must be deducted for the service of the debentures, and this will leave a balance of about £58,000 for dividends. Therefore, if all goes well, the company might reasonably expect to earn 15 per cent. for the current year and still be able to write off the amount still outstanding for preliminary expenses.

Royal Dutch.

The Royal Dutch report does not tell us anything particularly new, but we are told that the Ural Caspian has 10,000 tons of oil ready to be sent down to the sea, and with regard to the Mazout company, which Royal Dutch and Shell purchased from the Rothschilds, we are given some interesting details. The Mazout Company has a large number of installations all over Russia, does the distributing trade for the oil produced by the Caspian and Black Sea Company, and has a total storage capacity of 800,000 tons of oil. In addition to this it has a fleet of ten steamers and 200 lighters, representing a total tonnage of 500,000 tons. In view of the fact that a good many people think that the Caspian and Black Sea lands at Baku, which last year turned out 430,000 tons of crude oil, are falling away in production, it is interesting to note that the Royal Dutch declared that the production for the first four months of 1911 was no less than 192,000 tons. The total production of the Batavian Petroleum Company reached 1,344,060 tons, and the Dordtsche Petroleum Company reached 170,339 tons. The Royal Dutch is also working some land at Grosny in company with the Standard Russe, and here the production was 373,567 tons. The total production of the various enterprises affiliated to the Royal Dutch and Shell combine was 2,546,000, and if the Rothschild production is added we get a total of 3,000,000 tons.

Roumanian Refineries.

The *Moniteur de Pétrole Roumain* gives the statistics in its last issue of the Roumanian refineries for the month of April. The Steaua Romana heads the list with 37,560 tons, of which 5,665 tons were benzine. The Romana Americana is the next largest with 20,763 tons. But its output of light oils is very much less than that of any of its larger competitors, for it only produced last year 2,792 tons of benzine. The Aurora is another large Roumanian refinery, refining nearly 20,000 tons of oil, and the Vega comes fourth with 17,400 tons, but it turns out nearly 5,000 tons of benzine. The Astra Romana only handled 11,190 tons of crude, but it managed to produce 3,748 tons of benzine. Altogether, there are 59 refineries working in Roumania. But more than half are very small concerns, some of them handling only four tons of oil in a month, and the average being about 30 tons. Only seven refineries handled over 10,000 tons.

Galician Oil Lands.—A Warning.

When the Galician Oil Lands and Royalties Trust made its appearance, we thought it necessary to warn our readers against this company, and we find it imperative to again write a few words for a firm of outside brokers are distributing all kinds of literature with the object of selling the 8 per cent. participating preference shares. Applicants for £100 worth of these shares get 10 per cent. discount for cash, and receive 20 5 per cent. income certificates, whatever they may be. But if they do not wish to pay cash, they can buy the shares on a 2s. deposit and 2s. a week payment. To a perfect stranger they send a typewritten letter stating that they do not think that he realises that he is the holder of a 5 per cent. income certificate in the Galician Oil Lands. As the recipient of the letter had certainly not realised this, he must have been amused to read further on, in the same letter, that it was "not simply an advertising dodge." The future success of this precious oil company is stated to be "founded upon absolute certainties." Every kind of inducement is held out to people to purchase shares in this absurd company. One proposition is that the reader should buy from £5 up to £250 worth of the participating preference shares, and pay by instalments.

Another proposition is to sell two only of the preference shares, payable 2s. down and the balance in twenty weekly instalments. This attractive proposition entitles the person who accepts to "free registration of the income certificate." We can safely say that in the course of a long experience we have never read such extraordinary literature as that being distributed broadcast by this firm.

A pamphlet with maps and illustrations is also sent out which informs its readers that it is only necessary to venture some moderate amount of £5 (or £250), when you will receive handsome profits. The pamphlet says: "You will have discovered a new source of permanent revenue, and found a means of obtaining luxuries, and you will exactly follow in the footsteps of those great giants in the oil world, Messrs. Rockefeller and Rothschild, and possessed of their fixity of purpose, their readiness to seize any and every favourable opportunity, and their spirit of determination, there could be no reason why success in proportion to the effort may not be yours." This immense sentence, even if it will not draw money from the foolish, will certainly amuse everybody. The pamphlet consists of sixteen pages, and there is a laugh on every page.

Ural Caspians.

Ural Caspians have been a much better market during the last few days, and it is interesting to note that developments are proceeding along at least one of the oil strata which is supposed to be fifty miles in length. It is estimated that by next spring the company will have between twenty and thirty producing wells. The Ural Caspian is building a pipe-line from Doss Sar to the coast, and the pipe-line of Messrs. Nobels will be finished by the middle of August. Nobels and the Ural Caspian have arranged to work together, and the Ural use the line of Messrs. Nobels, and the Russian firm will have the use of some of the Ural tanks. The production for the coming year is expected to be at the rate of 2,000 tons per annum; the oil contains a high percentage of benzine, and will, therefore, be refined with great profit to the company. Development work is proceeding at Makat, Gabat, and Eskine. Sir Marcus Samuel informed us the company has about 10,000 tons of oil in its reservoirs, and it expects to get about 50s. a ton. There is no doubt that Ural Caspian is going to be a big oil proposition.

NEW COMPANIES.

Oilfields Finance Corporation.

Under the above title a company has been registered, with a capital of £600,000, in £1 shares. The objects of the company are stated to be: To carry on the business of bankers, financiers, capitalists, company promoters, underwriters, stock and share dealers, dealers in land and stock, importers, exporters, shipping agents or shipowners, mercantile and financial agents, etc.; to acquire and hold lands, mines, quarries, oil wells, etc., in any part of the world. First directors (not less than two nor more than 10) are Messrs. R. Barnett, W. W. Rutherford, M.P., P. C. Quilter, A. Rutherford, J. Harmood-Banner, M.P., and J. S. Smith-Winby. Qualification (except first directors), 1,000 shares. Remuneration, £300 each per annum (chairman £450) and 10 per cent. of the profits available for distribution in any year when ten per cent. dividend is paid, divisible (free of income-tax). The registered office is City House, 48, Cannon Street, E.C.

Societe Belgo-Franco-Roumaine de Petroles.

Under the above title a company has been registered in Brussels with a share capital of 1,250,000 frs. The objects are stated to be to acquire several oil concessions in Roumania at Salcia, Prahova, Bustinari, and Gropi.

Sir Campbell K. Finlay, who has been associated with the management of the Burmah Oil Company, has joined the board of the Anglo-Persian Oil Company.

Shipping Intelligence.

SERBO-RUSSIAN TRADE RELATIONS.

(From Our Own Correspondent.)

Odessa, June 23.

With the object of improving and extending the sea-borne trade between Servia and Russia, that is between Odessa and the Servian port of Raduevatz, on the Danube, there arrived here the other day a Servian delegation consisting of M. Miloschevich, director of the Servian spirit régie, M. Marinkovich, a prominent member of the Skuptschina, M. Kukich, director of Servian shipping affairs, and M. Mamuloff, secretary to the Russian Legation at Belgrade. The delegates were received by several of the local authorities, and by Prince Amatuni, representing the Russian Minister of Trade and Industry. Several conferences have been held between the Servian delegates and the local Bourse Committee, at which the director of the Black Sea and Danube Steamship Company was also present. An official announcement of the decisions arrived at by the conference has not yet been made, but I am privately informed that one of the chief proposals for attaining the object in view is to obtain an increased subsidy for the shipping company just mentioned in order to permit of a lower rate of freight between Odessa and Raduevatz, and also a privileged railway tariff for the carriage hither from the interior Russian centres of those commodities which Servia desires to import, the same advantages to be conceded to Servian exports to Russia.

It is doubtful, however, whether these efforts to expand the trade between Russia and Servia will lead to any practical result in face of the keen and unflagging competition of the Austrians on the Servian markets. Similar endeavours have previously been made, and defeated by the readiness of the Austrians to make temporary sacrifices to maintain their monopoly of the great bulk of the foreign trade with Servia.

MEDITERRANEAN MAILS.

Austro-German Competition.

A paragraph in the *Neue Freie Presse*, of Vienna, states that the Norddeutscher Lloyd is about to initiate a new service of steamers in the Mediterranean which will seriously affect the trade of the Austrian Lloyd, which has hitherto been supreme in the Eastern Mediterranean. The steamers of the latter line running between Trieste and Alexandria have hitherto called at Venice on the return journey from Egypt, but owing to a new arrangement with the Government with regard to the train connection between Trieste and the interior of Austria, it has been decided to omit the call at the Italian port. The conclusion of this arrangement was, however, according to the Viennese journal, immediately followed by the announcement that the Norddeutscher Lloyd had decided to establish a new service between Venice and Alexandria, and to abolish the service from Genoa. It is feared that the line from Venice will draw away a number of passengers from the Austrian Lloyd, owing to the superior attractions of Venice as a port of departure as compared with Trieste; but what steps, if any, the latter firm will be able to take to meet the new situation remains to be seen.

PASSENGER LIST.

Sailed from Marseilles, per Messageries Maritimes s.s. "Ville de la Ciotat," June 20, for Alexandria:—Mme. de Treville, M. Woller, M. Gabriel Saad, M. and Mme. Helemy and child, Miss Elenan, M. and Mme Moussa Naghi Bey and child, Père Yves, M. Desprats, Mme. Desprats, M. Camel Medewar, M. Trabinger, M. Apostolidies, Mr. Simpson, Mme. Villaret. For Port Said:—M. N. Assy. For Jaffa:—Mrs. MacAllister. For Beyrout:—M. Tarbouriech, M. Ali Sidoni, M. Lian Zarour.

STEAMSHIP MOVEMENTS.

Moss Line.

"Busiris."—Left Alexandria for Hull June 22. "Esneh."—Constantinople for Liverpool. Passed Gibraltar June 22. "Karnak."—At Alexandria June 20. "Khephren."—At Port Sudan June 14. "Menephtah."—Left Naples for Sfax June 10. "Menes."—Liverpool for Alexandria. Left Gibraltar June 22. "Merve."—At Liverpool. "Moeris."—At Odessa June 16. "Seti."—Left Alexandria for Liverpool June 9. "Siptah."—At Liverpool. The s.s. "Siptah," for Gibraltar, Malta, Syra, Smyrna, Constantinople, Odessa, Samsoun, Trebizonde, Batoum and Poti will close for cargo at Liverpool on June 29.

Cunard Line.

"Brescia."—Left Smyrna for Pera June 19. "Caria."—At Pera for Liverpool June 16. "Ivernia."—Naples for New York. Left Gibraltar June 16. "Lycia."—At Poti for Liverpool June 18. "Pannonia."—Left New York for Mediterranean June 20. "Pavia."—Poti for Manchester. Passed Pera June 17. "Saxonia."—Left Gibraltar for Genoa June 23. "Thracia."—Left Naples for Bari June 18. "Tyria."—At Manchester for Pera.

The s.s. "Lycia," for Gibraltar, Malta, Corfu, Patras, Syra, Smyrna, Constantinople, Odessa, Batoum, Trebizonde, Samsoun, and Poti will close for cargo at Liverpool on July 20.

Prince Line.

"Carib Prince."—Left Eastham for Alexandria June 19. "Castillian Prince."—Left London for Alexandria June 23. Corsican Prince."—Left Alexandria for Syrian Coast June 4. "Creole Prince."—At Alexandria June 19. "Italian Prince."—On Syrian Coast June 19. "Merchant Prince."—At Alexandria June 24. "Trojan Prince."—At Alexandria June 11.

The s.s. "Stuart Prince," for Egypt and Syria, calling at Tunis and Malta, will close for cargo at Liverpool on July 4, and at Manchester at 5 p.m. on the following day.

Anchor Line.

"Algeria."—Calcutta for Genoa. Left Port Said June 21. "Anchoria."—Calcutta for London June 18. "Assyria."—At London. "Bavaria."—At Calcutta. "Circassia."—Liverpool for Bombay. Passed Perim June 17. "Scindia."—Liverpool for Bombay. Left Gibraltar June 19.

The s.s. "Castalia," for Bombay direct (via Gibraltar and Suez Canal) will leave Birkenhead on June 29.

Johnston Line.

"Arranmore."—At Varna June 21. "Barnesmore."—Liverpool for Piræus. Passed Gibraltar June 20. "Barrowmore."—At Galatz June 17. "Blairmore."—Sulina for Antwerp. Passed Pera June 11. "Cranmore."—At Galatz June 1. "Dromore."—At At Galatz June 2. "Edenmore."—At Galatz June 13. "Fenmore."—At Galatz June 4. "Foylemore."—At Swansea. "Gorsemore."—At Antwerp June 9. "Heathmore."—At Liverpool. "Incemore."—At Galatz June 1.

The s.s "Jessmore," for Piræus, Volo, Salonica, Bourgas, Varna, Trebizonde, Samsoun, Constanta, Sulina, Galatz and Braila, will close for cargo on June 29.

Ellerman Line.

"Andalusian."—At Liverpool. "Arabian."—At Poti June 15. "Assiout."—Left Pera for Poti June 20. "Bavarian."—Left Liverpool for Alexandria June 23. "Bosnian."—Alexandria for Liverpool. Left Malta June 20. "Bulgarian."—Left Smyrna for Liverpool June 22. "Venetian."—Liverpool for Alexandria. Left Gibraltar June 21.

The s.s. "City of Khios," for Gibraltar, Malta, Syra, Smyrna and Constantinople, taking cargo for Odessa and Batoum, will close for cargo at Liverpool on July 13.

P. & O. Steam Navigation.

"Arcadia."—Shangai for Bombay. Left Hong Kong June 22. "Banca."—Left Kobe for Bombay June 4. "Caledonia."—Marseilles for Bombay. Left Aden June 23. "Delta."—At Bombay June 23. "Egypt."—London for Bombay. At Gibraltar June 24. "India."—Left Bombay for Aden June 22. "Mooltan."—Bombay for London. Left Aden June 21. "Nile."—At Calcutta June 23. "Nyanza."—Calcutta for London. At Bombay June 20. "Salsette."—At Bombay June 21. "Sicilia."—London for Calcutta. Left Suez June 21. "Sunda."—Calcutta for London. Left Suez June 24.

The s.s. "Persia," for Bombay and Karachi (via Suez) will leave London on July 5 and Marseilles on July 12.

British India Steam Navigation.

"Aronda."—Greenock for Calcutta. Left Suez May 30. "Barala."—Greenock for Calcutta. Left Suez April 5. "Chanda."—At Bombay June 18. "Chyebassa."—London for Bombay. Left Port Said June 17. "Chupra."—Bombay for Antwerp. Left Plymouth June 24. "Colaba."—Calcutta for London. Left Madras June 21. "Jelunga."—London for Calcutta. Left Port Said June 19.

The s.s. "Chupra," for Karachi, Bombay, and Persian Gulf, will sail from London on July 7.

Hall Line.

"Adalia."—At Shields. "Anatolia."—At Bushire June 22. "City of Bombay."—At Sourabaya for Bombay June 7. "City of Lahore."—Left Bombay for Karachi June 23. "City of Naples."—Karatsu for Hull. Passed Perim June 23. "Locksley Hall."—Karachi for Liverpool. Left Port Said June 15. "Persian."—At Karachi June 18. "Trafford Hall."—Karachi for Liverpool. Left Port Said June 22. "Worsley Hall."—Left Mombasa for Port Sudan June 22.

The s.s. "City of Poona," for Bombay, will close for cargo at Birkenhead on June 9.

City Line.

"City of Birmingham."—Liverpool for Calcutta. Left Suez June 21. "City of Calcutta."—At Calcutta June 7. "City of Delhi."—Karachi for Birkenhead. Passed Gibraltar June 23. "City of Edinburgh."—Colombo for Calcutta. Passed Perim June 25. "City of London."—Left Liverpool for Calcutta June 21. "City of Madrid."—Left Karachi for Liverpool June 20. "City of Manchester."—Liverpool for Karachi. Left Port Said June 24. "City of Paris."—At Bombay June 8. "City of York."—Liverpool for Bombay. Passed Gibraltar June 25.

The s.s. "City of Glasgow," for Bombay and Karachi, will close for cargo at Birkenhead on July 26.

Strick Line.

"Arbistan."—Left London for Calcutta June 21. "Armanistan."—At Middlesbro'. "Avristan."—At Karachi June 17. "Baluchistan."—Left Muscat for Bushire June 20. "Bardistan."—Left Bombay for Antwerp June 24 "Boukadra."—At Marseilles June 22. "Camerata."—At Rotterdam June 20. "Djerissa."—Left Bunderabbas for Suez June 11. "Serbistan."—Bombay for Dunkirk. Left Port Said June 19. "Tabaristan."—At Karachi June 17. "Turkistan."—At Ellesmere Port.

The s.s. "Adalia," for the Persian Gulf, closed for cargo in London on the 27th inst.

Westcott and Laurance.

"Asturian."—At London. "Barcelona."—At Alexandria June 23. "Belgravian."—At Sulina June 24. "Bosnian."—Left Alexandria for Malta June 15. "Egyptian."—London for Odessa. Passed Gibraltar June 22. "Favonian."—At Poti June 21. "Joshua Nicholson."—At Pera June 22.

Papayanni Line.

"Alexandria."—Left Liverpool for Gibraltar June 20. "Britannia."—Due leave Alexandria for Smyrna June 22. "City of Cambridge."—Liverpool for Pera. Left Oran June 20. "City of Oxford."—At Alexandria June 4.

The s.s. "Austrian," for Algiers, Malta, Corfu, Patras, Syra, Smyrna, Constantinople, and Odessa will close for cargo at Liverpool and Manchester on July 6.

Stock and Share Markets.

Bank Rate 3 per cent. (May 9, 1912.)

SETTLING DAYS.

CONSOLS.
Monday, July 1.
STOCKS AND SHARES.
In Mining Shares the next carry-over is July 9

Continuation Days.	Ticket Days.	Pay Days.
Wed., July 10.	Thurs., July 11.	Fri., July 12.
Wed., July 24.	Thurs., July 25.	Fri., July 26.

LONDON, June 27.

Although there is no business on the Stock Exchange the tone is distinctly better. The Settlement went off very well, money was plentiful, and the bull account appeared to have been reduced. Messrs. Sperlings report that their Consolidated Cities went well. But we suspect that there are still a few bonds left in their box. The Strand Palace issue was attractive. The Cape Breton Coal has a splendid front page. This should help it. Five millions should help the Consol market, but it has not yet been decided whether the money is to be expended in the purchase of Consols, or used for the telephone purchase. Money remains easy, and the Bank Rate should be reduced.

Internationals "Spotty."

The Foreign market has been spotty. Bulgarians are steady at 89, but Hungarian Rentes have jumped up half a point. Chinese issues hang fire; clearly the business is not yet settled. Egyptian Unified carried over at 100⅜, and Greek Fours at 56. In neither instance has much business been done during the account. Japanese look weak, and Russians are irregular on the news of further big issues. Turkish Unified carried over at 89, which is half a point below the middle price. It looks as though the dealers here wanted to buy stock.

Home Rails Attractive.

Home Rails are full of dividend, and should be bought. It is a good speculation to borrow the money from a bank at present low rates, and thus get an option for nothing. Yankees remain in an uninteresting condition, and will continue thus until the elections are ended. But American Copper shares should be bought. The scare about a hidden supply has died down. The principal talk in the rubber market is about the synthetic scare. Candidly, most people laugh, and some sneer. It is not taken seriously. The Shamva report is not particularly good, but now that the Chartered debentures have all been exchanged for shares it is believed that a move will be made here. Kaffirs remain stagnant.

Tin and Copper.

Tin shares are steadying up, mainly because the House has sold short. Copper shares soon recovered their little scare, which was caused by banks calling in their loans. The statistical position is extremely strong, and all the leading copper mines are improving their position day by day. There is very little chance of any serious fall in copper during the current year. The Miscellaneous market has improved. Hudson Bay report was good, and the shares will be split. Marconis are now out of favour; the shares will, therefore, dwindle. A new issue seems a certainty.

Egyptian Market Steady.

The Egyptian market has been steady without much business. Aboukirs carried over at 1⅝, Beheras are firm at 14, but Agricultural Banks are a little weaker at 6. The Delta Light Railways were hardly helped by the report, and look cheap at 8½. Salt and Sodas have firmed up to 15s. National Banks carried over at 17⅝. United Egyptian Lands were carried over at 3s. 3d.

United Egyptian Lands.

In our issue of June 7 we referred to the report of the United Egyptian Lands, and mentioned the thirty-nine feddans owned at Rodah Island. Some people might think that this was agricultural land, and perhaps it would have been more correct if we had spoken of the property as 163,800 square metres, which is the proper way to intimate that the land is building land.

Delta Light Railways.

The Egyptian Delta Light Railways report is excellent. The net earnings are up £7,477, and the dividend is, therefore, increased to 4¾ per cent. on the preference, which is 1¼ better than last year. The directors are negotiating with the Egyptian Government for an extension of the system in the North of Egypt. The property will then be considerably improved. There is a great future in front of the Delta Light Railways, and the preference shares are cheap.

Investment and Agency.

The Egyptian Investment and Agency are holding their own under difficult circumstances. The year's working shows a profit of £3,731, which is only £148 less than last year; £1,500 is added to the reserve for bad debts, and the balance is carried forward. The Investment and Agency is largely interested in the Sidi Salem Company, and also in the Associated Cotton Ginners. The Commercial and Agency Company was carried on this year at a profit. The investments have appreciated £9,709 during the year. But we note that the shares of the Commercial and Agency Company are still taken in at par.

Imperial Ottoman Bank.

The Imperial Ottoman Bank has issued its report, which shows a profit of £472,219 for the year ending December 31, and, added to the balance brought forward from last year, there is £494,520 available, or £301 less than last year. The dividend of 18s. a share remains the same. On the liability side of the balance sheet bills payable have increased £985,697, deposits are only £59,000 down, and current accounts £259,714. On the asset side the position has been greatly strengthened, as the cash is up £2,094,262. A portion of this has been taken from money at call. Bills receivable have increased £419,000, and participations in advances to Government £649,536. The position of the bank is certainly a strong one, as one-third of its trade liabilities are now represented by cash. There are few financial institutions in the Near East that can show a better balance sheet.

FINANCIAL NEWS IN BRIEF.

The receipts of the Delta, Helouan and Cairo Quarry lines of the Egypt Delta Light Railways for the ten days ending June 10 amounted to £E6,626, as against £E6,410, or an increase of £E216.

The National Bank of Egypt announces that Coupon No. 21 of the City of Alexandria Four per cent. Loan, due on July 1, will be paid at 4 and 5, King William Street, E.C., and that Coupon No. 16 of the Agricultural Bank of Egypt Four per cent. Cumulative Preferred shares, due July 1, will be paid at their offices in Cairo, Alexandria, and London (4 and 5, King William Street, E.C.

The numbers are announced of the bonds drawn on the 15th inst. of the Ottoman Five per cent. Loan of 1896. Copies of the list can be obtained on application at the Imperial Ottoman Bank, 27, Throgmorton Street, E.C.

The receipts of the Djibouti-Addis Abeba Railway for 1911 amount to 2,724,849 frs., and expenses to 1,128,785 frs.

On and after July 1 the first mortgage bonds of the Mersina-Tarsus-Adana Railway Company will be paid: In Constantinople, at the offices of the Ottoman Railway Company of Anatolia, the Deutsche Bank Filiale Konstantinople; in London at the Deutsche Bank (Berlin) London Agency, the Anglo-Foreign Banking Company, Limited; 8s. against Coupon No. 24, falling due on that date, on the first mortgage bonds of £20 and 4 per cent. annual interest, on presentation of certificates for fractions of bonds.

FORTHCOMING MEETINGS.

Chemin de Fer Métropolitain de Constantinople.—Pera, July 3, at 10 a.m.

Société anonyme ottomane d'Electricité de Salonique et de Smyrne.—Brussels, July 8 at 10 a.m.

Egyptian Hotels.—London, 11, Ironmonger Lane, E.C., on July 9, at 12 noon.

NOTES FROM ALEXANDRIA.

(FROM OUR OWN CORRESPONDENT.)

ALEXANDRIA, June 21.

The improvement in the stock market continues, and quotations are gradually becoming firmer. It would seem that prices have finally touched bottom, and everything points to a revival in the not very distant future. Prospects of an abundant cotton crop, combined with a rise in prices, constitute a bullish factor which it is impossible to ignore. Unfortunately, the continuance of the Turco-Italian war is seriously affecting Egyptian commercial interests, and I hear that a number of Egyptian capitalists have decided to liquidate all their business in Turkey and to realise the properties they have acquired in that country. On the other hand, local exporters are insisting on cash payment for goods sent to the Ottoman Empire. In this connection it is interesting to note that exports to Tripoli have increased enormously of late, and prospects of business between that country and Egypt would appear to be excellent.

New Companies Formed.

The present activity in business circles is shown by the formation of new companies en commandite, among which I would mention the following:—

A. Alexandroff and Co. Capital, £15,000. Business, stock and share brokers and commission agents.

G. Coury and Co. Capital, £12,000. Business, exporters of cotton and cotton seed.

Ibrahim A. Selim Sakal and Co. Capital, £27,841. Business, dealers in manufactured goods in Alexandria and Tantah.

Constantinides and Co. Capital, £E8,100. Business, importers and exporters.

Grande Teinturerie Française. Capital, £E9,000, divided into 1,800 shares of £E5 each. Business, dyers and cleaners.

M. Edrei, F. Suares and Co. Capital, £E2,500. Business, cinematograph operators in Alexandria.

Carli Grassi and Co. Capital, £E1,000. Business, tobacco merchants.

Bankruptcies.

I understand that an arrangement has been arrived at in the matter of the failure of the late Bartau Pasha, and that the creditors will receive satisfaction of their claims in full. Payment will be spread over five years, that is, up to December 15, 1917, but without interest. The assets amount to £E218,441, and the liabilities to £E198,332, showing a balance in the bankrupt's favour of £E20,101. Creditors will be guaranteed by a mortgage on the whole of the immovable assets of the estate. The principal creditor in the bankruptcy is the Bank of Egypt.

The failure is announced of B. J. Valsamidis, manufacturer of margarine. The assets are estimated at £E8,912, and the liabilities at £E10,395. The firm of Panayatti Baccatoro, dealers in ready-made clothing, have also suspended payment, the assets being valued at £E6,776, and the liabilities are £E6,438.

NEW COMPANY.

Michalinos Maritime and Commercial Company.

The business carried on for many years by Messrs. Michalinos Bros., steamship owners, has been taken over by a new company under the above title. The management is the same as heretofore, and Messrs. Michalinos and Co., of Gresham House, London, will continue to act as the company's representatives in England. Liabilities of the late firm will be discharged by the company, and debts owing thereto are receivable by the company.

DIVIDEND ANNOUNCEMENTS.

Compagnie du Chemin de Fer Mersina-Tarsus-Adana.—Dividends 1911, 12s. per ordinary share, equal to about 6 per cent.

Compagnie d'entreprises commerciales en Egypte.—Dividend 1911, 12½ per cent. per share, and 60.00 frs. per founder's share.

Eastern Telegraph Co.—First quarterly interim dividend of 1¼ per cent. on the ordinary stock, free of income-tax, in respect of the year ending December 31, 1912.

Digitized by Google

Company Notes and Reports.

Egyptian Investment and Agency.

The report of the Egyptian Investment and Agency, Ltd., for the year ended December 31, 1911, to be submitted to the meeting on 24th proximo, states that the year's working has resulted in a net profit of £3,731, which has been dealt with as follows:—Addition to reserve account for bad and doubtful debts £1,500, leaving to be carried to credit of profit and loss account for the year 1910 (reducing the debit balance of that account from £12,377 to £10,145) £2,231. At the time of the last general meeting of shareholders it was generally anticipated in Egypt that the cycle of lean years which that country had been going through was over, and that the outlook was quite favourable. Unfortunately, two very prominent failures in the autumn, those of the Bank of Egypt and of Messrs. C. G. Zervudachi et Fils, had the effect of heavily depressing Egyptian credit, and although in both cases the brunt of the losses fell on European houses, the result has been an accumulated depreciation in every class of stocks and shares, which has been reflected in the holdings of this company. Although not in any way affected directly by the above failures, the depreciation on the company's holdings at December 31, 1911, consequently amounted to about £54,060. Since the estimates with regard to the position of the company's assets were arrived at, the directors have been unfavourably impressed by the lack of progress made with the liquidation of B. J. Coury and Co.'s estate, and have therefore deemed it advisable to set aside a further reserve of £1,000 against that firm's debt, amounting to some £3,000 bills of exchange held by this company. The cotton crop for 1911-12 has proved a large one, but of only medium quality, very belated in growth, and, owing to the above indicated crisis, it has been marketed very slowly. The Sidi Salem Company of Egypt, in which the company is largely interested, suffered from the lateness of the cotton crop and the difficulties that the cultivators of the outlying provinces had to face in realising their crops early. Tenants did not enter into further land purchases, and the outlook was doubtful until the turn of the year, when the position improved, and cash came in satisfactorily. The management of the Sidi Salem Company are now reporting new sales and inquiries for land on the part of the fellaheen. The Associated Cotton Ginners had a good year, and in December last paid a dividend of 1s. 5d. per share, or just over 7 per cent., after placing a considerable sum to reserve to provide for dividends against the possibility of the cotton crop of 1911-12 proving a short one, as was thought probable early in the season. Fortunately, the crop, as above stated, has proved a large one (seven million cantars), and the reports of the ginning factories are again satisfactory. The business of the Commercial and Agency Company of Egypt during the past year has naturally been adversely affected by the commercial depression consequent upon the failure of the Bank of Egypt in September and the Zervudachi failure in November, though the directors are happy to say that the company did not in either case incur actual loss; its accounts show a trading profit of over £1,000, and a small net profit after setting aside an adequate sum for bad and doubtful debts. Having shown that it merits development, the board decided to support its financial standing by guaranteeing a credit up to £5,000, against which the company is fully covered by merchandise and bills. A new line of business—namely, that of bill brokerage—was undertaken during the year under review and has proved successful, resulting in a small net revenue after paying all expenses and without incurring liability.

Whim Well Copper Mines.

Besides paying 22½ per cent. in two years the Whim Well Copper Mines pay 5 per cent. interim dividend. This would have been much exceeded only the erection of its new plant to treat 250 tons daily required large expenditure from current profits. This new plant will, however, commence operations next month, and then the company will reap the benefit and be able to pay much larger dividends. If with copper at £20 under present price, it was able to pay 22½ per cent. in two years, with its enlarged production and improved price for copper it must be able to more than double dividends. Consequently, the shares at 1⅝ are one of the cheapest purchases in the market.

Van den Berghs.

The activity which is being displayed in market dealings in the shares of this company is doubtless attributable to the rapidly increasing character of the company's business. The increase in the turnover of the undertaking is being well maintained, and it is fully expected that the current year will establish a record in the amount of profit earned. For several years the company has paid a dividend at the rate of 17½ per cent., and last year the balance carried forward was £200,000, in addition to which the reserve fund totals over £288,000. At the present price the shares give a yield of almost 7½ per cent. on the investment, and the prospect of a big appreciation in capital value is exceedingly hopeful. The shares stand now at about 2½, a price much below their intrinsic value, and the market is talking them a good deal higher. From every point of view, therefore, the shares of Van den Berghs, Limited, are a safe and attractive industrial investment.

COMPANY MEETINGS.

Imperial Ottoman Bank.

The annual general meeting of the shareholders of this bank was held on Thursday, June 27, at Winchester House, Old Broad Street, E.C., Viscount Goschen presiding.

The secretary (Mr. Charles E. L. Corthorn) having read the notice convening the meeting,

The Chairman said:—Gentlemen, I have been informed by the tellers that this meeting is properly constituted. Our chairman, Lord Bessborough, is unable to be present today, having received a command to attend upon His Majesty the King, and he has asked me to preside in his stead. I presume it will be your pleasure that the report and accounts, which have been printed and circulated, should be taken as read. Before calling your attention to the report, I must allude, with the deepest regret, to the death since our last annual meeting of one of our colleagues, Mr. Gaston Auboyneau, of Paris. He had, like his father, for many years taken a most active part in the bank, devoting the whole of his time and attention to its affairs. Further, he held the position of director-general of the bank in Constantinople from November, 1902, to the end of 1903. In moving the adoption of the report and accounts which the committee have the honour to submit to you, I have to remark that the year 1911, like the preceding year, did not profit by any extraordinary operation, and that, as before, it is only to our current business that we have had to look for a profit. The harvests of 1911 have been, on the whole, very satisfactory. The good results of the agricultural campaign have benefited the railways, which have had their receipts augmented in appreciable proportions. The Ottoman Public Debt could not fail to profit also, in a certain measure, from the good harvests of 1911. The receipts for the first half (March-September) of the year 1911-1912 show a total of £T3,117,446, against, for the same period of the preceding year, £T2,081,665, being an increase of £T315,781, in which all classes of revenue participated. As regards our agencies, the year 1911 has been more productive than any which has preceded it. On the one hand, the satisfactory harvests in most of the districts in which our agencies are situated have been favourable, and, on the other hand, the very pronounced animation in the transactions which have followed resulted in a considerable development of activity in our agencies, both as regards advances and exchange operations. As to new agencies, in pursuance of the convention entered into with the Finance Ministry at the beginning of the year, we have established seven new agencies—namely, at Rhodes, Mamouret-ul-Aziz, Bitlis, Van, Diarbekir, Scutari d'Albanie, and Benghazi. The last-named has not, however, commenced to work, the opening of hostilities between Italy and Turkey having occurred at the moment when it was about to inaugurate its operations; but in any case some time must elapse before new agencies can become remunerative. In addition to the above-mentioned, we have founded two bureaux, one at Hamah, under the dependency of Beyrout, and the other at Djeihan, under that of Adana. The unfortunate war between Italy and Turkey still exists, and is a matter of common knowledge. The effect of this war upon Turkey we are unable to estimate; but I can assure you that every possible step is being taken by our managers to provide for all contingencies. Three new Ottoman members have recently been added by the committee to the council at Constantinople—namely, their Excellencies Djevad Bey, Hamid Bey, and Noury Bey.

Gentlemen, I should also like to take this opportunity from this side of the table of congratulating all ranks of the staff in our service upon the working of the past year and of offering to them our most cordial thanks for the services which they have rendered. I can assure them that we fully realise that the success of a big concern like this depends greatly upon their co-operation, and we sincerely appreciate the loyalty which they have shown to the bank and the energy and zeal which they have displayed in the discharge of their duties and in doing all they possibly can to further the interests of the bank.

I will now move:—"That the report and accounts now read be received and adopted; that the dividend for the year ending December 31, 1911, be fixed at 18s. per share, and that this dividend be paid in Constantinople, London, and Paris on Tuesday, July 2, 1912."

Sir W. Lawrence Young, Bart., seconded the motion.

The Chairman invited questions, but none were asked, and he thereupon put the motion, which was carried unanimously.

On the motion of the chairman, seconded by the Hon. Herbert A. Lawrence, it was resolved:—"That Monsieur Charles de Cerjat be and he is hereby elected a member of the General Committee."

The Chairman further proposed:—"That Messrs. Arsene Henry and the Baron de Neuflize be and they are hereby re-elected members of the General Committee."

This was duly seconded by Lord Oranmore and Browne, and agreed to.

Mr. A. Hood, in moving a vote of thanks to the directors, members of the committee, managers and staff, said he desired to congratulate the committee on another year of successful business, and to thank the staff in almost similar words to those used by the chairman for so loyally and zealously doing their share of the work.

Mr. Morrish seconded the vote, which was unanimously accorded.

The Chairman: I beg to thank Mr. Hood, on behalf of the directors and staff, for the very kind way in which he moved this resolution, and you, gentlemen, for the way in which you have received it. I assure you that as long as we feel we have your confidence we are inspired to go on doing our duty towards the bank.

The proceedings then terminated.

United Egyptian Lands.

As already announced, the ordinary general meeting of the United Egyptian Lands, Limited, was held at Alexandria, on the 6th inst., 25,146 shares being represented. Mr. Ed. Moss was in the chair. Mr. Citty, managing director, having read the report of the board and explained the various details of the balance-sheet, announced that he was about to negotiate the sale of some building plots at Rodah at a fairly advantageous price. Mr. Citty also went into the question of the agricultural lands at Kom El Akhdar, and dwelt on the satisfactory condition of this property. His statement was corroborated by technical details furnished by Mr. Arghiridis, the inspector of the estate. The meeting unanimously approved of the accounts for the year ending March 31, 1912, and elected Mr. Alfred Catzeflis, advocate, as a director. The auditors, Messrs. Peat Waterhouse and Company, were re-elected for 1912-1913. The extraordinary general meeting, which was subsequently held, authorised the board to reconvert into shares to bearer the ordinary stock issued as a result of the arrangement come to with the defaulting shareholders.

NOTES OF THE WEEK.

The mutiny at Monastir proves to be a more serious problem for the Turkish Government than was at first indicated. It is in effect a deliberate revolt against the Cabinet on the part of one or more organisations, but representing in the League of Military Unity a considerable body of influential military opinion. Local exigencies seem to have caused a premature outbreak at Monastir, but there is good reason to suppose that this military league contemplated some avowal of hostility to the régime of the Committee of Union and Progress, and was only holding its hand from patriotic motives in view of the war with Italy. Probably the unrest in Albania and the activities of members of the Opposition who had been unsuccessful at the recent election combined to force the hands of the malcontents in Monastir. Led by Tayyar Bey, an Albanian captain, a significant proportion of the garrison withdrew from the town, and has since made common cause with the Albanian insurgents. Their demands, which were addressed to the Government in Constantinople, are said to have included the retirement of the present Cabinet, the impeachment of Hakki Pasha and his Cabinet for the lack of military preparations in Tripoli, the removal of army officers' grievances, the prohibition of political activity on their part, the creation of a General Staff at the Palace, and, according to some versions, the holding of fresh elections. In this category the demands of various bodies at variance with the Committee have possibly been incorporated, as the latest accounts indicate that the actual mutineers are not likely to hold out for a complete regeneration of Young Turkey. They have received the tacit support of the whole of the Monastir garrison, and, while withdrawing from the reach of the troops that the Government is drafting into the district, have left their cause in the hands of their fellow-officers, who are said to be demanding an amnesty for the deserters.

The embarrassment that this incident in Monastir has caused the Government is illustrated by the succession of measures taken to deal with it. After having announced that deserters were being rigorously pursued by the loyal troops at Monastir, the Cabinet was made to realise that the garrison could not be counted upon to take action against its comrades. Orders appear then to have been conveyed to the General commanding in Smyrna to detach some of his troops for operations against the mutineers, but it is alleged that an answer was returned to the effect that no Turkish officer would take the field against his brother officers. Troops have, however, been despatched to Monastir, but according to an Austrian official telegram from Salonika it has been announced officially that they are intended for service in the region of Elbassan, owing to signs of great excitement among the Mirdites. Whether this statement is a tactical move on the part of the military authorities to put the mutineers off their guard, or represents an attempt to conceal the discovery that the troops are not to be trusted for operations against the mutineers, is not yet known. Even if the Government were prepared to risk civil war, it may be inferred that the feeling in the army of dissatisfaction with the present Cabinet is sufficiently strong to make the Committee of Union and Progress anxious to arrive, if possible, at any other solution of the difficulty. Accordingly, while the Government is said to be divided in its opinion regarding the best method of coping with the mutiny, negotiations are being continued either directly with Tayyar Bey through officers of the Monastir and Salonika garrisons acting as representatives of the Cabinet, or with these officers on behalf of the deserters.

Whatever may have been the connection between the previous unrest in Albania and the outbreak at Monastir, there is a strong probability that the latter will exercise a reflex action on the former. In these circumstances the arrival of reinforcements from Constantinople and Adrianople will be opportune, even if they are not required to take the field against the deserters. The serious defeat inflicted by the Malissori on the Turkish troops on June 22 was calculated to encourage an Albanian insurrection even more than the defection of officers and men of the regular army by reason of particular grievances of their own. But the two incidents together may furnish just the stimulus required to give the character of a national rising to Albanian unrest. In a clear issue, such as an insurrection in Albania, the Turkish Government may be relied upon to act with determination and despatch. The news of the outbreak at Monastir led to the summoning of the Chamber for the special purpose of passing a Bill introduced by the Minister of War, Mahmud Shevket Pasha, to prohibit political activity on the part of officers and men of the Turkish army. To judge by the demands of the mutineers the army itself will be the

Digitized by Google

first to recognise that such a measure is in its own interests. The present revolt against its régime is likely to be the more embarrassing to the Turkish Government, as it is proceeding as far as possible on constitutional lines, and has no desire to subordinate the interests of the Empire to the personal advantages of the malcontents. For this reason it may be hoped that the Cabinet, which has already shown that it lacks harmony among its members, will be reconstituted in such a way that the more enlightened elements in the Committee of Union and Progress will be able to direct Turkish affairs during a most critical period in the country's history.

In Tripoli two engagements were fought on consecutive days last week. On Thursday an attack was made on the Turkish entrenchments commanding Sidi-Said, and on the following day the Italians, still under cover of their naval guns, successfully cleared the whole position. The assault was carried out by two columns, concentrating from different directions on the enemy's lines. From the casualties on both sides it is to be inferred that the ground was stubbornly contested. The Italians' success confirms them in their occupation of Bu Kemmesh by making them masters of the heights commanding that position. Their losses for the two days are returned at thirty-nine killed and 190 wounded, a not inconsiderable total in view of the slight influence that this minor advance is likely to have on the campaign as a whole. If, however, a general forward movement is impossible, the Italian commanders are adopting the right tactics in spinning out their small successes. Public opinion at home is gratified, and the army of occupation is freed from the demoralising effect of prolonged inaction. In regard to the contraband trade, however, it is possible that Italian watchfulness, at no time very thorough owing to the extent of the littoral involved, has become still less effective latterly. If reports are to be believed, little difficulty is now experienced by the Turks in arranging for the consignment of guns and ammunition to the Tripoli coast, while food supplies are conveyed as previously from the Hinterland of Tunisia. Add to this the fact that the Arab levies are said to be receiving regular payment, although small, from the Turkish Government, which has never lost touch with the province in regard to ordinary administrative functions, and it will be seen that the Italian claim to annexation must appear particularly inadequate to Turkish eyes.

A check has been administered to the aspirations of the inhabitants of the Ægean Islands by the Italian military authorities. Owing to a misunderstanding the delegates at the conference at Patmos were subjected to some indignities. The mistake was rectified as soon as possible, but the inhabitants were reminded somewhat emphatically by General Ameglio that the islands were in Italian military occupation, and that there could be no talk of autonomy. At the same time, a semi-official statement was issued in Rome contradicting the report that the Italian Government had summoned to the capital representatives of the Ægean Islands. Some one who purported to be the representative of the inhabitants of the islands, the statement continued, had come to Rome of his own accord, but he had not been received either by the Minister for Foreign Affairs or by any member of the Government. The Italian Government could not well adopt any other attitude. Having rendered an early conclusion of the war impossible by a premature proclamation annexing Tripoli, it ought to be very careful that the door is not shut on the only possible terms of peace by ill-advised haste in dealing with the Ægean Islands, which it has temporarily occupied in the course of its naval operations.

News comes from Egypt of the discovery of an alleged conspiracy against the Khedive, Lord Kitchener, and the Premier. Details are wanting, but four persons have been arrested, and the police have seized at various places, including the Nationalist newspaper offices, a number of documents. If anything in the nature of an organised plot can be proved, it will indicate that the Nationalist party, finding its material for creating unrest restricted owing to the increase in the material prosperity of the country, is resorting to more criminal methods of airing its personal grievances. The leader of the party, Mohammed Bey Farid, is now in Turkey in order to avoid a prosecution for using inflammatory language, and although the suppression of several papers served to prove that his doctrines could still find expression, there seemed reason to hope that party politics were to be allowed to recede into the background. Until more is known of the alleged conspiracy, its significance cannot be accurately gauged. The incident, however, serves to call to mind the fact that in regard to public security the condition of Egypt has not advanced in proportion to the improvement in its material well-being. The circumstance is regretted by Lord Kitchener in his annual report, but he points out in respect of a considerable section of the crime statistics that they have little connection with public security, and can only be finally checked by the spread of education and civilised ideas.

Servia has suffered considerable loss in the death of Dr. Milovanovitch, the Premier, which took place on July 1 at Belgrade. Dr. Milovanovitch was more statesman than politician, and he succeeded to the chief office by force of circumstances rather than in virtue of his leadership of any considerable school of political thought. He had, however, as Foreign Minister steered his country through critical times, and although his services to the cause of peace in the Balkans may be better appreciated in Europe at large than in Servia, he had deserved well of his countrymen. The immediate outlook in the Near East may not be so gloomy as far as Servia is concerned as it was at the time when Austria-Hungary annexed Bosnia and Herzegovina, but the situation calls for all the tact and sense of proportion that Dr. Milovanovitch possessed to a degree unusual among Balkan politicians. The diplomatic activity now taking place in the Near East has been further illustrated during the past week by a cordial exchange of telegrams between the King of Roumania and the Emperor Francis Joseph in connection with a visit paid to King Carol at Sinaia by the officers of an Austro-Hungarian Army Corps. At another time the incident might have passed unnoticed, but it is symptomatic of the tension in the Balkans that it is now considered a significant political demonstration.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)

Constantinople, June 28.

The Trouble at Monastir.

Just when internal peace seemed fairly assured, the Albanians calmer, and the general public inclined to acquiesce in, if not to appreciate, the results of the elections, Monastir, that notorious storm centre, has provided us with a most unpleasant surprise. On the 24th inst. Captain Tayyar Bey, an Albanian officer from Dibra, left the barracks at Bistritza, three miles from Monastir, with several other officers and some sixty men. He is also said to have taken several machine guns and £T1,000 with him. He was joined by other officers and men, mostly Albanians, with a few Turks and Christians from Dibra and Perlepé. He informed the authorities that he and his followers were about to take to the mountains as a protest against reactionary tendencies of the Government, and sent a telegram to Constantinople demanding the impeachment of Hakki Pasha's Cabinet, the trial before a special court of Talaat, Djavid, Djahid, Omar Nadji, Nazim, Babanzadé, and Rahmi Beys—all members of the well-known Committee clique, which was threatened by the insurgents in the C.U.P. in the split of 1911—a guarantee that the Committee would cease to interfere with the executive, new elections and the resignation of the Cabinet. After this no one heard more of him. Some say he went to Dibra and joined Basri Bey and his merry men, who are now keeping to the hills. Others aver that he went towards Colonia to join a Tosk band which recently killed some soldiers at Koritza. Some of his men, with three officers, were overtaken and caught by a detachment sent in their pursuit.

The Government, or rather the military authorities, promptly instituted a Censorship. Mahmud Shevket urged Hadji Adil Bey to give the Press no information, and began by cutting off his supplies. Now no one can tell us anything. The latest War Office communiqué to the Press tells us that there is no change in the original situation and that the public must not allow itself to be taken in by reports spread by evil-minded persons with the object of casting aspersions on the fair fame of the army. Unluckily we do not know anything about the "original situation," and are thus as much in the dark as ever. All we do know here is that there has been a military movement, call it a mutiny if you will, or a military strike; that rumour ascribes it to the machinations of the "Ittihad-i-Askerié" (Military League), on which the mantle of the Committee insurgents is said to have fallen; and that the authorities at Monastir are unable or unwilling to adopt the prompt repressive measures which everybody anticipated when we first heard the news. Their inactivity has, of course, inspired further rumours as to military plots, etc., which it is impossible to confirm or to deny. There can be no doubt that Taalat Bey's management of the elections is at the bottom of the present movement, and that something ties the hands of the military authorities. What that something is can only be guessed. There are many alternatives—the belief that the mutineers will presently disperse, the dread of foreign complications, fear of civil war, or a knowledge that the army is unreliable. One might embroider these themes for hours without forming any opinion as to the truth. In any case the public and the Committee are nervous enough, but the latter will not fall without a struggle.

The Chamber of Deputies.

The Chamber has modified Articles 7, 43, and 35 of the Constitution in accordance with the recommendations of the Committee for the Revision of the Constitution, which did not go so far as the Government intended to go. The other activities of the Chamber have been restricted. The House seems to be as fond of verbiage as its predecessor, and it remains to be seen how it will accept the new War taxes. Within a few days it will be asked to vote an urgency measure imposing various pains and penalties on officers who occupy themselves with politics. The idea is excellent, but does not the proposal come a little late in the day?

NOTES FROM BEYROUT.

(From Our Own Correspondent.)

Beyrout, June 21.

Effects of the War.

The stagnation of business has lately become acute owing to various causes, but mainly to the war, which is giving rise to all sorts of wild conjectures. The influx of Egyptians and of Syrian residents in Egypt to the Lebanon in summer constituted one of the resources of the province, whose prosperity reacts on Beyrout; but this year the Egyptians are conspicuous by their absence. The rumour seems to have been circulating persistently for some time in Egypt that Italy has granted a delay till the 24th instant to Turkey for the conclusion of peace, failing which the Italians would blockade the Syrian coast, and, eventually, land troops. The appearance, on the 19th instant, of two Italian men-of-war, together with a large transport, off Tripoli (Syria) was taken as an indication that the rumour was not quite unfounded. The Italian warships, however, did nothing but search some Greek vessels lying off Tripoli, and then, finding no contraband of war, steamed away.

This state of nervous tension and uncertainty is, of course, calculated to affect business in general. The spread of cholera from Adana to Aleppo is contributing further to the depression of business, and the Damascus fire aggravated a situation that was already not healthy. And just at this low ebb of prosperity the impoverished inhabitants are to be made to bear the further burden of an increase in the land tax and of the imposts on salt and alcoholic materials, to which the Government is compelled by the bitter necessity of war, since it cannot contract a loan with any of the neutral Powers. But the new crops, which on the whole are better than last year's, will, it is sincerely hoped, tend to create a healthier movement, and dispel the clouds that now obscure the commerical atmosphere.

Changes in the Lebanon.

The Lebanon is deeply excited over the nomination of its new Governor. It seems to be the general belief that Yussuf Pasha Franco, whose mandate expires on the 8th proximo, will not remain, and the two likely candidates are said to be Sinapian Effendi and Aram Effendi. Is Yussuf Pasha not to be maintained mainly on the strength of the saying that "new brooms sweep best"?

But what is of greater moment to the Lebanese is the reform of the Constitution. It would seem that the Powers are going, at last, to move in the matter, and it is high time they did move. Many, if not all, of the evils from which the Lebanon has been suffering owe their origin to the faulty old Constitution, which should be modified to suit new conditions; for even the so-called "unchanging East" is changing. A revision of the *Cadastre* on systematic lines is said to be contemplated, and this will be one of the most important reforms of which the Lebanon stands in need.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 26.

Deputation to the British Agency.

As a result of Lord Kitchener's recent tours in Upper and Lower Egypt, the British Agency has of late assumed an unusually animated appearance. Impressed by the dignity and outward show that have in every case characterised these visits of inspection, the notables have felt it their duty to come up to Cairo and demonstrate to the British Agent their deep gratitude for the active interest he is displaying in their local affairs. This week three such deputations called at the Agency from the provinces of Minia, Behera, and Dakahlia. Each was headed by its Mudir. The two first-named expressed their thanks for the visit paid to them, and the notables from Dakahlia begged that the drainage scheme should be extended to their province, and that the British Agent should also honour them with a visit. Lord Kitchener, who received them, promised to give their first request his serious consideration, and to accede to their second one as soon as time permitted him to do so. At each of these receptions the delegates evinced unmistakable pleasure at the affable manner in which the British Agent chatted to them and discussed with them the various questions which interested their particular province. It is easy to foresee that having once started these provincial visits Lord Kitchener will not be allowed to rest until he has honoured each Mudiria in turn with his presence.

Although agriculture is figuring so prominently on the daily programme, the British Agent is not allowing his attention to be absorbed by it to the detriment of other matters. He is occupying himself with various questions nearer home, so to speak, but of equally vital importance to the country. He has paid a visit to the headquarters of the Société pour la Protection de l'Enfance and witnessed a demonstration of the Quinton method of marine injection in cases afflicted with gastro-enteritis. He has also inspected the Ophthalmic Hospital at Giza, where, after closely interrogating the patients and the doctors, he watched the performance of an operation. Gastro-enteritis is so largely responsible for the terrible infant mortality of Egypt, and ophthalmia is such a prevalent disease, that these visits of the British Agent are most welcome; for they are a sign that the admirable work done by the two institutions in question has not escaped his notice, and an earnest that the extension of the system of eye hospitals and the general adoption of the Quinton method will not be long delayed now. It is interesting to note that Lord Kitchener took the opportunity of the notables having assembled to welcome him at Giza to harangue them on the great importance of energetically fighting the cotton-worm.

A Miscarriage of Justice.

In a recent number of The Near East reference was made to the Dessuk murder case in which the Tantah Assize Court acquitted the two principal accused and sentenced the accomplice, whose confession fully confirmed the guilt of the other prisoners, and, at any rate, entitled him to extenuating circumstances, to penal servitude for life. Lord Kitchener has now taken the matter up, and has submitted the inquiry and the subsequent trial to the closest investigation. Since the unfortunate result was due to a misappreciation of the evidence, and the proceedings in court in no sense violated the prescribed legal procedure, nothing can, under the existing Egyptian Penal Code, be done to rectify this gross miscarriage of justice. The autumn will, however, witness a drastic change in the composition of the Assize Courts—and possibly a modification of the penal procedure; for it is generally conceded that in the interests of the country a repetition of such an incident must be avoided at all costs.

The Cairo-Alexandria Road.

The road linking Cairo and Alexandria, a section of which, north of Damanhur, Lord Kitchener recently inaugurated by a motor-car drive, will, it is hoped, be ready by the winter. There are three sections, on all of which the work is being energetically pushed ahead. The Minister of Public Works, Ismail Sirri Pasha, is displaying very great interest in the construction, and went last Friday to Galiub in order to inspect the work on the section which is to join that town with the capital.

The Alexandria Municipality.

With regard to the Alexandria Municipal scandal, the Council of Discipline which has been formed for the purpose of trying the officials who have been suspended met yesterday morning. The charges imputed to the Tanzim Department are the first to be inquired into. It is expected that the proceedings will last some time. Meanwhile a hitch has occurred in the appointment of the new Director-General of the Municipality. Dr. Granville, the Government nominee, insists on having a free hand in regard to the choice and disposition of his subordinate staff. So far as officials drawing less than £E14 per month are concerned, their appointment has always been in the gift of the Administrator, who is now replaced by a Director-General. Officials drawing more than £E14 per month were, practically speaking, almost entirely appointed by the municipal councillors. The Government has now asked that all such officials shall henceforward be appointed by the Municipal Delegation solely on the proposal of the Director-General. The councillors, however, object to this, as placing them in an undignified position. And so a deadlock has ensued.

There can be no question that Dr. Granville is amply justified in adhering to the proposal made by the Government. The report of the Commission of Inquiry, of which the new Director-General was a member, clearly showed the mistake that had been made in the former policy of appointments. Although examinations were held, most of the appointments were made on personal recommendation, and far too much nepotism was displayed. In addition, under the old régime, the councillors were too prone to intervene in favour of the employees, and as a result discipline was weakened considerably. It was to this direct interference of the Council that Mr. Chataway, the retiring Administrator, attributed his lack of control over the internal affairs of the Municipality. With this example before him, Dr. Granville wishes to have as full power as possible over his subordinate staff, and no serious-minded person with any knowledge of administrative work can blame him. It is, of course, very distasteful to some of the municipal councillors to have their little prerogatives curtailed in this manner; but there is really no other means of ensuring the efficient working of the administration, and it is to be hoped that Dr. Granville will receive all the support he deserves in this connection. The question is to come up for discussion at the meeting this afternoon. A decision will then have to be taken; for the matter cannot be left in abeyance any longer. The duties of Director-General are at present being carried out by Mustapha Pasha Ibadi, the Governor of Alexandria, who can, of course, ill spare the time from his official duties.

Cantonal Tribunals.

Last Monday's *Journal Officiel* contains the official announcement of the creation of the Cantonal Tribunals. In it the experiment has been confined to three provinces —Dakahlia, where nineteen courts have been created; Beni-Suef, with eight courts; and Fayoum, with nine. In addition seven new Summary Courts have been created in those provinces. The notables chosen to sit on the Cantonal Tribunals came up to Cairo to-day and took the oath at the Ministry of Justice. They are to take up their new duties on July 1.

LETTRE D'ATHENES.

(De Notre Correspondant Particulier.)

Athenes, le 28 juin.

La question des Iles de l'Egee.

L'occupation par l'Italie de Rhodes et des petites îles voisines a donné lieu à des démarches de la part de leurs habitants tendant à créer une question nouvelle dans l'Egée. Cette question, qui ne peut naturellement que susciter le plus vif intérêt dans ce pays, a déjà provoqué dès la naissance un incident diplomatique entre la Grèce et la Turquie.

A la suite d'une entente entre les notables des dites îles il a été décidé que leurs représentants, au nombre de douze, un par chaque île, se réuniraient en vue de délibérer sur les démarches auxquelles il y aurait lieu de procéder relativement à leur sort futur après la guerre et afin de mettre à l'épreuve les dispositions bienveillantes manifestées par l'Italie à leur égard. Cette assemblée des délégués des îles, qui a eu lieu le 4 (17) de ce mois à Patmos dans le couvent historique de St. Jean, a adopté à l'unanimité une résolution par laquelle, exprimant en premier lieu "la profonde gratitude des habitants des îles envers l'Italie pour les avoir affranchis du joug insupportable des Turcs," elle déclare "qu'ils sont décidés à n'importe quel sacrifice pourvu qu'ils ne retombent pas sous l'épouvantable tyrannie turque." Et après s'être fait l'interprète du "désir des habitants de s'unir à la mère patrie," l'assemblée "proclama l'autonomie et l'indépendance complète de ces îles, sur la base des déclarations écrites et verbales du général Ameglio et des amiraux et commandants de la flotte italienne et des privilèges de *self-government* qui sont acquis aux îles depuis des siècles ainsi que de la doctrine consacrée d'après lequel tout pays chrétien affranchi du joug ottoman ne peut plus yêtre ramené." L'assemblée donna ensuite à l'ensemble de ces îles proclamées ainsi autonomes le titre d' "Etat d'Egée," ayant décidé que son drapeau serait bleu traversé d'une croix blanche avec l'emblème de l'Apollon Soleil au milieu. Après quoi, sollicitant en faveur de ces résolutions le bienveillant accueil de l'Italie et des autres puissances civilisées pour qu'elles reconnaissent et garantissent l'indépendance du nouvel état, l'assemblée remit à un temps plus opportun sa décision sur le mode de procéder à l'election du chef suprême et du corps législatif de l'état égéen. Trois des membres de l'assemblée ont été chargés de remettre copie de cette résolution au général Ameglio avec prière de la faire parvenir au roi d'Italie et à son gouvernement, ainsi qu'à ceux des autres puissances. En dernier lieu il a été décidé qu'une commission composée de cinq membres serait envoyée à Rome pour appuyer ces demandes. Cette commission, qui doit partir dans le courant de cette semaine, visitera probablement aussi d'autres capitales dans le même but. En procédant à ces démarches ils ont l'espoir que les puissances consentiront à rendre ces îles autonomes afin d'écarter le danger que l'une ou l'autre d'entre elles ne cherche à s'en emparer.

Pendant que l'assemblée prenait ces résolutions à Patmos, on est venu rapporter au général Ameglio à Rhodes que les représentants des îles se réunissaient pour désavouer l'occupation italienne et se prononcer en faveur des Jeunes Turcs, agissant ainsi à l'instigation de l'Angleterre. Le général Ameglio ayant ajouté foi à ces insinuations a envoyé un contre-torpilleur à Patmos avec des ordres aux autorités italiennes de cette île de faire arrêter les délegués et de les envoyer à Rhodes. Ces ordres ayant été exécutés, les délégués conduits devant le général lui ont remis pour toute réponse à ses objurgations la résolution qu'ils avaient voté. Dès qu'il eut pris connaissance de ce document, voyant qu'il avait été induit en erreur et que les délégués avaient été victimes d'une calomnie, le général Ameglio exprima ses regrets de ce malentendu et leur rendit aussitôt la liberté après leur avoir assuré qu'il ne manquerait pas de transmettre leur décret à son gouvernement. Il leur a addressé néanmoins des observations et de violents reproches de ce qu'ils avaient organisé ce congrès en cachette, alors qu'ils auraient dû le lui faire connaitre d'avance, puisque les îles sont occupées par les Italiens.

Ces événements ont été rapportés ici par les correspondants des journaux grecs à Rhodes dont quelques-uns affirmèrent que des représentants officiels du gouvernement hellénique avaient assisté au congrès. D'après une version ce fut le vice-consul de Grèce à Rhodes et d'après une autre c'était lui avec un certain M. Lavras qui auraient pris part à ce congrès. Cette nouvelle a été immédiatement démentie par un communiqué officiel. Malgré cela ni l'une ni l'autre de ces affirmations opposées n'est tout-à-fait inexacte. Il paraît, en effet, d'après le récit d'une personne digne de foi qui s'était trouvée à Patmos pendant le congrès, que le vice-consul de Grèce à Rhodes, M. Liatis, s'est rendu aussi à Patmos ce même jour et qu'il se trouvait même dans le couvent où a eu lieu la réunion du congrès sans prendre cependant aucune part aux délibérations ni même entrer dans la salle dans laquelle s'étaient réunis les délégués. Mais, d'autre part, la même personne ajoute que M. Liatis, qui est natif de Patmos, où était autrefois sa famille, s'y est rendu en simple particulier, sans avoir aucune mission officielle. Toutefois la coïncidence de son arrivée à Patmos juste le jour du congrès ne pouvait, vu sa qualité officielle, que donner l'impression d'une intervention du gouvernement hellénique. Ce soupçon était renforcé par la présence simultanée à Patmos de M. Sophoulis, l'ancien chef du gouvernement de Samos, qui, pour donner plus d'importance à la part qu'il s'est empressé de prendre dans ce mouvement, laissa croire qu'il était énvoyé par le gouvernement grec.

Tout cela, rapporté à Constantinople, ne pouvait qu'exciter les susceptibilités des Jeunes Turcs et le ministre de Turquie à Athènes a reçu l'ordre de demander des explications au gouvernement hellénique. Il est très caractéristique que Mukhtar Bey ne s'est pas adressé au ministre des affaires étrangères, M. Coromilas, mais au président du conseil, M. Vénizélos, qui aurait assuré au représentant de la Turquie que la démarche des insulaires était absolument spontanée et que le gouvernement grec n'y avait pris aucune part, ni donné aucun ordre au vice-consul, ni à qui que ce soit d'assister au congrès des insulaires. Toutefois il aurait été convenu en conclusion de faire procéder à une enquête, M. Vénizélos ayant promis de prendre des mesures disciplinaires rigoureuses s'il venait à être prouvé que des agents du service extérieure aient pris part au dit congrès. Ces explications ont été trouvés satisfaisantes. Mais, quoi qu'il en soit et malgré l'abstention du gouvernement grec, qui lui est imposée par les règles diplomatiques, il serait peu raisonnable de vouloir prétendre de ce pays de se désintéresser du sort de ces populations sœurs irredimées, qui ont participé aux longues luttes, lesquelles ont eu pour résultat l'indépendance dont jouit actuellement le royaume libre, qui leur en est redevable.

WHY PAY RENT?

The City Life, under its "**IDEAL**" policy plan, enables Policyholders to reap the benefit of their investment **DURING THEIR OWN LIFE-TIME**, and in the event of premature death to leave their legal representative in possession of a comfortable house, free from any mortgage charge or encumbrance.

THE MUSSALMAN.

An up-to-date English Weekly, conducted by a Mussalman Editor of liberal and independent views. Though all topics of special interest to the Mussalmans are discussed in its columns, social, political, and economic questions of general interest always receive due attention. It is entirely free from sectarian bias and is a true exponent of the catholic principles of Islam, but it advocates the Mohammedan cause boldly and fearlessly when such advocacy is necessary.

Annual subscription (inland), 4 Rs., (foreign), 8 shillings.

THE MUSSALMAN, Calcutta, India.

The ALIGARH INSTITUTE GAZETTE

A High-class Urdu-English Weekly Journal.

Founded by the Old Sage of Aligarh, the late Sir Syed Ahmad, in 1866 A.D.

It is now the leading and officially recognised Organ of the M. A. O. College, Aligarh, All-India Muhammadan Educational Conference, and All-India Moslem League, on politics, education, and society. An excellent medium of advertisement on account of its large circulation amongst educated and enlightened class of Muhammadans, gentry and nobility in all provinces of India and places beyond India. Annual subscription, 4s. Agents securing advertisements have good offers.

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, July 1.

A Russian Railway from Djulfa to Tabriz.

It is semi-officially announced that the Council of Ministers has under consideration a tentative scheme for the construction of a railway from Djulfa to Tabriz. It may be recalled that when, about a decade ago, Russia came to the financial assistance of the Teheran Government, after England had undiplomatically declined to do so, one of the primary conditions of the Russian loan was that this country should have the first and exclusive option of building railways in Persia. It is, presumably, in virtue of that agreement that Russia now proposes to construct a Djulfa-Tabriz railway independently of the projected Trans-Persian line. It is possible that Russia is somewhat doubtful whether the Russo-Indian railway project will eventually be approved by England and the British-Indian Government. In the meantime she is not unnaturally desirous of securing for her own commerce and industry the important North Persian markets, and a line connecting her Caucasian system with the capital of Azerbaijan would, undoubtedly, give her the advantage she seeks; and, furthermore, it would materially help in the consolidation of what is already, practically, the Russian protectorate in the provinces of Azerbaijan and Urumiah. If the Djulfa-Tabriz railway scheme be decided upon by the Council of Ministers, it will be submitted to the new Duma at its first session in the late autumn, and it may be safely assumed that that Assembly will readily agree to the Ministerial proposal and vote the necessary outlay. There are no physical difficulties in the way of the line's construction. The distance is, I believe, not more than eighty miles. Russia's commercial traffic between Djulfa and Tabriz has for some considerable time past been carried on by motor-wagon transport under Russian military escorts, and the trade is said to show a steady increase.

The Trans-Persian Railway.

Except in two or three metropolitan journals, which are probably inspired by the Russian promoters, the Trans-Persian Railway scheme is but very meagrely discussed in the Russian Press generally. Two or three articles which some little time back appeared in the South Russian Press, by writers who had evidently an intimate knowledge of Persia, all declared that so far as the Persian section of the proposed international line was concerned it would prove a dead loss to the promoters.

If the opinion of the whole of the British residents in this country and in Persia were canvassed on the subject of a Russo-Indian line it would be unanimously opposed. For the time being Russia and England are excellent friends, but who can say that that friendship will always endure? Ententes and friendly understandings in these latter days are apt, sooner or later, to prove but painted laths. As The Near East wisely observes, the British public is entitled to have laid before it all the arguments for and against this enterprise. The British Government will assume a tremendous responsibility if they do not consult the country at large before coming to a final decision with regard to this, for India, vital question.

A Balkan League.

A special correspondent of the *Odesskia Novosti* substantially confirms a statement which appeared last week in the *Echo de Paris* to the effect that a Balkan League, including Servia, Bulgaria, Roumania, Montenegro, and Greece, is a possibility of the near future. The *Novosti* correspondent, whose last despatch on the subject is dated from Belgrade, affirms that this question has for some little time past formed the special subject-matter of semi-secret pourparlers between the Cabinets of the Balkan States, and that the political combination is likely to take tangible form in the near future. The report may, considering the existent situation in the Near East, have some foundation in fact, but for the moment it must, obviously, be taken with all due reserve. The *Odesskia Novosti*, commenting on its special correspondent's communications and the similar statement in the *Echo de Paris*, doubts very much whether either Greece or Roumania would join a Balkan Confederation, although the journal admits that there is nothing really inherently impossible in the alleged project for combining the five Balkan States in a defensive league. Whether Russia would approve the scheme is another question; and England is no less interested than Russia and the other co-signatory Powers of the Berlin Treaty in any fundamental change in the political status of the Balkan peninsula.

The ex-Shah.

On Thursday last the ex-Shah's treasurer, Mukhtar-ed-Dowleh, left here on some private mission, proceeding first to Vienna. He was seen off at the railway terminus by Mohammed Ali. The local Press understands that Mukhtar-ed-Dowleh's mission is to choose another residence for the ex-Shah, but whether in Austria or elsewhere is not known. After fulfilling this mission Mukhtar-ed-Dowleh will, it is stated, return to Persia. Mohammed Ali continues to lead a very secluded existence here, and is extremely seldom seen abroad. His communications with Persia by means of special messengers have latterly practically ceased, and are conducted by ordinary postal correspondence, chiefly with his Royalist partisans in Gumesh Tépé.

NOTES FROM PERSIA.

(From a Persian Correspondent.)

Teheran, May 29.

Yeprem's Services.

As soon as Yeprem was killed the news of his death was telegraphed to Teheran, but the information was kept from the public for two days. When it could no longer be withheld and became known to all there was a great scene—the reactionaries and enemies of the Constitution rejoiced, while the Constitutionalists, true patriots, and personal friends of the Sardar, mourned bitterly. As Yeprem was an Armenian, and a Turkish subject, when the news of his death reached here the Turkish Consul-General sealed his house, and took charge of it and of all his property.

Like the late Mr. Gladstone, Yeprem Khan was a true democrat, and disliked all titles. When I met him for the first time he said to me: "Please don't call me Yeprem Khan; call me just plain Yeprem. And if you ever write to me, address me as Yeprem Davidian, Teheran.' Your letters will find me, no matter where I am." Respecting his wishes, I will hereafter refer to him simply as Yeprem.

He was then forty-two years of age, and had been in the service of the Persian Government since the fall of Mohammed Ali Shah. When not fighting on the battlefield he was simply the "Beglarbegi" of the Teheran police and gendarmerie forces; but when fighting against some rebel prince, or rebel tribe, he was the "Sardar of the Army." But in all the engagements in which he took part he was always in command, never a subordinate officer. Two years ago he was sent from Teheran to subdue and, if possible, to capture the Khans of Karajadagh ("Black Mountain," the "Montenegro" of Persia). He went, fought several battles with the famous Rahim Khan, and defeated him. Rahim Khan fled and took refuge in Persia, while the other minor khans came in and surrendered. By Yeprem's orders they were temporarily disarmed, which, naturally, they did not like, feeling their dignity sadly wounded by having such a humiliation put upon them in the sight of their subjects. Going to Yeprem, they said to him: "Since we have surrendered to you, and become partisans of the Constitution, why do you disarm us? Why should you humiliate us before our own subjects, who have always regarded us as men of might and valour?" Yeprem is said to have replied: "You surrendered because you could not fight, and you have been made 'partisans' of the Constitution by force of arms, not by choice or by your own intelligence. You cannot help being what you are. I have ordered you to be disarmed, because, after fighting for the past three months, I have conquered you. You should be glad that I am taking from you only your rifles. Had you been

Digitized by Google

victorious, you would have taken not only our rifles and our horses, but our shirts also—if not our lives! Go, and be satisfied." And they went, knowing the truth of his every word.

From Karajadagh Yeprem continued his victorious march south-east to Ardebil, to subdue the troublesome Shahsevan tribes. These tribes, having heard of the flight of Rahim Khan to Russia, and being greatly impressed by his conqueror's fame, surrendered without firing a single shot. They even came out *pishvaz* for miles to meet Yeprem and his invincible army. He had sixty of their ringleaders arrested, and brought them to Teheran in chains as prisoners of war. The Government then, as a mark of appreciation of his services, presented him with a magnificent sword, and bestowed on him the title of "Sardar." He accepted the sword, but refused the title.

The Ex-Shah.

Yeprem fought several times against both Mohammed Ali Shah and Salar-ed-Dowleh, and was always victor. Apparently only a *fedai* and Chief of the Police, in reality he was second only to the Regent. He it was who kept the Persian Constitution on its feet, and by his death the backbone of the Constitution has been broken. The bravest men seem to be losing heart and giving way to despondency. The Regent has left the palace, and is living in the Sipahdar's garden, prior to departing for Europe.

After his expedition to Azerbaijan, Yeprem himself wished to leave and retire to Europe. But Mr. Morgan Shuster, then Treasurer-General, begged him to remain, promising him support, financial and otherwise; and Yeprem listened to his entreaties and stayed—only to die.

Yeprem also was one of the three leaders who, joining forces, besieged Teheran, fought Mohammed-Ali-Shah, defeated him, and forced his Majesty to take *bast* in the Russian Legation. The two other leaders were: Ali Ghuli Khan, the El-Khani of the Bakhtiari tribesmen, generally known by his title of Sardar-Assad, and the Sipahdar, commanding the Persian *mujaheeds*.

Last summer, when Mohammed Ali, leaving Odessa as "Kerbelai-Khalil," landed at Gumesh-Tepé and gathered together an army of Turcoman fighters, intending to march upon Teheran and regain his lost Peacock Throne, he sent a remarkable telegram to Yeprem. It was to this effect: "Do not interfere in my affairs—and Persia's. Do not fight against me, or place yourself in my path to the throne. By so doing you will only do harm to your Armenian brethren in Persia and prepare their possible future massacre. They have always been faithful subjects to us, and the Shahs of the Kajar dynasty have always been gracious to them. Do not, therefore, place them in a dangerous position." In reply Yeprem is said to have telegraphed somewhat as follows: "It is my duty to defend the Constitution, to fight against the enemies of the Constitution, to oppose all despots."

From the ex-Shah's telegram it is easy to infer that the only man he dreaded was Yeprem. Mohammed Ali would not lower himself to send a telegram begging any Persian Sardar not to fight him. He was not afraid of his former army, of his former officers, but he had to take Yeprem into account. And he was right in his calculations, as subsequent events proved; for it was Yeprem who defeated him and forced him to return to Odessa. Doubtless Mohammed Ali Shah gave a handsome reward to the man who was first to give him the news of Yeprem's death.

THE LATE SERVIAN PREMIER.

(From Our Own Correspondent.)

Belgrade, July 1.

Dr. Milovanovitch, Servian Prime Minister, after three days' illness, expired this morning at half-past four o'clock. He suffered from blood-poisoning, caused by inflammation of the kidneys.

The Prime Minister was well disposed to Austria-Hungary, and was thought very highly of by the Austro-Hungarian Government.

In these critical times, in a state of uncertainty as to what may occur at any moment in the Balkan Peninsula, it was considered expedient that he should remain at the head of the Government, and his sudden death has produced great consternation in all Servian circles.

Dr. Milovanovitch represented Servia at the second Hague Conference at the time of the annexation of Bosnia and Herzegovina. In his capacity of Minister for Foreign Affairs he visited the Western European Courts, pleading the cause of Servia; and, whilst Servian grievances made intercourse with Austria-Hungary disagreeable, it was he who represented Servia at Vienna to discuss the last treaty of commerce between Servia and Austria-Hungary.

He was born in 1863 at Belgrade, completed his studies at Paris, and after his return to this country in 1888 was appointed Professor at the Belgrade University. In 1890 he was appointed Chief of the Ministry for Foreign Affairs, and three years later was elected member of Parliament.

In 1896 he joined the newly-formed Radical Cabinet as Minister of Justice, which position he held for a short time. Five years later he was again an active politician, being appointed Servian Ambassador to Roumania, and shortly after became Minister of Finance.

His next appointment was as Ambassador at the Court of Rome, which he left in 1908 to become again Minister for Foreign Affairs. He remained Cabinet Minister until his death this morning, having in the interval, that is in 1911, assumed the position of Prime Minister at the request of the King.

To-day André Nikolitch, the President of the Skuptschina, before proroguing the House declared that the Prime Minister's sudden death was a great blow for the Government and for the whole country.

The funeral will take place to-morrow at half-past nine in the morning.

AUSTRIA AND ROUMANIA.

Last Friday, M. Maiorescu, the Roumanian Prime Minister and Minister for Foreign Affairs, was received in audience by the Austrian Emperor and conferred also with Count Berchtold.

The Vienna correspondent of the *Times* (under date of June 28) states that great prominence was given by the Austrian Press to an exchange of extremely cordial telegrams between the King of Roumania and the Emperor Francis Joseph in connection with a visit paid to King Carol at Sinaia by the General in command of the 12th Austro-Hungarian Army Corps and the colonels of the regiments composing it. King Carol telegraphed in warm words his thanks to the Emperor Francis Joseph for having allowed the officers to visit him, and expressed his "unremitting interest in the constant development and progress of your glorious Army, with which I am so closely connected by a double tie." The Emperor Francis Joseph, in reply, thanked King Carol for receiving the officers, and said:—"It makes me really happy to know that these representatives of my Army are your guests, and I am with my whole heart grateful for the honour thus shown to me and my Army, which, looking up to you in admiration, is proud to reckon you in a double capacity as its own." These telegrams are considered, the *Times* correspondent adds, in present circumstances, to be a significant political demonstration.

THE RENAISSANCE OF SYRIA.

Travelling with a friend during April and May over a good part of Syria, from Port Said to Aleppo, visiting Beyrout, the Lebanon, Rayak, Baalbek, Homs, Aleppo, Damascus, Jaffa, Jerusalem, and many other places in desert and mountain, I was struck with the possibilities of the apparently illimitable extent of plain and mountain side capable of cultivation. From what we saw of the present cultivation it was borne in upon us that here was a land on which, if properly cleaned, ploughed, and irrigated, food enough could be raised for half the world.

Great schemes of irrigation need to be set in hand. There is water enough now running to waste. The Orontes, running through the plain like a great white ribbon, has already a dam or lake which formerly supplied Emesa (Homs) with water; and there are many other rivers, such as the Nahr el Kebir. If the waters of the rivers and sub-soil were organised and disciplined, as it were, and the plans of Sir William Willcocks for utilising the waters of the Euphrates for Mesopotamia carried out, all in one grand scheme for the whole of the country, then the renaissance of Syria would have begun, and there would be no need for her sons and daughters to fly to Buenos Ayres, the United States, or Europe to find a living; for in their own deserts the corn would begin to wave and the rose to bloom.

"Give Us Water!"

Diocletian, in the third century, is credited with having dammed the Orontes for the supply of Homs, but nothing has been done since, and what was then done has long since fallen into decay. Take the matter of the wells. In a journey of five days in the desert we found three wells only. They were from thirty to eighty metres deep, but had a plentiful supply of water. At a village, where we found a small spring, the people clustered round us, wondering whether we were surveying for water. Their land was good, and about the neighbourhood of the spring there were some little fields of corn and some beautiful greenery. "We would not be here," they cried to my friend, who understood their language; "we and our children would be out in the fields if we had water wherewith to water them." And: "Water, give us water," was their pathetic cry. The wells should have immediate attention, and more should be dug. But that is not all. One day we saw some shepherds who were driving a fine flock of sheep to Homs, or some distant town, bargaining for over six hours with the soldier in charge of a well at a lone military outpost, where we were detained for nearly eight hours because of the heat. On asking the reason for the long delay in watering the thirsty animals, we were told that the shepherd did not wish to pay all that was asked; for though it was by no means a heavy charge, it was more than usual. "Why was the charge made?" Because the soldier in charge of the outpost, or he and his comrades, had, every now and then, to renew the rope, leather bucket, and pulley required for raising the water." That is the casual way in which things are done in Syria!

Now, this is clearly a work for the Government. Wells should be dug at every six miles, and the water should be free, the shepherds and camel men supplying labour for drawing only. The tax in payment for this might be made at the end of the journey as the sheep entered the market.

Hints for the Government.

Here is another hint for the Turkish Government and financiers. Let them abolish the farming of taxes. Let them, moreover, gather the taxes themselves, and start great schemes of irrigation, and let them condignly punish any tax-gatherer who gathers more than the proper amount of tax when the corn begins to be harvested as a result of irrigation. They should also endeavour to rescue their monetary system from its existing chaotic state. At present no one—not even their own officials—knows how to change the mejidiehs, beshliks, and metalliks. None of these coins are aliquot parts of any greater whole. Besides this, every other nation's coinage is in circulation, which confounds the monetary confusion. The Turkish Government loses, in all probability, some millions sterling a year through lack of a proper monetary system. Then there are the postal arrangements. Most of the European nations have their own postal service. In one town I was ordered to go personally to a Turkish post office for a parcel of photographic plates. After considerable waiting I was casually asked to sign a paper, to see three officials, and to open my parcel. This done, I was coolly requested to take a carriage and drive a mile or so to the Customs office to get a stamp of the value of a beshlik (sixpence) by way of paying the Customs due!

The inhabitants are everywhere a fine people, cultivating the tiniest patches of earth between the ledges of rock and terracing the mountain sides with great labour. In twenty years from now Turkey could make these vast wildernesses become gardens of cultivation. But to do it the love of pomp, ease, and sensuality must be laid aside. Work, and work only, can accomplish the reformation of Syria. From the highest official down to the mule-driver the order should be work. I know that some of the lands here described are very stony; but we saw corn growing in stony parts, and trees also can be made to grow, which by and by will give shelter and fuel, too, until coal and iron are found and worked. At present the land is robbed of its animal manure because of its use as fuel.

Towns and Roads.

Alongside of irrigation works should be carried on the complete renovation of all the towns and villages, beginning with Beyrout (where the tramway should be suppressed until the roads are widened to double their present width). All the villages, old towns, and the more ancient parts of most towns have their streets or lanes lined with dismal walls, in which there are no windows, but small doors leading into the usual Eastern court, around the three inner sides of which are built the rooms. They are the old walled cities of Joshua's days, which were built for defence against the marauders of the deserts. A civic police, not walls, should be the defence in these days, even in Syria. It would be quite easy to devise a scheme of proper protection for the peaceful dwellers in the villages and the workers in the fields. A system of desert police, with wireless telegraphy for communication and a block house every six miles—where the suggested wells might be dug—should be inaugurated.

The roads, too, should be taken in hand. Twice we lost our way in the trackless desert, and had we not possessed some knowledge of the stars and carried a compass we might have experienced an unpleasant time. Roads could be easily made, for there is plenty of stone which when cut would make excellent macadamising material.

The Lack of Ports.

There is one other very important reform which needs to be set in hand at once. Syria has no ports. Jaffa, Haifa, Beyrout, and other coast towns are reached in a ship, just as they were in the days of Jonah, and if there is any difference it is on the side of Jonah for comfort. I have seen old women bundled into the boats by the Arab boatmen like trusses of hay. I have seen a man staggering down the ship's unsteady ladder with a child, half-naked, tucked under his arm, holding a bundle in one hand and a box in the other, the marvel being that the child did not slip from his precarious hold, or that the man, child, and bundles did not tumble into the water. When I saw the heartlessness of the way in which human packages, merchandise, in the shape of furniture, glass, food, oil tins, machinery, etc., etc., were jumbled together, with every boatman clamouring and jostling his neighbour in the most reckless fashion, I remonstrated with the ship's officer. "I am," said I, "a man of peace; but you should place on this gangway two men, armed with loaded revolvers and cutlasses, who should order off every boatman but the one taking a cargo of goods or passengers, and the boats should be made to come alongside in rotation." To this the officer replied: "There would be a revolution in no time if we tried that." It is nearly 3,000 years since Jonah took ship at Joppa. It was evidently a kind of port then, and ever since then it has retained its stormy character both

Digitized by Google

of men and waters. But this long sleep on the part of the authorities must come to an end. The renaissance of Syria means ports. They can be made; therefore, "Wake up, Turkey!" should be the cry of her citizens.

ROBERT WILLIAMS.

Postscript.

Since writing the foregoing I have visited Jaffa twice, and am more strongly impressed than ever with the necessity of proper quays and landing stages at this port. The quay should be extended to the outer rocks, by which means an area of many acres would be gained for the town. There is a rumour abroad that the Turkish Government intends carrying out this work forthwith.

NEAR EAST IN PARLIAMENT.

The Future of Malta.

In the House of Commons, on Thursday of last week, on the vote for £60,075 for the salaries and expenses of the Colonial Office, Mr L. Harcourt, in the course of his speech, said that he thought he had better deal with Malta as a separate and peculiar entity. "A fortress and a great naval base, it must," he continued, "be held and governed mainly for naval and military purposes, but at the same time with a scrupulous regard for the advantage and the peculiar circumstances of its inhabitants. It would be an exaggeration to say that Malta is in a condition of incipient bankruptcy, but it is not untrue to say that its financial position is one which demands an immediate review and rectification. Twenty or thirty years ago, with ships of lesser tonnage and smaller bunkers, Malta was an essential coaling station for the traffic to the East; to-day, with greater coal capacity in ships, and the facilities of Port Said, she is left in a commercial backwater dependent largely on naval and military policy for her day-to-day prosperity. When at the beginning of this century, great naval and military works were undertaken at Malta, there was produced a state of inflation as unnatural as it was evanescent. The inevitable reaction has come, and with it some suffering to a redundant population. Emigration of those who are both fit and willing for it seems to be indicated as one of the cures, and I am now taking steps to discover what are the countries best fitted to receive and welcome those who are anxious to leave their island home." The cure of the present discontent, he added, could be neither immediate nor rapid, but he hoped to devise means to put the existence of the inhabitants of Malta on an economic and not extravagant basis.

Naval Position in the Mediterranean.

In the House of Lords on Tuesday Lord Selborne called attention to the naval position in the Mediterranean. Comparing the position in the Mediterranean to-day with that existing in 1904, he said: "The Navy of France was very strong in the Mediterranean then; so it is to-day. Austria-Hungary, which then had a small Navy, is emerging into a really important naval Power, and next year will have a squadron of the best, the largest, and the heaviest battleships in the world. Italy had a Navy of great efficiency, and it has now become much more powerful and larger. The Russian Navy is about the same, and the Turkish Navy is in process of resurrection. What about ourselves? The Infantry garrisons of Malta and Gibraltar have been reduced since 1904 from eleven battalions to seven battalions, though in 1904 the advisers of the Admiralty had regarded eleven battalions as our minimum requirement. The British Fleet in the Mediterranean in 1904 consisted of twelve battleships of the line, four armoured cruisers, and twelve other cruisers. To-day, with the reduced garrisons, there are no battleships of the line, though there are still four armoured cruisers; the other cruisers have shrunk from twelve to three. I believe there has been a reduction of torpedo craft. It has been suggested that our strength in the Mediterranean may be rehabilitated by an increase in the torpedo craft. Although they are of very great importance as a complement of ships and cruisers, they can never be a substitute for them." If we were at war with Powers which had some strength in the Mediterranean, and had no allies on our side, the position would obviously be very serious, as the enemy could deal us a deadly blow by intercepting our food supply. But even when we were not at war our prestige would be affected if for a long series of years we had no squadron of battleships in the Mediterranean. "The prestige of this Empire in the Mediterranean," Lord Selborne added, "is just as solid and material an asset of this Empire as the coal mines of England or the gold in the Bank of England. It is a reality built up by two centuries at least of position in the Mediterranean. The constant sight of our Fleet through the generations has produced a profound effect on the minds of the people, civilised or uncivilised, who live in the Mediterranean basin, and far beyond the Mediterranean. That great historical fact is known to the peoples of India and to the Far East. What must be the effect on the minds of those people, on their imagination, on their estimate of our power, if, after all those years, suddenly, as it were, the Flag of our country disappears from the Mediterranean? There will be no mistake on the part of other races if we merely keep an inferior squadron of cruisers in the Mediterranean. They will know that something has happened. We would not have done it if we could have helped it. Therefore, this question must be considered from the point of view of our diplomatic strength in the civilised world, and from the point of view of our prestige in India and elsewhere, where we have such grave responsibilities for the government of the people."

In conclusion, Lord Selborne appealed to the Government not to leave the garrisons of Malta and Gibraltar as low as they are now, and stated that if it is necessary to withdraw the squadron of battleships from the Mediterranean we are short by that one squadron of the strength demanded for the defence of the Empire.

Lord Crewe, who followed, said that the Government hoped to be able before long to describe their policy more fully in both Houses at the same time. He assured the House that the obligations of the Government in the Mediterranean had by no means escaped consideration, and Ministers fully recognised the duty of announcing at the earliest possible moment the result of the investigation they had been able to give to the subject.

The debate was continued by Lord Ellenborough, Lord Lamington, the Marquess of Bristol, and Earl Brassey, and was brought to a close by Lord Lansdowne.

Lord Lansdowne remarked that the Marquess of Crewe had objected to the expression "the evacuation" of the Mediterranean, but the policy of the First Lord of the Admiralty seemed to him (Lord Landsowne) to come uncommonly near to a policy of evacuation. "What are the facts?" he continued. "At this moment there are no battleships at all in the Mediterranean, and we are given to understand that if any are sent back they will be based on Gibraltar, and duties and obligations will be assigned to them which will make it impossible for us to count them as really available for use in Mediterranean waters. That is, of course, a complete departure from the old policy. We were used to a squadron based on Gibraltar and another squadron based on Malta. That is all to be changed. We are now to have only one squadron, based on Gibraltar, and only available occasionally for use in the Mediterranean. We are doing this at a moment when other Mediterranean Powers are stronger than they ever were, and at a moment when war is actually proceeding in the Mediterranean between two Mediterranean Powers. I am bound to say that the announcement of this new policy has had an almost bewildering effect upon those who attach importance to the reputation of this country as a great Mediterranean Power. It is a complete departure from our old policy, based upon the view that the control of the Mediterranean was essential to us." We had to consider what the results of the change will be upon our displomacy in the Near East, on our great interests in the Balkan Peninsula, in Asia Minor, and the part we had taken in the affairs of Crete. In regard to such matters, there was all the difference in the world between a diplomacy which was supported by sufficient force at sea and one which was not. What would be the position of the troops in Malta or in Egypt if the naval strength was not there to see to their safety? It would be a loss and not a gain of strength if we had a number of British troops locked up for a time either in Malta or in Egypt. In conclusion, Lord Lansdowne said: "I trust if this question is to be left still under the consideration of His Majesty's Ministers that they will find it possible to do something to allay the profound uneasiness which has been created by the announcement of this new departure. I agree with the Earl of Selborne that the only course to which we can look forward with a feeling that it will be a sufficient one, will be a course which will permit of the re-establishment of our old position in the Mediterranean. We cannot, in my view, afford to retire from the honourable position which we have in the past occupied in the Mediterranean. In the meantime, I trust that we may learn that His Majesty's Government have in contemplation some method which by adding to the strength of the Mediterranean garrisons, by re-establishing our defences, and by adding to the strength of the ships in the Mediterranean, may mitigate the blow which, I cannot help thinking, has been struck at the reputation of the country as a great Naval Power by the course which the Government, I think most unfortunately, had determined to adopt."

LETTERS TO THE EDITOR.

GREAT BRITAIN AND THE TRANS-PERSIAN RAILWAY.

To the Editor of THE NEAR EAST.

Sir,—May I be allowed to correct just one passage of the paragraph you devote in the last number of THE NEAR EAST to my letter in the *Times* on the subject of the Trans-Persian Railway. "Sir Valentine Chirol pleads," you say, "for friendly consideration of a scheme that he condemned some ten years ago." The whole point of my contention, on the grounds which you afterwards quite correctly summarise, is that the scheme under consideration to-day is not the scheme that I condemned some ten years ago, but is vastly different from it, whilst circumstances have also in the meantime entirely changed.

One point more. I agree with you that there would be "justification for a protest against any attempt being made to commit Great Britain to the project before the nation has been given an opportunity to discuss the line in all its bearings"; but I am at a loss to see any trace of such an attempt being made, whilst there is abundant evidence of attempts being made to get the case prejudged against the project.—I am, Sir, yours obediently,

VALENTINE CHIROL.

Queen Anne's Mansions, Westminster, S.W.,
July 1, 1912.

To the Editor of THE NEAR EAST.

Sir,—Mr. H. F. B. Lynch's instructive letter in the *Times* of the 7th states clearly enough the defects of the Trans-Persian Railway scheme from the British commercial point of view. The financial side does not seem at first sight to be more encouraging.

Those who believe that the preservation of peace and the development of European civilisation can best be served by an understanding between England and Germany have read the occasional guarded announcements in the Press of pourparlers between the two Governments having this object in view with intense satisfaction. Such persons, in seeking to trace the source of mutual jealousies, have been forced to the conviction that these sprang in large measure from an exaggerated distrust of the Baghdad Railway and the hostility aroused in Germany by our dog-in-the-manger attitude towards it. The appointment to the London Embassy of Baron Marschall von Bieberstein, who of all men is most familiar with the history of that great enterprise and of the unflinching sacrifices through which it has so far been accomplished, seemed to be a confirmation of modifications in our recent policy towards Germany, to be based partly upon a withdrawal of the embargo which has prevented the admission of the Baghdad Railway securities to official quotation on the Paris Bourse. These observers ask with astonishment the meaning of the new move.

No English bankers would take into consideration a scheme bristling with political and strategic difficulties such as the Trans-Persian Railway unless they had some assurance of Foreign Office approval; nor is it likely that they would contribute towards the heavy expenses of even a preliminary survey unless the principle of some form of financial guarantee had been recognised by either the British or the Indian Government.

Informal Government assurances can do much in the early stages of such an enterprise, but these will not, one supposes, extend to guaranteeing the bonds for the Persian section; and what would be the value of them without it? The deduction is that the English members of the Société d'Etudes are merely representative of a political interest, and that the promoters expect to finance it on the somewhat doubtful security of a Russian guarantee backed by British political support and an imposing array of financial figure-heads.

If this be admitted, where is the money to come from?

Even the resources of the French money market are not limitless. The ever voracious appetite of the French investor would no doubt be equal to the heavy demands which the completion of the Baghdad Railway must involve, and even to gradually absorbing its already issued but undigested securities; but would it extend to the assimilation of an additional heavy meal of Russian guaranteed railway bonds?

Would those who have had experience in placing Russian railway bonds (only guaranteed as to interest) on the English market be inclined to underwrite those of the Trans-Persian Railway?

Perhaps the promoters of this interesting scheme will apply to the Americans in view of their maxim "that there is nowhere where it does not pay to build a railway."—Yours obediently,

SYDNEY SCHIFF.

Bad Langenschwalbach, June 20, 1912.

A RIFT IN THE ITALIAN LUTE.

To the Editor of THE NEAR EAST.

Sir,—Italian newspapers tell us that the war fever continues to rage throughout the peninsula; that Clericals, Monarchists, Republicans, Socialists, and even Anarchists stand shoulder to shoulder in a stern resolve that Tripoli shall be conquered at any cost. This alleged solidarity has puzzled many Englishmen, who know that Italy is the habitat of races who have little in common from an ethnological or a social standpoint. Their scepticism is justified by private advices from Venice. It seems that on the morning of the day when King Victor Emmanuel welcomed the German Emperor to that historic city the police were seen busily engaged in tearing down huge posters in the Piazza San Marco and elsewhere, inscribed "*Abbasso la Guerra!*" which means, in homely English, "D——n the war!" Taxation had pressed heavily on the ignorant and poverty-stricken masses long before the weary struggle for Tripoli began. Will they endure the threatened turn of the fiscal screw which is to increase their burdens by twenty-five per cent.? Has not the psychological moment come for joint intervention of the Powers? These are pertinent questions, and many people think that a situation in Tripoli analogous to that of Egypt would be accepted by the Ottoman Porte under moral pressure.—Yours, etc.,

SIGMA.

June 29.

TRUTH AND RUMOURS.

To the Editor of THE NEAR EAST.

Sir,—Will you kindly print a few words by way of rejoinder to Mr. Godfrey Whittall's letter in your issue of June 28?

That gentleman is "astonished (to say the least of it)" at my remarks upon the attitude of many leading papers and my suggestion as to the cause of their change of front on the Italian campaign. Having lived in Turkey all his life may account for his astonishment. Is he to be counted among those who still regard newspaper information as gospel truth?

That the state of things I hinted at really exists may not be generally recognised, but it is known to be the case by those who have the opportunity of observing and judging. As Dr. Johnson suggested, "Let us take a walk down Fleet Street." There we may hear rumours and also learn the truth—even the truth which it is inexpedient to declare.

The freedom and independence of the Press in England have, alas! gone the way of many other of our vaunted free and independent institutions. Those who edit and write for newspapers are not wholly to blame. They have orders to obey and their living to earn.

Many things one feels and knows to be true cannot be openly proved. How frequently, for example, the "true inwardness" of a case in the Law Courts is never brought to light in the evidence which may be adduced?

I have strong and sound reasons for believing that the hint I gave was fully justified, and the preface to Mr. Francis McCullagh's book "Italy's War for a Desert" vividly illuminates the very point in question.

With Mr. Whittall's concluding advice to European States I heartily concur.

Finally, I am, as he correctly presumes, an Englishman.—Yours faithfully,

CHARLES ROSHER.

74, Church Street, Chelsea, July 1, 1912.

ENGLISH BOYS' SCHOOL, CONSTANTINOPLE

To the Editor of THE NEAR EAST.

Sir,—I should like, through you, to call the attention of British residents in the Near East to the fact that the new premises built for the English Boys' School at Constantinople will be opened on September 15 next.

The school was founded in 1905. The Turkish Government made a present of a building site, and money was subscribed in England and Turkey, the British Government making a handsome grant.

The school is situated on the breezy height of Nishantash, the healthiest quarter of the town, and looks on to the open country. The school house has accommodation for forty-three boarders, and is equipped with the most modern sanitary fittings, lavatories and shower-baths with hot and cold water, central heating, and Eos gas. The drainage has been entirely constructed by an English firm of sanitary engineers. The school hall and class-rooms, with accommodation for 150 boys, are in a separate block. There is a playground adjacent, and the school has also the use of a playing field.

The head master is an Oxford undergraduate (2nd class honours, classical mods., and modern history finals), and the teaching staff consists at present of five English resident masters and three French and two Turkish visiting masters. The boarding-house is under the charge of an English matron.

The curriculum includes the usual subjects taught in an English school. The senior forms are prepared for the Com-

Digitized by Google

mercial Education Examination held yearly at the Constantinople centre by the London Chamber of Commerce. Turkish and Latin are optional subjects.

The number of boys in the school at midsummer was ninety-three, of whom twenty-two were boarders, so that there will be room for a large number of new pupils when the school reopens on September 15, and the committee thinks that the advantage of securing a sound English education under favourable conditions near at hand and for moderate fees may attract British parents living in other towns in the Near East.

The school prospectus may be had on application to me, addressed British Consulate-General.—I am, Sir, your obedient servant,

A. T. WAUGH,
Chairman of the School Committee.

Constantinople, June 29, 1912.

THE GREEKS OF CYPRUS.

To the Editor of THE NEAR EAST.

Sir,—Allow me to correct the statement—reprinted from the *Stambul*—which appeared in a paragraph of your issue of the 28th ult., also in several other English journals, to the effect that I was sent to England by the Greek inhabitants of Cyprus in order to endeavour to obtain the acceptance by the Colonial Office of the demands that they have formulated on the resignation of the Greek members of the Legislative Council. I came over to England for private business, and I was not entrusted with the mission stated. If I sought and obtained an interview at the Colonial Office I was prompted to do so in my journalistic capacity and from purely patriotic motives.—Yours faithfully,

D. TH. STAVRINIDES.

28, Dorset Square, N.W., July 3.

THE TRANS-PERSIAN RAILWAY SCHEME.

Monday's *Times* contained a letter on the subject of the Trans-Persian Railway from Mr. H. F. B. Lynch in reply to Sir V. Chirol's communication on the subject. Mr. Lynch is of opinion that if in writing that no *prima facie* case against the proposal can yet be established Sir V. Chirol means that there are no obvious objections to it, the statement will be received with astonishment.

"We have to recast all our ideas about the defence of India. That must take a little time. Is the atmosphere favourable for such an educational process, when Russian troops are in occupation of Northern Persia in spite of promises given to our own Government as well as to Persia? And is it fair to ask Persia even to consider such a vital question while her Parliament is in abeyance, her Regent away 'on a holiday,' and while her statesmen who are in nominal direction of her affairs live in daily terror of some fresh ultimatum?" Many people who have studied the question "have probably come to the conclusion that, until Russia shall have subscribed by overt acts to the policy of 'Hands off Persia,' a railway which could bring her troops a thousand miles nearer to India through a country at present incapable of offering the slightest resistance is, to say the least, premature. It is quite true that railways would assist the Persian Government in pacifying the turbulent districts through which they would pass." But of these districts the most turbulent are by general admission Kurdistan, Luristan, and Arabistan, which the projected railway leaves a long way to the West. "If Persian needs of this nature be really the end in view, another Russian scheme for a line from Julfa through Tabriz and Sehna to Hamadan, where it will join the proposed line from Teheran to Kirmanshah (Potsdam Agreement), and whence it will be taken by British capital through Burujird and Khorremabad to Khor Musa and Bushire, would obviously meet the case better, while not precluding ultimate extension towards India, if and when Persia may have recovered from her present weakness and be in a position to resume her *rôle* of an effective neutral State between the British and the Russian Empires in Asia."

Mr. Lynch concludes: "I plead, Sir, not for opposition à *outrance*, but against encouraging Russian financiers in such an adventure at the present time. This, I submit, is a course which may lead to Anglo-Russian estrangement. The franker course would surely consist in stating our requirements at the outset, and among them not the least is that a railway of this nature should not cross a defenceless Persia."

THE PRESS ON THE NEAR EAST.

The Turco-Italian War.

Dr. Dillon has talked with many statesmen both in Italy and in Turkey concerning the prospects of peace, and in his review of Foreign Affairs in the *Contemporary* he gives the result of his inquiries. The Turks, he is convinced, "will withstand Italy to the last"; and he quotes a Cabinet Minister as saying that they would not save the Empire at the cost of abandoning their co-religionists in Africa; that even if they could not keep the enemy out of the Dardanelles they would still refuse to sign "a peace treaty ceding to the Italians the most Mohammedan provinces of the Empire." What, then, is the end likely to be?

One may say that of all the domestic contingencies that one can imagine taking place in Turkey, only two would materially affect the conduct of the war: a military revolution, or manifest danger to the Holy Places. If the Italians had been able to turn their efforts successfully in this latter direction they would have harvested in much more valuable results than will ever flow from temporary possession of the islands. . . .

The reinforcement of the defences of Chios and Mitylene, the elaborate preparations near Smyrna, the works undertaken on the shores of the Dardanelles and in half a dozen other places, the prolongation of the railway towards Mecca, the up-keep of the army in Macedonia and Albania—these are a few of the items that eat into the slender war fund, and send a thrill of apprehension to the hearts of Ministers. And it is Italy's interest, and therefore her object, to harass her enemy into spending, on such unproductive precautions, the last few millions that she can scrape together by borrowing or begging. In wild attempts, mostly failures, to smuggle soldiers and munitions of war into Tripoli and Cyrenaica, many millions have also been squandered. In a word, Turkey's financial resources are being drained by many channels, and are not being replenished. The end is a matter of calculation.

Italy Cautious.

Dr. Dillon deals further with the same subject in an article in Monday's *Daily Telegraph*. Italy, it seems, is inclined like Brer Rabbit to "lie low":—

A serious rencontre between Italy and Turkey on land, without being wholly eliminated from the list of contingencies, is improbable. Signor Giolitti, who directs the campaign on the principle of administering occasional stimulants to the Italian nation, will not readily run big risks; and this would be one of the biggest. The Turks desire nothing more ardently than that the Italians should attack Smyrna and land troops there, advancing beyond the cover of their guns. That would soon bring things to a head. It would stake the success of Italy's colonial enterprise on the fortune of war, and that is precisely what the Turks are longing for. It is obvious that they have far more incentives to heroism than the soldiers of King Victor Emanuel. They are fired by religious zeal, by patriotic ardour, and above all, by a hatred of Italy and the Italians, which will endow them with uncommon strength. During my conversations with General Abdullah Pasha, the Commander of the forces defending Smyrna, and with some of his officers, I could remark and appreciate the impatience of the Turks to have a good stand-up fight with the invaders. But I do not think that they can hope for such a piece of luck.

A march on the Holy Places would be less risky in the abstract; but for the Italians to attack Mecca would in truth be a daring enterprise. Still, if it were successful it would end the war and attain the aim in view. For it would strike a vital—perhaps the most vital—part of the Turkish Empire. Mecca in danger would be Islam in fever. No ransom would be too high to redeem the sacred places. "Libya" would be but as dust in the balance by comparison. No Cabinet in Constantinople, no public opinion in Egypt or elsewhere in Islam would hesitate to sacrifice the coveted provinces for the holy sites.

Is the feat possible? It is somewhat startling to find that many "competent men of all religions in and out of Turkey" to whom Dr. Dillon has put the question have replied in the affirmative.

There is no doubt that the Holy Places of Islam could be seized by a military State at war with Turkey and desirous of dealing a decisive blow, for they are inadequately defended, as every military man knows. The number of Ottoman troops there is small, far too small to discharge the duty now imposed on them by circumstance. And it cannot be increased. The War Ministry would gladly despatch reinforcements thither if it could, but the centre is cut off from all the commanding positions. The Red Sea—the one route over which military detachments were heretofore sent—is blocked by Italian warships, and the Turkish military status quo there must remain unimproved. The troops which happen to be there to-day are thrown upon their own resources. They must do the best they can under most unfavourable conditions. The overland route traverses a desert which would become the cemetery of any large body of troops that ventured to march across it towards Mecca. Thus the Holy Places are insecure.

Seyyid Idris might, the writer thinks, be tempted to play the traitor, but Imam Yahya would easily drive him back. If, however, Italy were to despatch a large and well-provisioned body of her best troops against

Digitized by Google

the Holy Places the end of the war might be in sight. She is not likely, though, to run any such risks; prudence will continue to be regarded by her generals as the better part of valour. The only hope of terminating the war that Dr. Dillon sees "lies in exhaustion, financial and moral."

Lord Kitchener's "Human Side."

In an article entitled "Lord Kitchener in Egypt" in the *Fortnightly Review*, Sir George Arthur writes:—

As Sirdar, as Commander-in-Chief in South Africa and India, Lord Kitchener exhibited an extraordinary appreciation of racial characteristics, a talent which time after time enabled him to grapple sucessfully with local questions which another administrator less sympathetic in this respect might have been unable to solve. In the part which he now plays under the ægis of the Foreign Office, the British Consul-General has shown not only an intimacy with European politics, but a flair and a lightness of hand which only those who knew him most intimately would have attributed to him, and his tenure of office in Egypt has already lighted up the thoroughly human side of his character. . . .

The strong soldier who has at times been accused of lack of sympathy and of holding human life too cheap, is revealed as the man for whom every detail affecting the lives, and especially the humble lives, which lie within the scope of his influence is of absorbing and vital interest.

Greece of To-day.

Last Saturday the *Morning Post* published an article by a special correspondent, who gave some remarkable facts concerning "Progress in Greece." We can quote only a single paragraph:—

The growth and embellishment of the capital in late years cannot fail to attract attention. When it is remembered that Athens did not become the seat of Otho's Government till 1834, and that at that time the Piræus, now probably the busiest port in the Levant, consisted of a single house, the progress of the city and its harbour seems extraordinary. At the last census, taken in 1907, the population of Athens was 167,479, that of the Piræus 73,579; the latter is now practically continuous with New Phaleron, and "the two towns," as the capital and the Piræus are locally called, may be estimated at present to contain, together with their suburbs, a joint population of well nigh 300,000 souls. Building is going on apace, and the houses of the wealthier Athenians are very fine and handsome. Even the broad streets, which used to be considered as unsuitable for a southern city, are now found to be better adapted for tramway traffic than are the narrow lanes of some Continental towns. In small provincial centres progress is also noticeable. Corinth, for example, a place which in its present incarnation dates from little more than half a century ago, now has good cafés and hotels. Accommodation has improved in various parts of the country, and the traveller who returns, like the present writer, to the mediæval monastery of Megaspelæon is surprised to find a clean Alpine hotel, built and presented by a wealthy currant merchant as a gift to that famous religious house.

The Homs-Baghdad Revelations.

The July *Asiatic Quarterly Review* contains an article with the above title. The first part is devoted to a *résumé* of the facts set out in the pamphlet published by the *Courrier Européen*, to which reference has already been made in THE NEAR EAST; the second deals with the financial aspect of the scheme, with the question of railways in that portion of Asiatic Turkey generally, and with British, French, and German commercial and financial interests in Turkey. The whole is of strong interest. The writer is of opinion that—

On the ground of facility, and, therefore, of efficiency in carrying out great commercial and industrial enterprises, it is surely better that the nationals of one country, speaking the same language and looking at things from the same point of view, should be told off to labour in a particular area. This principle has, indeed, already become operative in the case of Germany. Our own countrymen have been edged out of Asia Minor, where German industry has been given a free run. . . . Even if Germany were to aspire to industrial and commercial exclusiveness in Asiatic Turkey as a whole, she would find the task too great even for her energies and resources. Bismarck's motto, *Qui trop embrasse mal étreinte*, is surely applicable to her case. In this fact, which Germany will, sooner or later, be obliged to recognise, lies the hope of an understanding between her and France and England as to the part which each country is to play in the economic development of Turkey. Their persistent rivalries are as much opposed to the economic progress of the Ottoman Empire as they are opposed to their own interests. . . . As for the political aspects of the question, it can never be to the interest of any of these Powers to assume political responsibilities in Turkey. It is, therefore, much more probable that, when they had once composed their suspicions of one another, Turkish suspicions of their motives would also be set at rest.

"In the Homs-Baghdad scheme," the writer says, "we recognise the offspring of Sir William Willcocks, whose conclusions would seem to be open to the fatal objection that they would deprive Mesopotamia of the use of its natural waterways as main avenues of transport and communication." A railway along the Valley of the Euphrates is, he concludes, only a question of time.

When this line shall have been constructed Baghdad will become the terminus of two great trunk railways, one following the course of the Tigris, and the other that of the Euphrates. It is already the emporium of the trade with the Persian Gulf, the bulk of which consists of goods in transit for Persia. The importance of Baghdad as a jumping-off place for the trade of the richest provinces of Persia would seem as yet to have been imperfectly realised. When the stream of traffic with the Persian Gulf has been increased by feeders from the Mediterranean, the need of equality of treatment, and, therefore, of control, on the future railway between Baghdad and Persia will make itself felt among the industrial nations of Europe. That this key of the entire position shall not be placed in the hands of the nationals of any one State, and that the door which it opens into Persia shall not be closed, would seem to be the most pressing objective of the diplomacy of those Powers possessing interests, actual or potential, in these regions.

NEAR EAST BOOKSHELF.

ABDUL BAHA IN EUROPE.*

The Bahai movement should interest readers of this journal, for it originated in the Near East, and is daily winning favour throughout the civilised world. Its prophet, Abdul Baha, paid a visit to Western Europe last autumn, and we are indebted to the Unity Press of East Sheen for a record of his utterances during a stay of nearly three months in London and Paris. Dr. Johnson said of Burke that no one could take shelter from the rain with him, even for a few minutes, without discovering that he was a great man. Abdul Baha's personality is equally impressive. Mingling freely with all sorts and conditions of men, he won their hearts by his transparent sincerity and the all-embracing love which shone in his conversation. He had a right royal reception in this country. Archdeacon Wilberforce introduced him to the congregation of St. John's, Westminster, and at his bidding all of them knelt to receive the sage's benediction. Dr. R. J. Campbell welcomed him to the City Temple, and permitted him to deliver an address from its pulpit. Abdul Baha spoke words of comfort to a large gathering of working men and women at the Passmore Edwards Settlement; he held commune with bodies more esoteric, such as the Theosophists and the Higher Thought Centre. That animal instinct which we style curiosity, and the wave of intellectual anarchism, which is shaking organised creeds to their foundation, will partly account for the enthusiasm he excited. Someone who knew his fellows only too well remarked that if a temple were raised to Diana of the Ephesians in London it would attract hordes of the idle rich. But no body of belief can endure which appeals solely to unregulated emotion, and has no constructive energy. Abdul Baha is not the founder of a sect: he takes up a novel attitude towards manifestations of the religious instinct, and breathes a new spirit into the chaos of decaying creeds. That the Bahai movement displays the hall-mark of vitality is proved by the following dicta, culled almost at random from the books which relate his experience in England and France:—

The cause of disputes between nations is prejudice arising from diversity of race, language, religion, custom and tradition. It requires a universal action to overcome them.

There are three kinds of faith. The first comes of one's birth and the traditions absorbed in childhood; a child is born Mohammedan and remains so. Secondly, there is a faith resulting from knowledge and understanding. This is good, but a third is better still—that faith which arises from practice.

Art is worship. A craft pursued in the true spirit of service is identical with prayer to God.

Any religion which rejects the conclusions of science and knowledge is false: religion and science must go hand in hand. But man himself may become the slave of things he has invented. His re-birth occurs only when he is no longer engrossed by material cares; and he only is free who is no longer the captive of desire.

Under the late régime in Turkey Abdul Baha suffered imprisonment during forty years in the pestilential town of Akka. At one time 150 Bahais were herded in two rooms, suffering from malaria, typhoid fever, and dysentery, and this without any pretence of medical treatment. Yet we find him glorying like St. Paul in his long martyrdom, and expressing the thought which inspired poor Lovelace's verse, "Stone walls do not a prison make, nor iron bars a cage."

Liberty is not a question of place, but of condition. I am thankful for my imprisonment; my days were spent in the path of service, and the trials I underwent were fruitful of result. Unless one accepts the direst vicissitudes one can never attain to true happiness. For me imprisonment is freedom, troubles give me rest, death is life, and to be despised is honour. When a man is released from the prison of self then does he find freedom indeed.

In an earnest talk with the rector of a country parish, Abdul Baha said:—

I find England awake; there is spiritual life here. But your poor folk are so *very* poor. On the one hand you have great wealth and luxury; on the other hand men and women are living in the extremity of hunger and want. This great contrast between human lives is a blot on your civilisation.

An ardent Suffragist was asked by Abdul Baha to state her reasons for thinking that women should have the vote, and the following dialogue ensued:

Suffragist: I believe humanity to be divine, and that it must rise higher and higher; but it cannot soar with a single wing.

Abdul Baha: But what will you do if one wing be stronger than the other?

S.: Then we must strengthen the weaker, for otherwise flight will be hampered.

A. B. (smiling): What will you say if I prove to you that woman is the stronger wing?

S.: You will earn my eternal gratitude!

A. B.: Woman is indeed of great importance to the race; she has the heavier burden and the larger share of work. Look at the animal and vegetable worlds. The female palm, which bears the fruit, is most prized by date-growers; Arabs know that, for a long journey, the mare has the longest wind; for her greater strength and ferocity the lioness is more dreaded by hunters than the lion. Mere size of brain has been proved to be no measure of superiority. Woman has more moral courage than man; she has special gifts which enable her to govern in moments of danger and crisis. If necessary, she can become a warrior.

Complete equality between the sexes is a plank of Abdul Baha's platform. During his stay in Paris he said:—"In some respects woman is superior to man; she is more tender-hearted, more receptive, and her intuition is intenser than his. It cannot be denied that, in various directions she is more backward than man; but this inferiority is due solely to lack of educational opportunities."

The keynotes struck by Abdul Baha are Love and Unity. They sound strangely in a world which rings with the clash of contending interests, but harmonise with the spirit of brotherhood, which is destined to supersede the primeval law of struggle by the law of mutual help.

F. H. S.

THE STORY OF ESTHER.*

It is difficult even for the most inspired writer to find words and phrases of sufficient strength and beauty to raise a story founded upon Biblical characters above the commonplace. The author deals with a subject which calls for comparison, and in risking such comparison as the Bible has to offer he is fortunate if he escapes annihilation. Miss Agnese Laurie-Walker may be said to have escaped this, but further it is hard to go. As a writer on every-day life we can imagine this author being entirely successful, but in her re-telling of the story of Esther we find her strangely unconvincing. Occasionally one is afforded a glimpse of the real East, but the characters do not live; they are merely puppets obedient to the will of their creator or biographer. The shadow of the West falls heavily upon their conversations, causing the "thee" and "thou" of Oriental custom to stand out apologetically from the rest of the text. But despite this the story is pleasantly told, and in the creation of incidents Miss Laurie-Walker leaves nothing to be desired.

CURRENT COMMENTS.

Evidence that England has not entirely lost her prestige in the Near East comes to us from Skopia, known outside European Turkey as Uskub. There lives a harmless lunatic in that industrial centre who is firmly convinced that he is H.B.M.'s Consul-General, and asserts his claim to that post by sleeping every night outside the official residence of the real Simon Pure. He is not molested in any way, owing to an impression which is current in all Moslem countries that insanity is a proof of divine inspiration. This superstition seems preferable to the brutality with which demented creatures were treated in England not so very long ago. There are people living who remember that the keeper of a provincial lunatic asylum used to admit travellers by coach, at a shilling a head, to inspect his inmates, while horses were being changed on the journey to London.

***

The rumoured engagement of Crown Prince Boris of Bulgaria and Elizabeth, eldest daughter of the Roumanian Crown Princess, has caused quite a mild sensation in Fleet Street. One newspaper reproduces portraits of the young couple, whose united ages total up to thirty-five spring-times. Another points out that the *fiancée* has already passed the age reached by her mother when she wedded the heir to the Roumanian throne. It is a curious fact that very early marriages are seen only in the highest and lowest grades of our social hierarchy. Children belonging to the Royal caste give hostages to fortune at an age when their contemporaries of somewhat lesser degree are still in the schoolroom. In point of fact, they are pawns on the political chessboard, and their love affairs are made subservient to dynastic interests. Foresight is the keynote struck by statecraft; and mis-alliances are more likely to occur when young men think that they are old enough to choose a wife. Lads and lasses of the people plunge too early into matrimony because they are incapable of looking ahead, or reckoning up the pros and cons before they take a step of vital importance.

***

On the other hand, one may appear too soon on the field of action. A story is current to the effect that the Greek Patriarch at Constantinople, hearing of the demonstration made by an Italian squadron outside the Dardanelles, hastened to St. Sophia, in order to take possession of the erstwhile cathedral before his Roman Catholic rivals could assert their claim to occupy it. He was informed, it seems, by the mullahs that they would rather dynamite the glorious mosque than see it revert to infidels!

***

During his visit to Malta, Lord Kitchener accompanied Sir Leslie Rundle, the Governor of the island, to Mellaba, a small seaside place inhabited chiefly by fisher folk. The object of the visit was the inauguration of new waterworks, which ceremony was performed by the Governor. Unfortunately, owing to some slight miscalculation, as soon as the water was turned on it shot high into the air, and both Sir Leslie Rundle and his distinguished guest, to say nothing of a large number of others present, received a veritable shower-bath. This "christening" the performer of the ceremony and the spectators is, one suspects, hardly likely to prove popular.

***

Genius for war and the affairs of civil life is occasionally united in the same personality. Was not Napoleon even greater as an administrator than a general? Lord Kitchener's fame in the realms of strategy, tactics, and organisation is firmly established; but few of his countrymen credited him with the gift of wide sympathy. That he possesses it in a marked degree is proved by his short career in Egypt. The fellaheen have to thank him for opportunities of purchasing seed on easy terms of payment and for the dissemination of market news, enabling them to make better terms for their produce with middlemen. A reform of even greater moment suggested by Lord Kitchener is the creation of legally constituted committees for the purpose of settling village disputes. This idea was probably developed in the course of his sojourn in India, where five elders, known as the *Punchayet*, used to decide petty causes without appeal, until they were superseded by a cumbrous and exotic system imported from England. Egypt is fortunate in possessing a Consul-General who knows that law courts and their myrmidons are a fertile source of misery throughout our Indian Empire.

***

Western scholars appear to have Minoan and Mycenian civilisation on the brain. At the annual general meeting of the Hellenic Society we find Sir Arthur Evans asserting that Greek culture could no longer be regarded as a "child of miracle," inasmuch as its roots lay deeply in that of Crete and its offshoot, Mycene. But the last was destroyed, root and branch, seven hundred years before the age of Pericles dawned on Hellas. Is it not more probable that human nature makes a similar response to environment at all times and in all places? The genius of a gifted race will always work miracles when it receives some tremendous stimulus. We owe to the intellectual forces let loose by the Persian invasion that sudden efflorescense of literature and art of which modern civilisation is but a pale copy.

***

The fears expressed of a low Nile flood, or at any rate of very low levels on the Upper Nile until the flood comes down, bring home to one more forcibly than ever Egypt's utter dependence on the water which comes down to her from the Central African districts. At the same time one realises the great boon conferred on her by the construction of the Assuan reservoir and dam and the barrages at Esna and Assiut. In both 1905 and 1908 the reservoir saved the cotton crop, and this year it is doing a like service. It is no exaggeration to say that but for the Upper Egypt irrigation works Egypt would have suffered serious and almost irreparable loss thrice within the past decade, and Young Egypt, when he abuses the British Occupation, should remember that without it his country could never have taken out such a fine insurance policy for the protection of its crops against drought and inundation. More especially do the Egyptians owe a heavy debt of gratitude—though they are too inclined to overlook it—to those British administrators and engineers who insisted on carrying out their project in the face of financial obstacles, and devised a means of overcoming them, thanks to their great foresight and enterprising spirit, which enabled them to appreciate to the full the vital importance of those works to Egypt.

***

A valued correspondent in Jerusalem informs us that considerable scandal was recently caused in that city by the doings of a cinematograph company from America, which has been obtaining pictures for a representation of events in the "Life of Christ." Certain scenes were gone through, our correspondent writes, in a fashion that left the "deepest impression of horror and disgust" on the spectators; and the comments of the Moslems "have been painful to hear." "It is reported," our informant adds, "that the company had special facilities from the Porte. This may or may not be the case, but certainly had they not been protected by the police they would probably have had some rough treatment from the outraged crowds. By the end of the week public feeling became so acute that the local Government was obliged to interfere, and the company have left, though it is feared they have accomplished their purpose in coming."

***

Our correspondent evidently writes under the stress of strong feeling. And it must be admitted that it is not pleasant to read of those who have just been taking part in the protrayal of the most tremendous tragedy the world has ever witnessed returning "shouting and singing," like a party of "day-trippers" in brakes. Whether such scenes should be reproduced at all is a matter of individual opinion and taste. Reconstituted in a reverent spirit and for a worthy purpose they may do a certain amount of good. But when the object in view is solely to secure a series of pictures that will "draw well," and so put money in the pockets of those who engineer their production, one cannot well avoid feeling that little can be said in their favour.

***

The pitfalls of the English language were illustrated by a tale told by Prince Damad Ferid Pasha, the Sultan's brother-in-law, in a speech which he made when presenting the prizes in a driving competition promoted recently by Mr. Mark Sykes, M.P., at Sledmere (Sir Tatton Sykes's Yorkshire estate). The Prince, it may be mentioned, has a sincere friendship for England, and a long connection with Sledmere and Sir Tatton Sykes. At one time, wanting a ram, he sent a request to his friends that one from a celebrated English flock should be forwarded; but by some mischance the message was twisted in transmission, and by the time it reached Sledmere it stated that rum was required. To the embarrassment of Prince Damad, therefore, a large barrel of rum, instead of a ram, was duly forwarded. Not knowing what to do with the spirit, his Highness presented it to some British sailors—who, with resource characteristic of the British tar, hit on a solution of the problem. And it is satisfactory to be able to add that his English friends were subsequently able to rectify the error.

***

By the way, Mr. Mark Sykes, M.P., was the subject of *Vanity Fair's* cartoon last week. He is depicted seated in Oriental fashion on a revolving book-case; a map of Turkey is prominent amongst the papers that surround him; and "Jehu Junior" reminds us that he "has mapped 7,000 miles of Asiatic Turkey."

***

Just now, when Turkey is being accused of neglecting to carry out reforms that were promised at the time of the restoration of the Constitution, and when the Young Turks themselves are pointing to what has actually been accomplished, it is worth while remembering words spoken by Lord Palmerston in 1867. "Friends of Turkey," said Lord Palmerston in effect, "should look upon the road she has already passed over since the reform: Ottoman Ministers should look only upon the road which she has yet to traverse without glancing aside."

PERSONAL & SOCIAL

Sir Reginald Wingate has arrived in England from Carsbad, and will leave for Knockenhair, Dunbar, on the 11th inst.

The Khedive, who arrived in Paris last Saturday evening, paid a visit on Wednesday morning to M. Poincaré, the French Prime Minister and Minister for Foreign Affairs.

The Khedive will spend five or six weeks in France and Switzerland, and is due to arrive in Alexandria on August 10. As at present arranged, he will spend the month of Ramadan in Alexandria, and after Bairam will visit his Dolman estates, and thence proceed to Constantinople.

By the way, although reports of it found their way into the Press, the visit which the Khedive paid to Sir John Gorst at Castle Coombe on Wednesday of last week was intended to be of a strictly private character.

Prince Christopher of Greece honoured Mr. and Mrs. John Zarifi with his company at luncheon last Tuesday. Among the guests were Mrs. Fred Terry, Miss Neilson Terry, the Hon. Claud Yorke, and Mr. Stephen Schilizzi.

Mr. Ronald Storrs, Oriental Secretary at the British Agency in Cairo, is now in England on leave.

Mr. E. Bonham Carter, C.M.G., Legal Secretary to the Sudan Government, is now in England on leave.

Colonel Phipps, Civil Secretary, Sudan Government, is now in England on leave. He expects to return to Khartoum in October.

Mr. and Mrs. Hugh E. Poynter, of Constantinople, are at present on a visit to London, where they will remain until August.

On Monday, at Buckingham Palace, Admiral Sir Edmund Poë had the honour of being received by the King upon relinquishing his appointment as Commander-in-Chief of the Mediterranean Fleet, and upon his appointment as First and Principal Aide-de-Camp.

Rear-Admiral Sackville H. Carden has been appointed Admiral Superintendent of Malta Dockyard in succession to Vice-Admiral Simons.

The Servian Chargé d'Affaires and Mme. Grouitch were amongst the guests invited by Lord and Lady Swaythling to meet Princess Alexandra of Teck at luncheon on Sunday.

The French Diplomatic Agent and Consul-General at Cairo, Mr. Defrance, is going on leave on July 20.

Prince George of Greece and H.H. the Aga Khan attended Miss Olga Lowenthal's musical réunion at Claridge's Hotel on Tuesday evening.

Our Sofia correspondent writes:—The King is at present at Pishtian, a watering-place in Hungary, taking a cure for the gout, of which he had a severe attack this winter. He is expected to be back by the end of July to supervise the preparations for the festivities in connection with the celebration of the twenty-fifth anniversary of his reign, which will take place at Tirnovo. The Queen has returned to Sofia, and is busily employed in various philanthropic works, such as organising the hospital for children at Varna and the summer camps for sick children. Prince Boris has returned from Vienna and is now at Sibnianovo.

M. Sverbeew, Russian Minister in Athens, has been appointed Ambassador in Berlin.

The Greek Minister and Mme. Gennadius were amongst the guests invited by Sir George and Lady Cooper to meet H.R.H. Princess Christian and H.H. Princess Victoria of Schleswig-Holstein at dinner on Thursday last week.

Earl Curzon of Kedleston left town for Broadstairs on Tuesday.

Baron Empain is now almost recovered from his recent indisposition.

Miralai Herbert Bey, Commandant of the Cairo district, is now on leave in England.

Lewa Hopkinson Pasha, Commandant of the Alexandria City Police, who has been given three months and a half leave, left Alexandria for Syria on June 24.

Lewa Bernard Pasha, Financial Secretary to the Sudan Government, who has been ill, has now recovered, and will shortly be coming to this country on leave.

The *Gazette* contains the announcement that the King has been graciously pleased to appoint Geoffrey George Knox, Esq., to be his Majesty's Vice-Consul at Cairo.

The marriage arranged between James Douglas Craig, Sudan Civil Service, eldest son of James Craig, M.D., late of Beckenham, Kent, and Marjorie, youngest daughter of Joseph Dobbs, of Coolbawn House, Castlecomer, County Kilkenny, and Liscarraig, Greystones, County Wicklow, will take place quietly in August.

Mr. T. A. F. Critchley, manager of the Imperial Ottoman Bank at Alexandria, is passing through London on his way to Scotland.

A wedding has been arranged between the Hon. Ernest Brabazon, Coldstream Guards, fourth son of the Earl and Countess of Meath, and Dorothy, youngest daughter of Colonel and Mrs. Horace Ricardo, Bramley Park, Guildford.

We regret to announce the death of Lieutenant-Colonel H. B. Mathias, D.S.O., R.A.M.C., which occurred at Khartum on the 28th ultimo. Colonel Mathias was to have left for Cairo on June 20, but he was attacked by a sudden indisposition, to which he finally succumbed. He had been in the Sudan for many years in the capacity of Principal Medical Officer to the Egyptian Army, but prior to this he served with the Nile Expedition of 1898, and was present at the battles of Atbara and Omdurman. During the '98 campaign he was twice mentioned in despatches, and received the Egyptian Medal with two clasps. Colonel Mathias also saw active service in South Africa, from 1899 to 1902, when he was again mentioned in despatches, and received both the Queen Victoria and King Edward medals, each with two clasps.

It is principally due to Colonel Mathias that sleeping sickness has to a great extent been eradicated from the Lado enclave. The disease was rampant throughout the province when it was handed over to the Anglo-Egyptian Government by the Congo authorities, and a medical mission was at once despatched from Khartum to investigate the causes. As a result, one of the chief towns in the province was proved to be an active centre of disease, and it was at once destroyed. The death of this officer will prove to be a great loss, not only to his large circle of friends, but also to the Government which he had so long served.

Dr. Riza Tewfik Bey will be entertained at luncheon on July 24 by his British literary and scientific friends at the Whitehall Rooms. Those wishing to attend this complimentary *déjeuner* to the ex-M.P. for Adrianople are asked to communicate with Dr. Stephen, Eastern Question Association, 9, Northumberland Avenue, Putney, S.W.

Last Saturday King George of Greece embarked in the Royal Yacht, and proceded to Volo. Accompanied by his Prime Minister and the Minister of Marine, His Majesty has been present at a series of naval manœuvres carried out under Admiral Tufnell's command.

Lieutenant Sherman Miles, U.S.A. Military Attaché for Roumania, Bulgaria, and Servia, paid his first visit to the Sofia authorities last week.

Mr. McGillivray has returned to the Sudan after his visit to England in connection with the growing of cotton in the Gezira.

Wild Bey and Mrs. Wild left Alexandria for Europe on the 4th inst.

Mr. Williams, Inspector-General of Irrigation for Lower Egypt, has been granted leave for two months and a half from the 1st inst. During the absence of Mr. Williams, Mr. Adamson, Inspector of the Zifteh Irrigation Circle, will act as Inspector-General of Irrigation for Lower Egypt, until the return from leave of Mr. Finlaison, Inspector of the 1st Irrigation Circle, who is to act for Mr. Williams during the rest of his leave.

Moukhtar Bey, Director-General of Railways, is representing the Turkish Government at the Railway and Tramway Congress at Christiania.

Mr. Pritsch, a son of the German delegate on the Council of the Ottoman Public Debt and at one time German Consul-General at Antwerp, has been elected a Rhodes scholar and is coming to England in September, when he will go to Christchurch.

The United States Government has requested the Bulgarian Government to recognise Dr. A. Kermetchiew as U.S. Consular Agent at Sofia.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

NYE.—On June 22, 1912, at 30, Stanford Road, Brighton, the wife of Major V. A. Nye (Cheshire Regiment), Imperial Ottoman Gendarmerie, Constantinople, of a son.

MARRIAGES.

SMYTH—SCAIFE.—On the 27th ult., at St. Mary Abbot's, Kensington, by the Rev. Cecil Black-Hawkins, Guy Charles Gee, third son of Mr. and Mrs. L. Gee Smyth, of Calcutta, to Hilda Joan, youngest daughter of Mr. and Mrs. Arthur Scaife, late of Constantinople.

ARMBRUSTER—KNOBEL.—On June 29, 1912, at St. Marylebone Parish Church, London, by the Right Reverend Llewellyn H. Gwynne, D.D., Bishop in Khartum, Charles Hubert Armbruster, M.A., Sudan Civil Service, eldest surviving son of Mr. and Mrs. Carl Armbruster, to Stefana, widow of F. Knobel, Esq.

DEATHS.

MATHIAS.—On June 28, at Khartum, Lieut.-Colonel Hugh Brodrick Mathias, D.S.O., P.M.O. of the Egyptian Army, aged 49. R.I.P.

CRAWFORD.—On June 27, at Babbington, Weston-super-Mare, Henrietta Elizabeth, eldest daughter of the late Rev. Henry Crawford, of Christ Church, Jerusalem, aged 70.

FRIDAY, JULY 5, 1912.

A PLEA FOR PEACE.

The war between Italy and Turkey continues, in spite of the desire of both belligerents to be rid of it, in spite of the anxiety of the neutral Powers to quench the spark that has been kindled so dangerously near to the European powder magazine. To all outward appearances there is nothing to prevent the war from lasting indefinitely. From a military point of view a condition of stalemate prevails, although the Italians may push forward their outposts in Tripoli with varying success, and although they may have drawn a cordon round the Dardanelles and Turkey's Asiatic coast by the occupation of the Ægean Islands and by the blockade of the Red Sea. In turning her attention to Turkey's possessions in Asia it might be thought that Italy was taking an important step towards forcing matters to a head. The occupation of the Archipelago has brought the Turks into closer touch with the inconveniences of war, and if aeroplanes or airships are to take up the attack on the forts of the Dardanelles as a prelude to a forward movement on Constantinople, the Porte's confidence in itself may be rudely shaken. But it has yet to be shown that such measures will bring about the realisation of Italian ambitions in Tripoli. While Italy is conducting the war on the most economical lines possible, trusting to extraneous circumstances rather than to her own military prowess for the achievement of her aims, the Turkish Government is also freed from expenditure in keeping with the usual demands of a struggle between two powerful States. The process of exhaustion on which Europe now hangs its hopes for the termination of hostilities may prove as slow in its effects as the military operations of the combatants. In the meantime the prolongation of the war brings each country face to face with the probability of developments which may leave it in a far less favourable position for making peace than it is at present. To both Powers the turn of the screw may come in an unexpected guise, and this consideration ought to prompt them to review from time to time the general situation and the reasons for the prolongation of an ineffective struggle.

It must be admitted at the outset that from the military point of view there is nothing to indicate that the end of the war is approaching or to justify mediation. No time limit can be imposed upon Italy for the carrying out of her designs on Tripoli; nor have the Turks and Arabs been so worsted in the campaign that further resistance should be impossible or even difficult. Honours between the combatants are essentially easy. It is, however, agreed that both desire peace, while Europe is no less eager for it. The efforts that have already been made to pave the way for mediation have failed, for the reason that they were before their time. A short interval only has elapsed, it is true, since the Powers made their representations to Rome and Constantinople; but enough has happened to convince both Italy and Turkey that their former attitude, however correct or magnificent at the moment, must lose much of its glamour and justification as time passes. In the first place Italian prestige is suffering in proportion to the inability of the Italian forces to make good their pretensions to the annexation of Tripoli. The extension of hostilities to the Ægean Sea is a confession of impotence on the north coast of Africa. Whatever justification there may have been for the original declaration of war and the belief that in going to Tripoli the Italians were carrying out the mandate of civilisation, events have proved that the task is beyond their immediate resources, while a very serious complication has revealed itself in the refusal of the Arab population to accept the "deliverance" from the Turkish "yoke" that the Italians went to confer upon them. If the campaign in Tripoli had followed on the lines that the Italians had anticipated, they would have experienced little difficulty in justifying their action. As things are, even if they could extract from the Turkish Government a ratification of peace, they would be confronted with the problem of maintaining their position in "Libya" in the face of the determined hostility of the Arabs. Before this unexpected obstacle the claim to a civilising mission breaks down. The point at issue loses sight of original differences of opinion between Italy and Turkey, and resolves itself into mere land-grabbing on the part of the Italians by way of compensation for the territorial expansion of other Powers in North Africa. When this aspect of the war is brought home to the people of Italy it is possible that there will be less enthusiasm for the struggle, especially if the financial resources of the country are not equal to the continued strain without additional taxation. For the Italian Government, therefore, the moment would seem to have arrived to consider whether it ought not to adjust its ideas of the part that destiny has called it to play in Tripolitania, and to pave the way for an understanding with Turkey on the basis of what it has already achieved and of the work which it has some chance of consolidating. Such an agreement would be to the mutual advantage of Italy and of the native population in the restricted portion of Tripoli which may pass under her rule.

An obligation to review her position is no less imposed upon Turkey. At no time since the constitutional régime was established has the Government had less cause for self-complacency. The military situation in Tripoli may seem perfectly satisfactory, the full measure of the Italian menace in the Ægean may have been taken and provided for, and Ottoman finance may prove equal to all the demands of a long campaign. But the internal situation of the country constitutes an even more serious matter than the war itself, and the party responsible for the administration may well shrink from trying to deal with both these problems at once. It would seem, therefore, that we might address our plea for peace to the Turkish Government with some degree of confidence. Honour has been abundantly satisfied by the resistance offered to the Italian arms. European sympathy, at which the Turk has occasionally reason to cavil, has been in this war on his side. But if the Porte is able to continue the struggle indefinitely, the Italians, with their command of the sea, are no less able to maintain their hold on the coast of Tripoli. A prolongation of hostilities opens up the possibility of serious complications for Turkey, and no Government is ever likely to find itself in a stronger position for making peace than the Cabinet is at the present juncture. Between the demands of the two belligerents lies a halfway house, that Italy's authority over the town of Tripoli and a section of the province should be recognised, with all the reservations specified in Italy's original offer of terms. The transfer can be wrapped up in any disguise that diplomacy may suggest to save the susceptibilities of the Arabs; while as for the proclamation of annexation it is to be hoped that the Italian nation will not seek to place itself on an intellectual level with the tribes of the African desert by stipulating for the saving of its face by the retention of wording that was meaningless when first penned, and has remained a dead letter ever since. Italy's modified success will not have enhanced the virtue of an unrighteous act; but the justice of Turkey's cause is insufficient compensation in this instance for an inadequate navy. If the Porte neglects the opportunity for a voluntary compromise, it may find itself forced into a more humiliating position. The first overtures on its part, on the other hand, are likely to cause pressure to be brought upon Italy to abandon an intransigeant attitude. A precedent for making terms of peace seemingly inadequate to the existing military situation, but prompted by statesmanlike foresight, was set by Japan in the Portsmouth Treaty. If the Turkish Government were to follow that example it would have the satisfaction of knowing that it had acted strictly in the interests of the country, even though it be, as in the case of the Tokio Government, to the prejudice of its own popularity.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The *Journal* of the Chamber of Commerce of Turkey celebrates its twenty-fifth anniversary in the current issue to hand. It is a record number, containing many interesting articles and items of useful information. The writer of an article entitled "The Last Twenty-five Years of Trade in Turkey," is amply justified in regarding the *Journal* as one of the factors which have contributed to the awakening in Great Britain of a desire for news, political and commercial, about Turkey. His reference to the increasing circulation of THE NEAR EAST, as tending to support his contention that Great Britain is awakening, is warmly appreciated by us.

***

The same *Journal*, in its editorial notes, makes a reference to our recent recommendation that British agents should represent British manufacturers in Turkey, as they will be more likely to take the views of the firms they represent than would agents of other nationalities. It then says:—"This is a question on which we have often expressed our views in these columns, and are of opinion that if British firms were otherwise represented than some of them are, many unfortunate experiences might be avoided, particularly on just such occasions as the present. The fact should never be overlooked that a British agent, even if his dealings are unsatisfactory to his principals, can be attacked through the British Supreme Consular Court, and as practically every British agent is personally known to the Consular and Judicial authorities, such an action would bring him a notoriety detrimental to his commercial standing in his own colony. The fact of such actions being so extremely rare as to be almost unknown, speaks well for the British commercial community of this city."

***

My prophecy as to the outcome of the Mesopotamia irrigation adjudication in last week's issue of THE NEAR EAST was unfortunately confirmed by a Reuter's message from Constantinople on the following day. Thus ends a most pitiful tale and one that will hardly conduce to greater sympathy in Great Britain with Turkey's struggles. From a private source of information I gather that Djavid Bey was chagrined at the non-acceptance of his offer by either firm of contractors. It was an attempt on his part to drive an impossible bargain with the contracting firms, and, having shot his bolt, he now finds that he overshot the mark. Under the circumstances, and in view of the fact that Djavid Bey is personally strongly in favour of the realisation of the irrigation scheme, I should not be surprised if he were to make the two British firms a new offer. He might likewise be inclined to consider favourably any proposal made by the firms.

***

On the other hand, it must be frankly admitted that the attitude adopted by Messrs. Jackson and Pearson in refraining from tendering the week before last under conditions that were utterly impossible, have helped to raise British prestige. It shows the Turk that British firms of long standing are not of those who work at a loss merely for the sake of ingratiating themselves, or with ulterior objects in view. It also demonstrates clearly that, if the work is to be thoroughly done, the conditions imposed by Djavid Bey cannot be accepted by any firm, whether British or foreign. The result is that new conditions and new offers will have to be made if the scheme is to be realised.

***

Affairs in Persia seem to be slightly improving. On June 2, according to information which has reached me, the Baghdad and Hamadan routes were still closed, and there seemed no likelihood that they would be opened. A letter dated June 9 from Kermanshah reports that "since the arrival of Prince Firman Firma the town and district have been quiet, and business in general appears to be improving with the increased security. Several large caravans have arrived at Kermanshah from Baghdad, and forwarding has been recommenced on the Hamadan side." On June 19 news from Baghdad confirmed the opening of the Persian caravan route. This will have the effect of easing the Baghdad and Basrah markets, and will doubtless result in renewed orders for Manchester and other goods.

***

The recent Serbo-Bulgarian Customs Congress in Belgrade is still being debated in commercial and diplomatic circles. A month prior to the Congress there had been a first meeting in Sofia. As I pointed out in these columns, the commercial *rapprochement* between Servia and Bulgaria is the direct outcome of the Bosnian incident. A board was formed soon after Austria's unexpected *coup*, with the result that two months ago the Servian delegates paid a visit to Bulgaria, followed by a return visit in the form of a Congress, at which it was decided that a Customs Union between the two countries was desirable and possible, but that it could not be carried out without some modifications in the laws concerning duties, monopolies, etc.

***

According to a semi-official statement which has reached me, both Governments have agreed to the idea, which cannot, however, be put into practice at once, because both Servia and Bulgaria are bound by existing commercial treaties. Needless to say, the *rapprochement* has its champions and detractors, foremost among the latter being naturally the Austrians, headed by the Vienna "Thunderer," the *Neue Freie Presse*. The current number of the *Mouvement Economique* (Bucharest) contains some interesting extracts from the writings of well-known authorities on the subject.

***

The *Times* Cairo correspondent, in the course of a review of the new *régime* under Lord Kitchener, refers to "the scheme the object of which is to exempt small holdings up to five acres from distraint for debt." Should the project become law "it will mean that the small proprietor, if he is obliged to have recourse to borrowing, will have to content himself with what he can raise upon his crop," or "he will have to sell part of his holding." . . . Criticising the scheme, the correspondent says that it "would seem necessarily to imply the curtailment of the operations of land banks and similar institutions." This, I may mention, coincides with the opinion as expressed by our Alexandria correspondent. There can be no doubt that, should the scheme become law, it will affect bank dealings without affecting, however, the usurer's dealings with the fellah.

Could not the scheme be modified (suggests a correspondent) so as to exempt the small holdings up to five acres from distraint for debt, if such debt was contracted under usurious conditions, the word "usurious" being determined by supplementary clauses? I give the suggestion for what it is worth, but at the same time I should like to point out that the usurer's trade will flourish in Egypt, in spite of the law, until the number of agricultural syndicates has been increased a hundredfold, and the savings bank system has become popular among the fellaheen.

***

Italy's steady yearly outflow of Italian emigrants to America is to be checked. The outflow is to continue, but in another direction—to Tripoli. They are to be cajoled into the desert Empire of the New Rome, and their path to good wages and friends in the United States is to be strewn with rocks and shoals. The Transatlantic steamship companies will thank the Italian authorities. And, if grass does not grow in the sands of the Sahara, or if the enemy's tactics succeed in keeping the Italians on the coast, like ivy on a wall, the Italian emigrants will likewise be grateful to their paternal Government.

***

While on the subject of emigration, reference may be made to the migratory movement from Malta to Brazil. It is becoming very pronounced, due to a very large extent to the alluring offers made by those interested in helping to populate the forest and pampa lands of South America. A word of advice to the Maltese would not, however, be untimely. It is: look before you leap.

***

I referred at the time to the two resolutions on the agenda of the Eighth Congress of Chambers of Commerce of the British Empire on the subject of an "Imperial Consular Service," and I stated that I looked forward to the deliberations of the delegates on this momentous question. I confess to disappointment. While the congress approved of the principle involved, it decided "to refer the matter as to its details to the British Imperial Council of Commerce for consideration and action. In other words, *sine die*, as far as the Chambers of Commerce are concerned. I hope that the Imperial Council will be more painstaking, and go into "details."

***

Mr. Birch, U.S. Consul at Alexandria, waxes eloquent when referring to Lord Kitchener's irrigation scheme in Lower Egypt, which he calls "the greatest enterprise of its kind in Mediterranean countries." That reminds me of other great enterprises for which Egypt is known. The ancients built the pyramids, which were unique, and so, in its way, was the celebrated lighthouse at Alexandria. The cutting of the Isthmus of Suez was another great feat, and the building of the Assouan Dam a triumph of engineering skill. Now we have the irrigation scheme in the Delta, or the beginning of it, and it is to be followed by others—even in far-away Sudan, where irrigation is going to produce gigantic crops for Lancashire looms. Truly, there is something "great" intrinsically great, about the Nile and its watered valley.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Taxim-Sultan Bayazid Underground Railway.

Constantinople, June 29.

I have in several of my letters mentioned the lack of means of intercommunication between this city and its outlying suburbs, and I stated in one that it took as long to go from the European and residential quarter of Pera to Stambul as it would take to come from a point twenty miles distant in any other capital, which was no exaggeration, but rather the contrary. At present it certainly takes an hour or more, according to the means employed, to travel from Taxim, on the north-eastern summit of Pera, to Bayazid, near the War Office in Stambul, a distance of probably less than four miles as the crow flies. The existing tramlines cover this route much in the shape of an S. The proposed underground Electric Railway, which I have already mentioned as being studied by the Council of State, is the project of a group headed by the Deutsche Bank, and the name most mentioned in connection with the scheme is that of M. Hugénin, the director of the Anatolian Railway. The greatest secrecy is observed in regard to the details of this undertaking, which would appear to be on the point of materialising. Various routes have been given as those to be taken by the proposed line, but as these agree only in so far as the termini are concerned, they may be taken as pure conjecture. The most feasible would appear to be that following as nearly as possible a straight line, which will keep in touch with the present stream of traffic, crossing the Golden Horn at a point not far from the present Galata-Stambul bridge.

Purchase of Steamers and Shipbuilding.

Two twin-screw steamers, which I believe to have been the "Duke of York" and the "Duke of Lancashire," of about 1,500 tons gross register, were bought in Great Britain by the Navy League in the early part of last year at a cost of £16,000, and a sum of £25,000 was to be spent for the fitting of new boilers and repairs. Owing to the outbreak of war delivery of these vessels could not be taken, and they are now reported to have been disposed of, at a figure covering the total outlay.

Of the six small passenger steamers ordered by the Ottoman Steam Navigation Company, three were being built in London by the Thames Ironworks, but owing to the liquidation of the builders remain unfinished. Three of similar design have been built by the French St. Nazaire firm, but, although completed, cannot be delivered. It is reported that the company is treating to buy several small steamers of Danube owners.

The agenda of the meeting of the Chirket-i-Hairié S.S. Company, advertised to be held to-day, contains a proposal to the shareholders asking for the authorisation to issue debentures or to raise a loan for a sum of £T150,000 to carry out certain works. This company has during the last twenty years placed orders for some thirty odd passenger steamers, all of which were, until late years, built in Great Britain. The works contemplated by the increase of its capital undoubtedly include the addition of further vessels to its fleet, and with the continuation of the war these orders may be lost to our country.

Mesopotamia Irrigation Works.

The curtain has just been rung down on yet another scene of what is fast becoming the comedy of the Mesopotamia irrigation works. Since Messrs. Sir John Jackson were declared provisionally to be the successful tenderers on May 18 last negotiations have been taking place between the Ministry of Public Works and the provisional tenderers, upon the success of which depended the confirmation of the award by the Government. The Ministry on the one hand was trying to obtain a reduction in the total price of Messrs. Jackson's tender, and while the firm were prepared to meet the Government within certain bounds, they wished, on the other hand, to obtain from the Government a clear interpretation of certain clauses of the *cahier des charges*, which at some later date might have been the cause of misunderstandings and even litigation.

The Ministry then suddenly declared the adjudication to be cancelled, and at short notice invited the two firms, Messrs. Jackson and Pearson, to present fresh tenders under new conditions on June 27. Amongst these new conditions was one limiting the price to a certain figure. On the day on which the tenders were to be opened representatives of both firms appeared bearing bulky envelopes, which might, quite unintentionally no doubt, have conveyed to either the impression that the other was tendering. But instead—Tableau! Both firms declined to tender. In the meanwhile, Messrs. Jackson, under their provisional contract, are carrying out the work of the Hindieh Barrage.

THE DARDANELLES AND COMMERCE.

In a statistical article on the above topic, the last issue of the *Quarterly Trade Journal* of the British Chamber of Commerce of Turkey analyses the loss to trade caused by the closing of the Dardanelles. "Turkey herself," it says, "has experienced a very serious loss to the curtailment of her trade with foreign countries. The loss to the revenue is perhaps only temporary, but it is still serious, and had the Straits remained closed much longer the capital, although in railway communication with the rest of the Empire and with Europe, would have experienced considerable financial and economic inconveniences. The chief loss has, however, fallen not on the belligerents, but on neutrals, and especially on Great Britain and Russia, the latter owing to the southern ports of Russia, whether for export or import, being practically closed, and the former owing to its preponderant trade with Constantinople, and from the fact that British shipping has the bulk of the carrying trade for export of the Russian and Roumanian ports. The loss to other nations is insignificant compared with that suffered by these two Powers."

Russian grain exports through the Dardanelles is reckoned in round figures at £66,734,319.

"In the months of April and May the value of cereals exported in 1910 and 1911 was as follows:—£15,979,287 in 1910 and £16,142,764 in 1911. It was during these months that the recent closing of the Straits took place, and the value of grain on board ship and blocked in Southern Russian ports waiting for export may be estimated as worth about £16,000,000."

Roumania's exports during the same months are estimated at £1,350,000. Adding the two sums, "we get a grand total of some £17,350,000 as the value of the grain held up in the ports and on board ship during the closing of the Straits. It should not be forgotten that, in addition to increased freight charges, there has also been loss by germination and by delays in execution of contracts, etc., all of which are likely to arrest trade, but it is not possible at this moment to calculate the amount thus jeopardised."

As regards shipping, "there were 228 ships held up above the Straits for 4,801 days in all, at an estimated loss of £168,000, and 200 ships held up at the southern end of the Straits for 4,000 days in all, at an estimated loss of £140,000. The number of British ships held up was 143 for 2,915 days at a loss of £101,025, or about 33 per cent. of the total estimated loss.

"The value of grain cargoes is estimated at £4,100,000, and the grain bound for the United Kingdom is valued at £223,000, or 5.04 per cent. of the total amount."

In conclusion, and in view of the above figures, the question is raised whether trade and navigation are not justified in asking that the whole question of the Straits as regards commerce should not be re-examined.

"The effects of the war declared upon Turkey by Italy have proved to be—as, indeed, are all wars—disastrous to neutrals. Neutrals may even be said to be suffering in some respects more than the belligerents themselves. The closing of the Straits by Turkey in justifiable self-defence has undoubtedly chiefly affected neutral interests, and there is always a danger that the Dardanelles may be closed again at no distant date.

"All those who are interested in trade cannot but deplore the continuation of hostilities, and in any case it would seem as if the moment had come to devise means by international agreement to prevent the recurrence of such incidents as the closing of the Straits.

"At the time of the Turco-Russian war the Government of Great Britain made representations to Russia to ensure the neutrality of Egypt and the Suez Canal and with regard to the immunity of Constantinople and the free navigation of the Straits.

"The commercial interests of Great Britain are greater to-day than at that date. These inland waters are rightly considered territorial waters, but they have now become the public highway for the trade of nations. Commerce demands that navigable seas, whether wide or narrow, should be considered as always open to the trading ships of all nations. Commerce asks that this principle should be applied to the Dardanelles.

"The solution of the problem is no easy matter, but the time seems now to have come for European diplomacy to study the question. The statesman who can find the means to ensure the freedom and immunity of the Straits will have the gratitude not only of British traders, but also of the shipping and commercial world in general."

Turkish Railway Guarantees.

At the meeting of the Imperial Ottoman Bank last week, the chairman gave some interesting statistics concerning the Turkish railways enjoying a State guarantee. The receipts, showing a decided increase, were as follows:—

Line.	1911. £T.		1910. £T.
Haidar Pacha Angora	434,982	....	337,137
Eski Chéhir Konia	222,556	....	162,768
Salonique Monastir	156,542	....	156,864
Jonction Salon-Constantinople	206,157	....	190,017
Smyrne-Cassaba (ancien réseau)	220,652	....	207,086
" " (prolongement)	80,557	....	65,540
Rayak-Alep	117,859	....	115,950
Bagdad (1ère section)	35,389	....	22,628
	£T1,474,694		£T1,257,590

The insufficiency of receipts made up by the State has naturally been diminished; three of the lines have made no appeal to the guarantee of the State, and have even paid to it a part of their surplus receipts. Here are the sums paid by the Government in respect of these guarantees in 1911 compared with 1910:

Line.	1911. £T.		1910. £T.
Haidar Pacha Angora	—	....	22,389
Eski-Chéhir Konia	57,107	....	106,181
Salonique Monastir	—	....	—
Jonction Salon Constantinople	141,984	....	158,324
Smyrne-Cassaba (ancien réseau)	—	....	—
" " (prolongement)	127,277	....	142,831
Rayak Alep	80,513	....	82,423
Bagdad (1ère section)	13,260	....	16,770
	£T420,141		£T528,918

BELGIAN ENTERPRISE IN CAUCASUS.

(*From Our Own Correspondent.*)

ODESSA, July 1.

A syndicate of Belgian financiers is sending to the Caucasus an expert prospecting party of mining engineers to study the various and abundant mineral riches of that province, more especially in lead, copper, zinc, iron ore, and manganese. It is to be regretted that British enterprise is so much less energetic than that shown by the Belgians in this country. In this city the Belgians are now in possession of the electric tramway service, the electric lighting, and the telephone system. They have just obtained a concession for the establishment of an electric tramway service at Uman, bringing the number of such undertakings to forty-one in various Russian cities and towns. British commercial and industrial exploitation in Russia lacks the thoroughness of systematic method pursued by our Belgian neighbours. It may be said that British enterprise in Russia is not asleep, but it is not very wide awake, at any rate not as alert as it should be.

TREBIZOND PICTURE PALACE.

The U.S. Vice-Consul at Trebizond, Mr. Montesanto, reports that the city has one fine theatre for moving pictures, built for the purpose by the Trebizond Cinematographic Co. The company has spent £1,500 for its erection, and £1,000 for two oil engines and the necessary electric accessories. The 9-horse-power, 2-cylinder group electric motor is from Aster, of Paris, the 12-horse-power transmission motor from Auto Dautz, and the dynamo from Gramme Co., also of Paris. The lamps are metallic filament, and there is also an arc lamp of 2,000 candle-power. The building has a seating capacity of 600, and plenty of doors, ventilators, fire-proof projection-apparatus chamber, and other modern improvements. Five thousand feet of films are used for each show, and the programme is changed twice a week. Each new programme is duly advertised in four languages, Turkish, Greek, Armenian, and French.

The films are mostly of French manufacture, Gaumont and Pathé Frères, and sometimes American, of the Eclipse American Vitagraph Co., etc. The company receives the films from Constantinople and occasionally from Saloniki at a cost of 6 or 8 centimes a metre for each programme. The show usually lasts 1½ to 2 hours, starting about 8 o'clock each evening. Two performances are given. There are no matinées except on fête days, so profits have to be made from night performances only. It would not pay for a firm to send films only for the Trebizond theatre, but there are many moving-picture shows in Turkey, and several in the district under review. As their number is daily increasing, there is a good chance for a concern to establish an agency at Smyrna, Salonika, or Constantinople and have its films make the round of several moving-picture theatres.

BUILDING MATERIALS.

According to the *Nachrichten fuer Handel* (Berlin), five new hotels are to be erected in Bucharest. In addition, the following buildings are being constructed:—Carol I. University, Military Club, "Credit Roman" Bank, Town Hall, Senate House, and the "Agricola" Insurance Company's premises. Roumanian cement manufacturers had arranged to produce only 12,000 wagon loads of cement this year, but they have orders on hand for more than 24,000 wagon loads.

STEAM PLOUGHS.

Mr. E. H. Mulock, the Vice-Consul at Alexandria, writing on the trade of the district in a report shortly to be published, states that the Director-General of the Department of Agriculture calls attention to the demand for a cheap and effective steam plough for use upon the larger estates, as well as for inexpensive levellers for use chiefly in Upper Egypt.

BULGARIAN TRADE.

The Minister of Finance has addressed a circular letter to the Customs authorities of the Kingdom informing them that the following goods are in future to enter duty free, viz.: Gelatine, borax, talc, raw cotton, cork, and steel wire.

According to the *Oesterreichischungarische Konsular-Korrespondenz*, Vienna, German merchants are disposing of large quantities of printed cotton fustian in widths of 70 centimetres at Varna. This article is delivered at the price of 52 to 59 centimes f.o.b. Varna, payment at 90 days with 4 per cent. discount.

The same organ states that, although imports into Salonica may have diminished lately, purchases of oilcloth are on the increase. Great Britain is the principal importer of linoleum and floorcloth, followed by Germany and Austria-Hungary. The annual importation is valued at £16,000.

The district of Varna offers a good outlet for box calf, which is principally supplied by France and Germany. German manufacturers deliver box calf at the rate of Mk. 0.85, 1, and 1.10 per square foot, according to quality, c.i.f. Varna, against documents.

BRITISH COAL FOR EGYPT.

The Egyptian State Railways (says a Cardiff contemporary) are in the market for supplementary supplies of Welsh steam coal to the extent of 75,000 metric tons, 25,000 tons for July delivery, and 50,000 tons for August. The Egyptian Railways usually take second-class Admiralty and Monmouthshire large seams.

British exports of coal to Egypt during the first five months of 1912 amounted to 997,948 tons, as against 1,288,357 in 1911, and 1,067,012 in 1910.

PAPER TRADE IN ARABIA.

The *Handels Museum*, of Vienna, states that paper finds a good opening in Southern Arabia, notably at Aden, which is a free port. Account books, letter paper, and copying paper are most in demand. The United Kingdom has the largest share in this trade. The conditions of payment are fifteen to sixty days, with 2½ per cent. discount. The poor population use a brownish paper from India. There are no wholesale paper merchants at Aden, but the Arab priests and school teachers from the interior buy paper at Aden and sell it again in their districts at a small profit.

MALTESE TRADE CONDITIONS.

The U.S. Consul at Valetta, in advising his compatriots how to trade with Malta, says that most of the business is done on commission, and generally c.i.f. Malta, merchants preferring such a quotate.

Bacon imported into Malta is usually "cured middle cut." Each piece usually weighs 22 to 26 lbs. Hams are smoked and weigh 10 to 12 or from 12 to 14 lbs. each. Lard arrives usually in tubs, although I have seen cans also. The tubs weigh 28 lbs. each. Cheeses are pale or coloured and weigh 64 to 70 lbs. each. All these goods are quoted per hundredweight (112 lbs.).

Canned fruit is usually the whole fruit. All kinds of canned fruit are imported, particularly peaches, pears, apricots, and pine-apples. Canned asparagus is also in demand. The cans of fruit most in demand weigh about 2½ lbs. each. They come here packed 24 cans in a case. Most of these canned goods are brought from England.

CHOCOLATE TRADE WITH TURKEY.

The *Revue Commerciale du Levant* states that according to contracts made at the beginning of the year the sale of milk chocolate of English manufacture in Constantinople in 1912 will be more than £24,000 in value. There is an increasing market for milk chocolate among the Turkish public.

TENDERS INVITED.

EGYPT.

Hospital Clothing and Equipment.—Tenders are invited for the supply to the Public Health Department of the Ministry of the Interior of hospital clothing and equipment required during 1913. Tenders, made out on the proper form, will be received by the Director of Stores, Public Health Department, Ministry of the Interior, Cairo. Every tenderer must specify an authorised representative or agent in Egypt, who will be responsible on his behalf for the due fulfilment of the contract. A deposit of 2 per cent. of the value of the offer is required. Date, September 15 (noon).

Ash Arches and Seats for Camel Saddles; Ash Wood for Spring Boards.—The London Agent for the Egyptian War Office (Mr. A. L. Webb, C.M.G.) notifies that the Department named invite tenders for the supply of 800 ash arches and 400 ash seats for camel riding saddles, and 500 pieces of white ash wood for spring boards for gymnastic purposes. Tender forms and particulars may be obtained at Mr. Webb's offices, Queen Anne's Chambers, Broadway, Westminster, where also tenders will be received. Firms who have not previously held a contract with the Egyptian War Office must enclose two references—one from a bank. Date, August 7.

Supply of General Stores.—Tenders will be received at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo, for the supply of general stores required by the Cairo City Inspectorate during the year 1913. Conditions of tender, specification, schedule of stores, and conditions of contract at the offices of the Inspectorate, Cairo City Services. Samples to be deposited at the Stores of the Cairo City Inspectorate before noon on August 15, 1912. Date, August 15 (noon).

Construction of Qena Hospital.—Tenders invited at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo, for the construction of Qena Hospital. Specification, plans, and estimate, at the above office, where one set can be obtained on payment of 835 milliemes.

Tenders must be submitted on stamped paper. They should be addressed to the Chief of the Administrative Service, Public Works Ministry, Cairo, in a sealed envelope bearing the inscription: "Tender for the construction of Qena Hospital." Date, July 31 (11 a.m.).

Sanitary Installation.—Tenders will be received at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo, for the sanitary installation at Qena Hospital. Specification, plans, and estimate at above office, where one set can be obtained on payment of 80 milliemes.

Tenders must be submitted on stamped paper. They should be addressed to the Chief of the Administrative Service, Public Works Ministry, Cairo, in a sealed envelope bearing the inscription: "Tender for sanitary installation at Qena Hospital." Date, July 31 (11 a.m.).

SERVIA.

Supply of Railway Materials.—Tenders invited by the direction of Servian State Railways, Belgrade, for the supply of 15,525 tons of rails, 1, 178 tons plate-laying material, and 646 tons of plates.

ROUMANIA.

Supply of Electrical Materials.—Tenders invited at the offices of the Administration of the Finances of the District, Sofia, for the supply of electrical goods to the estimated value of 12,186.50 frs. Date, July 18.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending June 21:—Notwithstanding the sales this week on our market amount to only 5 cases, our sellers continue to maintain a very firm and tenacious attitude. They are all of one accord that the crop is a short one this year, and as soon as this is an established fact prices will advance and will meet with a ready response from consumers. Prices are therefore firmly maintained at 18s. to 19s. for common low grades, and from 21s. to 24s. as to quality for druggists' Carahissars and Yerlis. The arrivals amount to 149 cases, against 30 at same date last year.

Digitized by Google

Engineering Notes.

AGRICULTURE IN SYRIA.

The farmer in Syria is beginning to realise that he has need of better and more efficient machinery. This is partly owing to the fact that some enterprising firms, representing American interests, are sending their travellers through the whole vilayet of Aleppo as far as Diabekir, with some of the lighter kinds of implements, which they exhibit in the various districts through which they pass with splendid results.

Ploughs Needed.

The more important farmers are casting aside their surface-scratching native-made ploughs for British, American, and Austrian makes of light draught, and it is now a common sight to see European ploughs working side by side with the old native-made monstrosities. Most of the business is in the hands of Austrian and Hungarian plough-makers, though American goods are going in fast from Adana and Constantinople. English ploughs are occasionally sent through Egypt or Beyrout, and are highly esteemed, when they suit the soil. It should be borne in mind that the whole of Syria, with very little exception, consists of stony, cloggy soil, very uneven, and has only weak, inferior cattle for ploughing purposes.

Olive Oil Presses.

Olive presses are imported in considerable quantities from Austria, generally through agents in Smyrna and Constantinople. It is important to note that all oil presses are ordered and supplied with long levers for hand power. Hydraulic presses are in use in some places, and a certain pattern of hydraulic oil presses made in the north of England, with some slight alterations of the bottom platen, and two hand pumps for quick and slow movement of the ram may find a good sale. Such altered hydraulic English presses have been in use in Greece, the island of Mitylene, and other Ægean islands, with great success.

Windmill Pumps.

In such an agricultural country as Northern Syria is, irrigation is sadly neglected. Thousands of acres in and about Antioch are dependent upon heavy wooden wheels to raise the water from the river and feed defective wooden conduits. This is almost the only system of obtaining water for irrigation purposes, even on the banks of such rivers as the Orontes and Euphrates. Windmills of galvanised steel are being slowly introduced, but something still more efficient and reliable is needed. Pumps of the simpler kinds are more and more in demand, for most of the Syrian towns are unprovided with any regular water supply, and have to draw water from wells, averaging from 40 to 200 feet deep, in the old patriarchial manner with hemp cords and wooden buckets. British engineers and manufacturers should act with energy to get a footing, and not be shut out of this new and most advantageous outlet for their manufactures. They must not rest satisfied with simply confiding their interests to some commission firms already working in those districts.

Manure Distributors.

The use of artificial manures is increasing at Jaffa, in Palestine. At first they were utilised in orange groves only, but now they are in general use. The kinds most used are Chili saltpetre, potash, superphosphate of ammonia, Thomas and bone meal, calcium, chloride, potassium sulphate, and superphosphates of lime.

DUTY-FREE MACHINERY IN TURKEY.

The *Board of Trade Journal* publishes a list, obtained through the Foreign Office, of the agricultural machines and implements now admitted, duty free, into Turkey. The list is as follows :—

Ploughs (*charrues et araires*) of all kinds, steam ploughs, harrows of various kinds, ordinary and toothed rollers, scarifiers, cultivators, weeders, horse hoes, ridge ploughs, seed drills, manure spreaders, mowers, reapers and binding reapers, horse rakes, tedders, hay presses, threshers (worked by hand, steam, horse gear, or water power), portable engines, horse-gears, motors of various systems used in agriculture, fans, winnowing machines, separators, chaff-cutters, root-cutters, grain crushers and flatteners, maize shellers, beetroot and potato diggers, rice hullers, mills (*moulins*) for use in agriculture, oil presses and filters, wine presses, cotton gins, grape or raisin cleaners, root pullers, sprayers and sulphur sprinklers, centrifugal cream separators, churns of various kinds, butter workers, butter squeezers, centrifugal pumps for irrigation and for watering purposes, incubators, feeders, brooders, and other apparatus used in poultry yards, beehives of various kinds, honey-extractors and accessories for apiculture, steam pans and other apparatus for drying fruits and for the manufacture of preserves of vegetables and fruits.

All spare parts which are imported with the above machines and implements are also free of duty.

To the above list must be added the following, based on information received by the Board of Trade, to the effect that the Turkish Customs Administration contemplate extending to them the duty-free admission clause :—Draining ploughs (*fouilleuses*), motor ploughs, levellers, automatic binders, drill ploughs, hand-rakes, second-dressing machines (hand or horse), digging machines, pumps for liquid manure, machines for making holes for potato planting, peeling machines, brick burners (lever and steam), motor threshers, oil-cake breakers, hay elevators, grape beaters, mechanical sheep shearers.

Electric Light and Power in Abyssinia.

In view of the efforts that are being made by the Powers to hinder the importation of arms and ammunition into Abyssinia, it is interesting to note that the Abyssinian Government is now completing the erection of a cartridge factory, driven by a hydro-electric installation, which also serves for the lighting and supply of power to Addis Abeba, the capital. The cartridge machinery, purchased, according to Reuter, in Germany, is capable of turning out 10,000,000 cartridges per annum, and will manufacture principally Gras, Mauser, and Lee-Metford cartridges. The buildings are now finished and ready for the machinery, which is on the way from the railhead, and is expected in the capital within the next few weeks. The factory also contains a rifle-repairing plant, capable of dealing with 15,000 to 20,000 rifles per annum, for which the necessary mechanics are now on the way from England.

The hydro-electric machinery, supplied by a Manchester firm, is being installed on the Akaki river, about nineteen miles from the capital, and consists of two sets of 200 h.p. The power is transmitted to the capital at 6,000 volts, and is there transformed for power and lighting purposes.

The Assouan Dam.

Mr. Julian Grande contributes a short article on the new Assouan Dam to the *Field*. When completed, the new structure (he says) will contain about one and a-half times as much water as the old dam—that is, it will have a capacity of about 2,300 million cubic metres. The work has been carried out by Italians, Greeks, and Arabs, the number of workmen at one time having reached nearly 5,000. The Italians did all the masonry work, such as the dressing of the stones in the quarries at Chellal, near Assouan; the Greeks laid the stones, and the Arabs did the rougher work. The extension has been carried out by the firm of Messrs. John Aird and Co., who executed the works for the original dam. One of the chief difficulties which has had to be overcome arises from the peculiar climatic conditions in Egypt—the very hot days, followed by cool nights. This great difference of temperature in the twenty-four hours causes masonry to expand and contract in an extraordinary manner. Lord Kitchener will formally open the dam extension next December.

Threshing Machines in Adana.

There are now in Adana some 110 to 120 threshing outfits, all of English manufacture, which are giving every satisfaction, and 35 to 40 steam ploughs, also of English make. There has been but one steam plough of German manufacture introduced here by a local German house, but no further orders have been taken.

As regards reapers, there are now a large number in use, all of American origin. These are imported to the extent of 250 to 300 a year.

Internal Combustion Engines.

Mr. Vice-Consul McDonell, of Baku, reports a great demand for engines of the above type working on crude oil as fuel. Most of the oil producers of Baku are now dismantling their boiler installations and erecting motor electric plants for power purposes. Keen competition between electric and motor power is the result. Oil motors are holding their own at present, but it is difficult to say what the ultimate issue is likely to be.

Agricultural Machinery in Russia.

In the province of Kieff the demand for machinery grows continuously as labour becomes scarce. For some time past soldiers have been forbidden to work in the fields, with the result that at harvest time 100,000 fewer workers were available. In addition, as the cultivation of sugar beets extends, many workers confine themselves exclusively to this cultivation.

Roumanian Requirements.

The *Handels Museum*, of Vienna, states that the sales of agricultural machinery in Roumania, which were excellent during the past season owing to the good harvest, promise to be still better during the present season. Amongst the machines which are most in demand are ploughs with one or two shares, drill-machines, and agricultural implements. The Americans sell principally reapers. A company has just been formed at Bucharest, 29, Strade Carol, under the name "Comertul romanesc," with a capital of 500,000 lei, capable of being increased to 1,000,000 lei. The object of this company is the importation and sale of agricultural machinery.

Athens advices report that the advisory committee of the Ministry of Marine has recommended that nine torpedo-boats should be ordered from the German Vulkan Company.

Oil Topics.

Maikop Pipe Line.

The Maikop Pipe Line meeting gave the chairman, Mr. Peake, an opportunity of saying all the good things possible about Maikop. He pointed out that the field now gave an average production of 920,000 poods a month, and he laid great stress on the deep drilling that was going on. It is certain that the Maikop Victory discovery of oil at 1,480 ft. was most satisfactory. It appeared to be good quality oil, and it is a pity that the well could not have been baled. However, as this well is going down 3,000 ft. it will test the various strata on plot 489 very effectually. The Deep Drilling Company on plot 408 got a show of oil at 2,000 ft. Of course, as Mr. Peake pointed out, if Maikop can find a rich oil horizon at depth it will make a wonderful difference to the field. No doubt Mr. Tweedy has plenty of schemes in hand for the exploitation of the Maikop Pipe Line and the other companies in his group. The idea is to utilise the Maikop refineries, in which the Pipe Line Co. hold a preponderating influence, as a producer of petrol, and it is stated that a contract had been made with London firms for the supply of spirit at a good price for three years. But Maikop will have to turn out a great deal more crude than it is doing to-day if the refinery is to seriously tackle the petrol business. Maikop Pipe Line shares are very low, and they are being picked up with the idea that the company will in the end control the Maikop field, including the refineries and the pipe lines. Mr. Tweedy is an ambitious man. He may succeed.

New Oil Properties.

The New Oil Properties, Limited, is a very influential finance company, with very good people on the board. Its report for the year ending May 31 shows a profit of £26,221, and the directors have therefore decided to pay a dividend of 10 per cent., and they will carry forward £5,840. The company has interests all over the Near East, and participates in all the underwriting that is offered in connection with oil. It has an issued capital of £250,000, and has invested £292,381 in various oil properties, and has £31,287 in cash.

Grosny Oil Company.

The Grosny Oil Company has been largely advertised by Messrs. Oliver and Partners and others with, of course, the idea of selling the shares. Some of the directors wrote to the papers and declared that they repudiated these advertisements, which had been put in, so they said, without their knowledge and consent. Mr. A. A. G. Kindell now writes to the *Financial News*, and states that he compiled a brochure, giving full details of the Grosny Company, and that it was submitted to the offices of the company for revision and confirmation, and he adds that the advertisement was known to the chairman of the company and also to the managing director.

Russian General Oil.

The Russian General Oil Corporation has been registered, with a capital of £2,500,000, for the purpose of dealing with oil and oil finance in Russia. The president of the Russo-Asiatic Bank, the manager of the Banque Internationale, the president of the Russian Oil Company, and various other most magnificent noblemen and financiers will be on the board. The Russian General Oil Corporation is credited with having bought large blocks of Urals, and the recent rise is said to be due entirely to their manipulation. Whether this be true or not, there is no doubt that the money for the Corporation has been found, and that it will take up a very important position *vis-a-vis* to the oil trade of Russia.

British Maikops.

The British Maikop Oil Company appears to be having good luck with its well on Plot 489. This well started by giving 4,000 poods a day, and for the past week its production was 35,000 poods. This oil has been sold at £2 a ton to the Anglo-Maikop, and this price will leave a good profit to the company. Another well is going down on the boundary of the Maikop Victory, and should strike oil in a few weeks' time. British Maikop calculates that it can make a profit of 10s. a ton. It is, of course, pleasant to see a company that was in a bad way recover itself, but the Maikop Victory people probably look upon the success of its neighbour with a jaundiced eye, for oil sands are not inexhaustible, and if one company is sucking 5,000 poods a day from the sand it is taking exactly that amount out of the sands of its neighbour.

Roumanian Consolidated.

The Roumanian Consolidated held its statutory meeting on July 1, when Mr. Barnett again went over the ground, but also gave his shareholders a great deal of very valuable information that had not been made public before. For instance, he told the shareholders that one of their wells at Bordeni had come into oil during the past week at the 1,550 ft. horizon. The shareholders were told all about the big strike made by the Astra Romana on the Bana Hill. The well No. 9B is producing 1,200 tons a day, and proved a new oil belt. Last Easter there were only three wells producing at Bana, whereas there were now forty. Mr. Blundstone estimated that by the end of 1912 the company would have a production of 12,500 tons a month, and that next year the company might be turning out up to 40,000 tons a month. It is interesting to note that the Moreni Company has been asked to join the combine, the idea being that the Moreni Company will issue 110,000 shares, get half of them subscribed for cash, and then go into the combine at a premium. This company has some excellent land at Filipesti de Padure, and has already produced and sold about £13,000 worth of oil.

Ural Caspian Oilfield.

We were the first people to give any definite details of the great Ural Caspian Oilfield, and we have great pleasure in now telling our readers that another well has been brought into production, giving 500 poods a day of excellent oil. It will probably take two years to fully develop the great Ural territory, and by that time no doubt the production at Baku will have fallen considerably, and the Ural will, therefore, be the principal field in Russia, the one from which the internal trade through the Volga will be supplied.

Krimskaya Development.

Krimskaya, in the Kuban province, is now being rapidly developed, and both the Maikop Midland and the Levanovskoe are boring wells. Well No. 1 of the Anglo-Maikop spouted on the 26th, and caught fire. Unfortunately, one man was killed and five injured, including the general manager, the field manager, and the consulting engineer. A second well has now reached the oil sand, and promises to be a very fine producer. It is intended to lay a pipeline from the field to Krimskaya station, a distance of eight miles. The place is on the main Vladikafkas Railway, and is only thirty miles from Novorossisk. At this port on the Black Sea, there is already a refinery, and a large trade is done in oil.

Kuban Black Sea.

The Kuban Black Sea Oilfields Company is working at Suvorof, about ten miles from Anapa, and has proved three distinct oil horizons. There has been some inquiry for the shares of this company, and if they strike oil in any quantity, they might be worth buying. Anapa has been a great many years before the world, and has never yet done anything. But the oil engineers who have visited the place speak well of its prospects, and some of them have sunk a good deal of money in prospecting. It now looks as though their prophecy, that Anapa would one day turn out a big lot of oil, will come true.

Premier Oil and Pipe Line.

The attention of the Oil Share Market is being closely drawn to the new 7 per cent. preference shares of this company. These shares are being freely dealt in, as much as 9d. premium having been paid. It is understood that the shareholders of the company have largely taken advantage of their option to apply for the shares, which, apart from their sound security, are rendered particularly attractive by virtue of their participating rights to a further dividend, which it is confidently anticipated will be announced. The shares are now quoted at 6d. premium.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondent.)

Odessa. July 1.

The harvest prospects continue to be very encouraging. According to an official report issued a couple of days ago, the crops in the Governments of Poltava, Kharkoff, Kursk, Voronesh, Orloff, Kherson, Ekaterinoslaff, Tchernigoff, the Taurida and the Don Country, are all in excellent condition, and it is confidently expected that the general yield of all cereals in those provinces will be 12 per cent. over what is known as a fair middling crop. In the south-western governments of Kieff, Podolia and Volhynia, much damage has been wrought by abnormally heavy hailstorms, but, on the whole, the harvest is expected to be fairly good.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East :—

Larnaca. June 13.

The present stocks of Manchester goods of all descriptions are sufficient for immediate requirements. The execution of the orders already sent to Manchester will insure a sufficiency of stocks to meet the usual demand in July and the following months. Local prices are well maintained.

Stocks of Italian yarns are small, and it is not expected that the orders for fresh supplies will be executed in time to meet July requirements. On account of its comparative cheapness, Italian yarns are more in favour with the peasantry than are Manchester yarns.

The sale of the yarns manufactured at Famagusta amounts to about £700-800 a month.

Business in locust beans is very quiet. There are about 1,000 tons of old crop still unsold. The outlook for the new crop is good.

Salonika. June 28.

There is no change in the situation, which continues difficult. An improvement is expected daily, but there are as yet no signs of it coming.

There is no desire to renew the stocks of Manchester goods, existing stocks being sufficient for all local wants.

The crop outlook is good, but there are nevertheless complaints about the continued drought.

Jaffa. June 20.

The price of sesame is maintained. 27,000 kilos were forwarded to Jerusalem at 59 frs. the 100 kilos. The crop outlook is good.

There is a tendency for holding prices to rise. Present quotations : P.J. 17-19 the kilo. Lupines and wheat are steady.

150 barrels of olive oil were imported during the week from Smyrna, but orders are scarce ; prices with a tendency to drop.

Beyrout. June 24.

There has been an improvement during the week, especially in Russian oil and sugar. The rise in the price of oil, and the fear of a further drop in sugar has induced the merchants dealing in these commodities to be approachable.

But the war continues to affect the market in such a way that only the most necessary orders are placed for the immediate demand. There is a decrease of from 40 to 45 per cent. in the Customs receipts since the war broke out.

The wheat harvest is drawing to a close. In spite of the deficit from Horns, Hama, and Aleppo, the output for the whole district will be superior to that of last year, owing to the excellent harvest in the Hauran.

The gathering of cocoons has ended, and the result is estimated at a reduction of 20 per cent. over last year's yield. Prices are P.B. 53.55 the oke, as against 60.64 last year.

Damascus. June 22.

There is a considerable reduction in the barley crop, bringing prices up to P. 60-70 the 100 kilos. The dari, bean and lentil crops were good. Apricots, on the other hand, show a reduction of 60 per cent. over last year's output.

The situation as regards Manchester goods is the same as last week.

Basrah. June 7.

Disturbing rumours from Persia have induced certain importing firms to countermand all unexecuted orders.

As regards exports, the price of cereals continues high, but is likely to drop as the new crop comes in.

Since May 25, 21,000 tons of cereals were loaded, approximately 4,500 tons for London, 4,500 tons for Antwerp, and 12,000 tons for Hamburg.

CONSULAR REPORTS.

Corfu.

Writing on June 21, the Consul at Corfu states that a medium olive crop may be expected. The old stock of olive oil is calculated to amount to 90,000 barrels.

There is but little demand just now owing to the Italian merchants having a good stock on hand, which they purchased at a high price. The oil that is now being manufactured is of inferior quality, as the fruit has been left too long on the trees and is partially dried up. The prices of olive oil are now as follows, viz :—Edible (manufactured by the latest improved Italian methods), first quality from 75 to 80 drachmae, and second quality from 55 to 60 drachmae ; oil for burning purposes (churches), an improved quality which is now in demand, 49 to 50 drachmae ; common oil, 43 to 44 drachmae.

Syrian Apricot Paste.

The U.S. Vice-Consul at Beyrout contributes to the *Daily Consular Report* to hand an interesting article on the above industry, from which we reproduce the following :—

"The manufacture of apricot paste, known in Syria as Kamereddin, has long been in vogue at Damascus and all along the valley of the Barada River. A basin two or three feet deep is dug by the farmer and usually lined with cement. The ripe apricots are stoned and thrown into this basin and beaten into a pulp with tampers. The primitive method of kneading the fruit with bare feet is still often resorted to. The pulp is then spread out on thin boards and placed under trees and in shady places to dry. These boards are of uniform size, and the paste is so spread out as not to be thicker than one-tenth of an inch when dry. The sheets thus manufactured when dry weigh 1 rottle (about 5½ lbs.) and look like sole leather.

"The annual production of this paste reaches about 4,000 tons, and is increasing yearly. Of late years considerable shipments have been made to Egypt, Turkey, Roumania, and Germany. The exports in 1910 amounted to about £30,000. The 'leaves' are rolled for export and are packed in cases of 30 to 39 rolls.

"In Germany, I am informed, kamereddin is imported for the manufacture of jam, which has the full apricot flavour. The leaves should be soaked for 24 hours in a small quantity of water. The water and apricot paste should then be well blended and put to boil with the required amount of sugar. In Syria kamereddin is a substitute for candy and is eaten in its original form. It is also made into a sirup and forms the chief ingredient of the iced drinks served in the native houses. A valuable by-product is obtained in the kernels."

Crop Prospects.

The correspondent of the *Journal* of the British Chamber of Commerce of Turkey says that the prospects in regard to this year's grain harvest are very bright. If conditions remain favourable, it is expected that the crop will be thirty to forty per cent. better than that of last year.

The same journal as above states that this year, owing to the poor harvest on the one hand, and the monetary crisis and the abnormal situation in general on the other, the farmers in this district have not placed any orders for threshing and reaping machinery, ploughs, etc.

PRODUCE MARKETS.

London, July 4.

The markets have shown little activity, and although inconvenience is still experienced through the strike, the delivery of goods has decidedly improved. Sugar has slumped. Coffee is firm. Currants are cheaper. Sultanas in fair demand. Seeds quiet. Oils unaltered, except linseed oil, which is cheaper. Petroleum is inactive.

Sugar.

Beet is about 6d. per cwt. lower, and refined from 3d. to 1s. The downward movement in values is caused by the pressure to liquidate beet from the Continent, and apparently the weather is favourable for the progress of the young beetroots. Closing rates of German 88 per cent. analysis are :—July, 11s. 0¾d. ; August, 11s. 1¼d. ; September, 10s. 8¾d. ; October-December, 9s. 11½d. f.o.b. Hamburg. Refined sugars : English, Tate's No. 1 cubes, spot, 21s. 9d. per cwt. ; July-August, 21s. 9d. ; September-October, 21s. 6d. Foreign, Say's cubes, prompt to July-September, 18s. 1½d. f.o.b. Paris. Dutch, 17s. 1½d. to 17s. 4½d. f.o.b. Amsterdam. German and Austrian prompt, 16s. 7½d. f.o.b. Hamburg.

Coffee.

Most of the following kinds were sold this past week :—East India small common to good bold at 75s. to 85s. 6d ; Costa Rica ordinary to middling, 75s. 6d. to 81s. 6d. ; Mexican fine ordinary to fair bold, 78s. to 82s. ; Brazil, 68s. to 86s.

Currants.

The demand for provincial fruit has been somewhat slow, with bags offering at 24s. 6d. to 25s. ; also quarter cases at 25s. 6d. to 26s. 6d There is more business in Amalias at 27s. to 28s. ; also Vostizza 31s. to 33s., with choice 35s. to 36s. Siftings are slow at 26s. 6d. to 29s.

Sultanas.

Smyrna fruit is in fair demand from 50s. to 54s. ; also old at 36s. to 38s., with commonish new 41s. to 42s. Samarkand fruit is moving slowly at 39s. to 40s., small bags 45s. to 46s. Greeks are all cleared. Persians, 45s. to 52s.

Figs.

Good layers are quoted 38s. to 42s. ; common layers 32s. to 35s., naturals, bags 18s. 6d. to 25s. 6d.

Dates.

Dates are unchanged, with very little doing.

Seeds.

Quotations are without much change, the market showing little animation, which is usual at this time of year. Turkish canary seed, 56s. to 60s. per quarter ; Spanish, 80s. to 90s. Linseed on the spot is dull and easier for both Calcutta and Near Eastern districts. Cotton seed is continuing weak.

Oils.

Linseed oil has been slow, and values have further declined. Spot pipes, £42 per ton ; barrels, £42 10s. ; July-August, £38 ; September-December, £36. Olive oil is firm. Spanish, £44 ; Levant, £40 to £42. Cotton oil is steady. Ordinary pale refined spot, £27 15s. to £29.

Oil Cakes.

The demand is quiet, and quotations are again occasionally in buyers' favour. American western linseed cake is at £8 17s. 6d. to £9 ; Bombay, £9 2s. 6d. Liverpool makes £10 to £10 10s. Cotton-seed cakes : Liverpool decorticated, £8 10s. to £8 15s. ; undecorticated, £5 17s. 6d. to £6 7s. 6d. Egyptian, both on the spot and forward, is steady at £6 7s. 6d.

Petroleum Oil.

The market is in a depressed state, and, although quotations are nominally unaltered, less money is taken to do business.

Tobacco.

Doubtless the labour troubles have been largely responsible for the small volume of business transacted, the market having been very quiet. The following prices are quoted, subject to duty :—Turkish tobacco, 5½d. to 15s. per lb. ; Latakia, 1s. to 1s. 6d. ; Greek, 5½d. to 2s. 6d.

Various.

Egyptian Onions in good demand at 6s. 6d. to 7s. per bag. Haricot beans, Danubian, 65s. to 68s. per 504 lbs. Roumanian eggs, 6s. 6d. to 8s. 3d. per 120 ; Russian, 6s. 6d. to 8s.

COTTON MARKET.

Liverpool Report.

Messrs. Reynolds and Gibson telegraph :—The deliveries of cloth and yarn continue steadily, though there are signs here and there of engagements rapidly decreasing.

Cloth.—Near Eastern markets buy from day to day, but mainly sorting-up lots.

Egyptian Yarns.—Business is difficult to arrange, owing to the firmness displayed in the cotton markets. There have been fair inquiries in bundle yarns for export, and quotations are firm. Egyptian spot cotton has been in improved demand during the week. Quotations show advances of 3-16 for Good and Fine Brown, ¼d. for other grades of Brown and Upper cotton. There has been a falling-off in inquiries for the finer descriptions, with the exception of Nubari, which still continues in good demand at full rates. Estimated sales per week, 3,300 bales.

Cotton Goods in Egypt.

The report of the Egyptian Bonded Warehouses for the month of May is to hand, and shows that the stock of Manchester goods on April 30 was 2,245 bales or boxes. Arrivals in May were 440, and the withdrawals 572 bales or boxes, leaving in stock on May 31, 2,113 bales or boxes.

Reporting on the above figures on June 26, the Alexandrian correspondent of the Imperial Ottoman Bank says that the value of the arrivals for the five months ending May 31 was £400,000, or less than for the corresponding period of last year.

Owing to restriction of credit generally, collections in the interior are difficult, and this state is expected to continue until the month of November next, although collections may be a little easier during the month of Ramadan (August).

The demand, especially for good prints, is fair, and prices are slightly better.

Cotton Piece Goods in Turkey.

In spite of the exclusion of Italian goods, British imports, instead of reaping some advantage, are less than in previous years. We believe this is partly due to merchants not placing their orders before the end of last year, expecting prices to go still lower, which was the opinion prevailing at the time on account of a record crop of 16,000,000 bales of cotton in America. But in this, says the *Journal* of the British Chamber of Commerce of Turkey, they were mistaken, and have been obliged to book their requirements, however sparingly, since the new year, not only at higher prices, but for much longer deliveries, in some instances extending as far forward as the beginning of next year. This shows the flourishing position of our home manufacturers, who, being busy with large and profitable Indian orders, cannot supply sufficient quantities for this market with the required deliveries.

Stocks are not large in the hands of importers or shopkeepers in the interior, and by the closing of the Dardanelles fresh arrivals were considerably delayed. Even up to the present there has been only a small portion cleared from the Custom House, and the scarcity of such articles as tanjibs, bleached, and grey shirtings, velvets, etc., is much felt, not to mention Cabots and printed flannellettes, which are principally Italian specialities.

Cotton Goods in Syria.

Referring to the above in a letter published by the *Journal* of the British Chamber of Commerce of Turkey, the Beyrout correspondent says that, to judge by the opinion of the head of one of the most important firms trading in manufactured cotton goods, and established over twenty-five years in Syria, British trade in this particular section has not shown any very satisfactory development. The increase seems to have been more in piece and white goods rather than in greys. In coloured goods England seems to have lost ground considerably, owing to Italian and German competition. England twenty-five years ago was practically the only country to supply Turkey with this class of goods, and if the total imports have shown no decline it is due to the fact that, what was lost in coloured goods was replaced by whites, the consumption having naturally increased with the increase of the population and its increased consuming power. The article of yarn affords a striking illustration of the loss of ground sustained by the British market. Formerly all classes of yarn were supplied by British firms, but now the thicker numbers are almost exclusively imported from India, while only the finer numbers are still held by British makers. It is reckoned that 80 per cent. of the total imports of yarn is supplied by India. It is interesting to note that about twenty-five years ago an average of 300 to 400 bales of manufactured goods were imported every week from England into Beirout.

Cotton Yarns.

Turkey is one of the only consuming countries having no regulations in regard to short-reeled yarns, and although since the stoppage of supplies from Italy the importers have tried to get their short-reeled yarns from Austria, owing to that country's production of "extra hards" being insufficient to meet the requirements, there has been an increase in the imports from Great Britain. It is also gratifying to find that consumers are to a certain extent realising the advantages of buying full-count British yarns.

Cotton Losses in the Levant.

According to the *Manchester Guardian*, manufacturers of grey and striped cotton drills report a decided falling off in the demand, especially for export. Heavy sized goods for the Levant are in but little request, and merchants who have orders on hand are not pressing makers for delivery. Pure drills and drillettes for red and blue dyeing are, however, somewhat better, and the stock houses which supply the smaller Beyrout and Smyrna firms are selling more freely. The forthcoming season's trade for Constantinople and Salonika is adversely affected by the troubles in the Mediterranean.

NEWS FROM ALL SOURCES.

The site for the railway station at Baghdad has been definitely fixed upon on the right bank of the river Tigris. The scheme contemplated includes a harbour and custom house on the river bank, with a siding to the station, which is to be about a quarter of a mile from the river.

The Skuptchina at Belgrade has adopted, by 79 votes to 70, the Bill authorising the opening of a credit of 2,500,000 frs. for military purposes.

The recent adjudication for the supply of safes to the Egyptian Post Office has been awarded to the Milner Company.

The death is announced in Vichy of George Bey Bagdadli, President of the Omdurman Merchants' Association, and one of the wealthiest and best-known merchants in the Sudan.

The Egyptian Promotion Association has been actively pursuing the objects for which it has been formed, and has collected £1,400. A pamphlet describing the attractions in Egypt is in course of preparation, and a well-known firm has been entrusted with the printing and distribution; the design for the title-page is especially artistic and attractive. Agents have been appointed in London, Paris, etc., who will be instructed to contradict any erroneous reports which may appear in the Continental papers detrimental to Egypt. Among the results already achieved is an announcement by the Cunard Line of an arrival and departure in April, instead of as hitherto in March, thus lengthening the season.

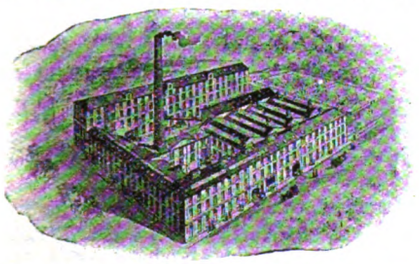
Messrs. Curtis's and Harvey, manufacturers of explosives, and contractors to the British and other Governments, have published their useful *Shooter's Year Book* for 1912-1913. They will be pleased to send a copy of this booklet to any NEAR EAST readers upon receipt of a penny stamp to defray postage.

The traffic receipts of the Smyrna-Aidin Railway for the week ended June 15 amounted to P.905,109.10, as against P.580.384 during the corresponding period of 1911.

Three brief but sharp earthquake shocks were felt in Teheran on Saturday last, but no damage appears to have been caused.

Through the efforts of Rev. Comos Sergias, a movement has been set afoot amongst the Copts at Khartum North to erect a church building. The results thus far have been encouraging. A large sum of money has been subscribed and much interest is taken.

An illustrated daily newspaper, *La Nuova Italia* has been founded and is being published at Tripoli. The new journal proposes to deal with events in the Tripolitain and Cyrenaica, and part of it will be printed in Arabic.



The P. and O. steamer "Medina," which sailed from Gravesend on June 28 had on board bar silver to the value of £1,700 for Port Said.

Shipping Intelligence.

THE DARDANELLES.

(From Our Own Correspondent.)

Odessa, July 1.

The commander of the Russian mail and passenger steamer "Koroleva Olga," which arrived here yesterday from Alexandria, reports that neither on the outward nor the homeward trip did he meet a single Italian warship of any type, and at Constantinople he was authoritatively informed that there was no longer any probability of the Dardanelles being closed again.

This opinion also obtains in British shipping circles in these waters, and charters are now being fixed with more confidence. There are just now 56 British steamers in the Black Sea and Azoff ports.

BALTIC-BLACK SEA CANAL.

Largely as the result of the heavy losses sustained by South Russian grain shippers through the recent closing of the Dardanelles, the scheme to construct a canal between the Baltic and the Black Sea has been seriously revived. It is proposed, says the London correspondent of the *Manchester Guardian*, that a sum shall be set apart in the next Russian Budget for a resurvey of the route, and it is now said that if the Russian Government is not prepared to undertake the work a financial syndicate will proceed with it, provided, of course, that a concession is granted. Beginning at Riga and ending at Khersou, the length of the waterway would be about 1,900 miles, of which long distances would be compassed by means of the Dwina and Dnieper. These two rivers, however, would have to be dredged and widened in parts, while it would also be necessary to dig a canal between them some sixty miles long in the vicinity of Vitebsk. The realisation of the project would naturally be of incalculable advantage to the grain trade. It would also enable the Donetz district to supply the Baltic provinces with coal and render Russia to a very great extent independent of foreign supplies.

SYRIAN EMIGRANTS.

Following the expulsion of 6,000 Syrians from Haiti, the Government of Colombia, advised that a large number of men, women, and children of this nationality would shortly emigrate to Colombian ports, has prohibited their admission on the ground that their presence would adversely affect the public health of the country.

STEAMSHIP MOVEMENTS.

Strick Line.

"Arbistan."—London for Calcutta, passed Penicbe June 25. "Avristan."—At Karachi June 17. "Baluchistan."—At Mahommevah. "Bardistan."—Left Bombay for Antwerp June 24. Stock and Share Markets.

Bank Rate 3 per cent. (May 9, 1912.)

SETTLING DAYS.

CONSOLS.
Thursday, August 1.

STOCKS AND SHARES.

In Mining Shares the next carry-over is July 9

Continuation Days.	Ticket Days.	Pay Days.
Wed., July 10.	Thurs., July 11.	Fri., July 12.
Wed., July 24.	Thurs., July 25.	Fri., July 26.

LONDON, July 4.

There is still a good tone in the markets, and if dealers could live upon "tone" they would do well. But they cannot; they need business, and this is scarce. The Synthetic Products made everyone laugh. Very few people subscribed. The Tulsa Oil was not an oil venture of an attractive type. The names on the front page of the Investment Corporation of Canada should induce people to apply for the debenture issue. The Sena Sugar Factory appears to be making large profits, but such businesses are very speculative. Everybody is now rushing to buy Irish Land stock, which has been allowed to fall below its proper value. Money is plentiful; the failures in Berlin are unimportant, and the outlook at the moment is good.

Internationals Featureless.

In the Foreign market Bulgarians are quoted 90, without any business. The bear squeeze in Italians continues, and the price is 96 ex-coupon. Greek Fours at 54½ ex-coupon are ½ lower. Japanese do not gain strength, but Chinese are supported. It is clear that the bankers think that the deal will go through. Turkish Unified can be bought at 89 ex-coupon. Egyptian Unified show no change. There has been some buying of the Moscow new issue, which was cheap, and the Danish new issue is also being supported. Here also the price is attractive.

Home Rails.

An examination of the figures of the leading Home railway traffics leads one to suppose that all the heavy lines, except Great Northern, must reduce the dividend at least ½ per cent. This reduction has been discounted by the market, prices are very low and stock very scarce. Therefore, a rise seems certain. The possibility of Dr. Woodrow Wilson becoming President of the United States should improve the Yankee market. But copper has been weak; speculators have been getting out.

Miscellaneous Dull.

In the Miscellaneous market business has been dull, but Waring debentures have risen ten points, and Indo-China Navigation shares are also harder. Both of these are market tips which look like coming off. Urals have been strongly supported, but the rest of the Oil market is dull, and the bulls appear tired. Mines have been sold on a rumour that the Goldfields report will be bad and the dividend cut.

Egyptians Steady.

The Egyptian market is steady without business. National Banks rose 1-16 on Wednesday, but Land Banks fell ⅛. There is no change in the quotations of any of the other shares, and practically no dealings. The prospects of the cotton crop are, however, good, and the price is likely to rise in view of a shortage upon last year of the American crop.

Egyptian Hotels.

The Egyptian Hotels report has now been issued, and the directors state that they are considering the question of pulling down the Ghezireh Palace Hotel and building a modern hotel on the site. The new bridge over the Nile has its terminus on the Ghezireh Palace estate. The building of the bridge has somewhat interfered with the hotel business during the past season. It is intended to reorganise the Casino and turn it into a first-class restaurant. The receipts of the Semiramis show a substantial increase, but the net profits of the whole company are only £4,888, which is £5,569 down from last year. In order to pay 5 per cent. on the preference shares, it has been necessary to take £1,000 from the reserve fund. During the year £8,206 has been expended on the maintenance of the hotels. This is a sound policy. There are not many hotels that will spend £729 more in a bad year than they would in a good year. We congratulate Mr. Charles Baehler upon his appointment as director and managing director. No one has a more intimate acquaintance with Egyptian hotels or is more capable of managing them.

De Dion Bouton (1907) Company.

The prospects of this company are of a most excellent character, and the increased earnings which it is now making have attracted considerable attention to it in the Share Market. The company owns the De Dion patents for England and all British Colonies and possessions, and has the rights on all improvements, which advantages are not to be lightly regarded in view of the constantly increasing demand which is in vogue for commercial motor vehicles, omnibus chassis, and auto-cycle carriers. So far this year the orders received are largely in excess of any previous corresponding period, and this has given rise to the supposition that the company's shares will appreciate considerably in market value. The dividend of 4 per cent. per annum which has been hitherto paid on the ordinary shares is fully expected to be enlarged at the end of the half-year. It may be observed that the ordinary shares rank first for Cumulative dividends of 7 per cent. per annum, after which they are entitled to one-third of the surplus profits, the remaining two-thirds going to the deferred shares.

DIVIDEND ANNOUNCEMENTS.

Tramways du Caire.—On and after July 1 payment of 10 frs. on Coupon No. 35 of the 4 per cent. Debentures, and 500 frs. per redeemed debenture.

Nouvelle Société du Canal de Corinthe.—Dividend of 3 frs. per £1 share.

Chemins de fer de Thessalie.—Balance of 3 frs. dividend payable on and after July 28 on dividend of 6 frs. for 1911, as against 6.50 frs. for 1910.

Chemins de fer Economiques de l'Est-Egyptien.—July 1. Six months Coupon No. 30 of the 3½ per cent. Debentures at 8.82 frs. per share.

Tramways Unis de Bucharest.—July 15. Coupon No. 13, 1st dividend, 4.50 frs. per capital share.

Ottoman Line.—Interim dividend to June 30 on the ordinary shares at the rate of 7 per cent. per annum.

Messrs. Boulton Brothers and Co. announce that the coupon of the Montenegro 5 per cent. loan, falling due July 1, should be presented for payment at 39, Old Broad Street, E.C.

The numbers are announced of 1,120 obligations of the Greek 5 per cent. national loan of 1907, which are repayable at 100 frs., or £4 each, in London, by Messrs. C. J. Hambro and Son and the Ionian Bank.

The coupon and drawn bonds due July 15 of the Piræus, Athens, and Peloponnesus Railway Three per Cent. bonds will be paid on and after that date at the offices of Messrs. R. Raphael and Sons, 25, Throgmorton Street, E.C.

NEW COMPANIES.

Jinning, Pressing, and Warehousing Company of Egypt.

Under the above title a company has been registered with a capital of £15,000 in £10 shares. The objects are stated to be to carry on in Egypt or elsewhere the business of seed crushers, oil manufacturers, cotton gineers, spinners and doublers, flax, hemp and jute spinners, manufacturers of cotton, linen, silk, cloth, and other goods and fabrics, wool merchants and combers, worsted spinners, etc. Minimum cash subscription, 10 per cent. of the shares offered to the public. The first directors (to number not less than three nor more than nine) are: J. J. Shute, jun., W. J. Walmsley, F. R. Verdon, C. G. Pilavachi, and J. P. Reynolds. Holders of shares Nos. 1 to 500 have the right to appoint five directors, who shall be permanent. Remuneration (except managing director), £20 per annum.

Ural Petroleum Syndicate.

Under the above title a company has been registered with a capital of £30,050, in 30,000 Ordinary shares of £1 each and 1,000 Founders' shares of 1s. each. The objects are stated to be to carry on the business of miners, refiners of and dealers in oil, shipowners, lightermen, wharfingers, etc.; to acquire, deal with and turn to account any oil wells, oil-bearing and other properties, etc. Private company. The first directors are to be appointed by the signatories. Qualification, £100. Remuneration, £50 each per annum (chairman £100). The offices are at St. Benet Chambers, Fenchurch Street, E.C.

Hungarian National Petroleum Company.

Under the above title a private company was registered, with a capital of £100, in £1 shares. The objects are stated to be to carry on the business indicated by the title. The first directors are to be appointed by the signatories. Remuneration, one guinea per board meeting attended. The offices are at Winchester House, E.C.

TURKISH FINANCE.

On Tuesday, in the Chamber of Deputies, the Minister of Finance, Djavid Bey, opened the discussion of the Budget. Without touching on the question of the war surtax, which he reserved for treatment during the discussion of the special Bill relating thereto, the Minister pointed out that the chief characteristic of Ottoman Budgets since the Revolution of 1908 was the steady increase in the revenue, which continued even after the outbreak of the war, the month of April last showing an increase of £T125,000, as compared with the corresponding month of 1911. He declared that the deficit of about £T4,000,000 in the ordinary Budget would already have disappeared if Europe had consented to give Turkey economic freedom, the yield of the Customs surtax of 4 per cent. and of the patent tax, the acceptance of which by Europe was still being negotiated, being sufficient to balance the Budget. As soon as the negotiations were concluded Turkey would raise nothing but productive loans for the execution of public works and the exploitation of the country.

The Minister of Finance praised the friendly attitude of the Ottoman Bank and the Administration of the Public Debt, thanks to whom the operation of the Sinking Fund was continued during the war, and was even more rapid than that of any other public debt. In conclusion, Djavid Bey announced that the negotiations for the construction of the Black Sea railways were approaching their termination, and that a project for making tobacco a State monopoly would be presented to the Chamber in about a week.

Company Notes and Reports.

Egyptian Hotels.

The report of the Egyptian Hotels, Ltd., for the year to April 30 last, to be presented at the meeting on the 9th inst., states that after providing for all expenses in connection with the working of the hotels and the annual charges payable in London the accounts show a profit of £18,194. From this has to be deducted—Debenture interest £3,834, and sinking fund for the redemption of Debentures £9,471, leaving a balance of £4,888. The balance of undivided profit brought forward, after providing for the dividends declared on June 20, 1911, is £285. The directors propose to transfer from reserve account £1,000, and to pay a dividend of 5 per cent. on the Preference shares, leaving a balance to carry forward of £424. During the year £3,206 has been expended on maintenance of buildings, gardens, plant, fixtures and furniture at the company's hotels. The sinking fund required to be set aside in terms of the Debenture trust deeds has now reached £51,624. The whole of this has been charged to profit and loss account. At the 1st January, 1912, this fund would under normal conditions have amounted to £11,072, but the rate of redemption set forth in the schedules to the Debenture trust deeds has been accelerated by the saving of interest consequent upon the redemption of £153,700 Debentures out of the proceeds of land sales, hence the sinking fund has reached the figure first mentioned. The directors in Egypt report that the receipts of the Semiramis Hotel showed a substantial increase over those of the previous year, while the expenses were practically the same. They have under consideration the pulling down of Ghezireh Palace Hotel, and the building of a modern hotel on part of the site. The new bridge over the Nile is practically completed, and has its terminus on the Ghezireh Palace estate, thus affording access from the hotel to Cairo by an easy walk or a few minutes' car ride. The constructional work in connection with the bridge, in close proximity to the hotel, has somewhat militated against the profitable working of the hotel during the past season. The expenditure on capital account during the past year has been £1,504, of which £819 was on buildings and £685 on plant at Shepheard's Hotel.

Egyptian Delta Light Railways.

The report of the Egyptian Delta Light Railways, Ltd., for the year ended March 31, 1912, to be submitted to the meeting on the 16th ult., states that the gross receipts have amounted to £282,900, an increase of £16,849. The average receipts per mile per year were £459 18s. 10d., as against £432 11s. for 1910-11. The coaching traffic shows a considerable increase for the year, the number of passengers carried being 8,122,055, as compared with 7,461,248 passengers carried during the year ended March 31, 1911. The gross receipts from this source were £182,624, as compared with £170,211 for the previous year, an increase of £12,413, and the average per mile per week was £5 14s. 2d., as compared with £5 6s. 5d. during the year ended March 31, 1911. The goods traffic has also shown a satisfactory improvement, the quantity of goods lifted being 1,240,800 tons, as compared with 1,115,564 tons during the year 1911, an increase of 125,236 tons, the gross receipts from this source being £92,528, as compared with £89,005 in the previous year, an increase of £3,523. The working expenses totalled £172,528, as compared with £163,157 for the previous year. The ratio of expenses to gross earnings was 60.99 per cent., as compared with 61.33 per cent. for the previous year. The net earnings from all sources aggregated £110,338, which, with interest and dividends earned, amounting to £2,037, and £19,458 brought forward from 1911, gives a total of £131,834 to be dealt with. After providing for all fixed charges, interest on Debentures and for the Debenture and share capital redemption sinking funds, etc., a balance of £69,977 remains. The Board recommend a dividend of 4¾ per cent. on the Preference share capital for the year ended March 31, 1912, which will absorb £49,437, and leave a balance of £20,540 to be carried forward. The directors report that in order to meet the requirements of the Government of Egypt, an extension of the system of light railways has been undertaken in the North of Egypt, and that negotiations with the Egyptian Government have for some time been in progress, which it is hoped may result in such alterations in the concession as should materially improve the position of the agricultural railways as a whole. Should these negotiations materialise, the detailed proposals will in due course be submitted for the approval of the shareholders. The depreciation in securities, which is referred to in the auditors' report attached to the balance-sheet, is occasioned by the fall in market value of the company's holding of 20,000 shares in the Egyptian Delta Land and Investment Co., Limited; these were at March 31, 1912, quoted at about 16s. per share, as compared with the original cost price of 30s. per share. Allowing, however, for the increased market value of other securities held by the company, the net depreciation was at the date above-mentioned £11,663.

Roumanian Consolidated Oilfields.

Presiding on Monday at the statutory meeting of the Roumanian Consolidated Oilfields, Limited, Mr. Richard Barnett recalled how the company had been formed under the auspices of the Oilfields Finance Corporation, with a capital of £1,750,000, to acquire the assets and undertakings of five British oil companies operating in Roumania. They, individually, were the old Roumanian Consolidated Oilfields, Limited; the Bana Moreni Petroleum Co., Limited; the Roumanian Oilfields, Limited; the British Roumanian Oil Co., Limited; and the Central Roumanian Petroleum Co., Limited. Those five companies had originally had subscribed capital of rather over £950,000 sterling, while in the amalgamation some £200,000 had been written off, so that of the authorised capital of the new undertaking nearly one million pounds sterling would be available for working capital and general purposes. Of that amount, £250,000 was guaranteed.

The assets included, in addition to the capital to be called, about 7,000 acres of oil land, a considerable portion of which was situated in the very richest fields of Roumania. They had, beyond this, land in varying outlying districts which was likely to prove of great importance to the company. The Chairman proceeded to indicate by means of a map the position of the lands in which the company was interested. They were, he said, intending to proceed to work on the proved lands in the first instance, but occasionally they would put down a well on some of those outlying lands, and one could never tell what might happen.

After enumerating their other interests, the Chairman said that the question was often asked why they had not brought in the Moreni Roumania Oilfields. That, however, was a very successful company which, within three months of its formation, had struck oil in its well No. 4, and had produced and marketed between 12,000 and 13,000 tons of oil. It, moreover, had not only got fine properties at Moreni, but a magnificent property at Filipesti. Perhaps the best answer he could give to that question was that the Moreni Company wanted too large a premium, while they would have had to ask for £400,000 of working capital. The directors, who had paid a visit to Roumania, had been very much impressed with the advisability of bringing that company into the combine, and had suggested that it should bring a dowry with it. The suggestion was that it should issue its remaining 110,000 shares, and, if that cash were subscribed, that it should come into the combine on the basis of 25s. for the £1 ordinary shares, and 10s. for the deferred shares. The cash would be necessary to develop its Filipesti interest. In conclusion, he pointed out that the continuity of all the businesses would be maintained. No prospectus had been issued, but every one of the directors represented on the board the interests of the companies with which they had become amalgamated. There was a good outlook, especially as regarded the refinery, which was able to deal with 250 tons per day, and they had outlets for the oil in two directions—namely, to their own refinery one way, and half a dozen other people, all of whom were anxious to secure the oil. It was estimated that by the end of the present year there should be a monthly output of 12,500 tons per month, and by the end of next year from 30,000 to 40,000 tons per month. It would all depend upon the progress which was made in the boring operations.

GHARBIEH LAND CO.

Annual Report.

The following is the report of the directors, submitted to the ordinary general meeting of shareholders, held on May 30, 1912:—

We beg to submit our report, together with the balance-sheet and profit and loss account, for our sixth financial year, ended February 29, 1912. Before referring to the accounts, we would dwell on the significance of two factors of recent occurrence which mark the advent of a new area of activity and material prosperity for Egypt in general and the company in particular. In the first place, there is the decision of the Government to carry out immediately the great drainage works which will largely benefit the whole of the Delta, and especially the Gharbieh and Behera Provinces. The arrival of Lord Kitchener in Egypt was the signal for the examination of a series of questions closely connected with the development and welfare of Egypt, one of the chief being the drainage scheme for Lower Egypt, mentioned in the preceding paragraph. This scheme, while ensuring the complete remodelling of the existing drainage system, will also, it is estimated, increase by at least one-third the cotton yield in that part of Egypt, and also to a certain extent protect the cotton crop from the ravages of insect pests whose attacks are intensified by want of drainage. The question of drainage was always deemed by our company to be one of vital importance, and it is because we foresaw, at the very outset of the company's undertaking, the paramount necessity of providing the Ras-el-Khalig estate with a perfect system of drainage that we were able to obtain such satisfactory results. This view is corroborated by the eminent hydraulic engineer, his Excellency Ismail Pasha Sirri, Minister of Public Works, whose opinion was published in our last report. When it is asserted by an authority of his Excellency's competence that the works carried out by the company have been the means of converting its Ras-el-Khalig estate into "a veritable Eden," the conclusion is justified that the same works undertaken on a large scale must produce the same effects on the hitherto uncultivated lands of Lower Egypt. These extensive works were inaugurated by Lord Kitchener on March 17 last, and it may reasonably be expected that their execution, which will greatly tend to develop the country's resources, will react favourably on Egyptian enterprises in general, and more particularly on agricultural undertakings such as ours. Moreover, this important scheme is but the precursor of a series of other projects, each of which will, in due course, impress its beneficial effect on the country. We may, therefore, confidently state that Lord Kitchener's presence in Egypt is a guarantee of unremitting and highly productive activity. The second factor to which we would draw your attention is more directly connected with the interests of the company. You doubtless already know that the company, by concluding lately an agreement with an important London financial establishment, has acquired the means of considerably extending the scope of its operations, and utilising the staff and special plant available now that the reclamation of the company's Ras-el-Khalig estate is being brought to a termination. To undertake the reclamation of lands belonging to others, by a process similar to that adopted so successfully in the reclamation of the company's own lands, is a brief presentment of the new programme which you approved at the extraordinary general meeting by voting the necessary modifications to the company's articles of association. The experience acquired by the company in this kind of work and the results already obtained justify the directors in anticipating the success of this new undertaking, both for the company and for land owners who avail themselves of the facilities to be offered them. We are at present engaged in completing the

Digitized by Google

special organisation required in connection with this new enterprise, and, judging by the proposals we are receiving, there is every reason to expect that this branch of our business will, in the near future, become a most important one, both in regard to the works to be undertaken and the profits to be realised.

Lands.

The area of the company's lands, which on February 28, 1911, was 8,099 feddans 14 kirats 1 sahm, has been reduced, by sales effected during the period under review, to 8,000 feddans 16 kirats 11 sahms, the balance-sheet value of which is £E403,741.835, made up as follows :—

	Area. F. K. S.	Cost Price £E
Lands at February 28, 1911	8,099.14. 1 ..	397,020.398
Expenditure on improvements, buildings, etc. ..	— ..	12,092.512
	8,009.14. 1 ..	409,112.910
Lands sold in 1911/12	98.21.14 ..	5,371.105
	8,000.16.11 ..	403,741.835

This amount comprises the cost of the lands and all expenditure thereon, but is exclusive of interest.

Irrigation and Drainage.

The drainage system continues to afford entire satisfaction. Important irrigation improvements have been carried out during the year. The old 20-in. pump on the Nile, whose substitution was referred to in our last report, has been replaced by a 20/24-in. pump of a new type and greater output. Further, in order to ensure in all seasons a perfect distribution of irrigation water for the Khazzan Division, permission was obtained to erect an 18-in. pump on the Bahr Shibin to feed our Shoka Canal, and the new installation will be completed in time for this year's summer crops. Finally, the Government was good enough to allow us to connect the canalisation of South Wastani with that of Ras-el-Khalig by a canal across Government lands for a distance of about 5½ kilometres. This canal, which has since been completed, will receive its water supply direct from the Sahel Canal, or from the 20/24-in. pump on the Nile, and will curtail the distance formerly traversed by water for the irrigation of South Wastani by some 7 kilometres.

Buildings.

The number of buildings erected in 1911 will provide accommodation for an addition of 111 peasant families. A house for the inspector of the ex-Wilson Division has also been built near the Sawalem Station.

Sales of Land.

Land transactions, in which, during the early months of 1911, there had been some activity, showed a marked falling off under the influence of various events which left their impress on the whole of the latter half of the company's financial year. The price of cotton, influenced by the strikes in England and the Chinese revolution, coincident with an exceptional abundance of the American and Egyptian crops, began to decline as early as September, occasioning a loss to Egypt—fortunately an exceptional one—of several million pounds. The primary cause of general depression just alluded to was intensified by the important failures of September and November, 1911, and, though perhaps less apparently, by the Italo-Turkish war and the political events in Morocco.

This concourse of adverse circumstances, aggravated in the case of the whole of the northern part of the Delta by storms of rain and hail in October last, has given rise to a general feeling of uneasiness, which, although fortunately merely of a transient nature, has nevertheless had a depressing effect on land business in general. It is owing to this that, despite the large number of applications for purchase received in the beginning of the financial year, the company had effectively sold by 29th February, 1912, only 98 feddans, 21 kirats, 14 sahms, located as follows :—

	Area. F. K. S.	Sale Price. £E.
Esbeh No. 1	16 3 6 ..	1,674.542
Esbeh No. 2	17 0 0 ..	1,700.000
Esbeh No. 3	17 12 0 ..	1,629.000
Ex-Wilson	5 2 8 ..	509.723
Wastani	28 22 0 ..	2,871.249
Khazzan	14 6 0 ..	1,174.503
	98 21 14	9,559,017

These sales, which leave a net profit of £E3,970.998, bring the total area sold to date up to 828 feddans, 14 kirats, 22 sahms.

Agricultural Exploitation.

Torrential rains accompanied by a heavy fall of hail—a phenomenon of extremely rare occurrence in Egypt—caused in October last very serious damage to nearly the whole of the northern part of the Delta. On the company's lands this damage, though of some importance, was to a certain extent compensated by the increased yield. Throughout September and up to October 25 the prospects of the cotton crop on the company's property appeared excellent, and the different estimates of the probable yield justified the expectation of a total crop of at least 6,500 to 7,000 cantars. The first picking, begun on October 4, was, however, suddenly interrupted on the 25th of that month by rain and hail storms, which, for more than ten days fell at frequent intervals, destroying a portion of the crop and considerably damaging the remainder. It is estimated that at least 1,000 cantars of cotton were completely lost. In spite, however, of all these mishaps, the 1911 crop was greater than that of 1910, as will be seen in the following table—

Year	1909.	1910.	1911.
Cantars (1 cantar = about 100lbs.)	2,721	4,843	5,665

The working results were, of course, modified by the damage above referred to, but doubtless the company was affected most by reason of the fall in the price of cotton. In fact, the difference between the 1910 and 1911 prices realised by our cotton was no less than P.T.150 a cantar, which on the 5,665 cantars signifies a diminution of about £E8,500. The net profits for the year attained the figure of £E13,684. This year arrangements have been made to finish the sowings at a much earlier date than in 1911, and there is every reason to hope that with the average advance already secured of fifteen to twenty days, the Company will not have to sustain any loss in consequence of the lateness of the crop.

Land Reclamation.

We have lately entered into an agreement for the reclamation of a small property not far distant from the Ras-el-Khalig estate. This is the first time we have undertaken a business of this kind for a third party. It, however, differs from the business forming the subject of the land reclamation programme, outlined in the first part of this report, in that the landowner in this case is paying beforehand the sums required for the works to be carried out. The conditions in which this particular business presents itself enables us confidently to forecast the prospects of our new programme of operations.

Purchasers of Land.

The balance of the purchase price outstanding on sales effected during the year is £E3,179,865 more than the same balance at February 28, 1911. Notwithstanding the fall in the price of cotton and the damage referred to above, the arrears in the annual instalments are only £E2,294.452 in excess of those of the previous year. Moreover, more than one-half of this amount will be paid in shortly.

Sundry Debtors.

This account comprises rents in arrear, advances to cultivators, deposits with lawyers, advances to contractors and officials of the company, suspense accounts, interest on unpaid calls, etc. A sum of £E3,000 has been withdrawn from the profits and placed to the credit of the account "Reserve for doubtful debts."

First Establishment Expenses and Furniture.

As usual, 10 per cent. has been written off these items.

Cost of Issue and Redemption of the 5½ per Cent. Mortgage Bonds.

The sum of £E2,000 has been written off this account.

Cost of Issue of the 5 per Cent. Mortgage Debentures and Loan Charges.

The 5 per cent. mortgage debentures issued in 1910 being redeemable only from the forty-fifth year, this account has been amortised by 1/45—viz., £E686,022, which amount will in future be deducted annually from the profits towards the amortisation of this account.

Capital — Unpaid Calls (Shareholders).

As a result of legal steps taken against shareholders in default, several of them have made proposals with a view to settlement, and, since the closing of the accounts, some have even begun to pay the calls in full.

5 per cent. Mortgage Debentures.

With the proceeds of the debentures issued since February 28, 1911, we have paid off most of the bank credits and other liabilities appearing in the previous balance-sheet, and the available balance has been employed in works of improvement on the company's estates.

Sundry Creditors.

This account comprises deposits for the purchase of land, amounts received by the company for land improvement, advances made by the Egyptian Enterprise and Development Company, balances due to contractors and workmen for work done during the year, interest accrued but not yet due, etc.

Unsold Crops.

Owing to the unfavourable state of the market, only in April last were we able to conclude the sale of the 1911 cotton crop. The proceeds of this sale exceed by about £E600 the amount of £E12,068,887 given in the balance-sheet. In order to avoid a recurrence of similar difficulty in effecting a sale of the crop, an arrangement has this year been concluded whereby the company will be able to dispose of the crop whenever it thinks fit without having to wait, as is usual, until delivery before fixing the sale price.

Profit and Loss.

The net profits for the year amounted to £E9.935.187, of which the following is an analysis :—

		£E
Receipts—		
Agricultural income		20,497.416
Interest		4,393.369
Profit on sales of land		3,970.998
		£E28,861.783
Ordinary Expenditure and Fixed Charges—	£E	
Agricultural working expenses	6,813.402	
Interest, etc., on 5 per cent. mortgage debentures	9,993.750	
General and administrative charges	1,297.458	
Sinking Funds— £E		
Preliminary expenses 124.583		
Furniture 11.381		
Debenture issue expenses 686.022	821.986	18,926.596
		£E9,935.187
Less:		
Exceptional and Temporary Expenditure—	£E	
Amortisation of cost of issue and redemption of the 5½ per cent. Mortgage Bonds..	2,000	
Reserve for doubtful debts..	3,000	5,000,000
		£E4,935.187
Profit on sales of land not encashed		2,200.000
		£E2,735.187
5 per cent, deduction for reserve fund	£E136.759	
Directors' fees	1,000.000	1,136,759
		£E1,598.428
Balance brought forward from previous year		2,936.988
		£E4,535,416

which we propose to carry forward.

Partial Renewal of the Board of Directors.

MM. Ernest Rolin and Edouard Thys retire by lot, and are eligible for re-election by virtue of Clause 15 of the Articles of Association.

Election of Auditors.

We propose the re-election for the current financial year of Mr. F. H. Russell, of Messrs. Russell, Harris and Co., Chartered Accountants, and M. Léon Rolin.

THE BOARD OF DIRECTORS.

1st May, 1912.

Resolutions.

The following resolutions were passed at the meeting :—

This meeting approves unanimously the balance-sheet and profit and loss account relating to the sixth financial year ended February 29, 1912, and grants a discharge to the directors in respect thereof. It resolves to carry forward to the next account the reduced credit balance of profit and loss account—viz., £E4,535.416. It re-elects MM. Ernest Rolin and Edouard Thys as Directors. It appoints MM. F. H. Russell, of Messrs. Russell, Harris and Co., chartered accountants, and Léon Rolin as auditors for the current financial year, and fixes their joint remuneration at £E150.

ALLIANCE

ASSURANCE COMPANY, LIMITED.

Head Office: BARTHOLOMEW LANE, LONDON, E.C.

Assets Exceed £23,000,000

Chairman: The Right Hon. LORD ROTHSCHILD, G.C.V.O.

Among the classes of Insurance Business transacted by the Company are the following:—

(1) LIFE INSURANCE, with and without Profits, with special provisions for the payment of Estate Duties.
(2) FIRE INSURANCE of every description.
(3) INSURANCES TO COVER LOSS OF RENT, INTEREST AND PROFIT consequent upon Fire damage to property.
(4) MARINE INSURANCE.
(5) BURGLARY, THEFT, and PLATE GLASS INSURANCE.
(6) ACCIDENT, including Personal Accident, Motor Car and Employers' Liability Insurance.

Fidelity Guarantee and Sinking Fund Policies are also granted.
Applications for Agencies are entertained, and Prospectuses with other papers may be had on written or personal application.

ROBERT LEWIS, General Manager.

WHY PAY RENT?

The City Life, under its "IDEAL" policy plan, enables Policyholders to reap the benefit of their investment DURING THEIR OWN LIFE-TIME, and in the event of premature death to leave their legal representative in possession of a comfortable house, free from any mortgage charge or encumbrance.

GOOD PROSPECTS FOR ACTIVE AGENTS.

Send Postcard for Prospectus and Terms to

NOTES OF THE WEEK.

This week the domestic situation occupies a more prominent place in the public mind of Turkey than the war. The dissensions in the Cabinet have come to a head in the resignation of Mahmud Shevket Pasha, the Minister of War, but it is significant of the obscurity which veils the forces now at work in Turkish politics that it is not yet apparent whether his downfall represents the beginning or the end of the struggle between the army and the Government. In explaining his retirement Shevket Pasha pleads fatigue in consequence of the recent great stress of work, and points out that it is preferable that the execution of the new law interdicting political activity on the part of officers of the Imperial Army should be entrusted to a new Minister. All that is known is that the late Minister of War incurred the hostility of a section of the Cabinet by insisting upon the undivided control of the details of military expenditure, and that the subsequent discovery of peculation in the supply department, together with his failure to enforce abstention from politics upon his officers, gave his enemies an opportunity to undermine his authority. The relative parts played, however, in the resignation of Mahmud Shevket Pasha by differences among Ministers themselves and by the necessity forced upon the Committee of Union and Progress of making some concession to feeling in the army have yet to be distinguished. Opposition to the person of the War Minister figured in the demands of the Monastir mutineers, and for some time he has been held responsible in the army for the lack of preparation that characterised the Turkish forces in Tripoli at the outbreak of the war. Mahmud Shevket Pasha has left his mark on the history of the Turkish constitutional struggle; if he has failed at the present crisis, the cause will not have been lack of patriotism or remissness in striving to promote his country's interests according to his lights. Torgut Shevket Pasha has refused the portfolio of War, and among the names mentioned as a possible successor to Mahmud Pasha are Abdallah Pasha, commander of the forces in Smyrna, Ibrahim Pasha, and Nazim Pasha.

The Monastir mutineers and the Albanian insurgents still fail to make common cause, and can, so far, be regarded by the Turkish Government as separate incidents calling for different methods of treatment. Despite its admitted sympathy, the Monastir garrison has refrained from joining the movement. But while a general outbreak appears to have been avoided, the situation caused by the desertions undoubtedly calls for the most tactful handling on the part of the Cabinet. At present Ministers are reported to be divided in their opinions regarding the attitude to be adopted towards the mutineers; but on this question, as on others, it remains to be seen what effect the withdrawal of Mahmud Shevket Pasha has on the counsels of the Cabinet. The Committee extremists are all for dealing with the deserters with the utmost severity; the more moderate section—recognising, no doubt, the extent of the dissatisfaction that recent events have stirred up against the Government—would prefer the regrettable episode to be hushed up as quickly as possible by making a return to allegiance easy for the mutineers. It is significant of the Government's difficulties that the mutiny should have caused embarrassment out of all proportion to the actual extent of the desertions. The secret organisation that inspired it had made little headway among other garrisons, and had apparently found favourable soil to work upon at Monastir alone. Owing to the premature outbreak many officers who would confess to opposition to the Committee's régime have been able to dissociate themselves from an ill-organised movement. The incident, however, is likely to bring home with special force to the Committee of Union and Progress the necessity of setting its house in order. Djavid Pasha, a strict disciplinarian, who earned some notoriety for the severity with which he conducted a previous campaign in Albania, has been appointed acting-commandant of the Monastir army corps. The regiments chiefly compromised by the mutiny are being transferred to other districts and their places are being taken by troops from the Dardanelles. In view of the causes for dissatisfaction that the Committee is said to have given to a large proportion of the officers of the army and the symptoms of unrest among other garrisons, it is to be inferred that a sense of loyalty to the country has been instrumental in keeping within bounds the growing opposition to the Committee. In the interests of Turkey it will be hoped that the establishment of a moderate and more enlightened administration will be effected without another national upheaval.

The Turkish Government would seem to be definitely committed to a military campaign against the Albanians. As the result of an engagement near Vuchitrn Fadil Bey with a superior force is said to have completely routed about a thousand insurgents under Isa Boletin. The Albanians were dislodged from their positions, and then subjected to a heavy shell fire in the places where they had taken refuge; they lost heavily, the Turkish report says, before they gave themselves up to disorderly flight. At Aktchehissar the Turkish garrison was besieged by a strong force of insurgents, but the timely arrival of reinforcements enabled the defenders to drive off the enemy. A possible effect of these operations may be to kindle a

Digitized by Google

general rising in Albania. Up to the present the leaders of the Albanian movement have endeavoured to carry on their agitation without recourse to organised military operations. They have entertained hopes of foreign intervention, and in their appeals to Constantinople and the country at large have been careful to represent themselves as true Osmans acting in the interests of Turkey itself. Their quarrel, they state, is against the deplorable policy of the Young Turkish Government, "a policy criticised by the whole civilised world, and bound to lead sooner or later to the invasion of the Fatherland by its enemies and to the destruction, in consequence of the errors of a handful of braggarts, of the Ottoman Empire that has stood for six centuries." No demand for national autonomy is being made at present, for on this question the population of Albania is divided. It is unanimous, however, in its insistence upon education, material improvements, and the appointment to Albanian posts of Government officials who, if not Albanians, should, at all events, be conversant with Albanian conditions.

Wednesday was a field day in the House of Commons for foreign affairs, and in the discussion considerable attention was paid to the Trans-Persian Railway. Sir Edward Grey's remarks were more explicit on this occasion in regard to the circumstance that the British Government remains uncommitted. It has refused to oppose on principle the scheme of an overland route to India, but it holds that the appointment of a Société d'Etudes binds neither that body nor this country to the ultimate construction of the line. The Foreign Secretary added that when the Société had reported, he was of opinion that the House ought to be informed what the proposal is, and he confirmed the announcement that the concession for a line from Mohammerah to be granted to a British company is under the consideration of the Persian Government. In regard to the Baghdad Railway, Sir Edward Grey said that the basis of negotiation in respect of the railway below Baghdad is "whether we shall give our consent to the increase of Turkish Customs which Turkey wants, and the one great object which we wish to secure is that there shall be an understanding between us and Turkey about the *status quo* of questions in the Persian Gulf in general." This latter point, however, was not "mixed up with the railway from Baghdad to Basra," but, if we understand the Foreign Secretary's remarks aright, will be the subject of a separate documentary understanding.

In Tripoli the Italians experience no difficulty in meeting the Turkish forces. The slightest movement from any of the fortified posts held under the guns of the navy is sure to result in an engagement, and the Italian troops have no occasion to complain that the enemy is elusive or loses any opportunity of a fight. On July 8 Misurata, a town some fifty miles east of Homs, was added to the list of Italian captures along the coast. The Turks, as usual, were entrenched at no great distance from the Italian sphere, and the operations consisted of a frontal attack, aided by a turning movement, after the Turkish position had been fiercely shelled. Italian casualties are returned at nine killed and 121 wounded; the Turkish losses are estimated at several hundreds. It is unfortunate that we are unable to form any opinion of the effect of these Italian successes on the Turkish and Arab forces. The Misurata encounter is typical of several fights that have taken place during the last few weeks, but the Arabs show the same determined resistance, and the Italian advance maintains an easterly or westerly direction, and hardly ever is found heading south. In the Ægean Sea the week has passed uneventfully.

An interesting document issued by the Italian Government records the administrative reforms introduced in "Tripoli and Cyrenaica" since the occupation "for the civilisation of a country which Turkish oppression kept in a state of misery and profound moral subjection." In effect, the operations of the central bureau or "general direction" would appear to be confined mainly to the town of Tripoli. Under the late Government, it is pointed out, municipal services were carried out in a most indifferent manner, if at all. One of the first steps forced upon the Italians from sanitary considerations was the removal from the city of persons with no domicile. Pieces of land in the oasis were selected and prepared and several thousand persons were removed to them, after being provided with food, clothing, and utensils. The cleaning and lighting of the city followed, and efforts were directed towards the re-establishment of trade. Harbour works on an ambitious scale are in progress, while an Agricultural Commission has started its investigations, "hitherto of necessity limited to a restricted zone of territory." The Commission, however, is optimistic as to the agricultural prospects of the country as far as it has seen it, in regard not only to the oasis, but also to the desert zone adjacent to the oasis, "which does not differ from other places that have been brought to a high pitch of cultivation. There can be little doubt that the Italians will be able to introduce many needed reforms into Tripoli. One of the chief difficulties, however, of a permanent occupation will be to provide openings for an Italian population that will leave to the Arabs the minor callings which no European can pursue without losing caste among the natives. Hitherto one of the objections of the Arabs to the Italian immigration has been that the majority of them are in danger of losing their present means of livelihood.

As will be seen from the letter we publish this week from our Cairo correspondent, there is every reason to suppose that the Egyptian conspiracy will prove to have been a widely disseminated plot that for sheer audacity of aim far outstrips the efforts of Wardani two years ago. Considerable credit is due to the police for the effective manner in which they seem to have anticipated the actual commission of crime, and to have arranged the seizure of the would-be perpetrators and of documents. It is some satisfaction to know that the additions to the Penal Code since 1910 will enable a conspiracy of this nature to be dealt with more effectually than was possible at the time of the murder of Boutros Pasha. Political unrest offers one of the most awkward problems of government, and it must always be a difficult point to decide when the limits of legitimate hostility have been exceeded. In the case of a deliberate conspiracy, however, the Government stands aside and the law takes its course.

Lord Kitchener is on his way to England on leave that no one will doubt has been well earned. It is a matter for general regret that he should still be feeling the effects of the injury which he sustained in India to his leg, but we trust that it will not interfere with the enjoyment of a short holiday. His tenure of office has had too much crowded into it to allow Egypt to dispense with his presence for any length of time at this juncture. In addition to the services rendered by him to the country which command universal approval, his energy and shrewd knowledge of Egyptian affairs have led him to embark on some schemes that clash with rival interests. The stimulus of his personal supervision and encouragement may be necessary, if his measures for drainage and the extension of the savings bank system are to survive open and latent opposition and to gain the widest recognition as to the best methods of attaining the end in view. Lord Kitchener believes in the future of Egypt, and has set himself the task of promoting its material prosperity as the soundest addition to the foundations already laid. Everything and everybody contributing towards this end can reckon upon his active support or personal interest; and it is no small factor in his popularity that he knows how to express his recognition of the value of each component part in the machinery of national progress, from merchant prince to the humblest fellah.

NOTICE TO OUR READERS.

As was foreshadowed in our Anniversary Number, the "Near East" has this week undergone a slight modification in form. The adoption of a cover has been necessitated by the increasing demands on our advertising space, and implies no change in the contents of the journal.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)

Constantinople, July 6.

The C.U.P. and the Military.

During the last week the Council of Ministers has apparently devoted its entire activity to the discussion of the knotty problem presented by the Monastir deserters. A few of the latter who broke off from the main body have been captured, a few more have surrendered of their own accord, and the remainder have made no attack on the loyal troops. But the latter, on the other hand, have undertaken no sort of offensive against the mutineers; and if the Government denies that it has entered into pourparlers with "men guilty of the worst of military crimes," there can be no doubt that deputations of officers from the Salonika and Monastir garrisons have been in contact with them, and that a majority of the officers from these important garrisons is in favour of a policy of clemency.

The main facts of the situation are as follows:—A movement having taken place at Monastir, the Government, unable to place absolute reliance on the local forces and the other troops in Macedonia, has been obliged to send an entire division from the Dardanelles to Macedonia and replace this force with a division of redifs from Ismid. The army, though it contains elements which are decidedly hostile to the Committee Extremists, which it considers too strongly represented in the present Cabinet, is not by any means unanimous, and wishes at all costs to avoid a collision between regiments. It is, therefore, desirous of hushing up the Monastir episode as far as possible, and of inflicting no serious punishment on the mutineers. On the other hand, the Minister of War, and still more the Committee Extremists, urge that the deserters who refuse to come in and surrender within a given period be punished with the utmost severity, while admitting that the punishment of those who voluntarily yield to the summons of the Government should be as mild as possible. Neither the War Minister nor the Committee feel at all secure, but the patriotism of the great bulk of the officer class will, they hope, prevent any present extension of the movement. In the meantime, there can be little doubt that there have been signs of disaffection among the troops at Smyrna, Adrianople, and to a certain extent at Erzerum and Erzindjan.

The probability is, therefore, that we shall have the usual compromise between the advocates of each policy, followed by a period of unstable equilibrium, during which the discontented military elements may dissolve, or may, on the other hand, gather strength for the next move. As for the new law imposing enhanced penalties on officers or soldiers who take an active part in politics, no one supposes that it is going to have very much effect as long as officers remain members of the Central Executive of the Committee of Union and Progress; and the discontent caused by the recent law on military grades, by which numbers of officers who had been too rapidly promoted in Abdul Hamid's days have been reduced to lower rank, and by the appointment of certain soldiers who are rightly or wrongly believed to be protegés of the Committee to important administrative posts, continues to be felt.

The Provinces.

The movement at Monastir seems to have caused a certain amount of excitement in the Mat district, a wild country west of Dibra, where a force of gendarmes has been attacked and has lost a captain and ten men. A machine gun is said to have fallen into the hands of the enemy. The Scutari Malissors are, happily, quiet. In Kossovo Isa Boletin's "Koulé" has been stormed after a long fight, but Isa Boletin escaped with the majority of his men. There has also been something of a revival of Bulgar activity in Macedonia. Two bomb-throwers were taken at Monastir on the 30th ultimo, and a fight with a band is reported from Strumnitza. Turkish successes are reported from Assir.

The Lebanon.

The term of office of Yussuf Pasha, the Governor of Mount Lebanon, expires in two days, but it is possible that the Ambassadors will prolong his mandate for a few days, pending the adoption by the Porte of certain reforms in the Organic Law of the Province of Lebanon which are demanded by the Lebanese Council of Administration (Medjlis el-Idara) and by the enormous majority of the people of the Mountain, who have just cause for complaint in the maintenance, unaltered, of a Constitution which was good enough for their country fifty years ago, but has long outlived its utility.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, July 6.

The Army and the Government.

Although Salonika is in direct railway communication with Monastir, it is impossible for us to learn the truth as to what has really happened, and is still going on, in that district. Some reports state that whole battalions, as well as many officials, have taken to the mountains; while others say that, as only a very few Albanian officers and men are concerned, the movement, although inopportune, is of no great gravity. One current of opinion, however, is that the movement of desertion must not be confounded with the unrest prevailing among the troops in that town, and which seems to be spreading to other garrisons. This spirit of unrest is said to have been lately strengthened by the founding of a secret society for promoting the union of the military element, part of its aims being to prohibit officers and public officials from mixing in politics and to transfer the General Staff of the Army to the Palace, where it would hold its meetings under the presidency of the Sultan himself, thus forming a supreme military chamber for revising irregularities in the advancement of officers, etc. Some colour is given to this view by the fact of the Government hurrying on a Bill to penalise all meetings of, and demonstrations by, the military, and their taking any part in political struggles, it being hoped by such means to make it possible to dissolve this new secret military society. To onlookers the scheme seems a difficult one to carry out; for Mahmoud Shevket Pasha, when speaking on the Bill in the Chamber, had to recall the fact that it was through the Army, to its honour, that the Constitution was re-established. He further said that even at that time he saw the danger of allowing the military to concern themselves with politics, but his position was not then sufficiently high to permit of his attempting any means to put an end to it. Then came the events of April 13, 1909, when, once more, the Army had to be appealed to for the purpose of suppressing the anti-Constitutional rising under Sultan Abdul-Hamid. Another view is that the movements are mainly anti-Ministerial, Mahmoud Shevket Pasha, Djavid and Talaat Beys being in special disfavour; but the malcontents are likewise demanding the suppression of the Union and Progress Committee, and the dissolution of the present Parliament, which, it is contended, is an altogether irregular one, as it is notorious that the people had no free choice in the elections.

The Albanian Trouble.

Although, a little time ago, we were told the Albanian trouble was practically over, considerable desultory fighting still goes on, and a fairly big engagement took place last Tuesday between Mitrovitsa and Vucitrin, the insurgents to the number of from three to four thousand being commanded by Issa Bolatin, while six battalions of soldiers and three batteries of artillery were under the personal command of Fadil Pasha. After some thirteen hours' fighting the troops got the upper hand and entered the village of Bolatin, where, however, they only found five dead, although the insurgent loss is supposed to have been heavy. The killed and wounded of the troops were taken in carts to Mitrovitsa.

A Piquant Situation.

A somewhat curious Press case is about to be tried here. The authorities of the Kossovo Vilayet brought an action against the editor of the *Yeni Assr* for publishing an article on Albania, signed Ch.M.F. (Cheik Muhsin Fani), which they contended was of a nature to cause "undesirable excitement." The editor of the

Digitized by Google

paper was summoned to Uskub and duly attended the hearing; but the Court finally decided that, as the *Yeni Assr* was published in Salonika, in which town the editor also resides, if any misdemeanour was committed he would have to be tried there. Now, "Cheik Muhsin Fani" being the literary pseudonym of Hussein Kiazim Bey, we shall have the curious spectacle of an action being tried in this town to decide whether an article written by our Governor-General was of a nature to cause "undesirable excitement," in which case the editor committed a misdemeanour by publishing it.

The Question of Foreign Advisers.

Two or three weeks ago the *Jeune Turc* had a most astonishing article, signed by a regular contributor, on the question of appointing foreigners to official posts in the Administration. The article was so strong that it altogether took one's breath away, seeing it laid such special stress on the utter incompetence and ignorance of all native officials, while most strongly advocating the appointment of foreigners to the chief offices of the Administration throughout the country, governmental and municipal. Owing to the Balkan Committee, the pendulum has now swung the other way, and the same writer curses the said committee from the crown of its head to the soles of its feet. It is quite evident that if this article expresses the general view, any friendly suggestion of the Balkan Committee will be utterly scouted and will never have the slightest chance of even being taken into consideration.

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, July 7.

The Baltic Meeting.

It is not a little remarkable that whilst the Continental Press and the leading London organs are speculatively discussing at great length the probable, or improbable, political results of the Imperial meeting in the Finnish skerries, the Russian Press, with the exception of two or three inspired semi-official metropolitan journals, takes but scant notice of the event. The same indifference was shown on the occasion of the last meeting of the Kaiser and Tsar at Potsdam. The cause of this is, undoubtedly, the ingrained antipathy of the Russians of all classes to Germany and the Germans; this sentiment amounts, indeed, to a national detestation of Russia's near and formidable neighbour. It has existed for more than a generation past, and although not demonstrative, it appears to lose nothing of its innate fervour with the lapse of time and the more frequent exchange of courteous and cordial visits between the German and Russian Monarchs. The anti-German sentiment is, as a matter of unquestionable fact, more pronounced in this country than it is in France. The Russian Telegraphic Agency, which is under Governmental control and direction, naturally gives a certain prominence to last week's Imperial meeting, but beyond the publication of the agency's statements the Press, as a whole, makes few or no comments on the event to which so much importance is attached throughout Europe.

M. de Giers' Appointment.

M. Giers, who has just been appointed Russian Minister to Montenegro, was managing director of the Russian Telegraphic Agency for the last two years. It is just as well to bear in mind that the chief disseminating source of Russian intelligence is under official control, a fact which is not, perhaps, generally known and appreciated in British journalistic circles.

Meeting of M. Sazonoff and Sir Edward Grey.

The usually well-informed St. Petersburg correspondent of the *Odesski Listok* learns from a competent source that M. Sazonoff will proceed to London about the third or last week of next month, and much importance is attached to the personal consultation his Excellency will have with Sir Edward Grey. It is understood, says the *Listok's* representative, that the situation in Persia and the Trans-Persian railway project will, *inter alia*, be exhaustively discussed at the meeting of the Russian and British Foreign Ministers.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 3.

The Nationalist Plot.

The sensation of the week has, of course, been the discovery of a plot for the assassination of the Khedive, Lord Kitchener, and Mohammed Pasha Said, the Prime Minister. For some time past the Cairo police had had suspicions of the existence of a secret society, and a very careful watch was kept. Everything pointed to Shoubra, one of the suburbs, being the headquarters; and conclusive evidence being forthcoming on Monday night, it was decided to arrest three young students who had been under supervision. In carrying out the arrest, the police obtained possession of a mass of papers, which on being sorted out showed that the case was far more serious than had been at first suspected. The police had known that an attempt on the life of Lord Kitchener had been arranged, but they found from the papers that the Khedive and the Prime Minister were also to be assassinated, and that the conspiracy was of very wide extent. Two more arrests were made and more incriminating papers were found. In the meantime the Regent, who was in Alexandria, was communicated with, and the Procureur-General and the Adviser to the Ministry of the Interior proceeded to the Agency to confer with Lord Kitchener. The arrested men were subjected to a searching inquiry, and, further evidence having been discovered in the documents that had been seized, the Adviser and the Procureur-General had another interview with the British Agent. It was then decided to raid the offices of *El Lewa*, the late Mustapha Pasha Kamel's famous organ, to which two of the conspirators contributed. Hassan Effendi Kamel, brother of the Nationalist leader, was found on the premises. He was searched, and all his papers and the documents existing in the house were taken possession of by the police. The manager of the paper protested at this perquisition, as he was under foreign protection, but Philippides Bey, the Mamur Zapt, very rightly paid no attention and continued his search. Another visit was made to the offices this morning, and the home of a former student of one of the technical schools was raided, with the result that more interesting documents were found. Meanwhile, Bimbashi Cartier was sent down to Birket-el-Sab in Menufia Province, and there he succeeded in arresting another conspirator, who had in his rooms some very compromising documents. The Higher Schools Club, to which one of the arrested men belonged, was likewise visited, and all its correspondence was seized.

The Accused.

The task before the Parquet of the police is stupendous. There is an enormous quantity of papers, which must be carefully examined; for it is quite possible that they contain information which will enable the authorities to arrest more accomplices. The Procureur-General himself is conducting the inquiry, and has had all the prisoners up before him. The chief accused are: Imam Effendi Waked, a former student at the Saidieh School, Cairo; Mohammed Abdel Salem, who is a member of the Nationalist party; Mahmoud Taher El Arabi, a member of the Higher Schools Club and an individual of pronounced Anarchist tendencies; Abdel Rahman El Sabahi, who is a law student and a Nationalist. Hassan Effendi Kamel, who was at first arrested, has been released provisionally.

There seems little doubt that this is a conspiracy which rivals the Wardani plot. It will be remembered that Wardani shot Boutros Pasha Ghali in February, 1910, and that a number of arrests were made immediately after the assassination. On that occasion the accomplices or conspirators, whichever one prefers to call them, had to be released, as the Penal Code contained no provision for punishing criminal conspiracies of that description. To repair this lacuna, an extra clause was inserted in the Code in June, 1910, which renders anyone conspiring with criminal intent, or instigating a criminal conspiracy, liable to imprisonment. Provided the guilt of all the men under arrest can be proved—and it would appear that there is little fear

Digitized by Google

of this not being possible—they will not escape this time.

At first it was thought that Lord Kitchener, who is due to go on leave to-morrow, would put off his departure. But he has decided to adhere to his programme. So also has Mohammed Pasha Said, who will leave for Europe on the 12th inst. It appears that the conspirators had decided to make an attempt on Lord Kitchener's life at the station on Sunday last, but that they were thwarted by the vigilance of the police. One of their number had also gone to Alexandria, as it has now transpired, to make a similar attempt on the Prime Minister; but once again the secret service and detectives followed the man so closely that he got a fright and returned to Cairo. It is said that arrangements had been made by the secret society to assassinate Said Pasha at Châtel Guyon, where he intends undergoing a cure, but so far it is not possible to obtain confirmation of that statement. Exactly where and in what manner the attempt was to be made on the Khedive has not transpired so far. The authorities are very reticent in the matter. So far no communiqué has been made to the Press by the Ministry of the Interior.

The Cairo Police.

The greatest praise is due to Harvey Pasha and his officers for the admirable manner in which this very serious case has been handled. An indiscreet word, a precipitate action would have spoilt everything, and would not only have enabled the guilty parties to escape, but would have caused the disappearance of all the incriminating documents. In a country like Egypt, where everything usually leaks out and the most important matters become public property in an amazing fashion, the secrecy and yet the perfect manner with which the various threads have been picked up and woven round the conspirators certainly point to the Cairo police being to-day in a far more efficient state than was the case some half-dozen years ago. We, in Cairo, take off our hats to the able Commandant and his gallant men.

Great indignation is everywhere expressed at this dastardly plot. Nothing can excuse it in any shape or form. The country is enjoying an era of great prosperity, and everything is being done to ameliorate the material condition of its inhabitants. There have been no political controversies such as existed in 1910, and affected the weak brain of Ibrahim El Wardani. In the storm of indignation that has arisen on all sides, it is remarkable that *El Lewa* is the only paper that has raised its voice against the action of the authorities in carrying out the arrests and perquisitions.

Lord Kitchener's Tour.

The British Agent has again found time to make another tour in the Delta. He left Cairo by special train on Thursday afternoon for Tanta, accompanied by Captain Fitzgerald. On arrival he was met by the Mudir of Gharbieh. He then motored to Sakka, where Birch Pasha was awaiting him. Two days were spent in motoring all over the district, Lord Kitchener's object being to see for himself the state of the cotton crops and the ravages made by the worm, as also to inspect the property owned in the region by the Domains Administration and the progress of the drainage works, which are in course of execution. The British Agent returned to Cairo by special train on Sunday afternoon.

The Sultan of Lahej.

Much attention has been paid in official circles to the Sultan of Lahej, who is now sojourning in our midst. Sir Ahmed Ibn Fadl, to give him his full name, arrived here last week, and was received with the usual honours by the British Consul-General at Port Said and by Captain Fitzgerald on behalf of Lord Kitchener at Cairo station. The Sultan proceeded to the home of Sheikh El Sayed Belal El Yemani, who has acted as his representative in this country, and whose guest he will be during his stay here. Subsequently His Highness drove to the British Agency to call on Lord Kitchener, who received him in very friendly style and returned his call the next morning. The Sultan, who is accompanied by his two younger sons, is said to have presented the British Agent with a pair of thoroughbred Arab horses. It is interesting to note the marked attention with which Sir Ahmed has been welcomed in Cairo. A ceaseless string of carriages conveying well-known natives has been daily making its way to Sheikh El Yemani's house, and Europeans have been equally eager to pay him their respects. A Syrian deputation came up to Cairo in order to invite the Sultan to visit their country, and it is understood that he will proceed there when he leaves Egypt. In an interview, Sir Ahmed stated that he had come to Cairo in order to discuss certain secret matters with the Khedive, and in order to undergo a cure. It is not quite understood why he should have come to Egypt at the present juncture if, as he says, the matters in question can only be discussed with the Khedive personally.

NOTES FROM CYPRUS.

(From Our Own Correspondent.)

The Disturbances: Police and Troops.

There appears to have been during the month of June a marked increase in the number of those applying for enrolment as zaptiehs. The applicants have been mainly Turks. The late disturbances have no doubt stimulated the recruiting, and past experience shows that the Moslems form excellent material for this force. The legal title of the force is "Military Police," and the strength is, approximately, 460 Moslems and 290 Christians.

The advent of another detachment of troops (Devon Regiment) from Egypt has allowed of the police being more widely distributed among the rural parts, and in addition to this about 100 ex-zaptiehs have been specially enrolled. Throughout the summer fairs are held in many parts of the island, and as long as tension between the two races continues a strengthening of the police force on these occasions seems very necessary.

A committee composed of Mr. J. S. Bucknill, King's Advocate, and Mr. Th. Theodoton, member of the Legislative Council, was appointed to investigate and report upon the circumstances relating to the recent riots. The report, I understand, has now been submitted.

Legislative Council Elections.

The election of non-Moslem members to the Legislative Council has just taken place, but the actual results are not yet to hand. It is most probable that the former members will, without exception, be re-elected. It will be remembered that the last election took place only as recently as last October, but in consequence of the dissatisfaction of the Greek member with the reply received from the Secretary of State to a petition submitted by them, they retired in a body from the Council, and refused to take any further part in the proceedings of the session, which has now ended. This action appears to have been regarded by the Home Government as tantamount to the vacating of their seats, and consequently directions have been given for holding fresh elections to fill the vacancies.

Government Farm.

Additions have lately been made to the live stock at the Government Farm, Athalassa, by the purchase of three bulls, six in-calf heifers, and one stallion, which have now been received from England. New stables have been specially built for their accommodation at the farm.

LETTRE D'ATHENES.

(De Notre Correspondant Particulier.)

Athenes, le 5 juillet.

La question des Iles.

Les démarches faites dernièrement par les habitants des îles occupées par l'Italie auprès de celle-ci et des autres grandes puissances en vue de demander leur autonomie ont provoqué de la part du gouvernement italien des explications assez claires à ce sujet. Son organe officieux, la *Tribuna*, considère l'occupation de ces îles comme constituant un simple gage vis-à-vis de la Turquie dont l'Italie se réserve de faire l'usage qu'elle jugera le plus utile à ses propres intérêts suivant la tournure que prendra la guerre

La presse officieuse d'Athènes, répondant à ces déclarations, estime que c'est là une grosse erreur, vu que personne ne peut prévoir quelle sera l'issue de la guerre ni connaitre les intentions des autres puissances, voire même le sentiment du peuple libéral italien, s'il s'agissait de ramener sous la domination turque et d'en exposer à de sûres reprisailles des populations chrétiennes poussées par les assurances des chefs de l'armée de l'expédition italienne à désavouer d'une telle façon la domination turque comme " tyrannique " et " odieuse."

L'Embros est d'avis que l'Italie a cherché d'abord à intimider la Turquie en la menaçant de l'affranchissement de ces îles mais quand elle a vue que cette manœuvre n'avait pas réussi, elle s'est hâtée de l'abandonner de peur qu'elle ne fît au contraire obstacle à la conclusion de la paix. La responsabilité de cette action n'en rétombe pas moins, dit *l'Embros*, sur l'Italie, qui s'est servie de ces populations pour ses propres intérêts.

Les relations greco-turques.

Les soupçons conçus par la Turquie au sujet de ces démarches des insulaires, qu'elle a cherché à représenter comme inspirées par le gouvernement hellénique, et le langage plus qu'intempérant tenu par la presse officieuse, tant en Grèce qu'en Turquie, ont provoqué une aigreur assez sensible dans les relations des deux pays. L'officieux *Hestia*, répondant aux organes des Jeunes Turcs, qui menacent de nouveau la Thessalie d'une invasion, déclare que la Grèce est maintenant en état de les recevoir sans plus avoir besoin d'implorer, comme autrefois, l'intervention des puissances.

Tout en faisant la part de l'exagération de ces appréciations de l'*Hestia*, il n'en est pas moins certain que, dans les circonstances actuelles, les Jeunes Turcs songent à toute autre chose qu'à déclarer la guerre à la Grèce.

Crete.

Le général Limbritis a fini par accepter le poste qui lui a été offert dans le nouveau cabinet crétois et il partira demain pour la Canée afin d'en prendre possession. De cette façon le président Hazzi-Michali Yannaris, qui s'était aussi retiré, prétextant être malade, ne pourra plus refuser sa coopération au nouveau gouvernement provisoire, qui s'en trouvera ainsi consolidé.

On signale une certaine agitation de la part des extrémistes, qui continuent à se réunir et à voter la suppression de toutes les autorités. Mais ces mouvements isolés sont sans importance et on espère que l'ordre n'en sera pas troublé.

Les manœuvres navales.

Les manœuvres exécutées ces jours derniers par la flotte grecque dans les eaux de la Thessalie ont été suivies avec beaucoup d'intérêt par le roi, le prince Nicolas, le prince André et la princesse Alice, ainsi que par le président du conseil et le ministre de la marine. La population de Volo a fait un chaleureux accueil aux souverains et aux ministres. A l'issue de ces manœuvres qui ont été en effet couronnées d'un grand succès, le roi, dès son retour à Athènes, adressa une lettre à l'amiral Tufnell lui exprimant sa haute " satisfaction " pour les progrès accomplis et rendant hommage à sa direction éclairée à laquelle ces progrès sont dûs.

A la suite de l'adjudication proclamée à cet effet, il a été décidé de proceder à l'achat, au prix global d'environ deux millions, de deux contretorpilleurs qui sont déjà en voie de construction dans les chantiers allemands " Vulcan " pour le compte du gouvernement allemand.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, July 5.

Turkish Deserters in Bulgaria.

To meet deserters from the Turkish army in Bulgaria, and especially in Sofia, was never a novelty; but lately the desertions have increased to such an extent that they really give much trouble to the Bulgarian Government. During the last two months only, nearly 1,200 deserters have passed the frontier, surrendering their arms and themselves to the Bulgarian frontier guards. The greater part are Turks from Asia Minor, Arabs from Syria, and Albanians; but there are also Macedonians and Greeks amongst them. As they are regarded as political offenders by the law of nations, the Bulgarian Government cannot surrender them back to Turkey without staining its honour as an independent State. At the same time, they form a burden to the community. Of course, such deserters are sent to the interior of the country, and the Government is doing its best to provide them with some work on the construction of causeways and railways and employment in coal mines. But these are only temporary measures, for very soon the season of the harvest and the summer will be over, and then the greater part of the local workmen, being free after the harvest, will replace them, and then will inevitably come a hard time for the deserters. Almost all these deserters are of miserable appearance, and, according to their own accounts, the reasons of their desertion are the illegal and arbitrary treatment accorded them by their officers, the never-ending marches to and fro in the country, bad lodgings, insufficient food, and irregular payments.

The Bulgarian Minister in Constantinople has been ordered to draw the attention of the Turkish Government to the facts, and to ask for a more vigilant guarding of the frontier, and, if possible, for the institution of measures against the causes of this desertion. The Bulgarian Government feels especially uneasy in these turbulent times, when a great part of the Macedonian army appears to be on the point of open revolt; for in case of a reverse—which seems likely to come very soon—many of the revolted troops may cross the frontiers and seek refuge and safety in Bulgaria. It is not pleasant to have a neighbour whose house is continually on fire!

Junction of the Bulgarian and Turkish Railways.

The long-standing question concerning the junction of the existing railways in Macedonia with those of Bulgaria seems to have entered upon a hopeful phase. It will be remembered that nearly two months ago a mixed Commission, composed of Turkish and Bulgarian engineers, was appointed to study and examine the question. The Commission visited the place where it was proposed to make the junction; all the preliminary work was executed, maps were prepared, the line was traced, and the two points of the long tunnel (about 2,000 yards) were marked; and the mixed Commission drew up a protocol of the case, which was signed by the two respective Governments in Constantinople and Sofia. At the moment when the protocol was signed, Bulgaria, anxious for the construction of the line, made it clearly understood at Constantinople that in case Turkey should not be able to finish the work by herself, or should the Eastern Railway Company not undertake it, the Bulgarian Government is ready to undertake the construction, even of that part of the line which lies in Turkish territory, and finish it in the shortest possible time. After this clear and unambiguous declaration on the part of Bulgaria, a staff of engineers with the chief one from the Eastern Railway Company, arrived at Sofia and requested permission to study the proposed line. To-day a telegram from Constantinople announces that the engineers have finished their work and the Eastern Railway Company has presented the plans for the construction of the line, at the same time asking the necessary guarantees from the Turkish Government. It is now the turn of Turkey to show her goodwill towards her neighbour by signing the contract and sanctioning the act while the Turkish Parliament is still in session. If she lets the present

Digitized by Google

opportunity slip, or tries to postpone the construction of the line, it will be clear that she never intended to open the line, though it would be of such great commercial value for both countries, since it would provide direct communication between Salonika and Sofia.

Value of the Line.

The construction of the line would not only have a local value, but would also prove very soon to be of international value, since it would establish direct communication between the lower Danube and the most eastern part of the Ægean Sea. On strategical grounds, however, Turkey has always been opposed to it; and it took quite a long time for the Bulgarian Government to disperse the Turkish suspicions. Yet the real strategical interests of Bulgaria demand not only the remoteness of the Turkish lines from the Bulgarian frontier, but even the non-existence of any railway communications in Turkey. For these reasons Bulgaria would be the loser and Turkey the gainer by the proposed junction; the strategical interests of Bulgaria are sacrificed for the commercial interests of both countries and the benefit of international commerce.

Although the length of the new line is only some sixty miles, at least two years will be required for its construction on account of the boring of the long tunnel, under the Osagova Mountain, the length of which will be 2,000 yards. Two-thirds of it has to be executed by Bulgaria and only one-third by Turkey. The line is to be constructed from both ends. On the part of Turkey the branch line from Uskub to Koumanovo is already opened, since it forms a part of the Nisch-Uskub line. On the part of Bulgaria the line has been continued from Kustendil to Gueshévo, only two miles off from the frontier, and is also opened. The remaining sections are: (1) Koumanovo-Egri Polanka (forty-eight miles long). Here the line will run through the valley of the river bearing the same name. (2) Egri Polanka Gueshévo (twelve miles long). The line here will traverse the slope of the Osagova Mountain and pass the frontier through a tunnel at the place called Devé Baïr. In this second mountainous part are the chief difficulties which have to be overcome by the engineers.

DESTRUCTIVE STORMS IN SERVIA.

(From Our Own Correspondent.)

Belgrade, July 7.

Last evening and the two preceding nights there raged in the environs of Belgrade, at Schabatz, and in other parts of Servia, destructive gales, accompanied by downpours of hailstones of immense size. The crops of Indian corn, plums, and other fruit in the places where the storm prevailed are quite destroyed, and the peasant-farmers of several villages have, in their distress, applied to their deputies to obtain help for them from the Skupchtina.

The roofs of many houses were blown off, windows were smashed, the telegraph service was interrupted in some districts, and many trees were uprooted; and, according to present reports, two men were killed and several injured. In the neighbourhood of Schabatz lambs and young cattle which were being driven home were killed by the enormous hailstones.

These tempests created quite a panic among the peasants, and many aged villagers declare that they have never in their lives experienced such terrific weather before.

A PERSIAN ON PERSIA.

SHAHSEVAN ACTIVITY.

Tabriz, June 18.

The Shahsevan tribes are again on the warpath. In Mishkin, near Ardebil, they have attacked the Russian force. In the fight, which lasted for some hours, the Russian loss was ten men killed and eighteen wounded, including the wounded officers. The Russians had only 300 men, while the Shahsevan horsemen were 4,000 in number. After the Russians had received reinforcements the Shahsevans retreated, plundering the numerous villages on their path.

No punitive Russian force has been sent from here to Mishkin. I heard that the Russian Minister in Teheran, Mr. Gazelle, would not permit the sending of an expedition to punish the tribes. But a force has been sent by the Governor-General Shuja-ed-Dowleh to punish them. The army is under Sirdar Rashid-el-Mulk, the Commander-in-Chief of all the Persian forces in this province, who has with him about 450 soldiers and 300 horsemen. This is a small force compared with the 4,000 Shahsevans, but extra men are being sent daily to Sarab, and thence to Ardebil, to swell Rashid-el-Mulk's army.

Rashid-el-Mulk's Record.

This Rashid-el-Mulk is the same man who was imprisoned here last summer by order of the Anjuman; his offence was that, when he was Governor in Ardebil, he had taken bribes from the Shahsevan chiefs, and had taken them to such enormous amounts that they came to Tauris and made a complaint against his severity and fines. It was said at the time that he received nearly 600,000 tomans (£120,000 British money). This was one of the causes which led the Shahsevans to revolt and expel Rashid-el-Mulk from Ardebil. Rashid-el-Mulk gathered an army and attacked them, but was defeated, the greater part of his army was killed, his guns were taken by the enemy, and he himself barely escaped capture and death by flight. The Anjuman also held him responsible for the death of the brave and numerous Government troops! He was about to be hanged, but the day before the hanging Mr. Müller, the Russian Consul-General (who was a German), rescued him from prison and from the scaffold by sending fifty mounted Cossacks to the Government House, where he was kept prisoner. The Acting Governor-General disappeared from the audience room into his bed-chamber, the guard of soldiers fled, and the Cossacks brought Rashid-el-Mulk on horseback to the Russian Consulate. The next day the Russian Consul-General took Rashid-el-Mulk with him to Namatava, his summer village. A few weeks after that Rashid-el-Mulk went to Vasminj and joined Samad-Khan Shuja-ed-Dowleh, who was then besieging Tabriz. Now he has a chance to pay his debt to the Russians for saving him from the scaffold, like a grateful man, by punishing those who have dared to attack and kill the Russians in Mishkin.

To-day Shuja-ed-Dowleh's own regiment from his native town, Maragha, arrived here together with 600 Chardovli horsemen. They entered the city with the band playing (the "band" was a drum, like the Salvation Army drum, and a "zoorna," which sounds like the Scotch bagpipes, but has only one exit for the air to escape). They will be sent to Ardebil to join Rashid-el-Mulk's army.

Making Up for Lost Time.

These chiefs of the restless Shahsevan tribes, these khans and el-khanis, are those who over two years ago were taken in chains, as prisoners, to Teheran by the late Yeprem Khan. Recently they were given their liberty and permitted to return to their homes and tribe. But since their return from Teheran they have not been quiet at all. Evidently they are anxious to make up for lost time and for lost plundering, which has been done by their tribal brethren while they were in confinement in the capital. They must avenge themselves and clear up their accounts with the Government. They must make things square, of course, in their own favour. Why they were let loose at all I do

Digitized by Google

not know—that is, I cannot tell—but that they were let loose by some authority and for some definite, planned purpose there is no doubt at all. The *mash-roota*-loving people and the democrats were banished or imprisoned, but these robber-prisoners were granted their liberty. Now they are doing what seems to them best and the most profitable way of living. And they need fear nobody. Yeprem is no more living to chain them; the Regent is gone; and in the absence of any government and authority they are the sole managers of their own affairs and the affairs of their neighbours.

These Shahsevans have sworn to fight the infidel Russians just as long as they can. When they find they cannot fight any longer, they have decided to cross over to Turkey, preferring the rule of the Moslem Osmanli to that of the infidel Russian. With this end in view they are selling and disposing of all their immovable property, all that they cannot carry with them, in order that their flight into the country of their Moslem neighbours may be easier.

The Shahsevans, if they do cross over to Turkey, will not, of course, remain quiet even there. It is not in their nature to remain quiet. They will have to do some plundering some time, then the red-capped Turks will be after them, and they will be compelled again to take refuge in the land of their birth. This they will keep up just as long as they can, as long as there is no authority in the land, until everyone gets tired of them and begs the Russians to become their rulers, to become the masters of the land, and to free the masses of the people from the raids and swords of these tribes, who fear neither God nor man. And the sooner this is done, the sooner the rule of Russia is acknowledged, the better it will be for all concerned—at least in this province. Russia may not be far advanced in civilisation as compared with Europe, but she is more civilised than we are; and the Russians will certainly introduce some laws and reforms into this lawless and masterless country. Politically we are always in the cloud and mist. Russia, perhaps, might be able to give us some sunshine.

"MIRZA FIROOZ KHAN."

NEAR EAST IN PARLIAMENT.

The Ex-Shah.

July 2.

In the House of Commons on Tuesday, Mr. Dillon asked the Secretary for Foreign Affairs whether he had any official information to the effect that the ex-Shah had again left Odessa for Vienna and Carlsbad; whether the Shah's allowance had been stopped, and whether he would communicate with the Russian Government with a view to the necessary measures being taken to secure that the ex-Shah shall not again enter Persia and stir up civil war.

Sir E. Grey: The answers to points 1 and 2 are in the negative. I have already been in communication with the Russian Government respecting the movements of the ex-Shah, but I have up to the present received no official confirmation of his reported activity.

British Policy in the Near East.

July 10.

On Wednesday, during the discussion on the Foreign Office Vote, the situation in Persia, the Anglo-Russian Agreement, railways in Persia, the plot in Egypt, and the situation in the Mediterranean were all included in the subjects of debate.

Earl Ronaldshay thought that Russia had been a little backward in recognising our special position in Persia. The prime necessity from our point of view was the maintenance of an independent Persia. A study of Russia's recent proceedings in Persia brought him to the conclusion that she was by no means so sincere in desiring to see the revival of an independent Persia as we were. British policy concerning Persia in recent times did not appear to have been carefully thought out and had been subject to periodic oscillations. He wished to know whether it was the intention of the Government to take any part in the prolongation of the Baghdad Railway to the Persian Gulf. Any such prolongation could only be for political motives. As to the Trans-Persian Railway, he strongly dissented from two of the three conditions which the British Government had laid down as necessary before they would co-operate. The first of these was that the line should be carried down to Bunder Abbas on the Russian gauge. The break in gauge should occur further north. His suggestion would be that the part of the line in Persian territory should not be constructed either on the Russian or Indian gauge, but on the narrower, standard gauge used in many other countries. The other condition from which he dissented was that if Great Britain got concessions for certain other lines running from the Persian Gulf into the interior, those lines should be international. They included a line running through the Karun Valley. Surely that should be a British undertaking.

Mr. Ponsonby regarded what was called the Trans-Persian Railway with a great deal of misgiving, and agreed with Lord Ronaldshay that Great Britain would benefit far less by its construction than by railway development in South-Western Persia. The projected line beyond Teheran to the sea coast seemed to him to be a perfectly mad project. He hoped the Government would not come to a decision till they had consulted every interest concerned, and more especially the Persians themselves.

Mr. Lloyd said he was anxious to see the Government of Turkey sufficiently stable and sufficiently powerful for us to be able to co-operate with it, not only politically, but in connection with the defence of our interests in that part of the world.

Sir G. Scott Robertson regarded the Trans-Persian Railway as more of a strategic move than as of commercial or economical advantage. It would prove a heavy burden on our finances, both at home and in India, as a special increase would have to be made for defensive purposes.

Mr. Baird raised the question of the reduction of our naval force in the Mediterranean. For 120 years we had found it necessary to maintain a strong Fleet in the Mediterranean, and he wished to know why suddenly it was no longer necessary to do so. He asked that the Foreign Secretary should state whether the reduction of the Mediterranean naval force took place after consultation with His Majesty's representatives at the Courts of the Mediterranean Powers, whether it had the approval of the British naval and military commanders in the Mediterranean, and whether it was supported by the late Inspector-General of the Forces in the Mediterranean.

Mr. Mark Sykes said that if we were really going to abandon the Mediterranean the whole of our foreign policy must undergo a profound change. He hoped that there would be no change in the attitude of Great Britain and other Powers towards the Dardanelles until our Mediterranean policy had been made public.

Sir E. Grey said that but for the Anglo-Russian Agreement Russia might have exercised still greater influence in Teheran, and might have developed a railway system in the direction of India. Under the Agreement Russia had given up a forward policy. The unsatisfactory state of things in Persia would have been far worse if the Agreement had not existed, and its maintenance was more than ever necessary now, for it served the mutual interests of the two countries and of peace. As to a large future loan to Persia, of which mention had been made, he could not see how it could be arranged on attractive terms; but if we suggested such a loan we should certainly insist that some of the money should be spent for restoring order on the southern roads. Turning next to the Persian Railways question, he said that when the idea of a Trans-Persian Railway was mooted the Government came to the conclusion that they ought not in principle to oppose its construction. Sooner or later railways would be constructed, and that would be for the good of the country; and, further, when the overland route to India should come within the region of possibilities he questioned whether it could be resisted indefinitely. Therefore, no objection had been raised to the formation of the Société d'Etudes that was to consider the question of the Trans-Persian Railway from an economic and commercial point of view. The country would not be committed to a guarantee without the consent of the House.

With regard to the Baghdad Railway and the negotiations thereon with Turkey, the Government had not committed themselves to any scheme. One great object we wished to secure was a clear understanding with Turkey as to the *status quo* of questions relating to the Persian Gulf generally—"an agreement," added Sir E. Grey, "with Turkey as to a satisfactory *status quo* in the Persian Gulf, which will make it perfectly clear to Turkey that we are not going to infringe her rights, and which will make it equally clear to us that there is a signed documentary understanding between us and Turkey under which our position in the Persian Gulf, to which we attach importance, will not be interfered with."

After referring to the measures taken in Egypt to repress political crime and eulogising Lord Kitchener's policy, Sir E. Grey turned to the question of the reduction of our Mediterranean forces. He did not hesitate to say that we had there now a sufficient force, or a force that could be brought there at very short notice, sufficient to meet any peril that could arise. Were we to abandon the Mediterranean, or to do anything approaching to that, we could not make our position there secure by any diplomacy, however skilful; but it was not necessary that we should have a force in the Mediterranean able to hold its own against all other fleets. A policy of abandonment would mean that the diplomatic position would harden against us. We must, therefore, still be counted as one of the Mediterranean Powers, having a force available for use in the middle sea at any moment.

Colonel Yate declared that but for English and Russian influences Persia would have gone absolutely to pieces long ago. Once remove those influences and she would be overrun by the Afghans on the east and by the Turks on the west. He thought Persians should be enlisted under British officers to maintain order along the Southern trade routes in the same way that they were being enlisted under Cossack officers for the protection of the Northern routes.

Mr. Bonar Law was not prepared to quarrel with anything said by the Foreign Secretary concerning the suggested Trans-Persian Railway; but with regard to the Mediterranean, he thought that the maintenance of such a force there as would allow us still to remain a naval Power in the Mediterranean was not at all adequate to our needs. Just as an offensive force in our home waters capable of protecting us against any possible attack was necessary for our existence here, so in his opinion a naval force in the Mediterranean strong enough to overcome any probable combination against us was essential.

LETTERS TO THE EDITOR.

ENGLAND AND THE TURCO-ITALIAN WAR.

To the Editor of THE NEAR EAST.

Sir,—A native Syrian friend of mine, writing to me from that country, says, in reference to the war with Italy:—

"All are afraid of those flying machines. They do say those Christians are the children of the devil. They do fly in the Heaven, and soon they will go up to God and will speak to him. An official tell me: 'All this is from the English. They are the greatest devils in all the world.' I tell him that England has nothing to do with this war. He tell me: 'Don't believe it. England is the first and last of this war, and she gives Italy the money.'"

This intelligence will be of equal interest to the flying man, the philosopher, and the Foreign Office.—Yours obediently,

JOHN GRAY HILL.

Mere Hall, Birkenhead, July 7, 1912.

"ITALIANS v. TURKS."

To the Editor of THE NEAR EAST.

Sir,—In your issue of June 14, a correspondent from Liverpool, doubtless a too patriotic Italian or a wholly misinformed Britisher, contributed a letter referring to the "ambitions" of the Ægean Islanders to free themselves from the Turks, which, permit me to state, is not altogether just to the latter.

Amongst other things, he says that the Turk has no regard for the welfare of his Christian fellow-citizens, but, on the contrary, nourishes the ambition to exterminate them. (Because it is reported that Enver Bey said something to this effect, it does not apply to the entire nation.) This is certainly not the case at the present day, although, when the ex-Sultan was in power, it may have been so. The curtain has, however, dropped on those times, and now with a progressive Government of Young Turks at its head, the Empire's first thought is for the equality and liberty of its subjects, be they Moslems, Jews, or Christians.

Having lived nineteen years in Turkey, I take the liberty of contradicting your correspondent, who, if an Italian, is excusable for what he writes, but, if a Britisher, may be classed with the usual run of his fellow-countrymen, whose archaic ideas regarding the Turks are but little heeded in this country.—Yours, etc., R. G.

Bey Keuy, Panderma, June 29.

THE DESTINY OF THE ÆGEAN ISLANDS

To the Editor of THE NEAR EAST.

Sir,—The war which started so abruptly last September on the sandy shores of Tripoli has now been extended to the Ægean Sea, and nobody can foresee where it will end. One thing appears certain—that the Italian Government never expected the war against Turkey to last so long, and, consequently, when they saw that the occupation of the coastal belt of Tripoli and Cyrenaica did not stop the wonderful courage of the Turco-Arab defence they found themselves in the position of the wrestler who throws down his opponent but finds it difficult to turn him on his back and make him acknowledge his defeat. There is no doubt that the Italians find themselves in an awkward impasse, because, even after their occupation of the twelve Ægean islands, they have not made the slightest impression on the Turk. A little more rage, a little more hatred is excited in the souls of the Faithful against the unfortunate *giaour* islanders, who seem to be made the buffers of the two combatants. The Turk shakes his fist from the shores of Asia Minor at the Italian sailors, who exercise for the time being an easy dominion over the Ægean Sea, but he is not likely to get to closer quarters with his enemy for reasons of prudence and diplomacy. The Italians are reaping glory and the Turks sympathy. But who will give a sympathetic ear to the poor islanders?

During the first days of the Italian occupation of the islands, notably of the smaller of them, like Kalimnos and Symi, the Italian admirals were most generous and enthusiastic in their proclamations to the islanders, announcing the gospel of liberty from the barbarous dominion of the Turk and of freedom to govern themselves as they knew best, keeping in mind that they were not to be governed any longer by Turkish laws, and that they should spend the money collected from municipal taxes and Customs duties for the sanitation of the towns, for the maintenance of their schools, and for other public needs; and, above all, that perfect order should be maintained in the towns and in the country by all the inhabitants.

In my own native island, Kalimnos, I had never seen such perfect order before, and had never felt such a feeling of safety by day or by night in the town or in the mountains as during the first ten days after the Italian occupation. Admiral Presbytero came to us only as an angel of liberty, took captive the few Turkish soldiers and Government officers on the island, and then left us to do as we pleased with ourselves. We had an interim of nine days, during which we had neither king nor flag, and we had the right to call ourselves a perfectly free people. From May 12 to 21 the flagstaffs, on which the Crescent had formerly flown, were bare. I shall never in all my life forget the first impressions I gathered from my round on the morning of my return to my island home from India, the land of exile. There was an inexpressible, ethereal feeling as if a weight, which had pressed the heart up to then, was lifted away.

Yet, whilst we were happy in our newly given freedom, the absence of any authoritative symbol of power to protect us caused us to be rather uneasy in the thought that we were a weak people and that the Power which came to free us had not yet shown us the shadow of her wing. When, therefore, Admiral Presbytero came again to the island and raised the Royal Italian flag, I affirm that for the first few minutes we all gazed at the tri-colour with the same love and palpitation of heart as we would have looked upon our own holy national flag, which from our childhood we learn instinctively to worship. I thought to myself then that the Cross was raised where the Crescent had been before, and that Italy came as a sister nation to help us to shake off for eternity the hateful yoke of the Turk. My impressions were intensified when I approached the Italian officers and men, and saw with my own eyes and judged with my reason that these men did not come as conquerors or as players on the diplomatic chess-board, but that they were men who felt joy and pride themselves when they came to give us the gift of freedom, which neither money nor sighs and sufferings can buy for a people, but the might of the gun and the sword.

In going through all the news and opinions appearing in the European Press every day, I can see the different points of view on the thorny problem of the islands, and, with all my ardent patriotism, I find that there is some reason in every point. But it seems to me that there is neither a diplomat nor a philosopher in these days, nor a wise man, nor a poet who will see the justice of the cause of the humble islanders. Are the half-million inhabitants of the Ægean islands not counted as a sufficient factor to weigh in the counsels of statesmen and freedom-loving men? Will not the freedom-loving British nation see that we, the Greeks of the islands, have a claim to breathe the same air of freedom which our brothers across the sea were vouchsafed some eighty years ago? Will not the noble French nation, which taught humanity the rights of man, cease for a moment to reckon the interests of the investors and the influence on their Mussulman Empire, when there is a golden opportunity to herald the gospel of freedom to the ancient and unmixed nationality of the Greek islands which spread the gifts of Greek wisdom and Greek art in the days of old? Will the Italian statesmen see fit to consider us only as inanimate pawns in their war game with the sick men of the East, or will they maintain the honour of the pledged words of their admirals to the helpless islanders?

It is strange how obstinate diplomacy is in its common ways of procedure. Its dominant factor is the interest of the nation for which it speaks. But should not the interest of Humanity at large and human justice form a factor in the interest of every nation? Has the history of the century-long struggle waged by the nations of the West in favour of the Turks given such good results that the wise diplomats of Europe wish still to impose upon the Balkan peoples and the peoples of the Ægean islands the dominion, virtual or nominal, of the Turk? All these are problems which the student of history would have no difficulty in solving for himself, though he may be called a visionary and a man who cannot see the realities of things.

As an islander, I wish to raise my weak voice to the high diplomats of Europe, and tell them that we also are men of blood and spirit, we also have, as descendants of a race which has been struggling in the East Mediterranean for the last four thousand years, the consciousness of human dignity, of intellectual superiority over the Asian race that has overcome us for the last four centuries, and, therefore, the undying desire to reign again as a free people and exercise our influence, the influence of our rejuvenated Hellenic spirit on the face of the earth. Has not Europe had enough of the race that has blasted these long centuries the golden shores of the Bosphorus? O, Italy! Italy! if only your own leaders would see what some of your humbler sons do see. What an opportunity to add undying glory to the golden pages of ancient Rome is the present one! Let us hope that the descendants of Garibaldi will not mar their glory and honour by taking a leaf out of the forgotten book of Machiavelli. We do not want them to play the philanthropic god-mother to our Mother Greece. But we wish Italy to keep the pledged word of honour of her soldiers and sailors and stand by us as the guardian angel of our freedom for her own immortal glory, thus earning the eternal gratitude of the Greek nation.—Yours, etc., GERASIMOS.

THE PRESS ON THE NEAR EAST.

The Cyprus Agitation.

On Monday the *Morning Post* published an article on "The Greek Propaganda in Cyprus," which gave a résumé of events which have led up to the present condition of affairs. On the same day, in a leading article, our contemporary said:—

We are accustomed, of course, to Greek protests against Turkish misrule, but it must come as something of a shock to our pride in our administrative capacity to find the Greek population protesting against British maladministration. We have yet to learn that Greeks, judged by the standard of government in Greece itself, are quite capable of appreciating the difference between good and bad administration. Their intrigues and agitation in Cyprus tend to give an idea that they are born agitators, to whom good or bad government matters little so long as they can indulge their undoubted talent for intrigue. We must confess that the conduct of the Greek inhabitants of Cyprus, governed as they are by such an experienced and kindly High Commissioner as Sir H. Goold-Adams, induces doubt of other grievances to which hitherto England has lent perhaps too ready an ear. . . . The truth is, as Mr. Alfred Lyttelton very plainly wrote to the High Commissioner in 1904, that the object of the charges brought against this country and the local administration is merely to create discontent and forward the avowed programme of Union with Greece. . . . The practice appears to have grown up of flying the Greek flag in the villages whenever the British High Commissioner is present. It is welcome news that Sir H. Goold-Adams has decided to put a stop to this practice. The agitation is almost entirely spurious. The presence of a British Executive and of an official delegation in the Legislative Council is at one and the same time an assurance of unbiassed Administration and a safeguard against irresponsible action in the international sphere which might be as inflammatory in its effects as the action of the Cretans threatened to be last year.

The Cypriot Greeks, by continuing their agitation, only retard the process of economic development of the island which they profess to desire. At the same time they raise doubts in the minds of Englishmen as to the genuineness of the desire of the Greeks of the Dispersion anywhere for just and economical administration. This the Cypriots have, and none the less their agitation continues. It is not thus that the aspiration for a Greater Greece will be furthered.

Malta and Emigration.

Commenting on Mr. Harcourt's references to Malta in his speech in the House of Commons in connection with the Colonial Estimates, the *Daily Malta Chronicle* (of the 3rd inst.) says:—

Mr. Harcourt says that he is seeking to find out what countries are best fitted to welcome those who are willing and anxious to leave this island home of ours, the home we love and leave with regret, the "circumscribed and unfertile home of a fertile race." If the Imperial Government would help us to go away to some country of promise, in which we should find many physical conditions similar to the physical conditions of Malta, and in which we might be more or less kept together, although we should find ample opportunity for expanding ourselves according to our abilities and our efforts, much, if not all, would be done to set us, here and elsewhere, upon a new path of prosperity, by following which we could never go astray.

Systematic, and not haphazard, emigration ought to be followed. Our people stand in need of encouragement, as all little people do—island peoples above all. Another *home* ought to be found for us: we would soon make it a great home, and, with the help of Providence, a proud home. Mr. Harcourt and the Government with which he is associated could do much for us: we trust that they will do something. The Maltese would gladly co-operate with recognised friends, and they would willingly give of their scanty resources to found another Malta in a country, under the British flag, if possible, which would lend itself to their development and afford promise of the prosperity to which they feel that they are entitled.

English Influence in Turkey.

Wednesday's *Morning Post* contained an article on "The Future of Turkey," contributed by its Constantinople correspondent, written under date of June 22. The writer declares that it has lately been frequently assumed in Turkey that Europe as a whole is by its very nature hostile to that country and all that it represents; and that consequently "there has been a tendency to lean back on Oriental tradition, and to call to mind the solidarity of Islam." At the same time, he says, the sense of indissoluble connection between Turkey and Europe has been growing, and at present the feeling that "the only way to evade the European menace is to adopt European principles of government" is gaining strength. Referring to a strong Anglophile tendency that has been manifesting itself of late, he says:—

The origin of this tendency it is not easy to determine. Perhaps it has always existed, but was obscured for a year or two by a temporary revival of German influence. The Italian attack on Tripoli was a serious blow to German influence in Turkey, and a renewal of sympathy for England was in the circumstances only a question of time. The attitude taken up by the British Government on the occasion of the closure of the Dardanelles gave the very liveliest satisfaction in Constantinople, and every hint of goodwill towards Turkey contained in English public utterances is now seized upon with eager gratitude. The importance to Turkey of English support is keenly realised. England, at any rate, seems to be the most disinterested of all the European Powers, whose tortuous movements, whose cryptic utterances are now a matter of grave concern to the Ottoman Empire. The friendship of England is accordingly the most valuable at the present juncture. . . .

That a warm feeling of goodwill for England exists is evident at every turn. Civilians have throughout been friendly towards England, but military men, under the influence of German training, have hitherto inclined towards Germany, and although the collapse of the Hamidian régime injured German prestige, the fact that military men played the leading part in the Revolution made possible a continuation of German influence, even under the new régime. It is, as has been pointed out, the Tripolitan War that has thrust German influence, for the time being, into the background, and has allowed Anglophile sentiment full play. England is, in fact, so popular at the present moment that, as one Young Turkish leader remarked, she has only to give the sign, and she could have her way in Turkey. It is the moral prestige of England that is influencing Turkey now. It is the name of England, as representing a tradition of civilisation, liberty, and justice, that is now so popular.

It must be admitted that Turks know comparatively little about England, and one finds remarkably few traces of direct English influence in Turkish public life. . . . Yet English influence is strong, and might easily be made much stronger. It rests on a firm traditional basis. It draws nourishment from memories of the aid given by England to Turkey during the last century, and from the circumstance that the idea of a Turkish Constitution was brought by Reshid Pasha from England, and by him transmitted to Midhat Pasha. Moreover, Turks have received a favourable impression of the general fair dealing of Englishmen in the Near East. If the Turks do not know England and English civilisation as a whole, they, at any rate, know Englishmen, and perhaps that is why the *Tanin* intimates, in hardly veiled terms, a desire that the specialists to be invited to aid in the work of reform should be first and foremost Englishmen.

The Arabs of Tripoli.

The *Manchester Guardian* reproduces some portions of an article contributed by Field Marshal von der Goltz to the Vienna *Neue Freie Press* (June 29) which has caused many heartburnings in Italy. The Field Marshal says:—

Turkish statesmen know as well as the European politicians who try to prove it to them that Turkish interests in Persia, the security of the frontiers in the Balkan Peninsula, the restoration of order in Macedonia and Albania, above all the building up of a good administration and the strengthening and better organisation of the army and navy and the defence against Russia, are more important for the future of the Turks than the possession of Tripoli. Yet they are unable to follow the advice of those who counsel them to yield. A surrender would mean the surrender of all respect and authority in the Turks' own country, since neither the Arabs nor even the Turkish masses would realise the inevitableness of such a step, and would regard it as a dishonour and shame.

Nor must we underrate the intensification which the self-consciousness of the Arabs has undergone in the process of their present resistance to the enemy. . . . There can be no doubt that the Arab population of Tripoli must now be judged differently from what it appeared but a year ago. It has (morally) gained considerably through the war, and must not be left in the lurch, if but for the reason that it would feel the betrayal now much more acutely than before. This must be borne in mind in all attempts at mediation if the situation is not to be jeopardised but improved by them. Had there been no annexation decree of November 5, 1911, in existence a solution of the quarrel might perhaps have been found in the autonomy of the province, with a native head but under the paramount influence of Italy, accompanied by the recognition of the more ideally than practically important supreme authority of the Sultan, which would have reconciled Moslem pride. This solution is now, however, impossible, and a new one must be found.

Articles to Note.

"Constantinople and Monastir," in the *Outlook* (July 6).

The Balkan Question: 1.—"The Roumanian Army," in the *Army and Navy Gazette* (July 6).

"The Albanian Problem," in the *Times* (July 5).

"The Young Turks and German Friendship" (an interview with Hussein Djahid Bey, from the *Berliner Tageblatt*), in the *Manchester Guardian* (July 5).

"The Elephant Poachers," in the *Morning Post* (July 9).

"Les Dangers de la Paralysie Diplomatique," in *Questions Diplomatiques et Coloniales* (July 1).

"Glück und Ende der Osmanen," in *Die Post* (June 30).

"Mesopotamien," in the *Ægyptische Nachrichten* (June 24).

NEAR EAST BOOKSHELF.

"THE ANCIENT EGYPTIANS"—SOME IMPRESSIONS.*

"The Ancient Egyptians," by Professor Elliot Smith, is a veritable "magnum opus," the well-deserved triumph of earnest industry, and quite in keeping with the best traditions of an able scholar. It opens new vistas to students of the science of anthropology, and every archæologist interested in matters Egyptian will be deeply indebted to its author for the manner in which he has cleared up many questions that have heretofore puzzled the best known writers, both of Europe and America, from the beginning of the nineteenth century. I refer particularly to his fixing of the discovery of bronze and the habitat of the primitive, narrow-headed Nilotic man (dolicephalic) to Upper Egypt during the Neolithic Period. Upper Egypt was inhabited already during the Palæolithic Period, but no human remains have ever been discovered of an age preceding that of the Neolithic, and it is with the latter part of this Neolithic Age that the author deals.

The book is a very small one for such an all-absorbing and lasting subject, and I feel sure that in expressing sentiments of regret for its brevity, I only re-echo those of nearly everybody else who has had the privilege of reading the little volume. The author takes us along with him from Egypt into Syria, and thence, with the victorious hordes which had adopted metal weapons, into Asia, the cradle of the square-headed branch of a race called "Armenoid," who in turn adopt the bronze weapon and invade Europe, only to conquer descendants of their own primitive ancestors, who had preceded them ages ago. Then again we travel with him on an entirely different route, namely, from Egypt westward along the northern coast of Africa, to Sicily and Morocco, crossing over to Spain, into France, Germany, and Britain, spreading the knowledge of the use of bronze and the existence of pyramids and other huge stone structures. Stonehenge is probably one of the first of their kind in Britain. The French dolmens and the tumuli scattered over Southern Europe and elsewhere are other examples of the origin of Egyptian art; whereas the many European forms of religion are but the crudest modifications of earlier Egyptian civilisation.

Personally, I am also most deeply indebted to the author for the many elucidating facts that have heretofore been formulated only as a mass of theories, based upon conflicting hypotheses, by the greatest living scientists and men of the past. My interests are mainly bound up with the age of flint, vulgarly speaking hundreds of thousands of years older than that of bronze, in which Upper Egypt offers a unique opportunity for research. Owing to the perfectly dry climate and the absence of all natural revolutions since the advent of man in this country, much of his handiwork in stone has been preserved to us, and it may not be inappropriate, therefore, if I should write these lines from the Thebaid, and quite independently of any feelings of gratitude for the book, which does not require my acknowledgment.

Following up a clue whilst removing a few flints from the immediate surface, on the fringe of the Western Desert last month, twenty miles from here, I came across a hollowed-out grave wherein I found, besides the crumbled remains of a naturally dried body lying in the semi-embryonic posture, a bronze sword, 25½ inches long, a lot of bronze arrow-heads, two gold hair-rings, and several vases of the well-known black and brown pre-dynastic type. It was only natural that I should remove them and thus save the lot from further destruction. The sword is double-edged without a cross-bar, the hilt and blade being cast in one piece. It is well shaped, and probably the only one so far known. The arrow-heads resemble the long ivory arrow-heads of the Neolithic period. This find leads me to believe that the objects belong to one of the very earliest dynasties, if not to the period itself of which the author speaks as the era of the invention of bronze and weapons made of bronze in Upper Egypt.

To readers not quite familiar with Egyptian history it may be interesting to know that the First Dynasty dates to about 6,000 to 7,000 years back. There are several conflicting theories as to its age, and they vary within a thousand years. The discovery of bronze being the advent to events that followed the establishment of the First Dynasty, it can therefore be pretty accurately dated to about 6,000-6,500 years ago.

M. Ed. Meyer has suggested a new system for determining the dates of the dynasties, basing his calculations on the cycles of Sirius' appearances on the Eastern horizon in Egypt. The ancient astronomers recorded this phenomenon at Heliopolis, and reckoning the periods at 1,460 years from A.D. 138, when Censorius pointed out that the first day of Thoth coincided with the 25th day of June, M. Meyer arrives at the following dates of cycles, namely—B.C. 1321, 2781, and 4241. The beginning of the first dynasty he places, therefore, at about B.C. 4241.

R. DE RUSTAFJAELL.

Luxor, June 13, 1912.

* "The Ancient Egyptians and their Influence upon the Civilization Europe." By G. Elliott Smith. (Harper and Brothers. 2s. 6d.)

NEAR EAST BOOK NOTES.

"The Story of Europe, from the Time of the Ancient Greeks to the Colonisation of America," is an elementary history for younger students. The authors are S. Bannister Harding and M. Snodgrass. The first is Professor of European History in Indiana University, while Miss Snodgrass is a well-known teacher of history in one of the large schools in Indianapolis. The book has been based upon the report of the Committee of Eight to the American Historical Association.

Our readers might find a good deal of material for careful and thoughtful consideration, in relation to the Naval position in the Near East, in Mr. P. A. Silburn's new book, published by the Longmans at 7s. 6d. net, entitled "The Evolution of Sea Power."

"The History of the People of Israel in Pre-Christian Times," by Mary Sarson and Mabel Addison Phillips, has been published by Messrs. Longmans, Green and Co. The Rev. A. A. David, D.D., has written a preface for it, and there are four maps. The work gives a running commentary on the Old Testament, linking book with book, narrative and prophecy and poetry.

Messrs. Longmans are publishing "A History of Europe," by Arthur J. Grant, M.A., King's College, Cambridge, Professor of History at the University, Leeds.

The Society for Promoting Christian Knowledge is publishing this month a little fourpenny pamphlet entitled "Archbishop's Mission to the Assyrian Christians."

CURRENT COMMENTS.

We see that the Cairo Press is spilling much ink over the question of the creation of an Egyptian Fleet. The glorious memories of Mohammed Ali have been invoked, and the equipment by the founder of the present Khedivial dynasty of the fleets, which met with disaster at Navarino and Alexandria, has been cited as proof of what Egypt might be capable of in that direction. Capital has also been made out of the fact that that country possesses a Minister of Marine. The existence of the latter portfolio is not generally known; it is, however, but a name, and is completely overshadowed by those of War and Public Works, all three being merged in one Ministry. The rumour that the creation of an Egyptian Marine had been decided on, which has set the Cairo Press agog with ideas and theories, emanated from Vienna, which has been the birthplace of most of the sensational canards which have seen the light of day of recent years. One can scarcely credit it, for there are many international difficulties in the way, in addition to which the Sultan, despite the Anglophile wave which has come over Turkey, would most certainly have something very pointed to say on the matter.

***

It seems highly probable that the recent talk of the establishment of a British naval base in Egyptian waters has been exaggerated into the creation of an Egyptian Fleet. What, however, seems quite feasible, and might be of great practical utility, would be the acquisition or construction of a few light cruisers for the policing of Egypt's large seaboard. Talking of the Egyptian Fleet reminds one of the famous story of one of the last cruises it made. The few scratch vessels that still survived were ordered out on manœuvres, and the Egyptian naval officer who was in command was instructed to steam for Malta, and after taking on provisions there to return to Alexandria. Days went by and no news was received of the vessels, and Egypt was just resigning herself to the terrible fact that her "fleet" had gone to the bottom when it turned up with its officers and crew in a state bordering on exhaustion. The commanding officer, as soon as he had recovered, went on shore and reported to his superior officer that "Malta mafeesh" (Malta has disappeared!) The poor unfortunate crew had been wandering round the Mediterranean vainly trying to locate Malta, and since their knowledge of navigation was, of course, faultless, it was obvious to them that as they could not find the island it must have disappeared! This constitutes one of the choicest stories that old Anglo-Egyptians retail to newcomers.

***

Lord Kitchener's Cantonal Tribunals have now started work in real earnest, and he is to be congratulated on having put his project through with such little delay. This creation of village courts to settle on the spot petty disputes and cases in which local custom is the determinating factor is a step of the greatest importance, for it opens the way for the introduction of many other popular innovations. It is to be hoped that the new judges fully realise how much depends on the manner in which they discharge the judicial duties entrusted to them. The next few months will be an anxious time for all concerned, and we sincerely trust that the ultimate result will justify this new departure.

***

During the throes of the Indian Mutiny of 1857 General Havelock was consulted by one of his subordinates as to the proper course of action against rebel sepoys. Should a beleaguered garrison mine, or make sorties? His reply was borrowed from the whist-table:—"Clubs are trumps, not spades." The converse applies to the quest of traces of buried civilisations. Patient excavation has changed our whole outlook on the past history of mankind, and given modern communities a clue to the course which their own particular brand of culture is likely to take. Spade-work of this description appeals to two primary instincts—a thirst for fame, a thirst for power. Are not Belzoni, Layard, Schliemann, and Petrie household words throughout the world of letters? Again, our copybooks proclaim that Money is Power; and we find Schliemann unearthing wealth beyond the dreams of avarice on the site of ancient Troy. Massive diadems, chains, pendants, and earrings of gold, packed in a graceful silver jar; 8,700 odd golden rings; bars of the precious metals, vases of electrum, and other valuables in lavish profusion—such was the reward won by the excavator who, though himself a millionaire, stood amazed at the contents of King Priam's Treasury.

***

But Schliemann and his brother-delvers were animated by worthier motives than greed of personal profit or the gambler's instinct. Deep down in human nature there is a craving for those mysterious and elusive forces which shape our civilisation. Romance is not dead in an age which, on its surface, appears wholly given up to material cares, and men of the noble type are impelled to action by a wish to advance the cause of historical research, or to leave the world somewhat better than they found it.

***

Egypt was the cradle of scientific excavation. But for the fruits of eighty years' spade-work on the banks of the Nile, Crete, Mycenæ and Mesopotamia would still be associated with half-forgotten legends, still sealed books to the historian and ethnologist. On Tuesday last an exhibition of Meroë's antiquities was inaugurated at Burlington House by the Sudan Exploration Fund, which is a branch of the Liverpool Institute of Archæology. Until 1909 Meroë was known to tourists on the Upper Nile by its group of pyramids, which rise out of the desert far southward of all similar remains. In that year Professor Garstaing's excavations proved it to have been the site of a great sun-temple mentioned by Herodotus, and another dedicated to Amon under a dynasty of sacerdotal kings, as related by the historian Diodorus Siculus. In 1910, the professor discovered a fresco there, portraying a king and queen of Ethiopia enthroned in state with their feet resting on captives who are undergoing torture. Facing them stands the Prime Minister, in gorgeous robes and wearing a small cross suspended from his neck. These remains date from the first century of our era, and give the earliest known example of a symbol which is now venerated throughout Christendom. Can the queen have been that Candace, whose eunuch, "a man in great authority and having charge of all her treasures," was converted by St. Philip as the Acts of the Apostles (viii. 27) records? In 1911 was found a bronze head of Augustus Cæsar, which has already been described in these columns, and it is pleasant to add that a masterpiece of the very highest merit is now the property of the nation. The professor has collected many other relics of Roman civilisation from Meroë, but, in view of their portability, it is premature to assert that the oasis was ever an outpost of that empire. Readers of THE NEAR EAST may judge for themselves on this knotty point by visiting the exhibition, which will remain open for a fortnight, free of charge.

Half a century ago the Hittites figured in our schoolbooks among the barbarous tribes who offered a vain resistance to the Chosen People. Thanks to systematic excavation at Carchemish, now Jerablus, on the Euphrates, about sixty miles north of Aleppo, we learn that they were a race of soldiers and statesmen, who fought for mastery in Hither Asia with the Egyptian and Assyrian Empires. The ruins of Carchemish include a royal city and a huge artificial mound, on which its citadel was perched. Mr. D. G. Hogarth, F.B.A., has cut various adits in this mound, discovering Arab, Byzantine, Romano-Syrian, and prehistoric remains in regular stratification. Fifty feet below the surface he penetrated a layer containing flint and obsidian implements, fragments of wheel-made pottery, and crystal beads.

***

The adjacent royal city yielded masses of masonry with the convex facing which is peculiar to Hittite buildings—column-bases flanked by sculptured lions and other traces of advanced civilisation. The inscriptions which Mr. Hogarth has brought home from Carchemish have yet to be deciphered, but one fact has been placed beyond cavil by his discoveries: There was a Hittite standard of art in force from the Black Sea to the Euphrates, which expressed identical ideas in the same spirit and with the same technique everywhere. Ægean, Egyptian, and Assyrian cultures have impressed their mark on that of the Hittites, but this wonderful people developed artistic traditions of their own, and expressed them with a sureness of execution which can have come only from long and exhaustive study. We are deeply indebted to the authorities of the British Museum, who, with very meagre resources, contrived to finance Mr. Hogarth's arduous undertaking.

***

Although there is of course nothing at all surprising in the fact, some of our contemporaries profess to be greatly surprised at Lord Kitchener's coming to England just now; and in some quarters there is an evident disposition to make a mountain out of a molehill. One ingenious pressman, for instance, writes: "A good deal of surprise is expressed at the announcement that Lord Kitchener is coming home for a brief visit to London. In letters which friends of the Consul-General have quite recently received Lord Kitchener makes no mention of any such intention, and there is a disposition in political circles to associate the journey which he is undertaking with the Government's proposals to evacuate the Mediterranean. . . . It is noted in this connection that Lord Kitchener is timing his arrival in London so that he may lay his opinions before the authorities before Mr. Winston Churchill makes his statement in the House in introducing his Supplementary Navy Estimates." This is a pretty bit of theorising, no doubt, but as a matter of fact it was known in Egypt in March that Lord Kitchener would probably be coming to this country in July, and THE NEAR EAST announced the fact on March 22.

***

A correspondent in Egypt writes, under date of June 29th:—"At an examination for police cadets last week, the pupils were required to write a paper on 'Thrift.' One paper caused great amusement in Egypt, and might be of interest to readers of THE NEAR EAST. This pupil wrote that first Joseph came to Egypt and stored corn for seven years. Then came Lord Issa, who said: "Have no thought for the morrow." And after Lord Issa came Lord Kitchener, who started savings banks for the fellaheen to make them thrifty."

PERSONAL & SOCIAL

Sir Gerard Lowther, the British Ambassador, and Lady Lowther left Constantinople by the "Orient Express" last Friday, proceeding to Marienbad.

Lord Kitchener left Venice on Wednesday morning. On arriving in this country he will go straight to Broome Hall, and expects to be in London next week.

Colonel Sir G. B. Macauley, Director-General of the Egyptian State Railways, is now in this country on leave.

Mr. Ronald Storrs, Oriental Secretary at the British Agency, Cairo, has arrived at 2, Grosvenor Gardens.

Coles Pasha, Director-General of Egyptian Prisons, left Egypt for this country, on leave, on the 4th inst.

Mr. Williams, Inspector-General of Irrigation in Lower Egypt, is now on leave in this country.

Miralai Savile Bey, Governor of Kordofan, is now on leave of absence in this country.

Mr. F. R. Sanderson, of the Khedivial School of Law, Cairo, has arrived in town on leave.

Mr. Dupuis, Adviser to the Ministry of Public Works, Egypt, is now in England on leave.

Mr. F. T. Rowlatt, Governor of the National Bank of Egypt, has arrived in town from Cairo.

Mrs. Hall, wife of Mr. Harold Hall, of the Steamers Department, Sudan Government, is in England for the summer. Mr. Hall was formerly general manager of the Sudan Development Company.

Mr. Také Jonesco, the former Roumanian Minister of Finance, and Madame Také Jonesco have arrived at 3, Marble Arch, Hyde Park.

H.H. the Aga Khan is at present on the Continent.

Prince Paul Kara-Georgevitch, nephew of the King of Servia, arrived in London on Tuesday from Belgrade. His Highness was met at Charing Cross by M. Grouitch, the Servian Chargé d'Affaires. Prince Paul is the only son of Prince Arsène, the King of Servia's brother, and was born in St. Petersburg on April 15, 1893. Having finished his preparatory studies in Servia, he will enter at Christ Church, Oxford, during the autumn. In the meantime he will study under the care of an English tutor.

Abdullah Pasha Wahbah is expected in London next Monday. In company with Prince Fouad, he will represent the Egyptian University at the 250th anniversary of the British Royal Society of Natural Science.

The marriage arranged between Mr. Philip Perceval Graves, *Times* correspondent at Constantinople, and formerly of Cairo, and Miss Millicent Gilchrist will take place on July 17 at All Saints' Church, Moda, Constantinople.

Brigadier-General D. Henderson, who served with the Nile Expedition at Khartum in 1898, has been appointed Director of Military Training.

Our Cyprus correspondent writes that Mr. C. S. Cade, Commissioner of Nicosia, and Mrs. Cade, were expected to go on leave on the 5th inst.

The *Gazette* announces that the King has been pleased to give directions for the appointment of William Alison Russell, Esq. (Crown Advocate, Uganda), to be King's Advocate, Cyprus.

The appointment of Mr. J. A. S. Bucknill, King's Advocate, Cyprus, to be Attorney-General of Hong-Kong, to which we referred some weeks ago, is now gazetted. As mentioned in our Cyprus letter, on another page, Mr. Bucknill has lately been serving on a committee appointed to investigate and report upon the recent riots in the island.

Mr. Wilfrid Carey, who, after retiring from the service of the Egyptian Government, went for a long trip to the Far East, has now returned and taken up his residence at Dunbar.

The Second Class of the Order of the Osmanieh has been conferred upon Mr. Arthur H. Middleton, Inspector-General in the Egyptian Ministry of Finance, who is now on leave for three months. Mr. Middleton will not return to Egypt, having resigned his appointment.

Mr. Dudgeon, Director-General of the Agricultural Department, is expected in Cairo on the 9th of next month, when he will take charge of his department, and relieve Mr. McKillop, who had been acting for the Director-General, and who will leave for England on leave on the 11th.

Lewa Bernard Pasha, C.M.G., and Mrs. Bernard were expected to arrive in Malta on the 4th inst. from Egypt. While in the island they will stay with Colonel Count and Countess Bernard, 133, Strada Brittanica, Valetta.

The Egyptian War Office *Gazette* of June 16 announces that El Kaimakam W. H. Drake Bey has been granted the temporary rank of Miralai.

Captain H. A. Duncan, Argyll and Sutherland Highlanders, has been posted to the 1st Battalion at Malta, on promotion.

On Friday last the Earl of Minto received the honorary degree of Doctor of Laws at Edinburgh University, of which he is Lord Rector.

The Egyptian Army Annual Dinner took place at the Grafton Galleries on Wednesday night. There were present: Lieutenant-General Sir Reginald Wingate, Field-Marshal Sir H. E. Wood, V.C., General Sir Archibald Hunter, Field-Marshal Lord Grenfell, Colonel Sir C. M. Watson, Major-General H. J. W. Hamilton, Lieutenant-Colonel W. H. Drage, Lieutenant-Colonel M. Peake, Colonel H. G. Fitton, Surgeon Lieutenant-Colonel P. H. Whiston, Colonel T. E. Hickman, Colonel C. G. Martyr, Colonel G. W. H. Pain, Sir G. B. Macauley, Majors E. B. Wilkinson, H. N. Dunn, M.B., J. K. Watson, H. V. Ravenscroft, W. H. Persse, F. F. Carroll, H. F. E. Lewin, C. Norbury, A. M. Pirie, W. Hayes-Sadler, C. H. Leveson, R. Beech, C. E. C. G. Charlton, T. C. Mackenzie; Captains J. Stuart-Wortley, C. R. G. Mayne, C. C. Maud, C. J. B. Daubeny, R. P. Lewis, F. G. Newall, P. A. Wilson, E. N. Broadbent, R. J. P. Cox, H. C. B. Hopkinson, P. J. V. Kelly, J. P. V. Hawksley, L. W. Le M. Carey, A. E. J. Wilson, S. F. Newcombe, the Hon. A. G. A. Hore-Ruthven, V.C., A. Owen, R. J. Collins, K. E. Edgeworth, G. F. Clayton, R. W. Hadow, C. V. Fox, R. V. Savile, the Hon. M. P. Macnaughten, E. J. F. Vaughan, H. G. Lyons, C. E. Cox, H. H. Wilson, and Mr. G. W. Scanlan (treasurer).

Dr. B. P. Grenfell has been granted a Civil List pension, "in recognition of his researches and discoveries as an archæologist and a classical scholar, and in consideration of the breakdown of his health." Whilst deeply regretting his illness, Dr. Grenfell's many friends in this country and in Egypt will be glad to learn of this recognition of his splendid work.

Previous to the State Ball which they gave at Buckingham Palace last Friday, their Majesties received his Excellency the Turkish Ambassador, who presented his Highness Damad Ferid Pasha, brother-in-law of his Imperial Majesty the Sultan of Turkey.

Amongst those attending the State Ball were:—Prince George of Greece, Prince Christopher of Greece, the Aga Khan, Damad Ferid Pasha, and the following members of the Corps Diplomatique:—The Turkish Ambassador, Djevad Bey, Vhby Bey, Chefik Bey Muftyzade, Commander and Mme. Hussein Bey; the Persian Minister, Mirza Abdol Ghaffarkhan and Gholam Ali Khan; the Bulgarian Minister, and Monsieur Mincoff; the Roumanian Minister and Monsieur Michel P. Boeresco, and the Servian Charge d'Affaires and Mme. Grouitch.

On Thursday of last week, Mr. Robert L. Mond gave a dinner at the Ritz Hotel to a number of gentlemen interested in the excavations of Hittite remains in Syria. Those present were:—Sir John Brunner, Sir Arthur Evans, Professor Sir James Dewar, Sir Edwin Pears, Professor Bosanquet, Mr. D. G. Hogarth, Mr. H. S. Welcome, Mr. Hugh Rathbone, Sir Alfred Mond, M.P., Sir R. Ross, Mr. L. W. King, Mr. H. R. Hall, Mr. W. M. Meredith Mr. Herbert Rathbone, Professor Garstang, Dr. Wilkin, Mr. A. Smith, Mr. J. Phythian Adams, Mr. R. Horsfall, and Mr. Hamilton Beatie.

A marriage has been arranged between the Hon. Alexander Cadogan, youngest son of Earl Cadogan, and Lady Theodosia Acheson, daughter of the Earl and Countess of Gosford. Mr. Cadogan, who is in his twenty-eighth year, is in the Diplomatic Service, and while in Constantinople was, two years ago, granted an allowance for proficiency in the Turkish language.

On Monday evening the Roumanian Minister dined with Mr. and Mrs. Pretyman Newman at their house in Eaton Square.

His Highness Prince Damad Ferid Pasha, brother-in-law of the Sultan of Turkey, has concluded his visit to London, and left for Paris.

An interesting collection of portraits and landscapes by the gifted Armenian artist, Miss Zabelle C. Boyajian, are at present on view at the Ryder Gallery, Albemarle Street. The Exhibition closes on the 14th inst.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

MONTEITH-SMITH.—On the 9th inst., at 29, Coleherne Court, South Kensington, the wife of R. E. Monteith-Smith, Cairo, Egypt, of a daughter.

MARRIAGE.

LOW—YOVITCHITCH.—On July 9, at Château d'Oex, Switzerland, by the Rev. Dudley Lampen, David Halyburton, second son of the late Rev. George D. Low, Edinburgh, to Mara, daughter of Alexander Yovitchitch, of Belgrade, and formerly Servian Chargé d'Affaires in Vienna and London.

THE GREEKS IN CYPRUS.

The announcement that a deputation is being sent from Cyprus to place the case of the Greek inhabitants before the Imperial Government is to be welcomed, if it represents the last card to be played in an agitation that has already lasted too long for the interests of the island. In company with others who are on a visit to this country from Cyprus in a private capacity, the official delegates, we may hope, will be able to form a dispassionate impression of the Cyprus question as a whole, removed from all local bias. The more patient the hearing they obtain and the more fully their claims are subjected in their presence to a critical analysis, the more likely are they to be brought to adequate realisation of what is best for their island and of British intentions regarding it. Their agitation has no novelty about it, nor has the refusal of the Imperial Government to accede to their wishes. But in Cyprus itself there are many Greeks, and London is a long way off; it is natural to suppose that the demands of two hundred thousand Greeks must ultimately prevail over the refusal of one Secretary of State. The deputation will not be lacking in intelligence, and here in the metropolis of the Empire, where in the course of a few hours they might pass in the streets more people than they would find in the length and breadth of their own island, they may acquire that sense of proportion which alone is needed to assist their agitation to a satisfactory issue. There are various anomalies in the situation in Cyprus, any one of which would suffice to render the Greek, always prone to political ebullition, blind to all other considerations than the glorious past of his race and the present "freedom" of the mother-country. It will be possible for a deputation of Greek Cypriots to England to have their views corrected on many points, even if they are not convinced that no amount of culture two thousand years ago can compensate for administrative incompetence at the present day, and that Greece, their "mother-country," is far too seriously engaged in trying to free herself from financial and political shackles forged by her own follies to contemplate with any real satisfaction an immediate extension of her boundaries. For the demands of the Greek Cypriots have little to do with half measures. In addition to the elimination of the official members from the legislation of the island they stipulate for the sole control of finance by the elected members of Council, the appointment of Cypriots to all administrative and judicial posts, and a modification of electoral representation in favour of the Greek over the Turkish population. But these "terms" are prefaced by the assurance that the Greek inhabitants "feel in a strong and unsubduable manner" the desire that Cyprus should be annexed to Greece, and in the course of the correspondence with the High Commissioner, the British Government is reminded that "the people of Cyprus have always looked and look upon the English occupation as one transitory period in their history."

The Greek Cypriots are spoiling a good case. When the island was occupied in 1878 the British Government promised to pay the Porte an annual sum of £92,800, representing the estimated difference between the revenue and expenditure, together with the value of certain light dues and the produce of Crown lands. For four years this amount remained unpaid, and it was then decided to devote the Cyprus tribute to the payment of the bondholders of the repudiated Turkish loan of 1855. This system has been maintained ever since, subject only to the modification that Great Britain has made the island an annual grant-in-aid to cover this drain of nearly half its revenue. For the financial year 1910-11 Cyprus shows a deficit of over £17,000; but if the tribute and the grant-in-aid were eliminated, there would be a surplus of £35,000. Thirty-four years ago the British, on taking over Cyprus from the Turks, found the Christian Cypriot wearing a fez and subjected to all manner of vexatious regulations. His lot and the conditions in the island generally have improved beyond all recognition since that day; but Cyprus has had to forego some two million pounds in exchange for the benefits received. If this amount could have been expended in the island, under British direction, in scientific handling of the water and irrigation problems, on agriculture, afforestation and communications by land and sea, the wealth of Cyprus must far have exceeded anything that it can show to-day. In urging that a financial arrangement for which little can be said to-day in justification should be abolished, and that the money raised in the island should be spent solely on its own requirements, the Cypriots have much on their side. If their case were submitted with moderation and backed by the obvious sincerity of the islanders in an attempt to further the interests of their country as a whole, it would be hard to deny them. As things are, the Greek inhabitants have allowed the real grievances of the people to be mixed up with and obscured by the selfish and personal aspirations of a section. Union with Greece, hardly a tactful sentiment to advance to the British Government, would mean in practice merely freedom for the local application of political intrigue and the spoils system so dear to the Greek politician. It is not denied that the administration of the island is not capable of improvement. The appointment of the present High Commissioner indicated that Cyprus was commanding the closer attention of the Home Government. But almost before Sir Hamilton Goold-Adams had time to pick up the reins of government he was confronted by the attempt of the Greek members of the Legislative Council to rush the position. The tenour of the correspondence, the resignation *en bloc* of the Greek Councillors and their attempt to inflame the populace showed clearly that the well-being of the island was a secondary consideration to the agitators.

We have no wish to disparage the national spirit of the Greek Cypriots. At the same time it is well that they should recognise, in common with the Greek inhabitants of the Ægean Islands, that their aspirations are susceptible of restriction in the face of the hard facts of practical politics. Our occupation of Cyprus is in the nature of a lease from Turkey. If circumstances suggest the extension of that lease in perpetuity, it would be for the reason that the island's status as a British possession is held to be desirable. If Cyprus should be regarded as no longer necessary or even useful to the British Empire, the most obvious method of terminating the present arrangement would be to hand the island back to Turkey. The neglect or indifference from which it has suffered in the past is due in no small measure to the fact that shortly after the occupation its strategical value to Great Britain had disappeared. Cyprus represents a bad bargain, and it may be supposed that, if it had not been for a sense of moral responsibility to its inhabitants the British Government might have been tempted to extricate itself from that bargain. We shall not flatter the chief agitators or impugn the good sense of the bulk of the Cypriots by supposing that any disturbances now being engineered in the island will have the effect of deterring the Government from its course of normal progressive administration. But it can do no harm to disclose to the deputation that has been sent to submit the Greek case to the British Government the two horns of the dilemma on which the Greeks are contriving to impale themselves. If the delegates can be dissociated from the ill-advised agitation for union with Greece, they may well plead for an adjustment of the tribute question. In this matter they could command considerable support. The money that might thus be liberated would go some way towards starting Cyprus upon an era of material prosperity, in the light of which union with Greece might appear for many years to come a retrograde step.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The special trade correspondent of THE NEAR EAST at Constantinople complained, in a recent letter, of the tardiness with which the Ottoman Government announced its tenders for supplies. No sooner is the offer published than it is closed, the result being that British trade is seriously handicapped. Another instance of this method has come to my notice. The *Journal* of the Board of Trade announces, on July 6, that tenders will be received by the Minister of Ports, Telegraphs, and Telephones, *up to July* 15, "for the supply of 1,500 first size and 4,500 second size linen sacks, and 10,000 canvas sacks." Such short notice certainly will not enable any British exporter, not already represented on the spot, to compete. Would it not have been possible, supposing goods of superior quality to have been in request, to invite tenders a week earlier, and close the interval during which the tenders could be handed in a week later? Personally, I think that if friendly representations were made to the Ottoman Government, the latter could be induced to meet the requirements of the case.

***

The report that a French company has asked the Turkish Government for permission to erect and run a sugar factory (the first of its kind in the Ottoman Empire) is arousing the business instinct of the Vaterland. Already the D.O.K. is in the field endeavouring to draw the attention of German capitalists to the possibilities involved, and the next thing we shall hear is that a rival German syndicate is in the field, offering to work at a loss if the concession is granted to them. Such things can happen in Germany, where Government grants are formidable. In this particular case it would not matter much which syndicate (supposing a German were to put in an appearance) obtained the concession, considering that in either case we should be entirely "out of it." This generosity on our part has been chronic of late in the Near East.

***

As for the success of the sugar factory enterprise, it ought to be assured if the raw material (sugar-beet) can be grown under favourable conditions. And it can. The effect of the undertaking on the market would in itself be nil, but if successful it would pave the way for the erection of hundreds of factories, and Turkey would gradually become independent of the Russian and Austrian markets and supply her own wants. In order to be convinced that this is possible we have only to look at the growth of the sugar industry in Servia within recent years. Under the circumstances, the D.O.K.'s reminder to German capitalists can be addressed (and, let *me* hope, not without avail) to British capitalists.

***

The letter from Lord Kitchener (to which reference is made on another page) read at a recent meeting of the B.C.G.A. will surely help to convince those who are sceptical about the Sudan's great future as a cotton-growing unit of the Empire, of their own folly. Not only that, but it may be taken as an indication that the rumours, to which I referred recently, are not without foundation, and that something will shortly be attempted in the Sudan to give an impulse to the cultivation of cotton. Lord Kitchener's interest has been aroused. and, that being so, we need not fear that the fanatical *butera* will succeed in delaying the introduction of those irrigation schemes so vital to the future of the Sudan. The Heluan road, with its historic "The money must be found," is there to remind us how swiftly plans are carried out under the new régime. Under the circumstances, I congratulate the B.C.G.A. on having received Lord Kitchener's letter: it is a good sign.

***

Until the delegates of this association visited the Sudan very few people in England were aware that the country possessed commercial possibilities on such a large scale. The fact is that the Sudan stands very much in need of a properly organised advertising bureau in London, where reliable information could be given regarding commercial and general openings for capital in the country. Our colonies have long realised the advantages of this form of advertising, and the time is ripe for the Sudan to emulate their example.

***

Unless some steps are taken in this direction there is a danger of foreign capitalists dominating the Sudan, as the Germans are fast dominating Egypt. I have referred to this point before, but I have reason to know that already German capitalists are preparing to take their "place in the sun" as soon as the proposed irrigation works are definitely decided upon, so time presses.

***

Not only England's trade with Egypt is declining; that of France is in a far worse plight. According to the *Deutsche Orient-Korrespondenz*, German trade was, twenty years ago, one-fourth that of France; today they are about equal, France's trade having declined, whereas that of Germany has visibly increased. To guard against the complete annihilation of France's trade it is now proposed to create a French Chamber of Commerce at Cairo.

***

On the other hand, it is a curious phenomenon how, in spite of France's commercial decline, her financial, or economic, interests in Egypt have continued to increase beyond all comparison with those of any other country excepting Great Britain. This feature is a characteristic, moreover, of France's relations with the different peoples of the Near East. Financially speaking, she reigns supreme from the Golden Horn and the Danube to Beyrout and Wadi Halfa. How is this possible when, commercially speaking, she has not the backing up enjoyed by Great Britain? It is partly, if not entirely, due to the fact that British capital is largely invested in America and in the various colonies and dominions of the Empire which are scattered all over the world. whereas France's extra-national investments are largely centralised in the Levant. Be that as it may, it gives her a strong political position in the Near East, and one that has not been unfrequently used to the detriment of British interests —even in Egypt *after* the signing of the Anglo-French Agreement.

It would be interesting to obtain some approximate figures (writes a correspondent) of French and British capital invested in the Near East. I agree, but am at a loss to advise. Perhaps some reader could tender the desired information.

***

On another page we publish an account of the formation of a new Egyptian company. The names of the two most prominent members of the company are Dr. Andreas Kreichgauer (716 shares) and Dr. Anton Kreichgauer (714 shares), both hailing from Germany. This is the third company formed in Egypt within the past few months under German control—a proof of the extraordinary growth of German enterprise and interests in the Valley of the Nile.

***

Our Odessa correspondent informs me that there has just been organised in that city a new commercial and industrial association under the title of "The Near Eastern Export and Import Syndicate," for the promotion and expansion of South Russian trade with Turkey and Egypt. The syndicate, which includes some fifty leading merchants and traders in Odessa and other Black Sea ports, is sending agents to study the conditions and prospects in those Near Eastern markets. These continuous and persevering endeavours to expand business connections between South Russia and its close neighbours in the Near East—and there is no question of the possibility of such expansion—do not, somehow, meet with that measure of success one would expect from them. There is something lacking in the business methods of the Russian. He believes that he has learned from the foreigner all that it is necessary to know in order to emulate Western enterprise, but he has not had the Westerner's experience. There would be more hope for him if he were conscious of his own shortcomings and less obdurately indisposed to accept extraneous advice and guidance. If the exploitation and development of Russia's vast natural riches and resources depended upon the Russian themselves those resources would remain dormant for another century.

***

Chief among the works of art included in the Taylor collection, and offered for sale at Christie's this week was a Persian carpet. Probably woven in the first place for an Indian prince, its colours and the wonderful workmanship which it contained were responsible for the highest bidding which has ever attended the sale of a carpet in any part of the world before. The bidding quickly sprang to four figures, only halting for a moment at 4,800 guineas, when it seemed as if the battle was over. At the last moment, however, a hundred was added, only to be immediately capped by another, thus bringing up the price to 5,000 guineas, at which figure it fell to Messrs. Duveen Brothers. It is probable that this extraordinary price will have a marked effect upon the Eastern markets, and that tourists will find the purchase of Persian rugs and carpets at moderate prices in the Oriental bazaars a matter of increasing difficulty during the coming season.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, July 6.

British Trade with Turkey.

An "Old Trader" contributes a very interesting article, entitled "The Last Twenty-five Years of Trade in Turkey," to the current issue of the Quarterly Trade Journal of the British Chamber of Commerce of Turkey, which celebrates its twenty-fifth anniversary.

I cannot possibly quote at any length from this article in a weekly letter, but I can give the gist of the same, which its writer supports with very detailed figures. In brief, it is this: While Great Britain's total exports have grown in twenty-five years from 281 millions to 557 millions, and while in the same period Turkey's imports from the five principal exporting countries have grown from about 10 millions in 1887 to 25 millions in 1910, and which imports, for purposes of comparison, still represent practically the same percentage of her total import trade, viz., about two-thirds, Great Britain's trade with Turkey has not grown in the ratio of these increased imports.

During the twenty-five years under consideration, Turkey's imports from the five principal exporting countries have increased two and a-half times in volume, Great Britain's share is but half as much again as it was in 1887, while the volume of Austria's trade is four times as much (since 1891), Italy's eight times, and Germany's nearly ten times as much as it was in 1887. I have quoted sufficiently from the article, in which there is a world's wealth of information, to show the points the writer makes, and which affords matter for serious reflection.

I find that as far back as twenty-five years ago the late Sir William Whittall (then Mr. J. W. Whittall), when making an address at the first annual meeting of the Chamber of Commerce, sounded a warning in regard to the falling off of British trade in proportion to the total imports into Turkey over a period of eight years, whereas during the same period Austro-German trade showed a great increase in proportion, and gave as his opinion the reason for this fact was the admirable way in which our rivals adapted themselves to the requirements of the market, and the system of commercial travellers employed by them to stimulate the purchase of their wares. To-day, apart from these now firmly established commercial rivals, there are others whom we cannot afford to despise. Holland, which twenty-five years ago exported to Turkey but £52,000, had in 1910 reached nearly two millions; Belgium, which then exported but half a million to Turkey, now exports a million and a-half. Quite recently Norway and Sweden have both shown considerable activity. The Commercial Attaché to the Swedish Legation in Constantinople has, in a recent interview to a home paper, stated that the commerce between the two countries is fast increasing. The exports to Turkey, which were £100,000 in 1910, had increased to £139.000 in 1911, the articles exported including wood, paper, iron, matches, hardware, heating, cooking and lighting lamps. The Attaché recommended Swedish firms to visit the market and learn the requirements of clients.

The foundation is announced at Bergen of an Ottoman-Norwegian commercial house, with an experienced Norwegian business man at its head, for the development of commercial relations between the two countries. The volume of trade of these two countries may be insignificant at present, but that is no reason why it will always remain so.

Now, what is our own attitude to this market? I think I can best answer this in the words of a paragraph which appeared in the *Mercantile Guardian* (May issue, 1912). Referring to a statement that Great Britain's trade with Turkey is very often said to be almost entirely in those goods which she is bound to obtain from us, simply because she cannot advantageously get them from our commercial rivals, the trade review observes that "on a close examination it will be found that these are the classes of goods in which most people get business, and this basis of business is a firm one. It says something for Turkish buying if its purchases are always the most advantageous, and something also for the goods which cannot be replaced from other countries." This may be considered to be very smart, and is the kind of statement one would expect to be made with all the seriousness of sixteen years by a scholar of the local English Boys' School in reply to an examination paper of the London Chamber of Commerce on Political Economy, but for a trade paper it is the most utter trash I have ever read. If British manufacturers wait for only that portion of Turkey's trade which cannot advantageously be given elsewhere, we may expect to see ourselves still further left behind in the commercial race.

I will now put this question and answer it. Are British firms able to compete in this market? An important local business man has told me that if once the British manufacturer can be interested and his sporting instincts roused, he can not only underquote his Continental rivals to an extent that they do not even get a look in, but he can handle much larger orders and give delivery in less time. I had this confirmed by a much less important person, a commission agent in quite a modest way of business, who told me that he had secured the agency of a British manufacturer, who could in his particular line cut out any foreign competition, and, what is more, he added, supply "better stuff."

I find that I have not exhausted this subject, and may have occasion to revert to other phases of the question in another letter.

Mesopotamia Irrigation Works.

It has been stated that the Ministry of Public Works have informed Messrs. Jackson that the funds appropriated for these works having been exhausted, their provisional contract is at an end. I learn, however, that Messrs. Jackson are still in negotiation with the Ministry in regard to the works they are carrying out.

Lignite Mine.

A concession for a period of ninety-nine years has been granted to two Ottoman subjects, Yahia Sezai Bey and Mehmed Nouri Effendi, for a lignite mine in the village of Koz-Chesmé, in the sub-province of Bigha (Dardanelles), in the county of the same name. The superficial area covered by the concession is 1,077 hectares. The machinery necessary for the working of the mine will be admitted duty free.

Against Fires.

A commission under the presidency of the Governor of Constantinople proposes the formation of two new battalions of regular firemen, the increase of material, and the building of several new fire stations. To carry out this project the commission has put in a demand for a credit of £T104,000.

TENDERS INVITED.

EGYPT.

Construction of a Shed.—Tenders will be received at the Central Office, Department of Public Health, Cairo, for the construction of a béton armé shed for stabling thirty mules at Mataria. Persons wishing to tender for this adjudication are requested to apply to the Engineering Office, Department of Public Health, Cairo, where the plans can be examined and a schedule of quantities obtained. Tenders must be submitted on a 30-millieme stamped paper, enclosed in double-sealed envelopes, addressed to the Director-General, Department of Public Health, Cairo, and bearing the inscription: "Tender for the construction of a béton armé shed at Mataria." Date, July 24 (11.30 a.m.).

Supply of Fire Hose and Fittings.—Tenders will be received at the Central Office, Department of Public Health, Cairo, for the supply of about 1,360 ft. of fire hose with necessary fittings. Full particulars may be obtained on application to the Engineering Office of the said Department. Tenders must be submitted on a 30-millieme stamped paper enclosed in a sealed envelope, addressed to the Director-General, Department of Public Health, Cairo, bearing the inscription: "Tender for supply of fire hose." Date, July 18 (11.30 a.m.).

Supply of Bristol Board and Mill-board.—Tenders are invited for the supply of paper, Bristol board, and mill-board required by the Printing Department of the Egyptian Government during the year 1913. Conditions of contract and schedule of quantities may be obtained at the Secretariat of the Ministry of Finance and at the Printing Department, Bulaq. Tenders should reach the Director, Printing Department, by noon on September 10.

Construction of a School.—Tenders will be received at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo, for the construction of Hussanieh School at Abbassia. Specification, plan, and estimate at the office of the Administrative Service, Public Works Ministry, Cairo. Tenders must be submitted on stamped paper. They should be addressed to the Chief of the Administrative Service, Public Works Ministry, Cairo, in a sealed envelope bearing the inscription: "Tender for construction of Hussanieh School at Abbassia." Date, July 25.

Supply of a Fire Engine.—The Local Commission of Mellaoui invites tenders for the supply of a steam fire engine. Full particulars can be obtained from the Department of Municipalities and Local Commissions, Ministry of the Interior. Date, September 7 (noon).

Lubricating Pads for Axle-boxes.—Tenders will be received by the Director, Egyptian State Railways and Telegraphs, Cairo, for the supply and delivery of one or three years' stock of cotton and woollen lubricating pads for axle-boxes. Copies of the specifications and samples may be seen at the offices of Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, S.W., or may be obtained from him, price 2s. and 6s. respectively. Legal domicile in Egypt is necessary. Date, August 12 (10 a.m.).

ROUMANIA.

Supply of Steel and of Rubber Pipes.—Tenders invited at the offices of the Roumanian State Railways, Bucharest, for the supply of (1) tool steel and rapid steel, and (2) of rubber pipes. Particulars from Direction des Chemins de Fer Roumains, Bucarest. Dates (1), July 16; (2) July 25.

Supply of Red Lead.—Tenders invited at the offices of the Roumanian State Railways, Bucharest, for the supply of two tons of red lead. Date, July 19.

Water Supply and Canalisation System.—Tenders invited at the Mairie, Turnu-Magurele, for works in providing a water supply, to be obtained from the Danube, and a system of canalisation for the town. Estimated cost 80,000 frs. Date, September 7.

SERVIA.

Supply of Bronze Wire.—Tenders invited by the Post and Telegraphs Administration for the supply of 8,000 kg. of bronze wire 1½ mm. Deposit, 5 per cent. Particulars from the Direction-General of Posts. Date, July 23.

BULGARIA.

Water-main Fittings, etc.—Tenders invited by the Direction-General of Bulgarian Railways and Harbours, Sofia, for the supply of special fittings for water-mains, etc. Estimate, 21,000 frs. Date, July 28.

The Manufactures of Servia.

(From Our Own Correspondent.)

Belgrade, June 26.

There are very few large factories in Servia. Numerous small workshops supply local wants, and in the country districts domestic industries exist, many private families being engaged in primitive hand-spinning and weaving, in the manufacture of carpets of a Servian type, in making earthen—and wooden—utensils, in grinding flour and corn-meal, in preparing prunes and plum jam, in distilling plum cognac, etc., etc.

It is computed that of these small producers, scattered over the whole country, about 120,000 are engaged in distilling plum cognac, turning out on an average 300,000 hectolitres a year, valued at about fifteen million francs, the market price fluctuating considerably.

Carpet Manufacture.

The manufacture of carpets, a Servian speciality, is carried on chiefly by the inhabitants of the town of Pirot, and in the surrounding country. It is a very ancient and esteemed industry, of which the Servians are exceedingly proud. The designs are original, rich in colour, and artistic in conception. A large trade is done for home use, and for export to Bulgaria, Turkey, and other Eastern parts.

The Servians are very desirous of having large factories in every branch of industry, and the Government give every encouragement by granting concessions, which relieve the enterprises of many taxes and Customs dues, as well as other advantages enabling the native manufacturers to compete with foreign productions.

But hitherto the insufficiency of railway communications, the bad roads, the want of skilled labour, the lack of capital, and the dearness of money have proved a great hindrance to the industrial exploitation of Servia's resources.

Cattle Breeding.

This is one of the chief resources of the country, and six large slaughter-houses and meat factories, the most important one in Belgrade, provide for the export trade, amounting last year to 18,000 tons, valued at 19,335,500 frs. The Belgrade slaughter-house exported 94 per cent. of the total.

The export of fresh meat in 1911 was greatly influenced by the convention concluded with Austria-Hungary, providing for an import from Servia to Austria of a yearly maximum of 50,000 pigs and 15,000 head of large horned cattle, paying an import duty of 10 kronen per 100 kilos; special permits are required for the importation of larger quantities than those stipulated in the convention, but in such cases the Austrian import duty to be 30 kronen per 100 kilos.

Flour and Corn-meal.

The flour mills as generally used in Servia in the villages were of a primitive type; they were very numerous, and ground small quantities of inferior quality. The best flour was always imported. Later, modern steam mills were erected. In 1895 there existed already 102, and they now number 244. The majority produce corn-meal consumed in the country. The peasants' bread is made of corn-meal, and they rarely eat bread made of flour.

Flour, formerly solely an import article, is now also to some extent exported. The larger flour mills which export part of their production have done a good business. During the year 1911, seventeen large flour mills were working in Servia, and produced 55,232 tons of flour and 17,384 tons of bran; the smaller village steam mills produced 32,000 tons corn-meal and 28,000 tons flour. This production does not include that of windmills and water mills. One large flour mill in Kragujevatz was destroyed by fire last year.

The total production of the flour mills for the year 1911 was 110,232 tons flour and corn-meal of the value of 20,880,350 frs., and 17,384 tons bran of the value of 2,607,600 frs., most of which is consumed in the country. The export of flour in 1911 decreased owing to the unsettled commercial state of Turkey, that country being the sole purchaser of Servian flour. The export of flour in 1910 was 10,120 tons, whereas in 1911 it was only 7,128 tons.

Mining Industry.

This industry assumes great importance on account of the State's consumption of coal and lead, but up to ten years ago very little had been done. In 1901 there were thirty-seven concessions for mines, which had increased to fifty-six by 1909.

Coals take a secondary place in the mineral products. There are fourteen coal mines, the majority of which are quite unimportant, both as regards quality and output. In 1900 there was a production of 15,570 tons, as against 29,612 tons in 1908.

Copper Mines.

Copper mines show the greatest development. The copper smelting works belonging to a French limited liability company, owning the copper mines at Bor, in Eastern Servia, are a thriving concern. They produced last year 6,720 tons of blister copper, of which the greater part was exported to the United States, the remainder to France. The company have enlarged the installation of their works: they spent last year more than 250,000 frs. on additional plant, and they have also constructed a railway line from their works to the junction of the State railway to Radujevatz.

Breweries.

In 1890 there existed eleven breweries in Servia, producing annually 45,740 hectolitres of beer. Two of these have gone into liquidation, whilst the capital invested in the remaining nine has been doubled, and treble the amount of beer is being produced. Besides satisfying the wants of the country, exports are made to Bulgaria and Turkey. The beer production had difficulties to encounter last year on account of the high prices paid for barley and hops, yet, notwithstanding adverse circumstances affecting this industry, the total production rose 32 per cent. as compared with the year 1910—that is, the production in 1911 amounted to 148,000 hectolitres, of the value of 7,500,000 frs.

Foreign beer is still imported, but in diminished quantities. In 1900 the imports of beer amounted to 4,106 hectolitres, but has now fallen to less than 1,700 hectolitres.

Prunes and Plum-jam Industries.

These had specially good results last year. The Servian plum crop, as regards quality as well as quantity, was satisfactory, whilst in other plum-producing countries there was a poor yield. Prices have ranged very high, especially for plum jam. The preparation of prunes is carried out by numerous small dealers. At present there is only one large enterprise of this nature. The Government control of the process of preparing prunes was more strictly enforced than in previous years, which greatly conduced to the superior quality of the product.

Sugar Factories.

The sugar refinery in Belgrade was, until the expiration of the year 1911, the only establishment of its kind in Servia. Another sugar refinery newly built at Paratchin will start working in the autumn of this year.

Beetroot was formerly cultivated in large quantities for the supply of the Belgrade sugar factory, but from 1902 to 1905 the factory ceased working, and during that period beetroot was not cultivated.

Prolonged droughts last summer were the cause of the beetroot crop being below the average.

Nearly the whole crop, 88,211 tons, of beetroot used in the Belgrade factory produced 9,540 tons refined sugar, of the value of 6,201,000 frs., and of this quantity 9,500 tons were consumed in Servia. The remaining 40 tons, together with 1,276 tons, a surplus from the year 1910, were exported to Turkey.

Vineyards.

The climate of Servia is very favourable for the cultivation of grapes, and until the invasion of the phylloxera in 1882, wine of a very fine quality was produced, which might easily have found a market in Western Europe. Servian wines obtained prizes at various international exhibitions, viz., at Bordeaux, Antwerp, Paris, etc. This country fell a victim, however, to the dread disease, and in 1906 the vineyards were declared totally infested by these insects. As the disease spread the growth of the vines ceased, until the production of wine was insufficient for the country's own consumption.

Saw-mills.

There are eleven large saw-mills with modern installations; of these two have been lately erected with concession privileges. They started working last year. The average annual production is 140,000 cubic metres of soft wood and building material, valued approximately at 3,500,000 frs., the whole of which is required for home use.

When railway communications are more extended, this industry will prosper better, as there are many forests in Servia.

Textile Industries.

Servian wool is not suitable for cloth of a good description, and the factories cannot compete with foreign makers for fine quality stuffs. Nevertheless, in 1911 the quantity of ordinary and low qualities manufactured was not equal to the demand. In 1911 9,560 spindles were employed, and 141 machine looms. Of these Servian-made stuffs, goods to the value of 650,000 frs. were sold to the State for Army use.

Many of the existing cotton-weaving factories were enlarged last year. The total number of machine looms is 720. The Ministry of War bought in 1911 Servian-made shirtings for the sum of 600,000 frs.

Last autumn a new cotton-spinning mill, with 3,200 spindles, was erected at Nish.

There is only one small cocoon enterprise at Lapova, founded in the year 1900. The amount realised in 1911 for raw silk was less than in the preceding year, on account of the Turco-Italian war. The whole of last year's product exported to Italy fetched about 700,000 frs.

There are in Servia three large hemp and flax factories, two of them of very recent date. Last year a brisk business was done. The Servian-grown raw material, especially flax, was of particularly good quality, and prices of manufactured produce went up about 20 per cent.

Tobacco.

The tobacco industry was until 1889 in the hands of private persons. Since then it has become a State monopoly. The home consumption is very large, and the exports increase regularly. The annual consumption of manufactured tobacco (including cigarettes) was, according to the sale value, 5,843,274 frs. in 1890, 11,939,814 frs. in 1900, and 16,704,323 frs. in 1909. The gross receipts on sales in 1910 were 17,658,881 frs.

SUDAN TRADE.

The Sudan Customs Department has issued its first quarterly statement for the year 1912. There has been a general decline in the external trade during the first quarter of the present year as compared with 1911, as the following table will show :—

	1912. (£E.)	1911. (£E.)
Imports.....	528,267	622,178
Exports.....	319,976	407,721
Re-exported	22,990	30,494
In Transit.....	2,564	5,400

This decline, says the *Sudan Times*, should not necessarily be taken as a sign that the trade of 1912 is going to be below that of 1911. The first quarter of the calendar year really belongs to the preceding rather than to the present year. It shows the effects of the preceding year and does not foretell the state of the year it introduces. It is on the condition of the various articles of produce that the trade of the Sudan depends. When the crops—gum, cotton, dura, simsim, etc,—are plentiful and fetch good prices there is an active export trade, and consequently an active import trade. The year 1910 was a very good crop year, and its good crops enlivened the trade of the last quarters of that year and the first one or two quarters of 1911. But 1911 was on the whole a bad crop year, and the effects of this made themselves evident in the last quarter of 1911 itself and are now making themselves felt in the first and possibly the second quarter of the present year. If the crops should again suffer in 1912, the trade would suffer a further decline this year and during the earlier months of 1913, unless some external causes help to develop the trade more than the normal course of things would do.

Engineering Notes.

Mining in Turkey.

Under the above title the *Financier* reviews the year's mining in Turkey in 1911, and states that no progress worth mentioning was made, owing mainly to the lack of means of transport and communication in conjunction with the resulting high cost of production. As things are now, mining in Turkey is not sufficiently remunerative, which is so much the more regrettable as the mineral resources—especially chromium, lead, copper, manganese—of certain parts of the country are undoubtedly very considerable. In 1911 five chrome mines—viz., Lupan (Kaza Kumanova), Radosa and Orasa (Kaza Kalkandelen), Kuckova (Kaza Ferisovitz), and Vrizencista (Kaza Pristina), and also the silver-lead mine Gomja Kratova (Kaza Kratova)—were authorised to work, but owing partly to the unprofitable working conditions, and partly to the lack of proper security, active operations were carried on in only one of them—the Radosa chromium mine, where 135 tons of the metal were produced and shipped to Salonika. Near Celopek (Kaza Kalkandelen) a promising copper ore occurrence has been discovered, and prospecting rights for two years have been granted to a company.

In connection with the above article, it may be pointed out that the yearly accounts for 1911 of the Kassandra and Héraclée mines have both closed with a loss. In the case of the former, the deficit was £T512, as against a surplus of £T10,717 in 1910; and in the latter the deficit was 155,232 frs. The war, depriving the mines of manual labour, is given as the cause of the loss.

Public Works at Alexandria.

Among the public works which are to be commenced during the current financial year at Alexandria, writes *African Engineering*, the most important is the main drainage scheme. This will, however, require six years to complete, and will cost over £300,000 before it is finished. The construction of the western branch of the East Port breakwaters is also to be started. This is to cost about £100,000, and when it is completed, three years thence, the eastern or Silsileh branch is to be commenced. Road improvements form an important part of the programme, and include a new bridge at Mex in conjunction with the proposed new road from Mex to Dekhela. The construction of a new 12-metre road along the coast is embodied in the sea protection works at Ibrahimia, which will probably be carried on eastwards, from Silsileh as far as Mustapha Pasha, in the near future. Besides this, the tramway serving the eastern suburbs of the town is to be increased from a double to a quadruple track. The central fire station, which, it is estimated, will cost about £10,000 and take two years to complete, is to be put up for tender.

Harnessing the Nile.

African Engineering, referring to the statement first published by THE NEAR EAST, to the effect that two sluices of the Assouan Dam are to be employed in the generation of electric power, states that the enthusiasm caused in the non-technical Press of Egypt by the announcement is really "quite out of proportion to the importance of the proposal. The primary object of the dam is, of course, the provision of irrigation water to Egypt, and all other considerations must be subservient to this. Thus, at flood time the reservoir is practically empty, while some three months later it is full to the brim. This is just the converse of what the water-power engineer aims at, viz., a constant head throughout the year. The difference in water level above and below the Assouan Dam ranges from some 60ft. when the reservoir is full to about 10ft. when all the sluices are opened to pass the flood. On the assumption that the 2 by 7 metre sluices are utilised, this represents a variation in the theoretical power obtainable of from about 70,000 h.p. per sluice with maximum head and opening, down to 3,500 h.p. at flood time. The larger amount would, of course, seldom be available, as the amount of water requisite would represent a serious drain on the reservoir. Anyhow, it is evident that the machinery must be capable of working under widely diverse conditions, and it will require all the ingenuity of the hydraulic engineer to design a satisfactory installation. In one direction, however, he will be favoured by the scheme proposed. That is the suggestion to utilise the power in the manufacture of nitrate manures. Although a constant supply of current is naturally advantageous to the working of such a factory, it could, of course, be shut down when the water conditions were unfavourable. In any case, it appears to us that the capital expenditure on the scheme must be so heavy in comparison with the output that the charges on it would go a long way towards paying the fuel bill of a steam plant."

Evaporating and Distilling Plant.

Messrs. G. and J. Weir, Limited, Cathcart, Glasgow, have just completed two important installations of evaporating and distilling plant for Egypt and Aden. One of these plants is a sextuple-effet installation for the Egyptian Phosphate Company at Safaja Bay. It is to produce 75 tons of pure drinking water per twenty-four hours, and is completely self-contained. Besides six Weir evaporators it comprises a marine-type boiler with forced draught fan and engine, a Weir boiler-feed pump, Weir distilling condenser, and a Weir combined fresh water, circulating and brine pump. The apparatus for Aden, says the *Times*, is a quadruple-effet fresh water distilling plant for the Aden agency of the P. and O. Company. It includes four Weir evaporators, evaporator pump, a Lancashire boiler, a Weir boiler-feed pump with automatic control gear, Weir surface feed heater, Weir uniflux distilling condenser, and a Weir combination circulating and fresh water and brine pump. The capacity of this installation is 25,000 gallons of fresh drinking water per twenty-four hours.

England's Latest Port.

Immingham, England's latest port, is bound to play an important rôle in Near Eastern commerce. Up-to-date in all its appliances for loading and unloading, with a storm-protected harbour and a deep-water channel, Immingham enjoys, moreover, independence from tides, an advantageous proximity to coalfields, and rapid railway communication with the great centres of British industries and consumption. Under these circumstances it will soon enter into serious competition with Hull and Grimsby, the two companion ports on the east coast.

NOTES FROM ODESSA.

(FROM OUR OWN CORRESPONDENT.)

ODESSA, July 7.

British Naval Constructors.

A despatch from Nicolaieff announces the arrival there of a number of British shipbuilding and engineering experts from Barrow-in-Furness to superintend the construction of the three Dreadnoughts for the Black Sea Fleet. The designs for these vessels were furnished by Messrs. Vickers, Sons, and Maxim, and that, too, in preference to the designs tendered from quite a number of highly reputable Continental naval-construction firms. Mr. Evans assumes the control of the engineering work, and Mr. Jones that of the ships' construction. Both these gentlemen are assisted by competent staffs from the same British yard. It is understood that British aid will be largely enlisted in the carrying out of the imposing new naval programme in the Baltic.

The total sum assigned for the creation of the new Baltic and Black Sea Fleets is 123,000,000, and this enormous outlay covers a period of only five years.

British Firm's Extension.

The well-known engineering firm of Mather and Platt, of Manchester, which has for many years past done a considerable business in Central and Northern Russia through its agency in Moscow, is now extending its operations to Southern Russia with similar success. It is noteworthy that in all the great Russian engineering establishments British foremen fitters are employed in preference to Germans or Frenchmen.

Engineering Lock-out.

The British agricultural machine firm of R. and T. Elworthy and Company, at Elizavetgrad, has just now, for the first time in its thirty years' existence, serious trouble with its employees. In the beginning of last week there was a partial strike, and the firm has now locked out the whole personnel, numbering about 2,200 workmen. They are the best-paid workmen in any of the large industrial establishments in South Russia, but they demand an advance of 20 per cent. in wages and the provision of smoking and reading rooms on the premises!

British Enterprise in the Caucasus.

From Tiflis it is stated that an Englishman named Stuart has just received from the Viceroy a concession for the establishment of a central hydro-electric station in that province on property leased from the Crown.

There are just now, says a Batoum telegram, several parties of British prospectors making researches for various mineral deposits in the Caucasus.

BUILDING IN ROUMANIA.

The Bucharest Municipal Council has practically decided to issue bonds for £231,600 of the £1,158,000 loan, to which we referred recently, and which was authorised by Parliament before its adjournment. It is proposed to expend the proceeds during the current fiscal year, says the *Daily Consular and Trade Report*, according to the following apportionment: Continuation of sewer system, £50,180; construction of water filters, £1,544; installation of electric-power plant, £26,634; slaughter house, £16,984; paving and providing drinking water, £42,460; construction of schools, crematories and markets, £19,300.

Oil Topics.

LONDON, July 11.

The shares of the Russian General Oil Corporation were introduced on to the market on Monday at 1½. The company is credited with having gambled in Urals, but bears of the shares say that it is merely a relief fund for the purpose of getting out the Russian bankers who are largely interested in the Lianosoff Company of Baku, a large concern with a big output which for April was nearly 1½ million poods. It comes next to Mantasoheff, and it is about as large as the "Caspian" Company. It takes large sums of money to finance these Baku oil companies, and in spite of oil being 36 copecks the St. Petersburg bankers think it a good time to get out. They are quite right, for Baku is a dying field, and its production falls off steadily. Nearly all the big Baku producers, headed by Nobels, are acquiring plots in the Ural Caspian district, and the price in Baku to-day for good plots is 10,000 roubles, or £1,000.

News from Ural Caspian.

The latest advices from the Ural Caspian are most encouraging. Nobels are sending up immense consignments of drilling plant, pipes, pumps, electrical machinery, and every appliance for the opening up of a big oilfield. Indeed, one engineer remarked that there was more machinery being sent up than had been sent up to Baku for years. The railway is being proceeded with, and a pipeline from the wells at Doss Sor to Astrakhan is being laid. Gurieff is not a port from which any oil will be shipped. It is much simpler to pipe the oil to Astrakhan which is at the mouth of the Volga, and from whence the whole of the internal oil trade of Russia proceeds. As we have before said, no less than two definite anticlines, running about north-west and south-east, have been traced through the district, which is as big as Great Britain. It is a vast plain as flat as Baku, but the boring conditions are much easier. The soil is very easy to drill, and as oil is found at 700 ft., a well which costs £10,000 at Baku, will only cost £1,000 at Dos Sor. Before another two years have passed we shall see a gigantic industry spring up around the north-east coast of the Caspian.

Forthcoming Big Flotation.

The new company with 3½ millions capital that is coming out shortly has bought the Stacheyeff property. Mr. Stacheyeff purchased one-half of the concession granted by the Russian Government to Mr. Lehmann. The other half, as is well known, was floated by the Ural Caspian Oil Corporation, in which the Shell now hold a controlling interest. The properties are at Iskene, Dos Sor, Makat, Kara-Tchumgal, and Karaton. They are all held under the same licence as those of the Ural Caspian. That is to say, prospecting licences covering about 100 acres are granted, and they carry with them the right to select a rectangular plot of about twenty-seven acres in any portion of the prospecting area. The balance of the land reverts to the Government, and is usually put up to auction. There is no royalty on either the Stacheyeff property or upon that of the Ural Caspian. Until January 1, 1915, there is a reduction of Excise duty of 60 copecks a pood on refined oil, and if the output is 6,000,000 poods 30 copecks, or half the Excise duty. At Iskene the new company will hold about 600 acres. On this area there are eight wells, seven of which are hand wells. At Dos Sor there are 400 acres, on which four wells have been sunk, and two more wells are being drilled. At Makat the company will hold 100 acres, but no drilling has been done, although hand wells exist which prove the existence of oil. There are 100 acres at Kara-Tchumgal, where a well has been sunk. A fountain is reported to have occurred here. At Karaton 200 acres containing one well, which got oil at 179 ft., found a second oil horizon at 462 ft., and a third horizon at 517 ft. Other wells have been sunk on this territory, in one of which oil was found, and the others were abandoned and the casing withdrawn. Oil could be landed into barges at about seventeen versts from Iskene and transported thence to Astrakhan. The weak point about the Stacheyeff properties is that they do not lie close together, but cover a big area of ground. They would probably have to be connected up with pipe-lines, and they will require a large working capital to efficiently prospect them. However, Messrs. Chaplin, Milne, Grenfell, and Co. are credited with having found sufficient money to put the company in a strong position.

European Oilfields Report.

The European Oilfields, which is a reconstruction of the old European Petroleum Company in which so much money was lost, has issued an interim report. The production from the old wells is kept up at about 1,000 poods a week, and when the new wells reach the first oil sands they are expected to yield from 600 to 1,200 poods per well per day. The company made a gross profit for the six months, ending January 13, of £19,155, and a net profit of £16,205. Since then the profit has been steadily rising, and for the month ending April 13 a gross profit of £7,869 was made. The company has 18 acres at Kirgees, 30 acres at Zabarat, and 13 acres at Bino. These are outlined territories, and all the Baku people are hoping that they will turn out well. Up to the present, of course, nothing has been done to prove the various oil horizons. The company has interests in Roumania and is negotiating with the Romano-Americana for the sinking of a deep well. All the liabilities of the old company have now been discharged, with the exception of £14,000, which was an advance on forward sales. This advance is being liquidated by payments of £2,500 a month. When the new wells come in the European Oilfields Corporation should do fairly well, as oil is high and the profits must be very large. It is now under the Barnett and Allan régime.

Taman Oil.

Almost everyone in London who has ever had a gamble in oil has acquired an interest in Taman. It will be remembered that Dr. Anton Raky once took up huge concessions in the Anapa district, and did very little with them. He was too early in the field, and, like most pioneers, had to pay for his experience without making very much money out of it. To-day, however, almost every promoter has some plots which he intends to form into a limited company: Mr. Tweedy, the Cedar Syndicate, promoters of the British Maikop, Mr. T. S. Marshall, Mr. Greenways, British and Foreign, the General Oil and Finance, Mr. Stuart, and numberless other less known oil promoters. Taman oil is so light that one engineer actually used it without refining for the purpose of driving his motor car. Whether all the oil will be equally valuable it is impossible to say. Some of that already pumped was probably the most valuable oil ever got out of an oil well. As to the quantity that is contained in the beds, that no one can talk about until the wells begin baling on a business basis. Up to the present the drilling has been more or less on prospecting lines. At the same time Taman is so well placed for the export trade that if it turns out to be a big oilfield it will speedily eclipse poor little Maikop.

Olex Company Results.

The Olex Company has issued its accounts for the year ending April 30, 1912. Profits have jumped up in a surprising manner. In 1911 the company only made 27,000 crowns; for the past year their profits are 241.000 crowns, and a dividend of 6½ per cent. has been paid. The shareholders received nothing either last year or the previous year. The Olex Company handles Austrian oils almost exclusively, and supplies the German railways and all the State departments. It will be remembered that the various German undertakings were all made into a combine at the beginning of 1911, under the title of the Olex Petroleum Company.

Another company working in Galicia is the Galizische Karpathen-Petroleum Aktiengesellschaft. This concern has also had a good year. Its profits are up 2,600,000 kr., and, after paying various expenses, the nett profit is 1,350.000 kr., which is a good deal better than last year, when the company had to admit of a loss of over a million kroner. The dividend for the past year is 7 per cent.

Oil Engineering Exhibition.

A display of oil engineering exhibits is to form part of the Hardware Exhibition to be held at Olympia from September 7 to 17 next, and space will be available for exhibits in the following sections:—(1) Oilfield equipment; (2) transport facilities, including tank steamers, tank wagons, etc.; (3) oil fuel systems and appliances; (4) oil engines for power and other purposes; (5) oil refining; (6) oil lighting and heating apparatus; (7) oils for fuel, lighting, burning, lubricating, etc.; (8) the world's oilfields; (9) geological sections, photography, etc. The organisation of the general exhibition is in the hands of Mr. G. D. Smith, and the special oil and oil engineering sections will be under the direction of Mr. Sydney H. North. The offices of the exhibition are at 119, Finsbury Pavement, E.C., where further particulars may be obtained.

ON ADMIRALTY LISTS.

Near East Markets.

SPECIAL REPORTS.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East :—

Larnaca.

The Government estimates that the quantity of this quarter's cereals will be as follows:—Wheat, 2,370.000 kilos; barley, 2,000,000 kilos; vetches, 210,000 kilos; oats, 450.000 kilos. Compared with last year's assessment, the percentage is :—For wheat, 2 per cent. more, barley 7 per cent. less, vetches 5 per cent. less, oats same as last year. With regard to quality, that of wheat is reported to be a little better, if anything, than last year's, and that of barley about the same; but it may not be quite safe to form an opinion on the quality. Exporters have stopped their purchases, awaiting arrivals of the new crops, which will oblige sellers to lower their prices to the level of those prevalent in Europe. The prospects of the date crop are becoming better and better.

Mitylene.

Many transactions have taken place in oil during the week. Exports, however, have not been so plentiful as was expected. We have to report the shipment of several small lots of oil, amounting altogether to 300 barrels, of the approximate value of £T2,150, and of 960 sacks of earth nuts for £T2,000.

Imports.—560 sacks of sugar from Trieste, 200 sacks of Rangoon Rice from Alexandria, 20 sacks of coffee, 120 moist sugar from Russia.

Adrianople.

The unrest created by the war and intensified by the unsettled state of the interior is making its effects felt in Albania. Such conditions must naturally prejudice the market and reduce transactions to the lowest ebb, where they seem likely to remain until the political horizon becomes clearer. The cocoon season, which is generally a brisk period, has just commenced, but the production is middling. The exports of this article will not begin for two months, when the cocoons have been subjected to the first treatment locally, so that we cannot yet estimate what the ultimate result will be.

Basrah.

The market remains very quiet. A few operations in cotton and colonial goods have taken place on a small scale to supply immediate needs.

Prices of cereals have fallen slightly, compared with those of the European market, however, they remain relatively high. Quotations are (in Togare, 1½ tons):—£T8¾ for wheat of the interior, £T9⅞ for wheat from the Karun, £T7¼ for sifted barley, £T6½ for paddy. These prices are, however, nominal, and not to be realised.

SUDAN PROSPECTS.

The *Journal* of the Sudan Chamber of Commerce states that the Tokar cotton season is now drawing to a close, and it is anticipated that the cotton picking will cease by the first week in June. The total quantity exported to this date is 104,000 cantars, which, with an estimated balance of about 6,000 cantars to come in, will bring the total of the crop up to 110,000 cantars (raw).

The good quality of the cotton has been well maintained throughout the season, the later pickings have not deteriorated to anything like the same degree experienced in previous Tokar crops, and owing to the firmness of the market in Alexandria and elsewhere excellent prices have been realised. Some of the cultivators combined to export and market their own cotton this year, and the results of this experiment have been so satisfactory that it seems quite probable this method will in future be permanently adopted by a large number of the natives, who up to now have been content to sell through brokers to buyers locally.

CONSULAR AND OTHER REPORTS.

Omdurman.

According to the *Journal* of the Sudan Chamber of Commerce, prices of gum fell towards the end of May to P.T.152. This fall in prices is to be attributed partly to the small demand abroad and partly to the good arrivals. The local stock may be estimated at about 35,000 cantars, and in case that arrivals at El Obeid do not stop owing to rains, and the demand from abroad does not increase, a further fall in prices is to be expected.

Bahr-el-Ghazal.

Arrangements have been made in all districts, says the *Monthly Report* of the Sudan Central Economic Board, to clear ground for the experimental planting of hill rice.

Aleppo.

The American Vice-Consul at Aleppo, Mr. Manachy, reports that the new wool clip has begun, and it is supposed to be fair. Prices have within the last few weeks advanced 7 to 8 per cent. on account of orders passed by firms in Beirut to their buying agents here. It is calculated that four-fifths of the Syrian wool is bought, either directly or through London and Marseilles firms, by the United States. The wool exported is generally washed in cold water and packed in hand-pressed bales weighing 110 to 130 kilos each. It is sold under two denominations, the Aleppo and the Urfa, the latter being considered a little superior to the former and invoiced a little higher. The wool can be bought in Aleppo with a guaranteed yield of 90 per cent., according to the Marseilles testing system.

Muskat.

Mr. H. Brett, U.S. Consul at Muskat, states that rice continues to be the largest article of import, though it is no longer so large as it used to be. Muskat was once the distributing centre for a considerable territory, but of late this position has been taken by Debai, the reason being that at that point no duty is imposed and the 5 per cent. collected here is sufficient to prevent the local merchants from competing. The amount of rice imported annually is not less than 100,000 bags of 168 lbs. each, or 8,400 short tons. All of this comes from Calcutta, and, at present, consists entirely of Bengal rice of two qualities, the Ballam and the Rari.

Tobacco Growing in Aleppo.

According to the *Daily Consular and Trade Reports*, the higher regions in the Aleppo Province are well adapted for the culture of the tobacco plant, and this industry could be developed profitably in several localities were it not for the restrictions imposed by the Regie des Tabacs de l'Empire Ottoman (Government monopoly). Whereas in the bordering Province of Lattakia cultivation of tobacco is encouraged to the point of constituting one of the principal resources of the natives, the Vilayet of Aleppo produces only a portion of the tobacco needed for local consumption. In the district of Aintab a very strong quality of tobacco is raised and exported to Egypt. Last year a shipment of this quality was made to the United States, and there is some hope that this trial will attract further orders. It is said that the Aintab tobacco can be used advantageously for cigar filler.

ATTAR OF ROSES CORNER.

As a result of a short crop, restricted harvest through heat and consequent high prices for the flowers, the price of attar of roses is likely to be unusually high this season. Private advices to the *Financial Times* give the Bulgarian crop at 125,000 ozs., against 170,000 ozs. last year, but other authorities consider this estimate to be over-stated by 100 per cent. At any rate, distillers have had to pay as much as 2¾d. per lb. for the flowers as compared with 1¾d. per lb. last year, and new season's attar is being quoted at 90s. net per English oz. It is estimated that 225 lbs. of flowers will be required to produce 1 oz. of attar, as against the average requirement of 160 lbs. Local attempts to corner the supplies threaten to advance prices still further.

PRODUCE REPORT.

LONDON, July 11.

There has been a moderate activity in the markets during the past week, and, with few exceptions, quotations remain firm.

Sugar.

Beetroot opened quiet, with a very slight decline. A small business was done, comprising: August, at 11s. 1d. and 11½d.; September, 10s. 10½d.; October-December, 9s. 11½d. Refined English Tate's cubes No. 1, prompt, 22s. 3d.; August, 21s. 9d.; September-October, 21s. 6d. Foreign: Dutch cubes, 17s. 3d., f.o.b. Amsterdam; French, 18s. 1½d., f.o.b. Paris; German and Austrian, prompt, 17s. (Meyer's), f.o.b. Hamburg. Russian crystals, prompt, 13s. 8½d., f.o.b. Danzig.

Coffee.

Business on the spot was quiet. Futures opened 3d. dearer; July, 62s. 3d.; September, 62s. 6d.; December, 62s. 4½d. Other quotations remain firm.

Currants.

There has been a fair demand for provincial bags at 24s. 6d. to 25s., and quarter cases at 25s. 6d. to 26s.; Amalias went at 27s. to 28s., Patras 29s., Vostizza 31s. to 33s., and choice 34s. to 35s.

Sultanas.

A good demand continues for Smyrna fruit. Commons are quoted 48s. to 50s., good 55s. to 56s., choice 62s. to 64s., Persians 45s. to 50s., Afghans 47s. to 52s., Greeks none.

Seeds.

Turkish canary seed is very firm at 60s. (spot) per 464 lbs. Linseed is quiet; July-August, 63s. 6d. to 66s. Rapeseed, 50s. Cotton seed, afloat, £8 15s.; Bombay to Hull, July-August, £7 5s.; and December-January, £7. Poppy seed, July, 72s. 3d. sellers.

Oils.

Linseed oil, quiet, spot pipes, 40s. 6d.; barrels, 41s.; July-August, 36s. 6d. Cotton oil, dull, crude spot, and July, 27s.; refined spot, 27s. 9d. to 31s. 6d. Soya oil, quiet, spot, 30s. Turpentine, weak, spot, 34s. Petroleum, quiet, Russian and Roumanian, 8d Olive oil firm, unchanged.

Oil Cakes.

Linseed, Russian, £8 15s. to £9. Cotton, London made, £5 10s. to £6; Egyptian, unchanged.

Wheat.

The market was depressed owing to American reports of shipments above trade requirements and favourable crop news from most countries, although rain was again reported to be delaying the harvest in South Russia and Roumania. Parcels easy; average price last week, 38s. 2d.

Barley.

Azoff-Black Sea was sold at 21s. 3d. for September-October, and for South Russian, July-August, 23s. was wanted, and 21s. 6d. for August-October; Karachi, July-August, offered at 25s. 9d.

Various.

Cyprus locust beans forward at 102s. to 100s. per ton, c.i.f. terms. Beeswax is firm at £7 15s. to £8 10s. per cwt. Sulphate of copper, prompt, £24 2s. 6d.; August, £24 7s. 6d. per ton, f.o.b. Soda crystals, 42s. 6d. to 45s. ex works. Cream of tartar, foreign (including Greek) powder, 82s. 6d. to 84s. 6d. per cwt.

DELICIOUS COFFEE.
RED WHITE & BLUE
For Breakfast & after Dinner.
Wholesale, of Hanson's, London, England.

CROP REPORTS.

(From Our Own Correspondents.)

Odessa. July 7.

The Hessian fly is causing considerable damage to the crops in several southern districts. A despatch from Nicolaieff states that 20,000 acres of ripening cereals in that neighbourhood have been almost entirely destroyed by the pestilent insect, and it is a difficult task to localise and isolate its swarming ravages. Elsewhere a series of torrential rains, floods, and abnormally violent hailstorms have also wrought much injury to the crops. In spite of these drawbacks, however, which are more or less of a local character, it is confidently expected that the South Russian harvest will, on the whole, give a bumper general yield. That is also the prediction of the British and American agricultural firms in this centre, and they are very fully and exactly advised by their ubiquitous agents and sub-agents throughout the southern and south-western provinces.

The crop reports from Central and Eastern Russia are also satisfactory. It is in those regions more especially where a good or fairly middling harvest is this year most grievously desiderated owing to last season's deplorable blight and its consequent widespread famine.

Several fertile districts in the Caucasus have been ravaged by locusts, but on the whole the Caucasian harvest is expected to be a fair average one.

The prosperity of this country depends on the success of its harvests, hence the general anxiety as to the condition of the crops at this critical time of the year. Even a partial harvest failure affects, directly or indirectly, all classes, a fact which goes to show that Russia is still essentially an agricultural country.

Dardanelles. July 4.

The valonea crop promises this year to beat all records in this district and that of Aivadjik. It has passed safely through the dreaded ordeal of a rain in June, which usually results in the trees shedding most of their catkins. The present record for these two districts is 400,000 kintals. This year it may pass a half million. Whether there will be enough hands to harvest it all is, however, problematical in the present state of affairs. Reaping of grain crops is proceeding very slowly, and will probably not be quite finished till the middle of August owing to the lack of hands.

COTTON-GROWING IN ASIA MINOR.

Referring to the attempts being made to grow cotton in Asia Minor, the *Manchester Guardian* says that efforts are being made to find an outlet for the produce in the English market. Trial shipments have been sent to Liverpool, and hopes are entertained by those concerned in the industry, among them being the Imperial Ottoman Bank, that a considerable development in this trade will soon take place. The Adana district is the one in which the efforts of agriculturists are being concentrated. Its fertile coast plain, which produces a high-class cotton, rice, cereals, sugar, and much fruit, affords excellent pasturage, and is well watered. Improved methods of agriculture and modern machinery have been introduced, and have resulted in a great stimulus being given to the cotton-growing industry, the area under cultivation this year exceeding 4,000 square kilometres. The Egyptian varieties are not cultivated on a large scale owing, it would seem, to peculiar climatic conditions, but within the last few years an American variety has been introduced and is giving satisfactory results. It is reported that the area at present planted with this variety will produce at least 3,000 bales, while the total crop has been estimated at 120,000 bales of 203 kilogrammes, or nearly double the output of last year. Before the outbreak of the war in Tripoli, Italy used to receive a large part of the cotton grown in a limited area of this district, but it is understood that the industrial centres of Southern Germany are now its destination, the cheaper sea freight and regular weekly sailings to Trieste giving an advantage to the south over the north German ports.

EGYPTIAN COTTON MARKET

(From Our Own Correspondent.)

Alexandria, July 4.

The market is regulated by speculative operations, but the fluctuations in the American market are principally felt here. The crop promises to be a record one as regards yield. The worm has so far done little damage, and water for irrigation is still fairly plentiful. The latest "communiqué" of the Irrigation Department states that the Nile gauges in its upper reaches show a higher level than last year.

Liverpool Report.

Messrs. Reynolds and Gibson telegraph:—Although there has been a good general inquiry, the rapid advance of quotations has made business difficult to negotiate. The turnover has been below the normal. *Cloth.*—Near Eastern markets continue interested in prices, but lack confidence. Should the present level of prices be well maintained, a better turnover is probable. Egyptian yarns continue to meet with a moderate demand, quotations being firm. Export bundles have been in better request during the last few days. Egyptian spot cotton is in moderate request at advancing rates. Upper Egyptian, being rather pressed for sale, has not fully followed the rise. Nubari is in good request. Quotations of Brown have been raised 3-16. Joannovich, Nubari, and Abassi ⅛, and Upper 1-16. Estimated sales, 2,600 bales.

B. C. G. A. Meeting.

A meeting of the council of the British Cotton-Growing Association was held at Manchester last week, Mr. J. A. Hutton being in the chair.

According to the *Manchester Guardian's* report, a letter from Lord Kitchener was read expressing appreciation of the efforts made by the Association with regard to developments in the Sudan, and stating that the action which has been taken has already brought home to the authorities the importance of assisting cotton-growing in the Gezira Province.

EGYPTIAN COTTON FIGURES.

BULGARIA'S COCOON PRODUCTION.

(From Our Own Correspondent.)

Sofia, July 6.

Thanks to the elaborate and methodical measures taken during the last fifteen years, Bulgaria promises to become in the near future a productive market of cocoons. In 1895 the production was 377,292 kilos., in 1900 768,163 kilos, in 1905 1,859,000 kilos, and in 1911 2,260,000 kilos.

This year's production is not yet exactly known, but it will not be less than last year's. The prices of the new cocoons vary from 2 to 3 frs. the kilogramme, and the dry cocoons are paid from 1.9 frs. the kilogramme. The silk industry being undeveloped, almost all the cocoons are exported to France and Italy, where they are preferred on account of their good quality.

One of the great difficulties to be overcome in the cultivation of cocoons was the rarity and absence in certain places of the mulberry tree. The Government's first measures tended to supply this want and in the different places where the cultivation of cocoons promised well nursery gardens were established for the growing of mulberry trees. The trees were then transplanted and sold to the farmers and peasantry at a very low price, nearly 5 centimes (½d.) each. Now the plantation and cultivation of mulberry trees has advanced considerably.

In order still more to help the new industry the Government went further, establishing in different places stations where practical demonstrations are given as to how to rear and feed silkworms. The result of these practical courses was the improvement of the quality of the cocoons.

The eggs of the silkworm were introduced from France and Italy, but now the Government has established its own nurseries according to the system of Pasteur, and silkworms are not permitted to enter the country unless they are examined by a special official, who delivers a certificate to the importer that the eggs are not attacked by any disease. The annual local production of silkworm eggs amounts to 25,000 untees.

The cocoon industry has exerted a direct influence on the general harvest. In order to meet the necessary expenses for the latter the farmers and peasants were obliged to borrow money at a high interest, while now those who cultivate cocoons can dispose of the necessary amount of money by selling the cocoons and so save themselves from the hands of usurers.

GERMAN REPORT ON ABYSSINIA.

The official German representative in Abyssinia, Dr. Zechlin, has just published a report of a several months' tour through the country, says the *Manchester Guardian*. From the Dschimma province, which is fairly populous, quite a good trade is done in hides, wax, coffee, and rubber. These are exported to Egypt by way of the Baro, the Sobat, and the Nile. The province of Kaffa, to the south-west of Dschimma, is but thinly populated, and the inhabitants are very uncivilised. The principal products are rubber, coffee, and wax. Goreh, the chief town in the Illubabor district, is an important trading centre for the western provinces. Representatives of several French firms are stationed here, and there is a considerable number of Greek and Arab traders. In addition to the products already mentioned, there is a good business in ivory. Commerce in the country is only yet in its infancy, and no developments of importance are probable until transport facilities are very much improved. The possibilities, however, are considered very great indeed.

Shipping Intelligence.

STAGNANT FREIGHT MARKET.

(From Our Own Correspondent.)

Braila, July 6.

The spring season is now at an end, and our freight market is in a complete state of stagnation. There is no inquiry whatever for tramp tonnage, as the few liners that are here prove amply sufficient for all requirements; in fact, they have great difficulty in completing their cargoes, and one had to accept grain for Antwerp and timber for Rotterdam in order not to experience undue delay.

As, however, tonnage cannot be replaced except at much higher rates, and as there is no competition, the small amount of cargo that is being shipped has had to pay increased rates as compared with last week, and yesterday 10s. 3d. was reached. For next week's loading 10s. 6d. for either Antwerp or Rotterdam is offering, but brokers are disposed to hold, and no forward business is reported.

The Mediterranean market, which had continued to show activity until the end of last week, has now collapsed, and there is practically no demand for room to any of the usual picked ports.

The Sulina market is also stagnant, but, owing to the dearth of spot tonnage, rates have slightly risen, and to-day 9s. 6d. has been paid for Antwerp.

The harvesting of wheat has now begun in nearly every part of the country, and, from all accounts, we have this year a fair average crop. The quality of the wheat is, however, much inferior to that of last year. A few truck loads have already arrived at Braila, and it is expected that in ten or twelve days shipments will be sufficiently considerable to influence our freight market favourably; its upward tendency will then be strengthened, and it is anticipated that freights will eventually reach a high level.

We have had a few showers which were needed for the maize sowings, but more rain is still necessary to ensure a good crop.

There are at present eight steamers at Braila, eight at Galatz, and six at Sulina. Depth of water in the Danube, 23ft. 9in.; depth of water on Sulina bar, 24ft.

LEVANT SHIPPING.

The steamer "Austrian" has left Manchester this week with a miscellaneous cargo of fine goods, machinery, chemicals, etc., for Constantinople, Smyrna, Syria, and Levant ports, calling at Algiers, Malta, Corfu, and Patras en route. The steamer "Bulgarian" is due in the Canal at the end of the present week, and will follow the "Austrian" on the berth. After a period of depression, due to a considerable extent to the Turco-Italian War (says the *Manchester Guardian*), there is a welcome improvement in the export trade to Turkish ports, especially in Manchester goods, the export of which has been on a very small scale for many months past.

INSTRUCTIONS FOR TURKISH SHIPPERS

The Commercial Intelligence Branch of the Board of Trade has received from the Financial and Economic Adviser to the Ottoman Government (Sir R. Crawford, K.C.M.G.) a copy of a notice issued by the Turkish "Direction Generale des Contributions Indirectes," to the effect that, with a view to facilitating the weighing and checking of goods, shippers to Turkey are asked to mark on all packages both the gross and net weights in kilograms.

STEAMSHIP MOVEMENTS.

Papayanni Line.

"Alexandria."—At Syra July 5. "Britannia."—At Pera July 1. "City of Cambridge."—At Pera July 3. "City of Oxford."—Left Alexandria for Liverpool June 30.

The s.s. "City of Oxford," for Tangier, Algiers, Malta, and Alexandria, will close for cargo at Liverpool on July 25.

Bibby Line.

Wed., July 24.	Thurs., July 25.	Fri., July 26.
Mon., Aug. 12.	Tues., Aug. 13.	Wed., Aug. 14.

LONDON, July 11.

The Settlement passed off easily. The account has been reduced. At the same time there are still a good many bulls who will have to be shaken out before the account becomes clean again. A big bull of Tintos was "gone for" last account and slaughtered. As usual, as soon as a settlement is over prices harden. Why, no one seems quite to understand. Perhaps the jobbers mark up prices to encourage buyers. The new issues have not gone well, Schroeder's Valparaiso Waterboard Bonds being the only exception. The oil company that was formed to take over the Lianosoff properties in Baku is quoted 1½. This seems an extravagant price. Another big Russian company is the Sissert. Russia appears to be the fashion to-day. The Stachyeff properties in the Uralsk are to be brought out by Chaplin, Milne, Grenfell and Company with a huge capital.

Dear Money.

Money will, they say, become dear in the autumn. This is the bankers' view, and the wish is father to the thought. We cannot see why we should have dear money. Consols are dull on a silly war scare. Canada will be borrowing some large sums in the autumn, and the Queensland Loan will be out soon. There is no demand for low-interest-bearing bonds, and such loans are bound to be failures.

Foreigners Idle.

Foreigners are idle. Bulgarians made up at 90¼, and showed no change on the account. Egyptian Unified made up ¼ lower; why, it would be impossible to say, for certainly there are more orders to buy than there are to sell. French Rentes have also fallen on the account, and German Threes have dropped to 79, at which price they look a good purchase. Greek Fours made up at 54. They have risen 4 points since last year. Italians, at 95½, made up below the quotation, which showed the bear influence. Russians are up a little. Turkish Unified are steady at 89½. The excitement in the Foreign market has been confined to Tintos. The bulls have been gone for, and to-day the stock looks like rising again.

Home Rails Improve.

Home Railways are improving a shade. Investors are gradually coming to the opinion that they might as well buy a dividend for nothing as wait until the stocks are quoted ex dividend. All the leading lines are excellent purchases. The Yankee market is uneasy. We are promised a boom in the autumn, but we shall certainly get a shake-out before this materialises. The copper position in the States grows stronger every day; the latest statistics show a decrease of 5¼ million pounds of copper, and the demand is increasing. There is nothing doing in the Rubber market. The Lampard Trust issued their report, a feature of which was the admission that they had locked up large sums of money in stocks that they could not realise. The dividend was therefore reduced.

Oil Boom?

Oil seems out of fashion at the moment, but everyone thinks that an oil boom is certain to come in the autumn, and all the big financiers are putting their money into properties with the idea of selling them to the public when they come back from their holidays. Urals are weak, and Shells also look tired. There are too many bulls in these to please us. Taman Peninsula Oil is to be boomed, and all the oil syndicates have purchased land. The Kaffir and Rhodesian markets are as dead as the Tin market. The only excitement has been the controversy that has been going on in the financial papers with regard to a criticism made by the new paper, the *Stockbroker*, on Shamvas. In the Miscellaneous market shares in the Indo-China Steam Navigation have been bought on the story that it will amalgamate with the British India. Electric Lighting shares have been firm, but Marconis are weak, and there is talk of a new issue.

Egyptians Featureless.

Very little business has been done in the Egyptian market. Agricultural Banks have been dull and offered. They made up at 5 15-16, at which price they are worth buying. Beheras are unchanged. Delta Lands made up at 15s. Delta Light Railways preference at 8¼. This is also cheap stock. Abdys at 8s. 6d. are unaltered. Salt and Sodas are quoted 15s., and National Banks were carried over at 17½. The row in the New Egyptian camp has made very little difference in the price of the shares, which made up at 10s. The news with regard to the crop is satisfactory. It is much earlier than last year, and should be of better quality, and also more plentiful.

FINANCIAL NEWS IN BRIEF.

The Imperial Ottoman Bank announce the payment of the half-yearly dividends due 14th inst. on the following Ottoman loans: 5 per Cent. Loan of 1896, 4 per Cent. Loan of 1901-5, Customs 4 per Cent. Loan of 1902, and 4 per Cent. Loan of 1904; also the dividend due 14th inst. on the 4 per Cent. Loan of 1903, which is payable at the offices of the Imperial Ottoman Bank and Messrs. Stern Bros.

The Council of Foreign Bondholders have been informed by the Council of Administration of the Ottoman Public Debt at Constantinople that the complete revenue receipts for February last amounted to £T464,003.60, as against £T519,372.98 for the corresponding period last year.

The total receipts of the Delta, Helouan and Cairo quarry branches of the Egyptian Delta Light Railways for the ten days ending June 20 were £E6,634, as against £E5,329 for the corresponding period of last year.

The Société Anonyme des Chemins de Fer de la Basse-Egypte is increasing its capital from 4,500,000 to 8,000,000 frs. by an issue of 7,000 new deferred shares of 500 frs. each.

Anglo-Persian Oil.—The transfer books of the Cumulative Six per Cent. Participating Preference shares will be closed from 17th to 30th inst. inclusive.

The Hungarian Shipping Company of the Levant has decided to increase its share capital by 1,800,000 kronen, to 6,000,000 kronen. The new shares are to be taken over by a syndicate headed by the Ungarische Bodencreditbank, of Budapest.

Two new companies have been sanctioned by the Egyptian Government, the Egyptian Kodak Company, and the Central Real Property Company.

The meetings of shareholders of the Etablissements Orosdi-Back, held on the 5th inst., passed a resolution increasing the capital of the company from 10 to 13½ million francs by the creation of 35,000 new shares of 100 frs. each.

NEW COMPANIES.

E. Del Mar.

The well-known business of druggists carried on in Egypt by Mr. E. Del Mar is about to be converted into a limited liability company under Egyptian laws with a capital of £E100,000 in shares of £E4 each. The services of Mr. Del Mar will be retained as managing director, and the board will include Mr. Max Fischer, who was formerly proprietor of drug stores in Alexandria and Cairo.

Societe Fonciere Nord-Africaine.

Under the above title a private company has been registered in Cairo with a capital of £E20,000 in 5,000 shares. The objects are stated to be: To buy and exploit agricultural and building lands in Egypt, the Sudan, and Europe. The founders and subscribers are Riad Bey Ghali, Hosni Bey Ghali, Maitre Guilhamou, Maitre Linant de Bellefonds, Messrs. André and Anton Kreichgauer, and Mr. Limongelli. The company begins operations by taking over the estates of the Mission de l'Afrique Septentrionale.

Ottoman Empire Tobacco Co., Ltd.

Registered July 4, by B. Martin, 128, Jermyn Street, S.W. Capital, £2,500, in 1,000 ordinary shares of 10s. each, 1,000 preference and participating shares of £1 each, and 20,000 founders' shares of 1s. each. Objects: To take over the business of a tobacco blender or cigarette manufacturer carried on by G. P. Singellos at 128, Jermyn Street, S.W. Private company. The directors are to number not less than three nor more than five. B. Martin is first director. Qualification, 100 preference or ordinary shares. Remuneration, as fixed by the company. Registered office, 128, Jermyn Street, S.W.

Anglo-Servian Minerals Finance Syndicate, Limited.

Registered July 5, by Church, Adams, and Prior, 11, Bedford Row, W.C. Capital, £5,000, in 4,750 "A" shares of £1 each and 5,000 "B" shares of 1s. each. Objects as indicated by the title. Private company. The first directors (to number not less than three nor more than eight) are A. Salter, J. M. Lambie, E. H. A. Newman, F. R. Quilter, and A. E. Salter. Qualification, 100 shares. Registered office, 118, City Road, E.C.

NOTES FROM ALEXANDRIA.

(From Our Own Correspondent.)

Alexandria, June 28.*

The market has been unfavourably impressed by Lord Kitchener's most recent scheme, which threatens to produce an upheaval in the economic conditions. No one doubts the good intentions of the legislator, but it is frankly stated that the five feddan law has not been sufficiently studied, and is not adapted to existing conditions. It needs revision, because, if applied as it stands, it would have disastrous effects on the situation. In the first place, the enforcement of the law would necessitate the immediate repayment of £6,000,000, which have been lent to the fellah. With interest, judicial expenditure, etc., the sum would be nearer nine than six millions, in order to obtain which it would be necessary to expropriate thousands of fellaheen, bringing in its wake a depreciation in rural values. The effect would be to rush the country into a grave financial crisis without benefiting the fellaheen.

There is another point in connection with this law that has affected the Bourse. Thus, for instance, the Agricultural Bank of Egypt would no longer have a raison d'être. It was created with a view to help the small farmer, and now it is proposed to deprive it of this clientèle. The result would be that its sphere of action would be considerably reduced. The law will also affect loans on standing crops, such as cotton, and will, moreover, deal a death-blow to the sales by our land companies to the small holder.

These are some of the reasons which have aroused the opposition of the Sidi Salem, the Union Foncière, the Gharbieh Land, the Behera, the Societé Agricole et Industrielle d'Egypte, the United Egyptian Lands, the Aboukir, New Egyptian, etc., etc. It is practically impossible to find buyers in Egypt for the shares of any of these companies.

I learn that the Cour d'Appel Mixte has refused to sanction this strange law, and has ordered its re-examination in November next.

Crown Brewery.

This company has published its report for 1911. The sales amounted to 26,104 hectolitres as against 21,615 hectolitres in 1910. The net profits, after deducting £62,069 for redemption, amount to £E6,507½; the dividend has been fixed at 9 frs. for ordinary, and 4 frs. for draw shares, corresponding at present prices to a revenue of 8 per cent.

Comptoir Financier et Commercial

The above company has now a lawsuit against the Bank of Mitylene in connection with a credit of £80,000, and there remains to be settled a case involving £105,000, between the Comptoir on the one hand and the Bank of Athens and the Banque d'Orient on the other. Both these cases are echoes of the Zervudachi failure. The Comptoir is now assured of assets enabling it to distribute, in case of liquidation, £1½ per share. As the price of such shares is only £1, the moment is opportune for buying.

Alexandria, July 4.

The position of the market is improving. The demand is extending every day, and, if there is very little business to record, it is owing mainly to the absence of offers. It would, as a matter of fact, be absurd to sell at the present time when quotations are so low. A number of sales by auction have taken place, and further big *dossiers* of the aggregate value of £100,000 are to be put up to auction in the next fortnight, at the request of Messrs. Salinas and the Comptoir National d'Escompte. It is expected that the shares will be easily absorbed without having any effect on prices. The shares mostly in demand just now are Cassa di Sconto, Comptoir, and Salt and Sodas, which show an advance on the week.

Salt and Soda Company.

The Egyptian Salt and Soda Company, Limited, has obtained excellent results during the past year. It has also been successful in obtaining two concessions from the Egyptian Government. One is the reduction of the tax levied by the Government to 4 per cent. instead of 8 per cent., as from January 1, 1912, and it has secured a number of other privileges on the occasion of the renewal of its concession for fifteen years.

Cassa di Sconto.

The new board of the Cassa di Sconto et di Risparmio has decided to write off the loss in assets incurred caused by the former management by reducing the capital to the extent of one-fourth. Moreover, they have succeeded in buying in 20,000 Privileged shares at 100 francs. This operation has allowed them to economise 700,000 francs of arrears of dividend and of redemption premium. In order to buy in these 20,000 Privileged shares, the National Bank of Egypt advanced the sum of £80,000 at 4 per cent., which reduces by 40,000 francs the annual interest paid by the Cassa to the Privileged shareholders. The position of the company has been greatly improved, but, unless serious economies are effected promptly, the shareholders will have to wait a long time for their dividend.

The Five Feddans Law.

The British, French, Italian, and Greek Chambers of Commerce, the banks, and the principal merchants have united in making a protest against the new law which renders holdings of less than five feddans not liable to distraint. All have recognised that the intentions of the Government were excellent, but that the enforcement of this law would cause considerable injury to the trade and agriculture of the country. Its application, in fact, would be nothing less than a calamity for Egypt, as it would practically ruin the small landowners, while injuring the interests of the large proprietors, and depreciating the value of land. Germany has already protested against the application of the law, and other Powers are expected to follow suit. Yesterday, the representatives of the import and export trade were received by Lord Kitchener, who was asked to suspend the execution of the law. His lordship replied that the idea of reducing the area of land not liable to distraint from 5 to 2½ feddans was being entertained. Furthermore, Lord Kitchener said that he was prepared to postpone the application of the law for three years. I have been assured by several members of the Legislative Council that the law would be rejected by an overwhelming majority by that body.

* Delayed in transmission.

BANK OF EGYPT.

The Senior Official Receiver and Liquidator of the Bank of Egypt, Ltd., notifies that he is about to make a further payment in part redemption of the loan certificates of 3s. in the £ on their face value, representing a further 1s. 6d. in the £ on the amount of the original debt. This will make a total dividend to date of 15s. 6d. in the £ on the original debt and a redemption of the loan certificates to the extent of 11s. in the £. The payment of 3s. in the £ will be made on the 10th inst. to the holders of the loan certificates.

MR. ZERVUDACHI'S FAILURE.

At a meeting of the creditors of Mr. G. Zervudachi, which took place on June 25, Mr. Meguerlitchian, one of the Syndics, stated that the Bank of Abyssinia had, through Mr. Rowlatt, Governor of the National Bank of Egypt, offered £5,000 for the Abyssinian gold mine belonging to Mr. Zervudachi, £500 being offered for an option of one year. The mine had cost Mr. Zervudachi £50,000; and as he had refused £20,000 a few months ago, the Syndics had asked for that sum and a share in the deferred shares. Pressed by Mâitre Mercinier, the Syndics admitted that they had not consulted Mr. Zervudachi as to the value of the mine. Mâitre Simond expressed the opinion that it would be advisable to accept the bank's offer, but asked the Syndics to insist on obtaining an agreement that a percentage of profits on the gold extracted should be reserved for the creditors. Replying to questions, the Syndics stated that the sum of £50,000, which the mine had cost Mr. Zervudachi, included the cost of handsome presents for the Emperor and Empress of Abyssinia. A delegate had been appointed to look after the mines at a salary of £300 a year. It was difficult to get a man for the situation in such a wild country. There were no materials at the mines for working them. After the verification of some debts, the meeting was postponed till November next.

CREDIT LYONNAIS IN RUSSIA.

Our Odessa correspondent writes:—The establishment of the Anglo-Russian Bank in St. Petersburg and its alleged intention of opening branch houses in several provincial centres appears to have aroused a competitive activity on the part of the Crédit Lyonnais, which, it is announced, is about to establish *filiales* at Kieff, Tiflis, Saratoff, Tashkent, Irkutsk, and Vladivostok. This enterprising French bank has for over twenty years been solidly established in St. Petersburg, Moscow, and Odessa. The Odessa branch employs a staff of eighty persons.

There is a veritable plethora of banks in this southern centre, but this notwithstanding, the solidity and repute of the Anglo-Russian Bank would ensure the success of its extending its operations to South Russia.

TURKISH FINANCES.

A leading article has just been published by the *Jeune Turc* (writes the *Financier*) in reference to the reserve fund held by the Public Debt Commission. The newspaper states that the Muharrem decree of 1881 does not provide for the establishment of a reserve fund for the Public Debt. The fund has been formed according to a decision of the delegates on the Commission, who are also able to annul it. Reference is also made to the increase in the receipts and the surpluses, and the newspaper recommends the Commission to invest the reserve fund, which amounts to about £T2,000,000, in Turkish Treasury bills or in mortgages on Government buildings, after the adoption of the Real Estate Bill by the Chamber. In commenting on these suggestions, the *Frankfurter Zeitung* remarks that from the standpoint of the State creditors of Turkey, the present period for such a discussion seems to have been selected at a scarcely appropriate time, even if the opinion should only reflect that of the newspaper in question. The taking over by the Public Debt Commission of Treasury bonds would substantially be equivalent to a loan operation, which cannot be the duty of the Commission, and the granting of mortgages on State buildings also requires mature consideration.

THE WAR AND INSURANCE IN TURKEY

Judging by the amount of special insurance placed in London, a good deal of uneasiness seems to be felt by merchants at Smyrna. According to the *Times*, large quantities of merchandise have been covered within the past few days against the direct risks of riots, strikes, civil commotions, civil war, war, and bombardment. The rate generally quoted was 30s. per cent. for cover during 12 months. In this connection a contract was made on Tuesday whereby the underwriters agree to pay the loss that a merchant suffered through inability caused by a bombardment of the port to ship figs during the present month, August, and September. For this indemnity 50s. per cent. was paid.

Goods have also been covered against the direct risks of riots, civil commotion, etc., at Constantinople, the premiums quoted being from 15s. to 20s. per cent.

BANKING FACILITIES AT ALEPPO.

Referring to existing banking facilities at Aleppo, the U.S. Vice-Consul states that, besides the Imperial Ottoman and the Deutsche Orient Bank, which have regular branches, several other well-known banks have correspondents in Aleppo, among whom may be cited the following firms: Rizcallah N. Gazale, Nametallah and Desiree Homsy, Nasri P. Homsy, Albert Homsy, Joseph Assouad et Frères, and Zollinger and Co.

The present war has affected the market, but no failures of any importance have occurred, and so far the situation looks financially healthy.

COMPANY MEETING.

EGYPTIAN HOTELS.

The fifteenth annual general meeting of the Egyptian Hotels, Ltd., was held on Tuesday at the registered offices of the company, 11, Ironmonger Lane, E.C., Lord Claud Hamilton, M.P. (the chairman) presiding.

The Assistant Secretary (Mr. A. Wright) having read the notice convening the meeting and the report of the auditors,

The Chairman expressed regret at the unavoidable absence of three of his colleagues on the Board, namely, Mr. Hug, Mr. Baehler, and Mr. Harrison. Proceeding, he said the accounts for the year ended April 30 last do not show such a satisfactory result as those of the previous year. This is attributed by the managing director in his report to the considerable falling off in the number of tourists compared with the previous year. This, he considers, was brought about largely by the groundless fear that the war between Italy and Turkey might so affect Egypt as to inconvenience visitors to that country. Another contributing cause was that false rumours were communicated to the papers as to health conditions in Egypt, which did considerable harm before they were officially contradicted. The season began very late, but, fortunately, it extended to the end of March, and during the greater part of that month Shepheard's Hotel was full to overflowing. This hotel has, as usual, occupied the premier position amongst the hotels in Egypt, and the great comfort and luxurious accommodation offered to their clientele have been greatly appreciated.

The Ghezireh Palace building has interesting associations as the palace of Ismail, and contains much valuable and artistic furniture and fittings which originally belonged to that Prince; but the scattered disposition of the buildings renders it unsuitable to the requirements of modern hotel business. The directors in Egypt have therefore come to the conclusion that it is desirable to pull down the hotel and replace it by a modern structure, for which much of the existing material and equipment will be useful. As a consequence of this rebuilding, the Egyptian Government has decided to build a quay along the Nile in front of the hotel, which will greatly add to the charm of the Ghezireh Hotel. The company will cede to the Government a strip of land for this purpose, for which, and for other consideration, a suitable compensation has been agreed to be paid by the Government. The new bridge over the Nile, now practically completed, brings the Ghezireh Hotel and estate within easy distance by tramcar or on foot from the centre of Cairo, which is of great advantage to visitors. The Egyptian Board has decided to repair and reorganise the Casino and to transform it into a first-class restaurant. It will serve to retain and encourage visitors to Ghezireh during the next season. As regards the Semiramis Hotel, it has become increasingly popular under this company's management, and shows a substantial increase in receipts. It is the policy of the Egyptian Board to maintain it as a strictly first-class family hotel. It is the intention of the Egyptian Board to hand over to the Government the water supply for the villas at Ghezireh and to the Gas Company the supply of electricity for the roads and villas on the estate.

The profits of the hotel were £21,651 8s. 6d. (compared with £27,668 10s. 9d. in the preceding year), and after meeting the expenses in London and providing for income-tax there remained a profit of £18,194 0s. 5d. The amount brought forward from last year was £285 10s. 2d., making a total of £18,479 10s. 7d. The Debenture interest amounted to £3,834 0s. 7d., and the contribution to the sinking fund for redemption of Debentures to £9,471 10s. 3d., making a total of £13,305 10s. 10d., leaving a balance of £5,173 19s. 9d. It is proposed to transfer from reserve account £1,000, making a total sum available of £6,173 19s .9d. Out of this sum the Preference dividend will absorb £5,750, leaving a balance to carry forward of £423 19s. 9d. Turning to the balance-sheet, it will be noted that the Debenture issues now amount together to £73,100. They were originally £280,000. The sinking fund for redemption of Debentures, which is in reality a reserve created by paying off Debentures out of profits, now amounts to £51,624 15s. 7d. The total creditors of the company other than Debenture-holders amount to £29.000 17s. 2d. On the other side of the balance-sheet the sum of £209,865 17s. 2d. is stated as the value of the company's freehold and leasehold land and buildings. The true value of the property is considered by the Egyptian Board to be greatly in excess of this amount, the land at Ghezireh alone representing in value a very large proportion of the figure stated in the balance-sheet for both the land and the buildings. I now beg to move: "That the directors' report and accounts for the year ended April 30, 1912, as submitted to the shareholders, be received and adopted."

Sir William B. Peat seconded the motion, which was carried unanimously.

The chairman next moved, and Sir William Peat seconded: "That a dividend of 5 per cent. on the Preference shares of the company for the year ended April 30th, 1912, as recommended by the directors in Egypt, be and the same is hereby declared payable on and after Wednesday, the July 10th, 1912."

This resolution was also unanimously adopted, and it was further resolved: "That, as recommended by the directors in Egypt, the sum of £1,000 be transferred from reserve account to the credit of profit and loss account."

The retiring directors, Lord Claud Hamilton and Sir William Peat, were re-elected, and, on the proposition of Mr. W. H. Walker, seconded by Mr. A. Wright, Messrs. Turquand Youngs and Co. were re-elected auditors of the company for the ensuing year at a remuneration of 50 guineas.

The Chairman: I beg now to propose: "That the shareholders desire to record their high appreciation of Mr. Charles Baehler's management of the hotels, and they also recognise and appreciate the assistance rendered by his staff." He remarked that this expression of appreciation was well deserved by Mr. Baehler and his staff.

The motion was duly seconded and carried, and Sir William Peat moved: "That a vote of thanks be accorded to the Chairman for the great assistance he has rendered in the interests of the company since its formation and also for presiding."

Mr. Walker seconded the vote, which was unanimously accorded, and, the chairman having briefly acknowledged the compliment, the proceedings terminated.

The earnings for the week ended June 22 of the Orientalische Eisenbahnen-Gesellschaft amounted to 286,730 frs., or 8,527 frs. more than in the corresponding period of last year. The earnings from January 1 to June 22 total 7,738,669 frs., an advance of 1,090,206 frs. on the corresponding period of 1911.

NEWS FROM ALL SOURCES.

The North German Lloyd's new line from Venice to Alexandria, instead of from Genoa-Naples-Alexandria, will be inaugurated on September 20.

The final results of the Tayiba Farm (Sudan) cotton crop were an average yield of 5.3 kantars for Geddan, maximum 7.9 and minimum 3.2 kantars.

During the first four months of 1912 the Kosti-El Obeid Railway carried 8,000 tons of Kordofan gum.

The American Levant Line, which has been organised, as reported by us, to carry on a direct passenger and freight service between America, Egypt, and the Black Sea, will have a fleet of four steamers, the first of which sails this month.

The Bulgarian Minister of Finances invited tenders recently for the supply of 5,000 gold coins of 100 frs., and 75,000 of 20 frs. The lowest offer was that tendered by a group composed of the Banque Générale de Bulgarie, the Hungarian Bank of Commerce at Budapest, and the Société d'escompte de la Basse-Autriche, Vienna. The coins will be minted at the Royal Hungarian Mint at Kremnitz.

The Egyptian Public Works Ministry announces that owing to the inconvenience caused by there being two stations named "Khanka" and "Khanka Sewage Farm Siding," it has been decided to, in future, call the latter "Gebel el Asfar."

Messrs. Lancaster, Sasson and Co., of Alexandria, were the successful tenderers recently for the supply of brass condenser tubes to the Egyptian coastguards.

The Egyptian Engineering Company of Cairo were the successful tenderers recently for the supply of an ice-making plant to H.M. Coastguard cruiser "Noor el Bahr," Port Tewfik.

Messrs. J. Compton and Sons, Meredith Austin and F. Ratcliff, of Cairo, and Messrs. Thos. Hinshelwood and Co., Alexandria, were successful tenderers recently for the supply of raw materials, etc., to the model workshops at Bulay and Assiut, and to the training school at Mansura.

The Sudan Government forwarded for examination a sample of sesame seed to the Imperial Institute, London, and the report has now been received by the authorities. According to it the clean seed contained 4.7 per cent. of moisture, and yielded 51.0 per cent. of oil. This yield of oil is normal for sesame seed, and is quite satisfactory.

The sample was submitted to brokers, who stated that it was superior to the fair average grade of sesame seed. They valued it at about £17 per ton delivered to European ports, with large white Bombay seed at £19 per ton, and yellow Chinese at £18 7s. 6d. per ton.

Destructive forest fires are reported from various parts of Thessaly and the island of Euboea. Some woods in an estate belonging to the Crown Prince near Larissa have been destroyed.

The death is announced, in his sixty-fourth year, of Mr. Joseph Battersby Duckworth, of Messrs. Muir, Duckworth and Co., cotton merchants, Liverpool, and president of the Duckworth Company, which has large business interests in Egypt and the Southern States of America. Mr. Duckworth was a director of the London and Lancashire Fire Insurance Company and of the Standard Marine Insurance Company.

THE EASTERN BANK, LIMITED.

Head Office: 4, CROSBY SQUARE, LONDON, E.C.

NOTES OF THE WEEK.

The domestic crisis in Turkey is dealt with at greater length elsewhere. While it is closely connected with the mutiny at Monastir, which in turn has influenced the revolt in Albania, the latter has now assumed such proportions that it may not be influenced immediately by the change of Government in Constantinople. According to the latest reports the whole province north and west of Uskub is disturbed, and trouble is continually threatened in the south. The main force of insurgents under Isa Boletin was reported last week to have been dispersed by Fadil Pasha, but the movement is kept alive by the presence of numerous small bands, who prefer guerilla warfare to any definite trial of strength with Turkish troops. These tactics render the task of suppression all the more difficult, even if the Porte could rely implicitly on the loyalty of the forces that have been sent against the Albanians. A significant defection is that of Ali Fehmi Bey, the Albanian Commander of Gendarmerie at Skutari, who had been sent with a detachment to Alessio to take over the command of the troops after their recent reverse at the hands of the insurgents, and at the same time had been entrusted with a mission to the Albanian leader at Kroja. Speaking in the Chamber on Monday, the Grand Vizier maintained that the movement had a personal and not a national basis, and that the Albanians did not wish to detach themselves from the Empire. He warned them, however, that if they entertained any such purpose, its realisation would mean their national extinction. The Albanians have already announced that their quarrel is with the Government as representing the Committee of Union and Progress and not with the Empire. They declare that the present revolt was planned for last year, but was postponed in the hope that the Liberal Entente might be returned to power at the elections, and that their demands would then be granted. The action of the Committee at the elections left them with no alternative to an appeal to arms, and to-day, whether in the field or not, every Albanian, they urge, sides with the insurgents against the Government. There is, without doubt, some ground for the latter statement in view of the action of the Turkish authorities in transferring the families of the rebels to Uskub. This action has caused the widest resentment, and it will be one of the first duties of the new Cabinet to redress this particular grievance and to satisfy the Albanian demands if a general rising is to be averted.

The British Government was again called upon to explain its attitude towards the Trans-Persian Railway scheme, when, on Monday in the House of Lords, Lord Curzon inquired as to the policy of the Cabinet and the views of the Government of India in relation to the proposal. He contended that in interesting themselves in the appointment of members of the Société d'Etudes and in setting their diplomatic machinery to work in the interests of the scheme the Government's attitude had been more than one of benevolent neutrality, and really one of implied support, if not of positive encouragement. They might be starting from these inchoate proceedings, and might end by finding that they were more or less committed to a scheme that, right or wrong, involved a more fundamental change of British policy in the defence of India than any event which had taken place in that country since the days of Clive. Because overland communication was regarded as being inevitable, it did not follow that the Trans-Persian railway ought to be built now or that Great Britain ought to take an active part in joining in at the present stage. The policy of the Indian Government for the best part of a hundred years had been that India must be surrounded by a belt, whether of mountains or of desert, which it was impossible to cross except at a great expenditure of men and of money. If this railway were built, and its construction were right, then all that policy was wrong. Lord Curzon did not consider that the railway would benefit Anglo-Indian trade with Persia, the value of which was less than two millions sterling per annum, while the greater part of it was taken from Indian ports to Persian ports. In the course of the discussion Lord Inchcape pointed out that India stood in need of money for the development of her own railways and would have none to spare for the Trans-Persian scheme. Replying to Lord Curzon's speech, Lord Morley challenged much of the picture that he had drawn. He repeated the assurance given last week by Sir Edward Grey that the Government would be justified in dealing with perfect freedom with the report of the Société d'Etudes. The prospects of financial success did not appear very attractive, but he held that improved communications alone would solve many of Persia's difficulties. It was, however, in his closing remarks that Lord Morley gave what is probably the best excuse for the Government's attitude towards the Société d'Etudes. The Government, he pointed out, had no desire to make a railway in Persia at this moment, but they might well wish to guard against the possibility of finding some morning that Persia had placed some important concession elsewhere, which would be damaging to our political interests and a strategical menace to our frontiers. They desired, therefore, to have the option to make a railroad and to assert themselves in case Persia should desire to place a concession elsewhere. In other words, the Trans-Persian railway scheme will, in the

Digitized by Google

opinion of the Government, not materialise, but the existence of the Société d'Etudes will postpone the danger of the line being built by others for the deliberate purpose of threatening India. Here, no doubt, the Government is on sound ground; but we should not be surprised to learn that the excuse had been discovered after the negotiations with the financial groups concerned.

In the interval since Lord Curzon counselled the readers of THE NEAR EAST to watch for developmensts in the Trans-Persian Railway scheme the proposal has been well ventilated, and there is no longer any danger —as seemed possible two months ago—of Great Britain finding herself committed to a scheme that had not received adequate attention from either the Government or the public. Before we leave the subject for the present it may be well to recapitulate the military arguments against the proposed railway as they have been set out during the week by the military correspondent of *The Times*. According to this authority the military objections, which have not yet been answered, are based upon the broad and general grounds that our military system is not fitted to bear the additional strain which this railway is liable to impose upon it. If the Indian Army is exposed to a conflict with a great military Power, our whole military system must be revolutionised and at great expense. With the railway built Russia would be able to deploy within three months such a powerful force on or near our frontiers that the Army in India would be unable to resist it. Nor is it held that most of the risks of the lines would be obviated by bringing it down to the Persian Gulf, where it might be controlled from the sea. The writer points out that we have not always enjoyed undisputed sway upon the sea in the Indian Ocean; and in future, owing to the enforced concentration of our Navy in home waters, the command of that ocean may, temporarily at least, pass to the Power which takes its measures to secure it, either by the clever initial distribution of its ships or by the subsequent addition of some ally to its side. To sum up, "if we allow our historic frontiers, whether the silver streak or the deserts of Baluchistan, to be traversed by a railway, England and India become Continental Powers, and, like Japan, will inevitably be compelled in the end to adopt the only military system open to Continental Powers in the present situation of the world." Those who quote in connection with the Trans-Persian Railway scheme the onward march of civilisation and the necessity of adapting military plans and strategy to meet changing conditions must face the only alternative to our volunteer military system.

Opposition to the Trans-Persian Railway proposal, however, entails no lack of interest in other railway schemes and commercial enterprises generally in Persia. It is becoming increasingly evident that if the country is to survive its political bankruptcy it will require a more solid basis for industrial and commercial development than mere financial accommodation. Efforts are now being made by the British Minister in Teheran to secure the opening of the Bakhtiari trade route from the capital to Mohammerah. All transport on this road has recently been stopped, and the Bakhtiaris have now agreed to an arrangement which will impose upon them the duty of securing the safety of the trade route and maintaining good relations with the Sheikh of Mohammerah. Responsibility with autocratic authority is vested for this purpose in Sardar Jeng as Governor of Behbehan, and he receives the sum of £8,000 from the Imperial Bank of Persia for initial expenses. In the north the Russian programme now includes a subconcession for the navigation of Lake Urumiah and the extension of the rails from the terminus at Russian Julfa across the Araxes to Persian Julfa. Simultaneously with any steps taken by the British to push through the Khoremabad railway project, the Russians will press forward the Julfa-Tabriz-Teheran line, and in all probability a railway from Julfa to Urumiah. The Cossack force at Tabriz is now to be increased, with the consent of the Persian Government, to 700 men, with two additional Russian officers, but the brigade remains, as heretofore, under the authority of the Persian Minister of War.

The main interest in the Egyptian conspiracy, so fortunately nipped in the bud before the perpetration of any actual outrage, will turn on the measure of complicity, if any, of the Nationalist party's executive. As far as can be gathered from the information that has reached this country, the four chief conspirators first attracted attention by a visit to the tomb of Wardani, the murderer of Boutros Pasha, where, it is stated, they were overheard to swear to rid Egypt of all whom they considered as its enemies. Three of the four undertook to account for the Khedive, Lord Kitchener, and the Prime Minister, while the fourth was to hold himself ready to act when any of the others had failed. The latter has given evidence against the others and has been released. Imam Wakid, who would appear to have been allotted the task of carrying out the conspirators' intentions on Lord Kitchener, is said to have shadowed the British Agent on more than one occasion, but the movements of all four were followed by the police, and the arrests were made apparently at the very moment when the final details of the plot were under discussion.

As will be seen from the Bulgarian letter in this issue, a highly interesting interpretation is placed by our Sofia correspondent on the recent mission sent by the Bulgarian Government to wait on the Tsar at Livadia. The actual dispatch of the mission predicates for it considerable importance in the eyes of King Ferdinand and his advisers, and there is nothing inherently improbable in the explanation now given. It would be impossible for the Balkan States to remain idle spectators of current developments in Turkey, and no discussion amongst themselvs would be allowed to bear fruit until some attempt had been made to sound one or both of the neighbouring Great Powers. A visit of the Tsar to Bulgaria, even for such an unexceptionable object as the consecration of a church to the memory of the Emperor Alexander II., would be an event of first-class significance in Balkan affairs, from which the two other objects of the mission would follow almost as a matter of course. The necessity—which can hardly be challenged—of postponing such a visit at the present time entailed a non-committal answer regarding both the question of a matrimonial alliance between the Bulgarian Royal House and the Russian Imperial Family and the request for Russian sanction for a forward movement of the Balkan States. If Bulgaria or its monarch felt the least pique in the apparent failure of the mission, it would be natural to seek solace in Vienna and Berlin. But the chief inference to be drawn from these episodes is that, however much they may be tempted to play with edged tools, the Powers still hesitate to countenance any measure that is calculated to submit the Near Eastern question to the arbitrament of war.

ENGLISH BOYS' SCHOOL,
CONSTANTINOPLE.

The New School Building will be opened on September 15th. The School House has accommodation for forty boarders. Resident staff, six English masters and English matron.
Healthy situation on Nishantash Hill, facing open country; drainage sanitary fittings, baths and lavatories by English sanitary engineers
Preparation for Commercial Education Examination of London Chamber of Commerce. French and Turkish visiting masters. SPECIAL ATTENTION TO FRENCH. Turkish and Latin optional. English games. Fees moderate.
PROSPECTUS can be had on application to the Chairman of the School Committee—
A. T. WAUGH, Esq., *British Consulate-General,* **Constantinople.**

ENGLISH SCHOOL,
NICOSIA, CYPRUS.

Preparation for Public Schools and for Commerce
Modern Languages. Turkish and Arabic if desired
ENGLISH GAMES.
Complete charge taken. Very healthy climate. Boys remaining for the summer holidays are taken to the Mountains. Moderate Terms.
Apply REV. CANON F. D. NEWHAM, B.A.Cantab., Director.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)

Constantinople, July 13.

Unrest in the Army.

The situation has, if anything, changed for the worse, owing to the steady extension of the military movement against Mahmud Shevket Pasha and the extremist members of the Committee of Union and Progress. As far as can be gathered from the rather vague accounts that have reached the capital, which is sedulously deprived of official information concerning the army movement, there has been a demonstration of sympathy with the Monastir mutineers at Smyrna, where the army, six divisions strong, under Abdullah Pasha, is now concentrated. Abdullah Pasha is said to be acting in concert with the officers of his force, who are known to be hostile to the Committee. At Damascus on July 6 two officers were imprisoned by the commandant of the Damascus A. Corps for political demonstrations. Their release was demanded by the majority of the officers of the garrison. It was at first refused, whereupon the garrison appears to have gone on strike, and adopted so threatening an attitude that the delinquents were released. Next the commandants of one or two isolated battalions on the Anatolian coast line reported that their officers demanded the same conditions as the Monastir mutineers.

In Europe the situation is no better than in Asia. On the 10th inst. the Ishtip division of Redifs, which had recently been called out and sent to Mitrovitza to watch the Albanians, struck and demanded special trains to repatriate them. The crops, they said, had to be reaped, and they did not wish to fight the Albanians. The local commandant prevailed on them to wait a day longer, as their departure would have left the depôt of arms and his artillery park unprotected. Next day troops came up from Uskub, and the Redifs went joyfully home. At Monastir the situation has improved, but there is no direct communication with the town by wire. The same is the case at Skutari, in Albania, which can only be reached by the private person by means of the Constanza wires. There is also "something happening" at Salonika, the telegraph offices only accepting "urgent" wires for this town and for Smyrna.

Mahmud Shevket Pasha.

On the night of the 10th inst. Mahmud Shevket Pasha resigned the portfolio of War on the ground that it would be more fitting were the carrying into execution of the new law concerning the punishment of officers and soldiers found guilty of taking part in political demonstrations entrusted to another Minister. Hurshid Pasha, the Minister of Marine, was appointed acting-Minister of War pending the discovery of a successor. Nazim, Torgud Shevket, Abdullah, Ibrahim, and Tatar Osman Pashas are all spoken of as possible successors to Mahmud Shevket. Torgud and Nazim have both refused, but it is hoped that the latter, who has been closeted for hours with the Council of Ministers of late, may reconsider his refusal. It is to be hoped that the Government may find a War Minister quickly, otherwise the situation will become more strained than is now the case. There is, however, some hope that the division existing between the two sections of discontented officers, one of which complained of military grievances and asked no more than the retirement of the War Minister, while the other had a definite political programme, which included the resignation of the Cabinet, the overthrow of the Committee, and the dissolution of the present Chamber, may bring about a compromise and save the country from a *pronunciamento*. All will now depend on which of the two sections of officers is most in earnest. Of the "Committee" officer little is heard nowadays.

Mahmud Shevket's resignation was followed by that of his cousin and brother-in-law, Hadi Pasha, Chief of the General Staff, who replaced Izzet Pasha when the latter went to Yemen. Other high officers are also expected to resign.

The career of the ex-Minister of War, who has been called the "Dictator" of Young Turkey, presents some interesting features. Somewhat reserved, hard working, and a strong upholder of military tradition, he was little known save to General von der Goltz and a few high German and Turkish officers till the Turkish revolution, which found him Governor and Military Commandant at Uskub. He threw in his lot with the Young Turks, replaced Hilmi Pasha on the Macedonian Financial Commission, and when the counter revolution broke out at Constantinople was invited by the Young Turks to lead their forces against the mutineers. He accepted without any hesitation, effected the capture of Constantinople on April 24, 1909, and thenceforward was one of the most striking personalities of the new régime. Energetic, a good rough-and-ready speaker, a thorough patriot, he was, if dictatorial, no dictator. One may doubt, indeed, whether the idea of dictatorship ever entered his head. His capacity for work was immense, and he laboured unceasingly and with considerable success for the reorganisation of the Ottoman Army. A quarrel with Djavid Bey concerning the examination of the details of military expenditure by the "Cour des Comptes," to which he objected, was the cause of strained relations between him and the Committee Left, which afterwards suspected him of having had a hand in the "Committee insurrection" of 1911. He always denied this, and towards the end of last year was accused by the discontented elements in the army of having been too subservient to the Committee, and of having consented to the promotion or to the passing over of officers on political grounds. His reluctance to accept expert control of the army accounts was another cause of ill-feeling, several officers having feathered their nests in the absence of a competent board of accountants. Such were the causes of his fall. The Ottoman army will in the future forget his mistakes of policy, and look on him as its first native reorganiser.

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, July 14.

A Disquieting Canard.

A disquieting report was current here a few days ago to the effect that orders for the immediate mobilisation of the South Russian garrisons and the Black Sea Fleet were hourly expected. There was a temporary panic on the Bourse, and the newspaper offices were bombarded with urgent inquiries to which the editors could give no satisfactory reply. Twenty-four hours later the report was formally and officially contradicted from St. Petersburg. The incident goes to show with what nervous apprehension the public regards the dangerously precarious situation in the Near East. It was not unnaturally assumed, for the moment, that, as a result of the Imperial interview in Baltic Port, Russia was about to adopt coercive measures to compel Turkey to accept the mediatory good offices of the Powers and come to terms with Italy.

The Baltic Port Event.

Both the metropolitan and provincial journals express their satisfaction with the fact that there was no exchange of toasts and speeches at the Imperial meeting, which, it is generally believed, leaves the political situation unchanged. One or two of the leading organs hint very plainly that the cordiality of the réunion of the German and Russian monarchs at Baltic Port must not be taken as indicative of a reciprocatively friendly sentiment between the two nations.

It is somewhat noteworthy that these leading Russian journals should have chosen the occasion of the German visit to dilate upon the naval counterpoise which Russia will oppose to Germany five years hence when her new Baltic Fleet is in active commission, and her Black Sea Fleet is ready for any sudden eventuality that may arise in the Near East. England cannot help but regard with the liveliest interest the creation of a huge Russian navy in the Baltic, given that during the next quinquennium there be no change in the existent grouping of the Great Powers and in the present alliances and ententes. Russia will then be in a position, should a certain and long-looming eventuality supervene, and as a faithful friend of England and the bounden ally of France, to compel Germany to guard her Baltic coast with the whole, or nearly the whole, of her North Sea Fleet.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 6.

A Nine Months' Retrospect.

When Lord Kitchener came to Egypt as British Agent the internal political atmosphere was far from satisfactory. The deplorable Moslem-Copt controversy was still raging; the Nationalist party was still indulging in active opposition to the authorities; the vernacular Press had abated very little the tone of its articles; and the efficiency of the administration and the attitude of the Ministers towards questions which required strong handling left much to be desired. On the top of that, but a few days after Lord Kitchener's arrival, there broke out the Italo-Turkish War, and with the scene of operations at Egypt's door there was at one stroke created a situation which the existence of a large Italian colony on the banks of the Nile and the community of religion of the population of Egypt and the other combatant Power rendered pregnant with serious possibilities, and the successful handling of which was calculated to tax the resources of the most experienced and able statesmen. Moreover, as a result of the previous régime, the native and foreign colonies had lost all confidence in the British Occupation, and European prestige had unmistakably fallen to its lowest ebb, whilst economically Egypt's condition was giving rise to great anxiety.

All this has now undergone a complete change for the better, and the explanation of the metamorphosis which has taken place undoubtedly lies in the fact that Lord Kitchener is, above all things, a practical man. He realised that no real progress could be made while a religious controversy was sapping the energy of the Egyptians; and so one of his first endeavours was to bring about a reconciliation between the Copts and the Moslems. It speaks volumes for the confidence which both communities had in the British Agent, that in deference to his suggestion the one dissolved its congress and the other adjourned the meeting of its general committee *sine die*, and that both agreed to leave the matter of their grievances in his hands.

The next step was to counteract the exciting influences which the Italo-Turkish War and the declaration and enforcement of Egypt's neutrality were bound to have on the native population. To Lord Kitchener's mind the only solution was to keep the masses occupied by the discussion and consideration of matters intimately concerning their material welfare. Hence quickly on each other's heels followed various projects for the amelioration of the lot of the fellaheen; the extension of the savings banks, to enable the smallest of the fellaheen to contribute his mite and so acquire the virtue of thrift; the protection of the cultivator from the exacting demands of the usurer, by fixing a legal limit to the rate of interest that can be charged; the extension of the judicial machinery by the institution of cantonal tribunals, in which village notables would sit and settle local disputes and petty lawsuits; the creation of a "homestead" by making free from distraint all small holdings not exceeding five feddans. The first three projects are now in active operation, the fourth is still under discussion. How true Lord Kitchener's forecast, based on his intimate knowledge of the native, has been is proved by the fact that, despite the greatest provocation, the Egyptians have maintained an absolutely calm attitude during the past six months.

The elaboration of these projects had an additional effect. It gave the masses the impression that the British Occupation—contrary to the preachings of the agitators—had their interests at heart and was trying to do everything to assist them. This impression was heightened by Lord Kitchener's attitude towards the native element. No complaint has been too petty, no petition has been too trivial for the British Agent to give a hearing to it. As a consequence, the portals of the Agency at Kasr-el-Doubara have seen more natives pass between them in the last nine months than ever before. Go to the "Bet El Lord" any morning you like and you will find the ante-rooms full of natives in European attire or in simple galabea waiting to lay their petition before the British Agent.

Further, Lord Kitchener has greatly impressed the indigenous population by his provincial tours. In addition to making two trips to the Sudan and one to Malta, he has found time to pay no less than four visits to the provinces. Each of these tours was of a nature calculated to raise British prestige. Lord Kitchener continued—and has, indeed, maintained it also in Cairo—the display of outward show with which he started his career as British Agent. It will no doubt be recollected that he arrived in Alexandria on board of a cruiser, and that he was welcomed by a salute from the harbour fort. This unusual departure had an extraordinarily favourable effect on the natives, who dearly love a "fantasia," and the fact that Lord Kitchener has made all his tours by special train, has been accompanied by all the highest officials, and has always been received with full military or police honours, has made a wonderful impression, and has at one bound raised British prestige to the level at which it stood in Lord Cromer's palmiest days.

The presence of a strong man at the head of affairs has been evidenced by the energetic manner in which the Ministers have tackled the various political incidents that have arisen. The systematic way that the Press Law has been enforced and that the Nationalist leaders have been prosecuted for their seditious utterances is a striking contrast to the attitude adopted in past years. The drastic steps that have been taken have completely cleared the atmosphere. The plot which has just been discovered, although serious in so far as the lives of high persons were threatened, is merely the aftermath of the recent pro-Egyptian policy.

Lord Kitchener's first year of office will probably be best remembered for the gigantic irrigation and drainage scheme he has initiated. Impressed by Egypt's great dependence on her cotton crop, his practical mind at once decided that the Government's first duty was to safeguard that crop by all the means in its power. He has instituted a vast distribution of selected cotton-seed so as to improve the quality of the cotton; he has forbidden the transport of unginned cotton from Upper to Lower Egypt, thus putting a stop to the illegal mixing of inferior with superior varieties, which was depreciating the spinning value of Egyptian cotton; and he has insisted on the cotton-worm campaign being carried out in a most energetic manner and in the removing of all obstacles that stood in the way of the work. The rapid decision in the matter of the Bersim is an indication of his interest in the matter.

The drainage scheme has for its object the release of the superfluous water which has congested the land in the Delta. Full details of the project have already appeared in your columns, so I will not dwell on them. But it should be pointed out that it is only thanks to Lord Kitchener's firmness that the scheme was put through. Objections were raised, lack of funds was pleaded, and various other obstacles were put in the way of the realisation of the project, which for years past has been frequently mooted and as frequently pigeon-holed. But, as in the case of the Helouan road, the British Agent, once he was convinced of the necessity of the work, thrust all objections aside and ordered the money to be found and the engineers to start operations.

To sum up, the past nine and a-half months have witnessed a patching-up of the religious controversy, the safeguarding of Egypt from any serious consequences of the Italo-Turkish War, and the peaceful occupation of the masses with the consideration of several reforms which will have an important effect on their material welfare and on the country in general, the complete settlement of the internal political unrest, the tightening up of the reins of government and the increase in administrative efficiency, a tremendous raising of British and foreign prestige and a distinct rapprochement between the masses and the Occupation to the detriment of political agitators, whose wings have been effectually clipped, and, finally, the adoption of measures, including a vast dainage scheme, which will insure Egypt's agricultural resources.

LETTRE D'ATHENES.

(De Notre Correspondant Particulier.)

Athenes, le 12 juillet.

La question des Iles.

Cette question est encore ici à l'ordre du jour. Après ce qui avait été écrit par la *Tribuna*, le *Corriere della Sera*, qui passe pour recevoir également ses inspirations du gouvernement italien, est venu déclarer à son tour que l'Italie n'est point disposée à discuter en ce moment le sort futur des îles occupées, lequel dépendra de la durée et de l'évolution de la guerre. De plus un de ses correspondants, qui a séjourné dans les îles occupées, a affirmé que des insulaires lui ont déclaré être tout disposés à devenir sujets italiens et a soutenu que le congrès qui a eu lieu à Patmos ne se composait que d'Egéens résidant à Athènes qu'il a qualifiés d'agitateurs, enfin que les habitants étaient étrangers à ce mouvement provoqué par les organes de la propagande Panhellénique et qu'ils ont même désavoué.

Ces allégations ont fortement mécontenté les cercles compétents envers l'Italie et ont provoqué des démentis à ses affirmations et de nouveaux articles écrits sur un ton acerbe qui contrastait avec le langage sympathique et cordial employé ordinairement jusqu'ici à l'égard des "frères italiens." Les journaux officieux déduisant des déclarations du *Corriere della Sera* l'intention de l'Italie de garder définitivement les îles occupés, se répandent en doléances à son égard, ne voulant pas croire que "le gouvernement d'un si noble peuple et d'une nation sœur puisse agir d'une façon aussi noire envers un pays qui lui a toujours témoigné le plus sincère attachement." La *Patris* fait observer "qu'aucune section de l'Hellénisme n'a jamais pensé à racheter son affranchissement du joug ottoman par le sacrifice de sa nationalité et de sa religion; huit millions d'Hellènes irrédimés sont là pour prouver cette vérité. Dans ces conditions s'il s'agit de tomber de Charybde en Scylla, il est préférable, conclut la *Patris*, que les populations de ces îles continuent à souffrir les vexations de l'administration ottomane, jusqu'au moment de leur affranchissement, que de passer sous une occupation étrangère contraire aux droits émanant de leurs traditions nationales.

Pourtant toutes ces récriminations et ces critiques intempestives ne pourront être utiles à aucun des intéressés. Les insulaires ont fait une démarche pour exprimer à l'Italie et aux autres puissances quels sont leurs desiderata et leurs aspirations. Cela devrait suffire et ils doivent s'arrêter là en différant toute action ultérieure dans ce sens et en se réservant de revenir à la charge à la conclusion de la paix.

Le nouveau gouvernement cretois.

L'arrivée du général Limbritis en Crète a mis fin à l'incertitude qui régnait encore dans la situation, ayant eu comme résultat immédiat la formation définitive du nouveau cabinet. Le vétéran Hazzi-Michalis Yannaris s'étant empressé de revenir à la Canée, a accepté la présidence du cabinet et la direction de la justice. Le Général Limbritis a pris la direction de la sûreté publique et des travaux publics, M. Michélidakis celle du département de l'intérieur et M. Coundouros celle de l'instruction publique et des finances.

Divers.

L'aviateur grec, le lieutenant Cambéros, a accompli un raid remarquable. Ayant aménagé son biplan de façon à pouvoir lui servir aussi d'hydroplane, il a parcouru dimanche dernier la distance entre le Pirée et l'île de Hydra, environ 80 kilomètres, en 43 minutes, moitié par air, moitié par eau. Le lendemain, M. Cambéros, malgré un vent très violent, n'a pas hésité à partir par la voie de l'air et, s'étant tenu à une hauteur moyenne de 200 mètres, a pu arriver, avec quelques détours, au Phalère en 38 minutes, faisant environ 110 kilomètres à l'heure.

M. Siciliano, le directeur du Bureau de la Presse au ministère des affaires étrangères, a été transféré provisoirement à la légation hellénique de Paris, où il remplira les fonctions de premier secrétaire. Son départ a été vivement regretté tant par les représentants de la presse locale que par les correspondants des journaux étrangers.

LETTER FROM MALTA.

(From Our Own Correspondent.)

Valletta, July 12.

The Mediterranean Question.

Considering that, despite the lapse of time, the Press in England and in other parts of the Empire has shown hardly any abatement of zeal in the discussion of the Mediterranean question, it would be strange indeed if the monthly letter to The Near East from the island so vitally affected by that most important of all current questions should contain no reference to it. Malta is ever eagerly watching the turn of events; every more or less official, or otherwise authoritative, pronouncement is carefully studied, not to say dissected, and as carefully weighed; and hopeful conclusions are in the main drawn as to the future of the island's position in the Empire. In brief, in Malta, as much as, if not more than, in any other part of the Empire, the Mediterranean question is still *the* topic of the day, and, far from waning, the belief is daily increasing that Mr. Churchill's scheme lacks the elements of vitality, that British naval supremacy in the Mediterranean will be ere long reasserted, and Malta will be restored to the pre-eminent position which her unique geographical situation in the very heart of the Middle Sea together with an immemorial tradition have secured for her.

Rumoured Effects of the New Situation.

The announcement telegraphed from Malta to the English Press as to the proposed increase of this garrison by two companies of R.G.A. and an infantry battalion, though founded on a mere rumour which originated here some time ago, has more than a semblance of truth. On the one hand, one may be almost sure that, though the naval reorganisation scheme will eventually turn out a temporary measure, the Admiralty will not very quickly go back on their word and undo their own work; but, on the other hand, it may be presumed that the Government will in the meantime make an attempt to silence critics by strengthening the garrison of Malta. The reported imminent withdrawal of troops from South Africa, where they are to be replaced by local battalions, and other indications strengthen this belief. There is a much weaker basis to the other rumour, which also originated here, as to the proposed strengthening of the Royal Malta Artillery—at one time a splendid unit, but now depleted—and the conversion of one of the two battalions of local militia into a regular unit. But should the suggestion be eventually carried out it will cause universal gratification here; for, apart from the material advantages which would accrue to the island from such a scheme in these hard times, the Maltese would be delighted to take a more active part in the defence of the Empire to which they are so proud to belong. It may be noted in passing that the local battalions, both artillery and militia, have at all times elicited the highest encomiums from all who have had the opportunity of testing their efficiency.

The Navy and the Empire.

It is an open secret that what is giving the powers that be food for serious reflection, in so far as the naval question is concerned, is less the number of ships, which after all resolves itself into a matter of pounds, shillings, and pence, than the shortage of men; and it has been suggested that the British Empire should be called upon to supply the deficiency in the personnel. Why not, indeed? Is there any lack of energy or patriotism in the Empire? Was it ever more solidly bound than it is to-day? Since the Boer War, when the daughter-states made common cause with the Mother Country, England has never had cause to doubt the steadfast loyalty of her dependencies or their readiness to stand by her in weal and in woe.

Should the suggestion bear fruit, it is hoped that the resources of Malta in this respect will not be overlooked. I could quote a long history to prove the excellent seamanship of the Maltese; suffice it to say that they have inherited the spirit of their Phœnician progenitors, and that the galleys of the Order of St. John, which for centuries swept the Mediterranean, affording security to the southern shores of Europe, were manned mostly by Maltese sailors.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, July 11.

Turkey's Position: A Bulgarian View.

For the last ten days the entire Bulgarian Press has been occupied with what is going on in Turkey. There may be some exaggerations, but even allowing ample margin for such exaggerations, what remains is enough to be termed appalling. The same symptoms were observed four years ago when the first Turkish revolution broke out: the same exodus of intelligent and rich people passing into Bulgaria, and the same desertions from the army. The only difference on the present occasion is that among others many timid Young Turks, alarmed because of the movement and fearing revenge, seek refuge also in Bulgaria. Naturally, so many unexpected guests are giving trouble to the police and the Government, for it is really difficult to class them into well-intentioned, spies, and *agents-provocateurs*. All of them condemn the present régime of the Committee of Union and Progress, and blame the present Government and its members, who have brought the country again to the brink of an abyss. "Before we had only one great tyrant, now we have many small tyrants. The great tyrant during his thirty years of reign could not harm the country so much as these small tyrants have done during these last three years only. Something must be done to save the country, but that something, which we earlier had the chance of doing ourselves, someone else must now come from outside and do for us." Such is the language used by the Turkish guests come lately to Bulgaria. Of course the public here is not easily led astray by such language, for the psychology of the Orientals, and especially of the Turks, is well known here now, since it was the same story with the Young Turks who lived in Bulgaria during the reign of Abdul Hamid. The Young Turks of that period received great attention from society here, and took advantage and made free use of the great hospitality that was given to them. But as soon as they succeeded in their cause and returned home nothing could restrain them from revenging themselves on the peaceful Bulgarian population living in Turkey. Such was the return they made to Bulgaria for her hospitality given a few years ago. And the fact is enough to explain the great uneasiness and anxiety of the people here at present; for everyone sees clearly that the scapegoat for all the troubles in Turkey will be again the Christian population and especially the Bulgarian population.

Whatever may be the intentions of the present Bulgarian Cabinet, and however pacifically it may be disposed, public opinion is forcing it to take some elementary measures of precaution and to be ready to meet all eventualities. Six hundred officers from the Reserve, who had to take part in the autumn manœuvres, are asked to join the colours now and present themselves on July 15. It is supposed that they will be kept only two months, but no one knows how circumstances may develop, or if their number will not be augmented very soon. The effectives of the frontier guards have been increased, because it is feared here that some incident may arise on the frontier in this troubled period, when nearly one-half of the Turkish Army is said to be in a state of mutiny. The desertions from the army have not ceased. On the contrary, they have increased. Five days ago three posts from the Turkish frontier guards around Adrianople, fully armed, with their sergeants and an officer, presented themselves to the Bulgarian guards and left the frontier open for a distance of three kilometres. Being asked the reasons for deserting their posts, they answered: "The Committee men have gone mad. They order us to fire at our men who are crossing the frontier in order to seek refuge in your country. It is a crime to fire at a Moslem when he is trying to seek refuge on account of ill-treatment: and because we know that we shall be punished severely for not doing it, we too have decided to seek refuge. The Committee that governs our country is composed of Jews and infidels, otherwise such an order could not have come from the Padishah." If this is really the state of mind of the Turkish soldier at the present moment it can be easily understood why the mutiny is so easily propagated and why Bulgaria feels anxious and uneasy.

The Result of Dr. Daneff's Mission.

The Bulgarian Mission, headed by Dr. Daneff, President of the Sobranje, which visited the Tsar at Livadia at the end of last spring, and thereby gave rise to many rumours and conjectures at the time, produced somewhat inconclusive results for Bulgaria.

It is now positively known that it was intended to send the mission at the beginning of the winter; but the Russian Government let it be understood that it would be preferable to postpone the visit for a time, until the Tsar visited Livadia, when the mission might present itself with the ostensible object of saluting him upon his arrival on the coast of the Black Sea.

Dr. Daneff's mission had to inform itself on three points, namely:—1. On the possibility of a visit of the Tsar to Bulgaria at the time of the inauguration and consecration of the memorial church of St. Alexander, which is erected in Sofia in memory of the Tsar Liberator, the Emperor Alexander II. The idea was favourably considered, but was finally declined on the ground that such a visit might, in the present circumstances, be considered as unfriendly to Turkey. Therefore, the inauguration of the church, which was to take place on August 15, coinciding with the twenty-fifth anniversary of King Ferdinand's reign, has had to be postponed. 2. The possibility of uniting the two dynasties by a marriage. This proposal was also favourably considered, but it, too, was refused for the time, on account of the respective ages of the parties. 3. Dr. Daneff had to explain to the Russian Government that it is time for Russia to change her optimistic views on Balkan affairs: that in the very near future the situation may become so complicated that Bulgaria will be obliged to defend her vital interests alone. On this point also Dr. Daneff received counsels of patience. He was promised that an European conference would see to the amelioration of the conditions of the Christians in the Balkans, and that such a conference was in view after the July meetings.

The mission of Dr. Daneff, who is leader and representative of the Russophil party in Bulgaria, thus proved a complete failure; and to this failure are due the brilliant receptions offered to King Ferdinand shortly afterwards in Vienna and Berlin. Such, at least, is the view taken by Mr. Gueshoff, the head of the present Bulgarian Government.

REFORMS IN THE OTTOMAN EMPIRE.

The Eastern Question Association has received the following letter, dated July 15, from the Foreign Office:

Sir,—I am directed by Secretary Sir Edward Grey to acknowledge the receipt of your letter of the 4th inst. soliciting a declaration by him that there is reason to hope that reforms will be introduced into the administration of the Ottoman Empire.

I am to inform you in reply that in Sir E. Grey's opinion the declarations made by the Turkish Minister of the Interior after his recent journey in Macedonia and Albania, and the request of the Turkish Government for the loan of five additional British officers, which is being sympathetically considered by his Majesty's Government, and for two additional French officers for service in the Ottoman *Gendarmerie*, indicate that the Sublime Porte realise the need of reforms in the administration of the European provinces of the Empire, and are determined to take the necessary measures to introduce them.—I am, etc.,

W. Langley.

The Secretary, British Committee, Eastern Question Association.

NOTES FROM SERVIA.

(From Our Own Correspondent.)

Belgrade, July 14.

Dr. Milovanovitch's Papers.

Since the death of Dr. Milovanovitch, the Opposition papers have been making bitter comments on the action taken by the Servian Government in seizing the writings and documents found at the late Premier's private residence. It appears that the Government does not wish that the memoirs of the late Prime Minister, or anything that he has recorded, should be made public; while on the other hand the widow has been instigated by friends to claim all her late husband's private papers, with the right of doing with them whatever she may see fit.

It was known here that the Minister, through negligence, frequently misplaced secret codes and other documents, which he often took home to study at his ease. It was also known that he had begun to write his memoirs, and that among his papers were many memoranda which he had jotted down in his own handwriting referring to conversations and statements in connection with the Bosnian annexation crisis. These papers were all the more important, as although an official secretary accompanied him on his tour to the various Courts of Europe, he invariably made his own short notes of all he saw and heard.

How much light Dr. Milovanovitch's private papers might throw on these historical events it is difficult to say, but at his residence no less than 100 sheets of memoirs were found and numerous semi-official papers. The opportunities he had and the illustrious personages with whom he came into contact were such that no doubt they would make his disclosures extremely interesting. It must be remembered that just before his last assumption of power as Cabinet Minister he had been appointed Minister Plenipotentiary at the Court of Rome, whose Queen is sister-in-law to King Peter of Servia, and that the Servian Minister was on an intimate footing at that Court.

The Late Premier's European Mission.

When he started on his mission at the time of the annexation crisis, he first went to Rome, where he stayed several days, and afterwards proceeded to London, where it is said he had very weighty and lengthy interviews with Sir Edward Grey and other prominent English statesmen; and when at St. Petersburg he had audience of the Emperor of Russia, it is believed that the latter spoke very openly and candidly to him and was very friendly. The interviews with the Russian Minister, M. Isvolsky, and with the Austrian Minister, Count Aehrenthal, it is supposed, made matters more clear to the Servian Minister than was agreeable to him.

Strong Official Action.

The polemic in the Servian Press turns on the rights of the widow of the deceased statesman and on the action of the Government. When it became evident that Dr. Milovanovitch's recovery was hopeless, and before he died, a Commission, including the Prefect and the chief of the secret police, presented themselves at his residence and sealed his safe, tables and drawers, and, last of all, the doors of the Minister's private cabinet. On the day of the funeral, soon after the burial, the First Secretary of the Foreign Office and the Minister of the Interior called at the residence and, in the presence of the widow, examined all the papers, the examination lasting throughout the night; and numerous official and semi-official documents and all papers of a private nature which had reference to State matters were taken charge of and removed.

Friendly Feeling Towards England.

That Great Britain acted firmly during the crisis at the risk of being drawn into a war, and was Servia's best friend, every one in Servia is to-day convinced, and Dr. Milovanovitch is supposed to have said that if Great Britain's advice had not been followed Servia would have had to pay the piper. His memoirs would also most likely show that Russia's sympathy was not likely to have yielded substantial help, and that France was unreliable.

THE PRESS ON THE NEAR EAST.

Mahmud Shevket's Resignation.

The *Deutsche Orient-Korrespondenz* publishes the following expression of opinion from a Constantinople correspondent on the subject of Mahmud Shevket Pasha's resignation. It is interesting for more reasons than one:—

It is impossible to realise the impression created in Constantinople by the resignation of Shevket Pasha. The Government—if it is possible to speak of the Government—is in a state of consternation. There is a new list of candidates for the Ministry and the Viziership every hour, and it is generally admitted that with Shevket Pasha's retirement that of the Vizier is bound to follow. In connection with the new Viziership the name of Kiamil Pasha, the great friend of England, has come to the front. He has been in the background for some time, but recently he has been an influential adviser.

Nobody who knows the situation in Turkey believes that England's influence has waned. In spite of German diplomatic success British diplomats have followed their traditional policy, both in Europe, Turkey, Egypt, and Mesopotamia steadfastly, without hesitation, with the result they have extended their power and influence to such an extent that the Turks firmly believe that it would be trying to swim against the current if they attempted to free themselves from British influence. This is the policy of Kiamil Pasha, and because his opinions are based on long experience in the politics of his country it would be advantageous if he were to step forward to save his country from the perils and disasters which are threatening to shake its very foundations.

Roumanian Defences.

The *Army and Navy Gazette* of the 13th contains the second article of the series, "The Balkan Question," which, like the preceding article, deals with the Roumanian Army. The writer, who has been granted special facilities by the Roumanian War Minister, has watched exercises by infantry, cavalry, and artillery in turn, and is favourably impressed by what he saw. He concludes his article with some notes and reflections on the Bucharest fortifications.

In the early eighties, when smarting under their unjust treatment by the Russians at the Berlin Congress, the Roumanians thought they could find salvation in concrete and iron, and General Brialmont was instructed to draw up a big scheme for fortifying Bucharest and the line of the Sereth. A cordon of forts was placed round the capital, having a perimeter some forty miles or more, and converting Bucharest into a huge entrenched camp. There are 18 large forts at intervals of about two and a-half miles, with 18 smaller forts in the intervals, all well armed with 15 cm. and 12 cm. guns, and most of them mounted in pairs in steel revolving cupolas made in Gruson's works at Magdeburg. I did not see the Sereth fortifications, but they consist of entrenched camps at Galatz and Foscani, with a fortified bridge head at Nemolassa, in the centre of the position, the whole line of works extending for some 45 miles, and being equipped with similar guns and mountings as form the armament of the Bucharest defences.

Roumanian statesmen now admit the error of their ways in having spent some £8,000,000 in permanent fortifications, which are already out of date, and which will be a source of weakness rather than strength to the Roumanian Army in the field. No Power wants to attack Roumania, and if it did it would not run its head against the Bucharest or Sereth fortifications. The money sunk in these elaborate works would have been better spent in adding to the mobile strength of the Roumanian Army. Fortunately, Roumania, for her size, is one of the richest countries in Europe, and with an increasing revenue is able to bear the financial burden of her armaments easier than some of her poorer neighbours. Leaving her fortifications to take care of themselves, she is now perfecting the organisation of her field army, and making large additions to the plant of her arsenal, so as to be ready for any emergency which may call for her armed intervention should her interests be threatened in the Balkan Peninsula.

Turkey's Navy in the Past.

A most readable and interesting article in the July *United Service Magazine* is "Some Forgotten Admirals of the Sixteenth Century" (contributed by Gertrude Elliot). The writer gives an excellent account of Khaireddin Barbarossa, who may be regarded as the Father of the Turkish Navy, and of Torghoud, both of whom proved such veritable thorns in the side of the Spaniards; and Pialé Pasha also comes in for notice. At the beginning of her article the author reminds us that:—

It should also be remembered that the Turkey of former days was not only a formidable power by land, but that her navy challenged the supremacy of Spain in the days when Drake and Frobisher were as yet unborn, and that later, even after suffering the defeat of Lepanto in 1571, Turkey compelled Spain to abandon her hold on Tunis in 1574, when that State became tributary to the Porte, that Cyprus was conquered in 1573, and that in 1669 Venice ceded Crete to Turkey, retaining only the ports of Karabusa, Suda, and Spinulunga. The conquest of Candia

Digitized by Google

after the struggle for its possession had lasted twenty-five years and cost Turkey 30,000 men, has always been considered the crowning achievement of the great Grand Vizier, Achmet Kioprili, there is, therefore, little cause for wonder at the reluctance shown by a proud and warlike nation to parting with a dependence whose very name calls up to the memory the recollection of one of their most fiercely disputed victories.

After remarking that it remains to be seen whether Italy will succeed in severing the tie that once bound the Barbaresque Provinces to Turkey, the article concludes:—"Perhaps the memory which still lingers in her seaboard towns of the ravages inflicted by the redoubtable Barbarossa and his fellow corsairs has played a part in promoting the popularity of her present adventurous policy; but, on the other hand, it is not to be expected that Turkey will easily relinquish any portion of her hard-won dependencies, even if the benefits derived from them are purely sentimental."

The Trans-Persian Railway.

In a leading article dealing with Parliament and Foreign Affairs, the *Manchester Guardian* (of the 11th inst.) says, apropos of the Anglo-Russian Agreement:—

Our complaint against the Foreign Office is that it has worked this Agreement in such a way as to defeat its objects. One was to maintain Persian independence; but Russian troops are still in Persia, and not for the protection of any legitimate Russian interest. Another object was to interpose a neutral zone between the spheres respectively allotted to the two countries in Northern and Southern Persia; and this object, too, is menaced by the project of the railway. The railway is a purely political venture, and has no serious commercial backing; and every argument adduced in its support presupposes that the elaborate provisions for maintaining Persian independence as a buffer and a neutral zone in Persia itself are valueless. What else does the argument mean that the railway will be made in any case, and had better be made with our concurrence than without it, except that these clauses of the Anglo-Russian Convention were made only to be broken by Russia as soon as it may be convenient? When Sir E. Grey urged once more last night that we ought not to compare the present state in Persia with an impossible ideal, but only with what might have happened if there had been no Convention, he assumed that the Convention had been and would be kept. Our complaint is that it has already been violated in some of its provisions, and that the railway project is based on the assumption that the remaining provisions will be torn up later.

The Greek Cypriots.

Writing in the *Northern Echo* on "Cyprus of To-day," Mr. A. H. Scott says:—

The Greek Cypriots have always chosen the wrong way to get their grievances redressed. They telegraph the King on the occasion of his coronation, or his birthday, or when passing on his way to visit his Indian empire; and such is their folly, they never fail to omit from these messages their desire to be under another king, and pretend to wonder that such tactless communications remain unanswered. When Mr. Churchill, as Under Secretary of State for the Colonies, visited the island in October, 1902, instead of making the best of their opportunities to talk over the grievances, their influence was lost by their repeated requests to be restored to their beloved Mother Greece; and these national aspirations were based on the reports of latest archæological researches and successive settlements of Greeks! Of the nine Greek members of the Legislative Council who resigned, eight are lawyers, some of them men of great ability and intelligence; but the least effective men to influence the British to amend their serious misgovernment of Cyprus. Lawyers' trade unions here, as in our own country, do not allow ordinary advertising, and so lawyers become politicians, more in their own interest and for publicity, than in the interest of the island. If the Greek Cypriots would drop their lawyers, and elect nine of their leading business men, something might then be done.

Here, then, is a hint for the Greek Cypriots. The writer also puts forward other practical suggestions for improving the lot of the islanders which seem well worth considering.

Articles to Note.

"The Collapse of the Young Turks," in the *Saturday Review* (July 13).

"The Trans-Persian Railway: Military Considerations," letter from the Military Correspondent in the *Times* (July 15).

"By Rail to India: What the New Project Means," by Lovat Fraser, in the *Daily Mail* (July 16).

"Persia's Plight: Railway Schemes," by B. W. Stainton, in the *Financier* (July 17).

"The Proposed Indo-European Railway" and "The Indo-Russian Railway," in the *Manchester Guardian* (July 16 and 17).

"Cyprus," letter from Mr. Robert Pierpoint, in the *Manchester Guardian* (July 15).

"The Foreign Office Vote," in the *Spectator* (July 13).

NEAR EAST BOOKSHELF.

EASTERN LYRICS.*

The love songs of the East are always haunting, and Mr. Clinton Scollard has succeeded in giving a very fair idea of Syrian song, even though his verses lack the polish necessary to make them attractive to English readers. This little book strikes us as being the work of a very young man, or at least of a man who has had no great experience in writing. It must not, however, be inferred from this that the author is crude in his methods, for this is very far from being the case. But though the mind of the poet and of the artist is evident at times, the purity of the language used on these occasions is not sustained.

The following two verses may be quoted as best showing the author's possibilities:—

"In the twilight Abdul Kedir, when the fevered day was spent,
Bared his weary brow to Allah in the doorway of his tent:
'Not unto myself, O Master, be Thy balm of heart's-ease sent!

"'But to one who watches lonely far from paths whereon I fare,
Waiting—waiting—waiting—waiting; Allah, take her to Thy care!'
And my soul cried out in echo unto Abdul Kedir's prayer."

Mr. Scollard's ideas are poetical, and with a little more care in his choice of words his book might have been well above the average of its kind. As it stands, this slackness of expression robs it, we think unnecessarily, of much of its charm, but even so it is worth reading. If this is a first book we hope to hear more of Mr. Scollard in the future.

*"Songs of a Syrian Lover." By Clinton Scollard. London: Elkin Mathews 2s. 6d. net.

NEAR EAST BOOK NOTES.

A little while back, the Rev. A. L. Kitching published a most interesting work, entitled "On the Backwaters of the Nile." It is a series of studies of some child races of Central Africa, and has a number of most valuable illustrations—fifty-six in all—reproduced from photographs taken by the author. Mr. Kitching has lived for ten years in close intercourse with many of the wild tribes of British East Africa.

The Kerr lectures, delivered in the United Free Church College, Glasgow, during the session 1911-12, have been issued in volume form. The lecturer was the Rev. Adam C. Welch, and the subject "The Religion of Israel under the Kingdom." The contents are: Stories of Je; Prophecy before Amos; Amos; Isaiah; Deuteronomy; Notes; Index of Scripture Passages; Index of Subjects.

Among the new publications of the Cambridge University Press is a volume entitled "Greek Education: Its Practice and Principles," by James Drever, M.A., Assistant to the Professor of Education at the University of Edinburgh.

We have not yet seen Mr. L. March Phillipps's "The Works of Man," but judging from notices we have read it should prove an interesting volume. Mr. Phillipps writes of Art as the expression of the Spirit of its age, and has a good deal to say about the Egyptian and Assyrian monuments. What he writes does not appear to be flattering, but it would seem to be well worth reading.

Mr. John Murray has published "The Excavation of Gezer, 1902-1905 and 1907-1909," by R. A. Stewart Macalister. There are two volumes of letterpress and one of illustrations, and the price is four guineas net.

NEAR EAST IN PARLIAMENT.

The Ex-Shah.

In the House of Commons on Thursday of last week Mr. Dillon asked whether the British Consul at Odessa had been instructed to keep a watch on the movements of the ex-Shah of Persia; whether the Government had recently received any reports from the British Consul at Odessa as to the proceedings of the ex-Shah; and whether the British Government adhered to their often-repeated declaration that under no circumstances would they recognise the ex-Shah as ruler of Persia.

Sir E. Grey: The answer to the first point is in the negative. A report has been received from his Majesty's Consulate that the Shah was preparing to leave for Carlsbad, but there has been no confirmation of it from other sources. As to the third point, his Majesty's Government have seen no reason for modifying their attitude.

Warships in Cretan Waters.

Mr. Fell asked the Secretary for Foreign Affairs whether he would state the nature of the guarantees of this country to support the *status quo* in the island of Crete, and if such guarantee had on more than one occasion in recent years compelled the presence in Cretan waters of a force of his Majesty's warships; and if the force in the Eastern Mediterranean at the present time was sufficient to ensure the carrying out of this country's obligations there.

Sir E. Grey: The nature of the engagements undertaken by the Powers in respect of Crete are to be found in the Blue-books issued in 1897-98-99. The presence of more than one of his Majesty's ships in Cretan waters has been necessitated on three occasions since those undertakings were given. The naval forces of his Majesty in the Mediterranean are amply sufficient for any purposes connected with the maintenance of existing obligations. In reply to supplementary questions, Sir E. Grey said he was not sure whether one or two British ships were in Cretan waters at present. The ships required were not necessarily of high fighting value against modern warships.

The Trans-Persian Railway.

In the House of Lords on Monday Earl Curzon rose to call attention to the project of a Trans-Persian Railway and to inquire as to the policy of his Majesty's Government and of the Government of India in relation to this proposal. This was a question of a great trunk line which would compel us to revise the principles on which the defence of India had been so far based. It was said that the line would reduce the journey from England to India from twelve and a-half to seven or eight days. The assurances given by Sir Edward Grey in the House of Commons last week were valuable and sound. The right hon. gentleman might have given more. No Foreign Minister could have given fewer. Did they go far enough? When his Majesty's Government had encouraged, as they had done, a group of British financiers, when they had interested themselves in the appointment of members of the Council of the Société d'Etudes, when they had set their diplomatic machinery working in the interests of the scheme, and when, lastly, they had declared their sympathy with it in principle, he could not help thinking his Majesty's Government had gone a long way in the direction of supporting the scheme. The attitude of his Majesty's Government seemed to him to be more than one of benevolent neutrality, and really one of implied support, if not of positive encouragement. We might find that we were more or less committed to a scheme which involved a more fundamental change in British policy towards India and the defence of India than any event in the history of India since the days of Lord Clive. He agreed that some day or other an overland connection with India would come; but it did not follow that it ought to come now or that it would be good for us or for India, or that we should take an active part in joining in at the present stage. There was nothing in the argument of inevitability that applied exclusively to the Trans-Persian scheme. The military authorities were against the proposal. Instead of closing our Indian frontiers this railway would have the effect of opening them, of connecting India on its most vulnerable side, the West, with the outside world, and of destroying that most valuable protection, the Buffer State. The only ground on which this very considerable risk was to be run was our present friendly relations with Russia. No one welcomed this satisfactory state of things more than he; but we could not be sure that it would continue for all time, and that the Russian bogey would not again show its features in the East. In these circumstances he hoped that his Majesty's Government would think, not once or twice, but thrice, before they gave their adhesion to this project, and that at any rate they would not do so without some better reasons than those already given. As regards Anglo-Indian trade with Persia, the construction of this railway would reverse the whole of our traditional policy, because it would substitute land passage for sea passage and divert traffic from routes that we do command to routes that we do not command. He hoped the Government would not involve this country or the Government of India in the great responsibilities that would result from a change of policy in regard to the defence of India without placing before Parliament the opinions on which they proposed to act.

Viscount Morley (Lord President of the Council) said Earl Curzon was not accurately informed as to the immediate relations of the Government to the Société d'Etudes. No money had gone from the British Exchequer to the chest of that body. The statement that his Majesty's Government had encouraged this body in its operations was entirely imaginary. They had done nothing to encourage it beyond the fact that when the proposal was presented to them they examined it. His Majesty's Government would be perfectly justified in dealing with perfect freedom with the report of the Société. The question of railways in Persia was not new. Since 1872 that question, including a trans-Continental railway, had been a thoroughly live issue. The question entered on a new phase about the end of 1910, and this proposal was submitted for consideration. His Majesty's Government were quite alive to all the considerations urged by the noble Earl with regard to estimated profits and cost of construction and so forth. It was stated, and he confessed he did not see any answer to it, that Russian trade was very likely to get more profit out of the proposed line than we were. That might be. That was an argument which the Government would consider. He wished some of his friends in the House of Commons would realise what the difficulties now were in Persia, and how far they would be affected by railway construction, whether a trunk line or branch lines from the ports. The difficulties in Persia were yielding to improved communication, and were little likely to yield to anything else. He was not at all sure, however, that those were not right who, instead of railways, recommended cart-roads. Supposing the circumstances should compel the Government of the day to adopt a railway policy, the precedents were not very encouraging. The confusion of Persia, coupled with the advent of the Baghdad Railway and the Anglo-Russian Convention, were the three things that had made this proposal actual. His Majesty's Government had no desire to shut out foreign enterprise from Persia, and they had no desire to make railways in Persia themselves at this moment, but admittedly this railway would do more than anything else to enable the Persian Government once more to hold up their heads and to manage their own affairs, and in these circumstances we might well wish to guard against the possibility of waking up some morning and finding that Persia had granted concessions damaging to our interests, and strategically menacing to our Indian frontiers.

Lord Lamington believed that the construction of the proposed railway certainly would not tend to improve our relations with Persia. While bringing us no advantage, it would involve every possible risk, and therefore he trusted that his Majesty's Government would not be too benevolently disposed towards the inquiry that was being held. By adopting too benevolent an attitude they would put themselves in a much weaker position if they found themselves obliged to reject these proposals hereafter.

The Marquess of Crewe said this particular matter of a possible Trans-Persian Railway had not been formally considered by the Committee of Defence, because it was not in any sense a live project. The subject had been considered by the General Staff in India, and, on the whole, they took the view that it might be disadvantageous, and even dangerous, to pronounce an absolute veto on a proposal, when made in this tentative form, on the ground that if they were prepared not to dismiss the principle altogether, and if also the money was forthcoming for the working of the railway, then they would be able to secure that it should be made in the manner least detrimental to our interests, whereas, if they attempted to interpose a veto, and the railway was still made, it might then be made in the manner least advantageous to Indian interests. He hoped the supporters of the Government would see that the Government had not committed themselves to any participation in or approval of this proposed railway. Still, the Government were not prepared to say the line should not be made. His Majesty's Government had entered into no sort of engagement with the promoters of the scheme to assist it in any way.

Earl Curzon said that if there had been misinterpretation of the attitude of the Government, the Government had only themselves to thank. If this line was to have all the advantages claimed for it by his Majesty's Government, it was remarkable that neither in the House of Commons nor in their Lordship's House not a single member should have spoken in support of its construction.

Russian Troops in Persia.

In reply to Mr. Dillon, Sir E. Grey stated that according to his latest information the total number of Russian troops at present in Persia appeared to be some 12,400 men. Of these the greater part are stationed in Azerbaijan and Khorassan. He added that the Russian Legation had requested the formation at Tabriz of a detachment of Persian Cossacks 700 strong, with two Russian officers and four non-commissioned officers. The Persian Government had agreed to the request, and no action on the part of his Majesty's Government appeared to be called for.

Persian Railway Concessions.

Sir G. Scott Robertson asked the Foreign Secretary whether his attention had been drawn to a railway proposed to be built by Russia from Djulfa to Tabriz, independently of the proposed Trans-Persian Railway; whether the Persian Government had sanctioned the construction of such a line; and, if so, would he support as of right, under the rescript of Shah Nasr-ud-Din, the proposal of an English company to build a railway in South Persia.

Sir E. Grey: The answer to the first part of the question is in the affirmative. I do not, however, know whether the Persian Government have sanctioned the construction of the line in question. As regards the proposal respecting the construction of a line by a British firm in the south, I am already in communication with his Majesty's Minister at Teheran on the subject. If a concession for a railway is given in the north we should, in accordance with the previous undertaking, claim a corresponding concession in the south, but I must point out that a railway from Djulfa to Tabriz is not a very extensive project.

THE POWERS AND CRETE.

THE CASE FOR "UNION."

The Cretan question, having lost its acute character for the time being, and the menace to the peace of the Orient from that direction being put aside for the present, it is time to consider it at leisure; for it will inevitably reappear in a few months.

It will be remembered, of course, that the Cretan deputies were denied admission to the Greek Chamber, after which the Chamber was prorogued until next October. Once more M. Venizelos, yielding to the wishes of the Powers, acted in a way diametrically opposed to his own feelings both as a Cretan and as a Greek, thus putting his popularity in Greece to a severe test. One of his colleagues, differing from him on the subject, resigned, and fourteen deputies went over to the Opposition. The exclusion of the Cretan deputies was a sad sacrifice offered up by Greece, who thus rendered a valuable service—and a valued service, as the Continental Press bore witness—to the cause of European peace. Their admission to the Chamber would perhaps have proved the spark that would have set the highly inflammable Orient in a blaze; and in the present state of affairs no one can say what would be the limits of a war in which several Balkan States would be involved.

The matter is not definitely settled yet, however. In October it will be to the fore again, urgent as ever. The parliamentary life of a State was suspended for six months; the same step cannot be taken again. It is the manifest duty of the Great Powers to find a solution in the meantime. The previous conduct of the Powers and the hopes to which they have given birth point to a solution favourable to Cretan aspirations. Let us consider the matter objectively, from a juridical point of view, and from an economical and practical point of view.

The Cretans freed themselves from Turkey and gained their liberty by force of arms before the Greek War of Independence in 1821. The island of Eubœa not having submitted to the Turkish yoke, an exchange was effected; Eubœa was added to the Hellenic State, which had just been created, while Crete became again a Turkish island. The most important of the Cretan revolutions against the Ottoman Empire were those of 1848, 1856, 1866-69, 1876, and 1896-7. Throughout the last century Crete constantly affirmed its independence and its fixed determination of being united with Greece; a determination expressed forcibly, consistently, and efficaciously. Now let us recapitulate briefly what has been the history of the island since it was taken in hand by the Great Powers.

On March 2, 1897, they declared that "Crete will be granted an absolutely effective autonomy under the suzerainty of the Sultan." On November 15, 1898, following upon an ultimatum of the Admirals, the last Turkish soldier quitted the island for good and all. On November 26 the four Powers nominated Prince George High Commissioner in Crete, *without asking for the approval* of the Sultan, whose supreme suzerainty over the island was confirmed—a purely nominal suzerainty, the only symbol of which is a Turkish flag "which will fly *only* at one point in the island."

Crete paying no tribute, no effective tie with Turkey remains any longer. The Cretan State is not only absolutely autonomous, but it has the right to conclude treaties. Exercising this right it joined the International Postal Union. The Cretan Customs, by decree, treated imports from the Ottoman Empire in the same way as imports from foreign States, and finally the Powers decided that "the collection of Customs dues upon Ottoman merchandise is *legitimate*." Turkey also treats Cretan merchandise in a similar way to the merchandise of *foreign States*. The Cretan State, therefore, enjoyed the widest and most effective autonomy. But the autonomy is not sufficient; the Powers, by a series of acts, have permitted a gradual approach towards union with Greece. They gave more than hope; in the first place a promise, negative but formal. On April 3, 1905, they agreed not to annex the island themselves and not to allow its annexation by another Power *against the wish of the inhabitants*. Then commenced a new era for Crete, which, with the consent of the Powers, took on each day a more and more marked Hellenic character. In July, 1906, the Protecting Powers declared that "taking into account the legitimate aspirations of the Cretan people, and to enlarge in a *new, national* sense the autonomy of the island, it is agreed to grant the King of the Hellenes the right to designate, for the approbation of the Protecting Powers, the High Commissioner in Crete whenever the post becomes vacant." At the same time they ordained "the reform of the gendarmerie and the creation of a militia, in which the Cretan and Hellenic elements may be gradually developed." Moreover, the gendarmerie and the militia are commanded by Greek officers and officered by officers and non-commissioned officers of the Greek Army. The finances of Crete, its postal and telegraphic services, are directed by employees of the Kingdom. Magistrates belonging to the Greek service hold superior responsible positions in the Courts of Appeal at Canea and at Candia. A collective Note of the Protecting Powers, presented August 14, 1906, to the King of the Hellenes, "recognised in a practical manner the interest that H.M. the King of the Hellenes must always take in the prosperity of Crete." The island thus became a dependency of the Hellenic Kingdom. But the promises did not stop there. On October 28, 1908, the Powers declared "that they would not be indisposed to regard benevolently *the discussion of the union*" upon condition that order was maintained and the Moslems protected. The Cretans, not unnaturally, considered these declarations not as indications but as assurances of their approaching union with Greece.

In September of last year, upon the expiration of the mandate of M. Zaimis, the High Commissioner, the Powers notified the King of Greece of their intention to leave the post vacant. Thus the island came to be governed, not by a High Commissioner of the Powers, but by a Cretan Government, which on September 24, 1908, proclaimed the union with Greece. Now the Greek flag floats over all public buildings in Crete, the Chamber is opened in the name of the King of Greece, Ministers and public officials take the oath of allegiance to King George, justice is administered in his name, the postage stamps of the Cretan State bear the inscription "Hellas," the Cretan *Official Journal* appears as a supplement of the Greek Government *Journal*, and Decrees are issued in the name of the King of Greece.

The status of the island at this time is, then, dependent not only on the Cretan constitutions of 1899 and 1906, recognised by the Powers and their declarations, but also upon the situation in fact created by the proclamation of annexation and expressly or tacitly acknowledged by the Powers. The island is still under the suzerainty of the Sultan, attested by a flag upon the islet in Suda Bay; it is still in the keeping of the Protecting Powers; but they no longer govern it by a High Commissioner; they recognise the right of the Cretans to govern themselves by means of a Government with which the Powers maintain international relations.

Such is the present status of the island, a status very little removed from union; all that is lacking to render it perfect is international recognition, vainly solicited by the Cretans. And such are the solemn declarations which bind the Powers in the matter.

Crete has now nearly 315,000 inhabitants, of which number scarcely 30,000 are Moslems, that is to say, less than a tenth of the population. Equity demands that the will of the nine-tenths of the population, already granted in the greater part, should be recognised fully and entirely; for what little remains undone prevents the islanders from profiting by what they have already obtained. Practically Crete is entirely detached from the Empire, and is of no benefit to it materially or morally. The loss of the island would not deprive the Turkish Treasury of a piastre or the Army of a single soldier.

The solution of the problem is a matter of urgency also from the economic point of view. The present state of the island is highly precarious. In need of money, the Cretan Government can find no one ready to advance money to it because of the state of political uncertainty which exists. All economic progress is therefore arrested. On the other hand, since the island is treated as a foreign country by Turkey in the matter of Customs,

Digitized by Google

and since Greece is forced to consider Cretan merchandise as foreign goods, the agricultural and other products of the island can find no favourable market.

This state of affairs, in conjunction with the state of enervation brought about by the unexpected delay in the fulfilment of the promises made by the Powers, has become intolerable. It is their duty to proceed with the only solution possible in the present circumstances: the solution conformable with the aspirations of the Cretan people.

TURKEY'S CONSTITUTION DAY.

By E. Schaap.

A few days hence—to be precise, on July 23—Turkey will be en fête, for Constitution Day must not be allowed to pass unnoticed. There will be reviews of troops, the streets will be beflagged and festooned, and at night there will be illuminations. On retiring to rest that night the Old Turk will fasten his door somewhat more carefully than usual; in Salonika and Constantinople the Young Turk will vehemently discuss Liberty over a cup of coffee and a cigarette; and in the far-away provinces the Arab will ask himself whether the new régime is better than the old. The European who will be privileged to see all this is not likely to applaud very heartily the old catchwords Liberty, Equality, and Brotherhood repeated with so much wearisome iteration. For he knows the value of mere words; that Licence, Fratricide, and Inequality have long ago become the order of the day; that Action and Reaction, Liberty and Licence are the cause and consequence of every revolution in Turkey as well as elsewhere.

After every revolution the people throw off their allegiance to their old masters. Not only does this take place in the realms of politics where there is simply a change of dynasty or the exchange of a monarchy for a republic, but in the sphere of religion this is also to be remarked—with a difference, however. With the overthrow of the temporal government there is a *quid pro quo*—a president in the place of a king; with the downfall of the spiritual powers a void is created, and consequently liberty becomes licence, for there is no guiding hand. Irreligion, which is a negative *term*, cannot supply the place of religion, which is a positive *fact;* and irreligion has always marked the downfall of the old ideals. The return of Charles II. to England, the French Revolution, the recent revolution in Portugal, were all followed by a wave of active irreligion. And active irreligion is generally as intolerant, as bigoted, as narrow-minded as intense fanatic religion. The Dreyfus affair in France and the expulsion of the religious orders in Portugal go to prove my contention.

As a religion preaching noble ideals and purity of life well suited to the climatic conditions of the country, neither the Koran nor Islam is in conflict with good government or good morals. If the softer influences of Christianity seem wanting, if the morals of East and West seem to clash, it must be remembered that East is East and West is West. What is good in Europe and America may prove to be bad in Asia. For example, polygamy, although permitted by Mohammedan law, is but little practised, and in the course of time may die out altogether, as it did in Europe. It will, perhaps, be urged that so long as it is "tolerated" by the Koran it will not cease to exist. Was it not killed by popular opinion in Europe? In the history of Christianity the laws against polygamy are of a comparatively late date, and even so Christian a king as Charlemagne had two wives! Moreover, quite recently the Roman Catholic Church sanctioned the bigamous marriage of a prince related to half the imperial houses of Europe. I only point to this to show in a negative way how small our religious differences are.

In Turkey, too, there is a tendency to cast off the trammels of religion, and this will prove Turkey's undoing. So long as there was an inner moral power—call it conscience if you will—regulated by hard and fast rules, all went well with the Turk. In Europe he was feared on account of his religious zeal, in which lay his strength. In battle he fought and died for his religion, consoled by the thought that he was not shedding his blood in vain, for Allah would recompense him. His thoughts were centred in the unknown Power that rules the universe. "Inshallah" (if God wills)—that one word summed up the Turk's attitude towards the world, its pleasures and its pains.

The Old Turk with the New Spirit still says "Inshallah," but it has become as meaningless as our English "Good-bye," that once meant "God be with you." Here, as elsewhere, liberty has banished the old gods, the old watchwords, the old ideals. It has not stopped to discriminate between the good and bad old gods, the good and bad old watchwords, the noble and ignoble old ideals. "Whole-hoggers" the Turks—everything has had to go in the sacred name of "Liberty."

The Young Turk has very often read Voltaire, Rousseau, Schopenhauer, and Nietzsche; he is able to quote long paragraphs from these, his favourite authors; he can argue too with all the subtlety and brilliance characteristic of the Orient. But ask him about Mohammedanism—he shrugs his shoulders. He is not sincere, however, in his Atheism. Deep, deep down in his heart is graven "Allah is Allah and Mohammed is his Prophet." His Atheism is but a passing phase, the fashion of the hour; he cannot root out from his mind the doctrines inculcated with fiery zeal by Mullah and master. Moreover, he is the heir to the ages, just as we are. Hence strive as he may to eradicate his religious beliefs, he fails. His one anxiety is to become European, to acquire Western habits of thought and mind, and to achieve this he becomes abject in his worship of things and persons Occidental. And as soon as a nation loses pride in its history, as soon as it seeks to lay aside its national characteristics and endeavours by imitation to give the impression of a thing which is not, forces of disintegration are at work which, unless they are speedily arrested, will assuredly destroy the whole social fabric.

Will Turkey gain by the changes it is undergoing? By throwing off the yoke of the Koran, will the spirit of brotherhood, of social equality, become more intense? Is everything European so good, so pure—has the West no vices? Is Christian Europe more tolerant than Mohammedan Asia? Are the people of Europe happier in those lands where aristocracy still prides itself upon its exclusiveness than in the East, where there are no social distinctions?

The Young Turk must be wise. He must give up the worship of externals. He must remember that men of his race and religion were renowned as scientists and philosophers at a time when Europe was plunged in darkness. If the history of his own time be somewhat bloodstained let him solace himself with the thought that nations celebrated for their high pitch of civilisation have also their pages of history which will not bear the strong scrutiny of critical but unprejudiced eyes.

Above all the Young Turk must evolve, and his evolution will bear the best fruit if it strives to retain its best national and religious characteristics. Change may be either evolution or revolution. Real greatness and social stability are founded on the former. As things stand at present the casual observer can have but little faith in a spurious Occidentalism that manifests a strong desire to turn up its nose at its true self.

The eyes of Europe are fixed on Turkey. If those living under the new régime are intent upon abandoning the old enthusiasms, which did so much to make the Ottoman Empire great, for meretricious European catchwords, no expressions of fulsome praise will absolve them in the eyes of their friends for their desertion.

Moslem as well as Gentile can best be studied from the Jew. Everywhere the Jew, as in some huge convex mirror, reflects his surroundings in some exaggerated form. In England during the Boer War, when Jingoism stalked through the land, it was the Jews who were "plus royaliste que le roi." Likewise in Turkey, they are more Turkish than the Turks in their endeavours to out-Europeanise Europe. When Mohammedanism was more or less fanatic the Jew in his observances was also fanatic. The change that has taken place in the sentiments of both these races gives one seriously to think, and constitutes a menace to good order and a high standard of civilisation. Let East remain East—wonderful undying East, and let West remain West—wonderful fickle West.

CURRENT COMMENTS.

The question of the nature of appointment of judges to the Egyptian Native Court of Appeal has of late years given rise to much discussion. It had been decided, for reasons best known to the Egyptian Government, to appoint such judges on a contract for a specified period. Under the Organic Law, Appeal Court judges were irremovable—and quite rightly so—but, on one of the judges claiming that his contract was therefore not valid, the Mixed Court of Appeal decided that such contracts were perfectly legal and binding. There can be no question that the system of appointing judges for a fixed period, with the option on the part of the Government of renewal at the expiration of that period, is open to the most serious criticism. It does not give the judge that freedom of action and immunity from influence from official quarters which are so necessary to the dispensation of impartial justice.

***

This point had evidently struck Lord Kitchener, for in his recent report he wrote:—"It is evident, however, that the judges in question must be safeguarded against the possibility of undue interference on the part of the Government, and it has accordingly been deemed advisable to discontinue the system of contracts in spite of the vindication of their legality by the Law Courts, and to deal with the question by a new law." This new law has now been promulgated, but we must confess that, in the light of the above quotation, we do not see how it really improves matters. It lays down that all judges appointed to the Native Court of Appeal who have not previously been in the service of the Government shall be appointed by contract for a period of from two to three years. At the end of that period the Council of Ministers, after having taken the opinion of a committee of Appeal Court judges, will decide whether the judges in question are to be retained or not. Consequently, during the first two or three years, the new judges will be liable to the interference from which, it was admitted, they must be safeguarded.

***

It will probably be objected that, however able a lawyer a man may be, he may prove himself quite unable to dispense justice efficiently in an Oriental country, and that therefore the Government must protect itself against such a contingency. To which we make bold to reply: But why appoint outside men to the Court of Appeal, or, in fact, to any of the Native Courts? The judgeships which fall vacant are the rightful reversion of the junior men in the service, and the taking of men from outside is a direct injustice to those junior men, who have been brought out from England on the promise of certain definite prospects—the promotion to judgeships. To our mind there has been too much of this passing over of junior men in the past, and in this unfortunate policy reposes the true reason why the Egyptian Government has experienced such difficulty in obtaining suitable English recruits for the judicial service.

***

A certain section of the Sudanese community have at all times been expert in the matter of thieving on a small scale, but in the wake of civilisation has come a more ambitious mode of working, and recently the officers' quarters at the British barracks were entered at night by thieves, who got away with something like a thousand pounds' worth of loot. The burglars did their work very conscientiously, and left nothing of any real value in the part of the building they visited. The police have, up to the present, been unsuccessful in obtaining any clue which might lead to the identification of the nocturnal visitors. But the very "mixed" nature of their bag will probably lead to their downfall in the end. It included Distinguished Service Orders, war medals, valuable jewels, a revolver case and ammunition, and, unfortunately for the burglars, a clasp-knife bearing an inscription and some waistcoat buttons. Convertible articles of gold and silver will probably have been in the melting pot of the bazaar within a few hours of their abstraction, but the native can do nothing with buttons except wear them, and we know him too well to imagine that he will forego that temptation. The Khartum police have only to sit tight and watch the waistcoats of the populace, and the authors of the burglary will sooner or later be discovered.

***

The Sudanese thief is an active, determined person, but he is seldom dangerous. He usually goes to work clad only in a sheath dagger, which he wears round the biceps of his left arm, and by well greasing his body he makes it a difficult matter for anyone to capture him. In his book "Five Years in the Sudan," Mr. Edward Fothergill tells an amusing story of the cunning and kindness of his servant in regard to one of these gentlemen. There had been several thefts from the steamers in the dockyard when he was in the Sudan, and eventually the thief paid a visit to Mr. Fothergill's boat. "It appeared that in the early hours of the morning," he writes, "my boy was lying half awake when he saw a man stealing quietly down the bank opposite the ship and come on board. He was stark naked, but he carried the small knife which the Sudanese use in its sheath on his left arm. Mohammed, feigning sleep, watched him quietly. His body was heavily greased; thus, had anyone attempted to capture him he would have literally slipped through their fingers. My boy was too wise to attempt to do this; he waited calmly until the man, finding nothing of sufficient value on deck to steal, descended into one of the holds. Then he rose calmly, closed the hold, and sat on the cover and called for help." A council of the crew agreed to release him immediately because he was a poor man, but the fright which he had sustained had its effect and there were no more thefts from Government steamers."

***

Apropos of the Mediterranean Fleet question, a correspondent writes:—The strong criticisms levelled against the new scheme by the Opposition, and the feeble stand which the Government and their supporters are making against these vigorous attacks carry the mind of the student of history back to the glorious era which saw the birth of British naval supremacy—the age of Nelson. Your Malta correspondent has referred to the oft-expressed opinion of the hero of the Nile, as he then was—for Trafalgar was still on the lap of the gods—that Malta as a naval base was utterly valueless to Great Britain. Although the opinion has since been qualified as one of the most extraordinary ever expressed by Nelson, yet in 1801 it was, for some inexplicable reason, endorsed by no less an authority than Earl St. Vincent; and thus it placed a mighty weapon of self-defence in the hands of the British Government of the time, who, too weak to bear the burden of office, rendered all the heavier by the wars of the French Revolution, was willing, nay, anxious to sacrifice Malta—then the *only* bone of contention—in order to purchase an inglorious peace with France. But no sooner was British public opinion apprised—mainly, if not solely, through the publication in Cobbet's *Register* of the famous memorial of the Maltese people to the British Throne against the preliminary Treaty of Amiens—of the danger of evacuating Malta, and of the enormous value of the island to the British Empire, especially as a naval base, then it veered round to the necessity of holding Malta against all comers and at all costs. Thus a fierce struggle broke out between the Government and the people of Great Britain, with the result, so natural in constitutional countries, that the Ministry, unable to stem the current of public opinion, finally gave way, and Malta became the direct cause that reopened the hostilities which ended on the battlefield of Waterloo. Now, as then, Malta has created a wide gulf between the Government and the great mass of the people, and this time the Empire, a potent factor to be reckoned with, manifestly throws its weight on the people's side. Who will give way in the long run? Will history repeat itself?

***

On more than one occasion we have referred in these columns to remarkable cases of longevity in the Near East, but the Cairo correspondent of the *Pall Mall Gazette* reports a case that must surely constitute a record. An Arab was taken before the local magistrate charged, alas! with the unromantic offence of fowl-stealing, and in course of the hearing it transpired that his age was 112. Many Orientals are, we know, quite unreliable in their statements concerning their own and other people's ages. But in this instance there was presumably fair reason to believe the offender's statement, for, on the strength of it, the magistrate actually decided not to commit him. And then the most astonishing feature of the case came out. On being asked if he had anyone to look after him, the venerable robber of hen-roosts replied at once, "Oh yes; I live with my mother." We can only observe that it is high time the old lady taught her boy better ways. There is nothing like beginning early in such things.

***

We are sometimes told—in fact, we are very often told—that Turks and other Moslems are given to abusing the facilities they are supposed to enjoy in the matter of divorce; and certain sentimental writers have drawn harrowing pictures of distressed wives who have found themselves cast aside at a moment's notice, so to say, by a fickle husband. But the most fickle of oriental husbands is usually prepared to give *some* reason, however poor, for his wish to divorce his wife, and in this respect he would appear to be more rational than a certain Swiss girl. The young lady in question, we learn from a Sunday paper, is asking for a divorce from "a Turkish nobleman," whom she married only three weeks ago. And she brings no accusation against her husband, but bases her petition on the grounds that "Western and Eastern life are very different." It would seem to be a pity that she did not read, mark, learn, and inwardly digest certain well-known lines written by Mr. Rudyard Kipling before she took her fatal plunge. But we hope she will secure her divorce—if only for the sake of the "Turkish nobleman."

***

The resolute way in which the conscription of men of over forty years of age has been enforced by the authorities has led to a strange result in at least one part of Turkey. The *Daily Chronicle's* correspondent at Antigoni reports that the choristers of the Armenian churches there have gone out on strike as a protest, and that "for the first time in the history of the church" there was no chanting on the day he sent off his message. As he offers no critical opinion on the merits of the choristers in question it is difficult to guess whether the strike is likely to prove effective, or whether it may tend to popularise the enforcement of the conscription.

PERSONAL & SOCIAL

H.H. the Khedive, who arrived last week at Geneva for his annual visit, celebrated his birthday on Monday.

Sir Adam Block and Lady Block, accompanied by Miss Block, have arrived at Goring from Constantinople.

Prince Antoine Bibesco, First Secretary of the Roumanian Legation, has arrived in London.

The Duke and Duchess of Sparta, with Prince George, Prince Alexander and Princess Ellen of Greece, the Grand Duke and Grand Duchess George of Russia, and Prince Christopher of Greece, visited Queen Alexandra at Marlborough House on Wednesday afternocn.

Lord Kitchener reached Dover last Friday and proceeded direct to Broome Park, Canterbury. On Tuesday he came to town and was amongst the callers at Buckingham Palace, afterwards proceeding to the Foreign Office, where he saw Sir Edward Grey.

Mr. Milne Cheetham and the staff of the British Agency, who accompanied Lord Kitchener to Alexandria on his departure from Egypt, have taken up their residence at Bulkeley, Ramleh, for the summer.

A son and heir was born to Earl and Countess Percy at 3, Upper Belgrave Street, S.W., on Monday morning.

Mme. Grouitch, wife of the Servian Chargé d'Affaires, was "At Home" at the Legation on Wednesday. Prince Paul Kara-Georgevitch, the members of the Diplomatic Corps, and members of the Servian colony were present.

Prince Christopher of Greece honoured Mrs. Pandia Rodocanachi with his presence at her dance on Monday night.

Prince Paul Kara-Georgevitch honoured the Servian Chargé d'Affaires and Mme. Grouitch by taking luncheon with them at the Legation last Friday.

The Greek Minister and Mme. Gennadius were amongst the guests at Mrs. Alec. Tweedie's luncheon party last Friday.

Sir Lucas and Lady Ralli were honoured by the presence of the Grand Duchess George of Russia, Prince George of Sparta, and Prince Christopher of Greece at dinner at 2, Park Street on Wednesday night. The Greek Minister and Madame Gennadius and Mr. Vouros were also present. After dinner Lady Ralli held a small reception, which was attended by several members of the Greek community in London.

The Bulgarian Cabinet has fixed August 15 as the date for the family celebrations of the twenty-fifth anniversary of King Ferdinand's reign. They will be held at Old Tirnovo. The principal celebrations are to take place at the end of October, when the new Cathedral Church of St. Alexander Nevsky will be consecrated.

Last Friday being King Peter of Servia's birthday, by command of King George, the Hon. Sir Arthur Walsh, Master of the Ceremonies, called on the Servian Minister at the Legation in the morning to offer his Majesty's congratulations. Other callers included the Prime Minister, the Secretary of State for Foreign Affairs, the Lord Chamberlain, and many members of the Diplomatic Corps.

Major Clauson, C.M.G., Lieutenant-Governor and Chief Secretary to the Malta Government, and Mrs. Clauson left Malta on the 5th inst. by the P. and O. "Macedonia," and are now in this country.

Major M. H. G. Fell, Royal Army Medical Corps, on returning from Cairo, has been posted to the London District for duty at the War Office.

Borton Pasha, Director-General of the Egyptian Postal Administration, left for England on Monday.

The King of Greece has conferred on Mr. C. S. Butler, of Athens (formerly Captain, the 3rd Battalion of the Durham Light Infantry), the decoration of Knight of the Order of the Redeemer, for services rendered to the State.

Dr. J. Currie, of Gordon College, Khartum, is in London representing the college at the 250th anniversary of the Royal Society.

The King of Greece has conferred the Cross of Grand Officer of the Order of the Saviour on Admiral Tufnell. His Majesty has also bestowed minor decorations on other members of the British naval mission, in recognition of the progress effected in the reorganisation of the Greek Fleet.

Mr. Goschen, of the Egyptian Ministry of Finance, left Cairo for Port Said on the 8th inst. on his way to this country, where he will spend his summer holidays.

Captain Hall, who had been performing the duties of General Manager of the Egyptian State Railways, left for England, via Port Said, on the 15th inst. on leave.

Our Malta correspondent writes that El Lewa Bernard Pasha, Financial Secretary to the Sudan Government, arrived in the island on the 3rd inst. on a short visit to his family, and was leaving last week for England.

Mr. Sidney H. Wells, Director-General of the Department of Agricultural, Technical, and Commercial Education, has left Egypt for his annual leave, and will return at the end of September next.

Captain R. W. Hutton, Royal Marine Artillery, and Captain R. S. Gibson, Royal Marine Light Infantry, have been appointed to the Egyptian Army.

Colonel W. E. Fairholme, who has been appointed to command the Artillery of the Third Division, was on the Turco-Greek Boundary Commission in 1898; was an Assistant Commissioner in Crete in 1899; and, after acting as Military Attaché at Vienna in 1902-3, served with the Macedonian Gendarmerie.

The death occurred at his residence, Banbury, last Friday night, of Vice-Admiral Hart-Dyke, who had seen much service in the Near and Middle East. He served in the Abysinnian Expedition, and subsequently took part in the suppression of slave-running in the "Spiteful." Later he was in command of the "Sphinx," which is so familiar an object in the Persian Gulf, and he was senior officer in the Gulf from October, 1890, to March, 1893.

A marriage has been arranged between Captain Gilbert F. Clayton, late Royal Artillery, Sudan Government Service, eldest son of Lieutenant-Colonel and Mrs. Clayton, of Sandown, Isle of Wight, and Enid Caroline, second daughter of Mr. and Mrs. F. N. Thorowgood, of 24, Elm Park Gardens.

A marriage is arranged, and will take place quietly in September, between Richard Massie Graves, Egyptian Civil Service, of the Ministry of the Interior, Cairo, second son of Alfred Perceval Graves, of Erinfa, Harlech, and the late Mrs. Graves, and Eva, fourth daughter of the late Major H. C. Wilkinson and Mrs. Wilkinson, 16, Chester Terrace.

Sir Percy Girouard, whose resignation of the post of Governor and Commander-in-Chief of the East Africa Protectorate is just announced, made his name as Director of Sudan Railways and as President of the Egyptian Railway Board. He was selected for the first post by Lord (then Sir Herbert) Kitchener, who left to him the entire direction of the task of keeping pace with the remarkable advance of 1896-98. The laying of the railway across the desert rendered practicable the operations at Atbara and Omdurman, which led to the overthrow of the power of the Mahdi; and in recognition of his services Lieutenant Girouard was noted for a majority on promotion and decorated with the Distinguished Service Order. He did not share in the completion of the Sudan War, for in April, 1898, he was chosen by Lord Cromer to succeed Mr. Robertson as President of the Egyptian State Railways and Telegraphs.

Our Bucharest correspondent writes:—Prince Ahmed Fouad, uncle of the Khedive, in company with Professor Fago, has been paying a lengthened visit to this country, studying its ways and institutions. They had the honour of being received by King Carol a few days ago, and last Saturday paid a visit to the Crown domains at Cocioc. The Prince interested himself especially in the cattle-breeding establishments.

Early in August Prince Henry of Prussia, brother of the Emperor of Germany, will pay an official visit to King Carol of Roumania.

Mr. Titus Maïoresco, the Roumanian Prime Minister and Minister of Foreign Affairs, has returned to Bucharest and resumed his Parliamentary duties.

H.R.H. the Prince of Wittgenstein, Councillor of the German Legation at Sofia, who has been in charge of the German Legation at Bucharest since the departure of Dr. Rosen, has returned to his post, the new German Minister to Roumania, Herr Von Waldtshausen, having arrived a few days ago.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

HOLLAND.—On July 15, at 7, Berkeley Square, Clifton, the wife of Captain H. H. Holland, Imperial Ottoman Navy, of a son.

MARRIAGES.

CLIFTON-POLLOCK.—On July 11, at St. Mary Abbot's Church, Kensington, Ernest Hamilton Clifton, son of the late George Henry Clifton, of Candilli, Constantinople, to Vanda Marion, only daughter of Arthur Pollock, of 6, Lincoln's Inn Fields.

TEALL—COX.—On July 11, at Marylebone Parish Church, London, by the Rev. E. T. Clarke, Minor Canon of Llandaff Cathedral, Frederic Hathaway Teall, of the Egyptian Civil Service, and younger son of J. J. H. Teall, Sc.D., LL.D., F.R.S., Director of H.M. Geological Survey, to Marjorie Clayton, youngest daughter of Dr. and Mrs. William Cox, of Stone House, Winchcombe, Glos.

DEATH.

BUCK.—July 10, at Hyde Terrace, Leeds (suddenly), George O. H. Buck, of Smyrna, formerly of Constantinople and Cheetham Hill, Manchester.

FRIDAY, JULY 19, 1912.

THE SITUATION IN TURKEY.

The Cabinet of Said Pasha has resigned. On Monday it was accorded a vote of confidence in the Chamber of Deputies by 194 votes to four, and on Wednesday it had ceased to exist. The very numbers of its majority rose up in judgment against it, for they argued a complete estrangement between a Chamber of the Government's own creation and the condition of the country at large. It is only possible to reconstruct in the barest outline the circumstances that have led to the downfall of the Turkish Government, for behind the statement that it is due to internal dissensions lies obscured the whole history of a prolonged movement that has come to a head with unexpected rapidity. The Cabinet of Hakki Pasha had been forced to resign, at the beginning of the war with Italy, owing to the popular indignation caused by its failure to avoid war or to make adequate preparations for it. Said Pasha filled the gap, with nominally a non-party Ministry, but before long the Committee of Union and Progress saw fit to strengthen the Government by the substitution of some of its own men. The process of gathering the reins more tightly within its grasp was extended to the Chamber, and the elections, as we have seen, were carefully "made" with the deliberate purpose of securing Parliamentary support for the Committee. From that moment the fate of the Cabinet was sealed. Internal dissensions in its ranks became acute, the Opposition in the country secured an invaluable rallying cry, and at the same time dissatisfaction among the officers of the Army was growing apace from causes inseparable from the Committee's policy of consolidating its personal power. The Albanian revolt threw upon the Army the onus of deciding whether it would support the Committee in extricating itself from the results of its own mismanagement or would refuse to take the field against compatriots whose only quarrel was with the Committee. Any doubt as to its attitude was removed by the mutiny at Monastir, and, whether that incident occurred with or without the sanction of the organisation known as the Military League, the latter appears to have followed up the declaration of war with determined action.

It is at this point that the difficulties of following the inner workings of Turkish politics begin. Popular or military hostility would seem to have embraced four Ministers, Mahmud Shevket Pasha, Talaat Bey, Djavid Bey, and Hadji Adil Bey. All these are stalwarts of the Committee of Union and Progress, but it is probable that the Minister of War and Djavid Bey were divided by personal antagonism. Hadji Adil Bey, on the other hand, enjoys a good record, and the circumstances of his recent tour through Macedonia and Albania bespoke for him both some measure of enlightenment and a desire to give much-needed reforms a prominent place in the Government programme. Mahmud Shevket Pasha was the first to be sacrificed to the exigencies of the situation, and in view of what has happened since there may have been some foundation for the report that his "resignation" was the result of a twenty-four hours' ultimatum from the Military League. His withdrawal was effected before the Cabinet had time to appoint a successor, and no little difficulty was experienced in finding a suitable candidate for the post. On Tuesday it was announced that the Government's choice had fallen on Mukhtar Pasha, but the Iradeh confirming the appointment was never issued. It seemed incredible that the new Minister could command the support of the discontented faction in the Army, but for a moment those who had been following the various phases of Turkey's internal difficulties were tempted to believe that they had overrated the strength of the Opposition and the vitality of the Committee's Cabinet. The issue was not left long in doubt. Whether other forces were also at work we have no information—it is reported that the Sultan had been urging the Cabinet to resign—but the selection of Mukhtar Pasha to succeed Shevket Pasha as Minister of War was the last attempt made by the Said Ministry to hold its ground. Within twenty-four hours it was out of office. Tewfik Pasha, Turkish Ambassador in London, has been appointed Grand Vizier, and it is probable that he will be able to form a neutral Cabinet. The Chamber, with its overwhelming majority of Committee supporters, might be supposed to introduce an element of difficulty into the situation, but it is held in competent quarters that even without a dissolution the deputies would experience no strain upon their corporate conscience in acclaiming the new order.

The fall of the Said Ministry will evoke little regret. On the other hand, it would be premature to conclude that other men will at once mean other methods in Turkish administration. The influence of the Committee of Union and Progress has yet to be reckoned with, for it remains, as far as can be gathered, the only political party with a capable organisation. It is to its credit that at a critical period in Turkey's history it knew how to grasp the reins of power firmly. This strong qualification, however, has not saved it from failure in other directions. Its chief mistake has been in concentrating its efforts on its own personal security at the expense of the wider interests of the country as a whole. Three grave problems are directly confronting the Ottoman people; they concern the financial position, the Army, and the component races of the Empire. Up to the very last the Said Cabinet showed no adequate sense of its responsibilities in these directions. In regard to the first the policy of the Government has been at best a makeshift one; in dealing with the second it has obviously failed to perform its part with any degree of success, while in handling the race question it has shown a complete lack not only of statesmanlike qualities, but also of the most rudimentary knowledge of the duties of government. To these three problems must be added another even more pressing—the question of the termination of hostilities with Italy. The resignation of the Government, we may hope, has brought the conclusion of peace appreciably nearer, and the Committee of Union and Progress will consult its own interests and those of Turkey if, at this juncture, it stands aside and allows a new Cabinet to be formed that contains none of its extreme supporters. A Cabinet charged with the duty of concluding a honourable peace would have little occasion for elaborating a comprehensive domestic programme, and there would be no fear of the Committee languishing too long in the deserts of Opposition. Respite from office would enable it to rid itself of the elements that have been mainly responsible for its failure to retain popular support, and in due course it could return to a fresh lease of power with a clearer conception of its duties to the nation added to its admitted capacity for organisation.

THE MEDITERRANEAN FLEET.

The Executive Committee of the Navy League have issued a manifesto urging their conviction upon the Government and both Houses of Parliament that our naval supremacy in the Mediterranean must immediately be re-established, and at all costs. The opinion is based upon the following considerations: (1) That any departure in policy which gives colour to the idea that this country proposes to abandon its position in these waters is a distinct encouragement to rival foreign nations, which may be antagonistic to British interests. In view of the alliances existing among European Powers, it is conceivable that a war in home waters might equally involve us in the Mediterranean. (2) That the good government and peace of India and Egypt are bound up with the maintenance of British prestige, which is wholly dependent upon British command of the sea. (3) That if this country relinquishes its traditional policy of regarding the Mediterranean as the pivot of British Imperial policy, enormous expenditure must be anticipated in strengthening our military position in Malta and Egypt, in order to maintain our Imperial communications throughout the world.

The Committee draw attention to the significant fact that in 1910 over 105,000,000 cwts. of wheat reached this country by way of the Mediterranean, and that the aggregate trade of these islands with the Empire and foreign countries through that sea exceed £325,000,000 sterling.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

According to the German Consul at Alexandria, economic conditions in Egypt have improved. Large suspensions of payment have no longer occurred, and the number of small suspensions has slightly decreased, whilst payments by customers are easier. The banks continue to impose limitations on credit, and importers and the better class of native merchants have become more cautious in deliveries to customers. The war affects trade unfavourably, especially the transit trade to Turkey. On the other hand, a substantial development of business is not expected before the autumn—a prophecy with which I should like to concur. But, as a matter of fact, the present state of the Egyptian market is far from easy, and, in spite of the German Consul's optimism, I doubt whether the autumn will see an improvement. Business men recently arrived in London from Cairo and Alexandria assure me that the stagnation of the market is chronic, and that prospects for the immediate future are not sanguine. From the speculator's point of view, I am bound to confess that I agree with this view.

***

The return of the "Selandia" from Singapore to London marks the final achievement of a bold plan, and one that is going to revolutionise the history of shipping. Apparently the journey out and home again was successful in every way, and two minor troubles to the exhaust were quickly remedied. The most interesting problem in connection with the ship's run would be to work out the average cost per knot and ton as compared with that of an ordinary steamer. I see that the oil tanks were filled in Singapore for a return journey out, oil being cheaper there than here.

***

The *Board of Trade Journal* takes from the *Handelsmuseum* of June 20 an account of the construction of the new central railway station at Salonika, and heads it, "Building Materials for Railway Station." On April 19, three months ago, THE NEAR EAST published the details of the new construction.

***

"Bernie" in the *Egyptian Morning News* is deservedly severe on the hundreds of distilleries in Egypt which turn out gallons and okes of cheap, poisonous "brandies, wines, liqueurs, to say nothing of mastic—and I might add whiskies—which are sold wholesale, and which are placed into bottles having originally contained first-class creature comforts, and which bear the labels of some well-known mark." ("Black and White" is one of the brands which suffers the most from this iniquitous adulteration, as I know from my own experience.) Apart from the considerable damage caused to trade, this poisoning of "first-class creature comforts"—to use one of "Bernie's" epithets—for native consumption is "responsible for the ever-increasing amount of crime in Egypt."

***

There is more truth in this remark than is generally admitted by the legislator. I do not know to what an extent the Capitulations are responsible for the Government's non-interference in the illicit liquor fraud, but surely if a campaign, crowned with a measure of success, can be waged against the white slave traffic, a similar one could be directed against the wholesale poisoning of the natives by vitriolic drinks. Nationalists and Little Englanders are in the habit of throwing all the blame for Egypt's moral deterioration through drink on our shoulders because we introduced whisky into the country. They had better reserve their accusations for the Greek-Levantine poison-brewers of Cairo and Alexandria. First-class Scotch or Irish is never drunk by the native; he prefers (because it is cheap) his filthy "Bu'cana"—vitriol and methylated trade spirits sold in bottles bearing the label of Buchanan's Black and White.

***

The Bulgarian loan, to which I have already referred in these columns, is presumably to be placed in both France and Germany, a banking concern in Berlin taking over 40 per cent. of the total loan of 180,000,000 frs. For Bulgaria's sake, it is just as well that it should be so. I pointed out on another occasion that the French were peculiar customers to deal with, and that when they presented themselves as lenders they generally made it a point to accompany their generosity with awkward conditions, involving the borrower's obligation to spend the larger part of the loan in France. From a French point of view this policy is excellent, and might even be adopted by us, as it is tantamount to a highly ingenious form of protecting home industries. The case of Bulgaria seems to have been no exception, for I read in the *Deutsche Orient-Korrespondenz* that immediately after the arrangements for the loan had been concluded representatives of the great French industries visited the Prime Minister with a view to exact from him a promise that he would do as other Premiers had done before him. Doubtless he would have done so, but the circumstance that Germany has entered the arena will tend to minimise the danger of Bulgaria losing her economic independence.

***

The *Monthly Journal* of the British Chamber of Commerce in Egypt asks the question "Who pays the loss on exchange when a buyer remits to the manufacturer?" It answers the question by quoting from a letter in reply to one of its correspondents. "The usual practice is that a bill drawn in pounds, shillings, and pence is paid by the customer at the fixed legal rate of P.T. 97½ to the pound, unless it is stipulated in the draft that the same is to be paid at the current rate of exchange." If it is intended to make the buyer responsible for the exchange, the words "payable at the rate of exchange in London" must be incorporated in the wording of the bill, and the point should be carefully explained at the time the document is signed. I agree with the *Monthly Journal* when it says that it would often save a lot of difficulty and unpleasantness if manufacturers and merchants would not insist upon remittances being made at the rate of exchange, but would agree in the first instance to accept par.

***

The Bulgarian Telegraph Agency reports that the Ottoman Government has again the intention of approaching the foreign Cabinets with a view to obtain their adhesion to an increase of 4 per cent. *ad valorem* in the Customs duties. The demand for a 13 per cent. *ad valorem* tax on all articles imported into Turkey has been frequently, but unsuccessfully, made, but I am informed that, as a result of the Anglo-Turkish negotiations, British opposition may be overcome. However, until the war is over I very much doubt whether the desired adhesion will be general. Turkey must realise this, and I am therefore inclined to question the accuracy of the above report.

***

THE NEAR EAST published last week a reference to a new company which is to operate in Servia with a view to exploit some mineral properties. It would seem as though British finance were at last going to turn its attention to the mineral wealth of Servia, a country only forty-four hours distant from London, and yet as little known to us as the wilds of Africa. For some reason or other—unjust prejudice, I should say—British capital has been deterred from investment in Servia, with the result that Austria, France, and Germany have forged ahead. It is not too late for us to participate in some measure in the opening up of the country's natural resources and to improve our trade, which has dwindled in the most inexplicable manner within the last few years.

***

I read with pleasure that negotiations are in progress between the committees of the Sudan Chamber of Commerce and the Omdurman Merchants' Association with a view to the amalgamation of the two bodies. From the very first moment I condemned the creation of the last-named society, because rivalry between both would prove injurious to the country's commercial interests. At the same time, I admitted that the younger association had grounds for setting up as it did, owing to the lethargic inactivity of the Chamber. It is to be hoped that the proposed amalgamation will be effected shortly, and that the combined energies of both associations will be of real use to British trade in the Sudan.

***

We publish on another page the notice of an architectural competition in Sofia which ought to offer an exceptional scope for ambitious British architects. I should like to point out to them, however, that Continental draughtsmen are in the habit of putting more finish into their drawings than is the case with us. Another point to be remembered is that in Bulgaria the metric system is in vogue, and that it will therefore be necessary to draw up the plans on the metric scale. For it must not be forgotten that a Continental jury is—Continental.

***

The Imperial Bank of Persia at Teheran is prepared to place its services and those of several branches at the disposal of clients for the collection of bills drawn against goods sent to Persia by parcel post, and addressed care of the Imperial Bank of Persia. Certain conditions, specified in a circular letter which has come to my notice, are attached to the transaction. The bank's services will be welcome to many exporters, and are certain to prove beneficial to trade. Parcels for Tabriz and the north-west of Persia are to be sent *viâ* Djulfa; for Kesht, Teheran, Kazvin Ispahan, and Central Persia, *viâ* Enzeli; and for Meshed and north-east Persia *viâ* Badjgiran.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, July 13.

Great Britain's Trade with Turkey.

The Board of Trade returns for the month of June, just to hand, show a further slight decline in the total exchanges between the two countries.

The enumerated exports to Turkey during June, 1912, are less by a round hundred thousand pounds than during the same month in 1911, and a hundred and sixty thousand pounds less than in 1910. The decrease is general, with the sole exception of cotton yarns, which I explained last month as being due to the stoppage of Italian imports. Turkey's exports to Great Britain are slightly greater than during the same period in 1911, the increase being in the shipments of barley, but they are less than in 1910, the decrease in this instance being in the shipments of mohair, which amounted to £110,874 in June, 1910, but were only £27,725 in 1912.

The total enumerated exports to Turkey during June, 1912, were £498,028, as compared with £598,672, and £659,852 during the same months in 1911 and 1910 respectively. The enumerated imports from Turkey were during the same month £96,119 in 1912, as compared with £60,754 in 1911 and £140,613 in 1910.

The total exports from Great Britain to Turkey for the six months ended June, 1912, are £2,873,084, as compared with £3,523,443 during the same period in 1911, and £3,003,829 in 1910. Here again all articles show slight decreases, with the exception of cotton yarns, of which the total exports are £313,860 in 1912, as compared with £217,820 in 1911 and £194,576 in 1910.

During the six months under consideration the total enumerated imports from Turkey were £966,564 in 1912, £694,275 in 1911, and £638,500 in 1910. The noticeable increases are in wheat and barley, the imports of the latter amounting to £570,365, as compared with £225,144 for the same period in 1911 and £119,168 in 1910. Mohair is also slightly in excess of 1911, but falls exactly a hundred thousand short of 1910, the actual figures being £171,080 in 1912, as compared with £159,535 in 1911 and £272,920 in 1910.

The total exchanges between the two countries show for the half-year just ended a decrease of exports to Turkey in 1912 amounting to £650,000 as compared with 1911, and £130,000 as compared with 1910, but of this decrease £270,000 is recovered in imports from Turkey as compared with 1911, leaving a shortage of £380,000, while we are still £200,000 ahead of 1910. Seeing that the decrease in the exports to Turkey of cotton goods alone amounts to £640,000, due purely to market conditions, it would certainly appear that the war has had little, if any, direct result upon the regular trade of the two countries.

Proposed Municipal Loan.

The General Municipal Council, at a meeting held during the week, authorised the Prefect of the city to take steps to negotiate a loan of £T650,000. It decided at the same time that the proceeds of the loan should be devoted, £T150,000 for expropriations in the quarters burnt in Stambul, £T60,000 for the laying out of these same quarters, £T100,000 for the rebuilding of houses, £T50,000 for the building of a hospital at Scutari, £T50,000 for the construction of roads in Scutari, £T120,000 to meet the deficit in its last year's Budget, and the balance for the requirements of the various municipal circles.

Owing to a portion of the petroleum storage tax, one of the securities given to the National Bank for the loan of a million pounds negotiated last year, having been the source of an adverse litigation, the municipality will doubtless be required to replace this security by the new municipal tax on house property, and as this security could hardly be divided, it would appear likely that the new loan will be proposed to the National Bank, but whether the moment chosen is quite opportune is another question into which I cannot enter.

Harbour Works.

A French company is said to have made application for a concession for the construction of a harbour at Ineboli, on the southern coast of the Black Sea to the west of Sinope, including the regularisation of the course of the river flowing into the port.

The project of a French company to construct the harbour of Cavalla has been approved by the Council of State. The estimated cost of the works to be undertaken is £T270,000. A concession for a period of fifty years is demanded, and the Government will participate in the profits to the extent of 50 per cent.

The Abattoirs of Constantinople.

The several tenders for the construction of the abattoirs of this city not having fulfilled the condition of the recent adjudication, upon the recommendation of a technical commission of the Ministry of Public Works to the Prefecture of the city, it is proposed to shortly invite fresh tenders in this matter.

Adjudications.

There are several adjudications announced for supplies which might be of interest to British manufacturers, but the notice given is so short that only those locally represented could possibly tender. The Ministry of Public Works, Direction Générale des ponts et chaussées, invites tenders for nine rollers of a weight of one and a-half tons each, and thirty-three of three tons each, suitable for animal traction, to be used in road construction in the provinces. Closing date for this is July 30. An electric crane with a lifting capacity of four tons is required for the tannery at Beicos. Particulars of the 5me Section de l'intendance générale on July 15, at three p.m. I might also mention another for a perforating machine and a paper-cutting press for the printing office of the Army, and 23,000 metres of serge required for the Navy, for which the closing date is to-day, but it would be merely to show that while there is business to be done those interested must have local representatives.

SYRIAN EMBROIDERY.

Mr. Manachy, the U.S. Vice-Consul at Aleppo, reports that the manufacture of embroideries and embroidered linen handkerchiefs is rapidly developing. A few years ago these articles were sent exclusively to the United States, whereas now important shipments are made to several countries in Europe.

This industry owes its revival to the initiative of two members of the American mission, Mrs. Shepard, wife of Dr. Shepard, head of the American Hospital in Aintab, and the late Miss Corinna Shattuck. This industry, starting from Aintab, the headquarters of the mission, has rapidly spread to the other cities, towns, and villages of the province, and now constitutes a means of livelihood for thousands of women and girls.

SERVIAN STATE MONOPOLIES.

During the month of May last the receipts accruing to the Administration of the Servian State Monopolies were: Tobacco, 1,727,248 frs.; salt, 583,624 frs.; petroleum, 134,339 frs.; stamps, 617,172 frs.; matches, 110,928 frs.; cigarette paper, 127,186 frs.; Customs, 1,202,363 frs.—or a total of 4,880,174 frs.

C.O.D. IN EGYPT.

The *Monthly Journal* of the British Chamber of Commerce of Egypt contains an admirable and timely article on the cash on delivery system, from which we reproduce the following:—

We offer no excuse for once more mentioning the fact that the cash on delivery system is in force between England and Egypt.

In his recently-issued report, Lord Kitchener stated that "the cash on delivery parcels system with Great Britain continues to develop satisfactorily, but more business could be done if British firms advertised more freely in the local Press." His Lordship might, with equal truth, have added the words "and if it were more generally known in England that the system exists between the two countries."

The following incident explains our point:—

About the middle of last May a retail stationer wrote to a London firm as follows: "Would you please send me per parcel post C.O.D. six boxes . . . pens gilt, and oblige (1 gross per box)." The reply which was given on a postcard was to this effect: "We regret that we have no means of sending parcels *Contre Remboursement*, but shall be pleased to send you six gross . . . pens on receipt of P.O. for. . . ."

It is difficult to understand the attitude of the London people. Granted they were unaware of the fact that goods can be sent from England to Egypt C.O.D., one would have thought that definite instructions from an Egyptian trader would, at any rate, have caused them to send over to the nearest Post Office and make inquiries on the point.

In case these notes should meet the eye of anyone who is labouring under the delusion that the sending of parcels from England to Egypt by the cash on delivery system involves a number of vexatious formalities, and the loss of considerable time, we propose to endeavour to dispel such misunderstanding by briefly explaining the whole of the procedure.

1. The parcel is to be handed in at any Home Post Office.

2. The usual forms relating to the despatch of foreign parcels are to be filled up. These consist of a Customs declaration, and a despatch note. On the despatch note the sender is to mention that the parcel is a C.O.D. one, and he is also to state the sum the Post Office is to collect from the addressee.

3. The sender is to pay a fee of 2d. at the time he hands in the parcel.

As it will be seen, the procedure is not by any means formidable.

When the parcel arrives in Egypt, the Postal Administration here, before parting with the same, collects from the receiver the sum marked on the despatch note. The money, less the Post Office's commission, is then remitted to the sender by means of postal orders or money orders. The fee charged by the Egyptian Postal Administration for their work in the matter includes delivery of the parcel and the commission on the money (or postal) orders sent in payment of the sum collected. Naturally, the charges do not include any sum payable to the Customs.

BAKHTIARI TRADE ROUTE.

A strong effort is being made (says the *Times* Teheran correspondent) by the British Minister to secure the opening of the Bakhtiari trade route, otherwise known as the Lynch road, from Teheran to Mohammerah. Owing to the insecurity which prevails, Messrs. Lynch recently stopped all transport, and this appears to have brought the Bakhtiari to their senses. It has now been agreed to appoint the Sardar Jengh as Ilkhani of the Bakhtiari for a term of five years, to reside at Behbehan, with despotic powers. His principal task will be to secure the safety of the trade route and to maintain good relations with the Sheikhs at Mohammerah. For initial expenses the Imperial Bank has advanced him £8,000 worth of guaranteed shares in the Anglo-Persian Oil Company. Amir Mofakhem, a Bakhtiari, is also to be appointed Governor of Kirman.

This attempt to solve the problem of the southern roads results in a considerable measure from the recent visit of Captain Gray, British Consul at Ahwaz, to Teheran, and its success is highly desirable, although confessedly problematical.

Openings for Business.

MACHINERY IN THE CRIMEA.

(From Our Own Correspondent.)

Odessa, July 14.

Thanks to the excellent harvest now practically assured in Southern and South-Western Russia and the Northern Caucasus, a flourishing and lucrative trade is this season being done in these provinces by British agricultural machine manufacturers, more especially in threshing sets. An enormous number of these appliances have been imported during the last three months, and they have all been sold. They are supplied by such well-known firms as Clayton and Shuttleworth, Robey, Marshall, Ruston Proctor, Foster and Ransomes. The chief carriers in the trade are Messrs. Thos. Wilson, Sons and Company, of Hull, whose regular liners now make their first deliveries of agricultural machines at Novorossisk before coming to Odessa.

The superior quality, solidity and durability of the British machines are gradually wearing down American competition. The attractively cheap cost-price of the American machinery is more than counterbalanced by the extra expense of continuous repairs and the supply of new parts. It is in this wise that the Americans recoup themselves, and the Russian agriculturist is discovering that fact by vexatious experience.

The American agricultural machine manufacturers now operating, with indifferent success, in these provinces are the International Harvester Company, Case and Company, and a newly-formed combine of Garr, Scott and Company, the "Advance" Company, and the Rumley Products Company, now called the Rumley Trust.

CRAIOVA TOWN HALL.

At Craiova, in Roumania, the municipal authorities have decided, we learn, to erect a town hall worthy of the town. It is proposed to spend a sum of between £50,000 and £55,000 upon the building, and manufacturers of builders' material, sanitary fittings, and so forth in this country might find it worth their while to make inquiries as to local requirements. Particulars of the proposed hall can be obtained from the chief magistrate of Craiova.

EQUIPMENTS FOR EGYPT.

The Commercial Intelligence Branch of the Board of Trade has received from the Director of Stores of the Egyptian Ministry of the Interior copies of the conditions of tender and specifications for the supply of clothing, equipment, and general stores required by the Stores Department, during a period of one year commencing October 1, 1912, says the *Board of Trade Journal*. The requirements include clothing and accessories; accoutrements; harness, saddlery, etc.; fire engine appurtenances; barrack, etc., furniture and requisites; tools and miscellaneous stores.

Tenders marked "Tender for the Supply of Stores," will be received by the Under-Secretary of State, Ministry of the Interior, Cairo, on stamped paper (obtainable from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.) up to noon on August 25. A provisional deposit equal to 2 per cent. of the total value of the articles tendered for will be required. Every tenderer must state his name and address in his tender, and must specify an authorised representative or agent in Egypt, giving his name and address, who will be responsible on his behalf for the due fulfilment of the contract. The goods supplied must be exactly similar to the patterns kept at the Bulac Stores and at the office of the delegate of the Minstry of the Interior in London, Mr. A. L. Webb, C.M.G., address as above.

Copies of the specifications containing form of tender and list of articles required, may be obtained by British manufacturers on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

BRITISH TRADE WITH ODESSA.

Writing on the trade of the Odessa district, the British Consul-General, Mr. C. S. Smith, says that in the course of a year "a large number of applications are made by British firms anxious to begin trade in Odessa. They have no idea of the local requirements, conditions, or terms upon which people in that market are in the habit of buying; a long correspondence follows, and in the end nothing comes of it. Business houses in the United Kingdom should notice that, though for raw materials unobtainable in Russia the terms are cash in exchange for documents at Odessa, or London banker's acceptance in London against documents, all manufactured goods are usually sold in Odessa on credit ranging from four to six months or longer, against customer's bills. Firms desirous of opening trade should be very careful in the selection of their agents, who should be able to supply satisfactory British references."

TURKISH ADJUDICATIONS.

Our readers' attention is called to the last paragraph of our Constantinople Business Letter, containing reference to Turkish adjudications. The notice is, as we have repeatedly pointed out, too short to enable British firms without representation in Constantinople to compete. The *Board of Trade Journal* publishes, on July 11, a notice to the effect that tenders for bridge constructions on the Hedjaz Railway will be received up to July 24. For all practical purposes such a short notification is valueless.

TARPAULINS FOR GREEK ARMY.

With reference to the notice on page 154 of The Near East of June 7 relative to a call for tenders for the supply of 4,650 waterproof (tarpaulin) covers for the Greek Army, the *Greek Government Gazette* of June 27 contains a notice that the time for the receipt of tenders has been extended to July 9, and that should no adjudication then be made (as to which further notice will be given) another competition will take place on July 23.

Tenders should be addressed to the "Ministère de la Guerre (Section du Matériel)," Athens, accompanied by a deposit of 500 frs. (£20) for each lot. Local representation is necessary. The covers are required for wagons and pack saddles, and tenders are invited in three lots.

ARCHITECTURAL COMPETITION.

H.M. Legation at Sofia report that the Ministry of Public Works, Sofia, invite the submission of designs for (1) a new Royal Palace and (2) new Law Courts. Four prizes are offered in each competition to the value of 10,000 frs. (£400), 7,000 frs. (£280), 4,500 frs. (£180), and 2,500 frs. (£100) in the case of (1); and 6,000 frs. (£400), 4,000 frs. (£160), 2,500 frs. (£100), and 1,250 frs. (£50) in the case of (2). Architects wishing to compete must submit their designs, not later than December 1 next, to the "Section d'Architecture au Ministère des Travaux Publics," Sofia, where copies of the programmes, etc., may be obtained on request. A copy of the programme (in French) of each competition may be seen by British architects at the Commercial Intelligence Branch, as above.

TENDERS INVITED.

EGYPT.

Supply of Two Distillers and Six Tanks.—Tenders in sealed envelopes will be received at the office of the Director, Coast Guard Stores, Arsenal, Alexandria, for the supply of two distillers and six tanks. The contract conditions and specifications can be seen at or may be had from the office of the Director of Stores, Arsenal, Alexandria. All tenders must be submitted on stamped paper, addressed to the Director, Coast Guard Stores, Arsenal, Alexandria, and marked on the envelop "Tender for the supply of distillers and tanks." They must be accompanied by a provisional deposit as indicated in the conditions of tender."—Date, August 15 (noon).

Supply of Timber for Mahariq.—Tenders will be received by the Under-Secretary of State, Ministry of Interior, for the supply of timber required for buildings at Mahariq outpost. A copy of the specification and conditions of tender can be obtained on application to the Personnel and Equipment Department (Nizam and Ghafir Office), Ministry of Interior, Cairo. Tenders must be submitted on the printed form provided for the purpose, accompanied by a covering letter on stamped paper of 30 milliemes, and should be addressed to the Under-Secretary of State, Ministry of Interior, Cairo, enclosed in sealed envelopes, marked: "Tender for the supply of timber for Mahariq." Date, August 5 (noon).

Tenders for Paper and Cardboard.—Tenders invited by the Egyptian State Railways Administration for the supply of printing and miscellaneous papers and cardboard for the years 1913, 1914, and 1915. Tenders to be registered and sealed, and enclosed in two envelopes, the inner marked "Tender for the supply of Paper," and the other addressed to the General Manager, Egyptian State Railways and Telegraphs, Cairo. Deposit of 5 per cent. of value of the offer. Samples of the papers proposed to be supplied should be sent to the Auditor, Printing and Stationery Section, Egyptian State Railways, Cairo. Copies of the specification, containing form of tender and samples of the paper, etc., required may be obtained at a cost of 4s. from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.—Date, September 9 (10 a.m.).

Supply of General Stores, Clothing, Wood, Petroleum, etc.—Tenders invited by the Director, Coast Guard Stores, Arsenal, Alexandria, for the supply of general stores, wood, petroleum, etc. Conditions, etc., at the Service Stores, Arsenal, Alexandria. Tenders (on special form obtainable from the Magazine, accompanied by a stamped paper of 30 milliemes) to be addressed to the Director of Coast Guard Stores, Arsenal, Alexandria. Envelopes to be sealed and marked: "Tender for the supply of general stores, clothing, etc." Date, August 15 (noon).

MALTA.

Supply of a Refuse Destructor.—Tenders will be received at the office of the Receiver-General and Director of Contracts, Valletta, for the supply of a refuse destructor for the Central Hospital. Specifications and forms of tender to be had from the Crown Agents for the Colonies, Whitehall Gardens, S.W. A deposit of £10 to accompany tender.—Date, July 25 (11 a.m.).

Supply of Cast-iron Pipes and Castings.—Tenders will be received at the office of the Receiver-General and Director of Contracts, Valletta, for the supply of cast-iron pipes and irregular castings. Specifications, etc., may be had from the Crown Agents for the Colonies, Whitehall Gardens, London, S.W. A deposit of £20 to accompany tender.—Date, August 1 (11 a.m.).

ROUMANIA.

Water Supply and Canalisation System.—Tenders invited at the Mairie, Turnu-Magurele, for works in providing a water supply, to be obtained from the Danube, and a system of canalisation for the town. Estimated cost 80,000 frs. Date, September 7.

BULGARIA.

Supply of rails, etc.—Tenders invited by the Direction-General of Bulgarian State Railways for the supply of: Rails (2,723.191 T.), fish plates (144.277 T.), chairs (598.360 T.), bolts (30,720 T.), ordinary buffers (131,874 T.), and ditto for buffer stops (4.365 T.), fifty sets of switches and crossings, and twenty pairs of points. Estimated value is 681,181.15 frs. Five per cent. of offer to be deposited in the National Bulgarian Bank by successful tenderer. Tenders may be for the whole, or for (1) rails, fish plates, and chairs; (2) bolts and buffers; (3) switches and points. Those tendering must forward undertaking to deposit 5 per cent. if declared successful; and those who have not previously supplied the B S R. should submit a certificate from a railway company that they have supplied similar goods to their satisfaction. Tenders to be addressed to the Direction Generale des Chemins de fer Bulgare, Sofia, in envelopes marked, "Offre pour la fourniture de rails, du petit matériel et d'appareils de changement et croisement de voies." Specifications, etc., may be obtained from the Direction on payment of 5 frs. for those concerning the rails and small material, and of 15 frs for the switches, etc. Date, August 17 (5 p.m.).

Engineering Notes.

RAILWAYS AND HARBOURS IN BULGARIA.

(From Our Own Correspondent.)

Sofia, July 11.

Railway communications in Bulgaria have increased so rapidly of late that the rolling-stock has proved quite inadequate for the increased traffic. At the beginning of the year the Railway Department received 860 new cars and 25 locomotives; but four months later it was found that even such a quantity would not be sufficient to cope with the year's abundant harvest. New tenders were accordingly invited for the month of July for 452 cars of different types for a round sum of 1,875,000 frs., and 20 locomotives for a sum of 2,000,000 frs., which have to be delivered by the middle of October. German competitors have agreed to furnish the new order within the required time, and that with a reduction on the Government's price of 2,000 frs. in the case of the cars and 110,000 frs. for the locomotives. The German competitors also proposed a new condition: that should the Bulgarian Government find it necessary to double the number of the cars and locomotives before the end of the current year, they will execute the second order under the same conditions, if they are notified a month before the fulfilment of the first contract.

Dock Construction at Varna.

The construction of a dock, which will serve for at least some ship repairs, has become a necessity for the port of Varna, especially now that a channel is opened, which connects the Lake of Devnia with the port. In order to start the work the Government has provided in this year's Budget a small sum of 1,000,000 frs. But the detailed plans and specification will not be ready before the end of July, when tenders will be invited for the construction of the dockyard. A Dutch company has already sent an engineer to study the place and the project, and a rumour is going round that the same company has already made proposals to the Government not only for the construction of a repairing dock, but also of a large dockyard for the construction of new ships, and has asked a concession for the purpose. The idea has been accepted in principle; but in order not to lose time in the execution of the present project changes will be introduced which will leave ample space to extend the work if that proves necessary. The Government is very desirous that the work should begin not later than September, and if the conditions for the construction of the large dock prove acceptable, a supplementary credit will be asked and provided in the next budget.

The Government engineers are inclined towards the project of a large dock; for they know from experience that anything constructed on a small scale in this country has to be pulled down or enlarged after a couple of years. The same mistake was made with the ports of Bourgos and Varna, which only after ten years are already proving too small to accommodate the number of ships visiting them, and have to be enlarged also. For the same reason the engineers insist that the new dockyard should be constructed at once on a large scale, so that it may serve at least for a period of twenty-five years.

DREDGING OF THE BUG.

(From Our Own Correspondent.)

Odessa, July 14.

The important work of dredging the fairway of the river Bug between Nicolaieff and Otchakoff to a mean depth of 30 ft. will be commenced this week and completed in two years; a sum of 4,000,000 roubles has been assigned by the Admiralty for this particular purpose. Although the deepening of the fairway is, of course, to enable the new Dreadnoughts now building at Nicolaieff to descend the river in their fully completed condition, it will greatly facilitate British shipping with the Bug port. Over three hundred British bottoms every year clear from Nicolaieff with grain cargoes. At present, a steamer of over 5,500 tons must come to Odessa to complete her full cargo. With the completion of the dredging work British steamers, of the largest tonnage, will load full cargoes at Nicolaieff. The distance between Nicolaieff and Otchakoff is 40 miles, but it is only a section of about 26 miles that needs to be dredged.

Hitherto, the Black Sea battleships built at Nicolaieff were sent round to Sevastopol for their armour and armament and finishing equipment.

International Telephone Line.

Our Bucharest correspondent writes under date July 12 that a few days ago the work for the construction of the direct telephone line between Vienna and Bucharest was commenced on the Bucovine and Galicia. In Roumania the work has been going on for some time. It is hoped that the line will be ready for the use of the public as far as Czernowitz by September next, and from thence to Vienna itself by February, 1913. The above innovation will be a great boon to commercial circles throughout the land, as not only Bucharest but Galatz, Braila, etc., and the seats of the timber industry will thus be put in direct telephonic communication with headquarters in the Austrian capital.

Russian Bounties for Engineers.

Almost at the same time as Turkey passed a law admitting all agricultural machinery and implements duty free into the Ottoman Empire in future, the Russian Government passed another by which, in order to encourage the manufacture of agricultural machinery in Russia, generous bounties are to be granted to native firms. This new law enacts that as from January 1/14, 1913, the Imperial Treasury may grant to firms engaged in the manufacture of "complicated steam threshers, reaping and sheaf-binding machines, and reaping machines with automatic ejectors, and also in the manufacture of portable engines intended to work steam threshing machines and steam ploughs, a bounty for each such threshing machine or reaper at the rate of one rouble 2s. 1½d.) per poud (36 lbs.) of its weight, and for each such portable engine at the rate of 1 rouble 25 copecks (2s. 7 2-3d.) per pound of its weight."

British-made Machines Popular.

The admission of agricultural machines and implements duty free into Turkey will, of course, considerably increase their use in the vast agricultural districts of European and Asiatic Turkey, and offers British manufacturers better opportunities to secure orders. For by the omission of import duty, landowners and other buyers are now able to obtain British-made machines and implements at prices hitherto paid for the same goods of foreign manufacture, and it is well known that there is a marked preference for the former, even at a higher price. What the British manufacturers and merchants must do now, and at once, is to act: to make systematic and concentrated efforts to secure the markets now, from the beginning of these important changes. We quote what the British Consul at Stockholm says in his recent report:—"Don't expect trade to result from sending the Consulate a catalogue with English prices, etc. Swedish purchasers do not come to the Consulate to study them. They give orders to persons who call on them." The same remarks apply to purchasers in the Near East.

The Russian Market.

As for Russia, the new law has not affected the activity of agricultural machine manufacturers, for from east and west these are exploiting the Russian markets, and only a few weeks ago the principals of two Australian harvesting machine firms were in the country, one of whom left behind him two harvesters for demonstration purposes. English harvesting machinery could be sold more freely in Russia than is at present the case if better efforts were made on the part of the manufacturers.

Danube River Works.

The municipal authorities of Belgrade intend shortly to arrange for the construction of retaining walls on the banks of the Danube and Save, the cost of which is estimated at three million dinars (£120,000), says the Berlin *Nachrichten für Handel und Industrie*. At the same time it is proposed to build three large docks with warehouses, etc. on the Save, close to the central railway station, the estimated cost of which is out at nine million dinars (£360,000).

Internal-Combustion Engines for Agricultural Purposes.

One of the features of the Royal Agricultural Society's Show at Doncaster from an engineer's point of view, says the *Manchester Guardian*, was the evidence it afforded of a growing adoption of internal-combustion engines for farm work. For stationary work the suction gas engine and producer have for several years been gaining in popularity, but now the tendency is to apply the internal-combustion engine, usually with oil as a fuel, to tractors, motor ploughs, threshing machines, and other portable plant. In America the "gasoline plough" is already very common, but it is very rare here as yet. The progress so far made speaks well for the simplicity and reliability of modern engines, but there is still room for further progress. Fuel is not the only expense, but it is an important one, and it is highly desirable that engines using common paraffin and even crude oils should be perfected. Another need is an adaptable engine so that the former can apply it to his various machines according to the time of the year, and thus save on the capital outlay, which is one of the present drawbacks.

With reference to the invitation for tenders for the supply of a multi-tubular boiler for the cruiser "Sarea," issued by the Egyptian Coastguard Administration, it may be of interest to note that it can be seen at the office of Mr. A. M. Gordon, M.I.N.A., Baltic Chambers, Wellington Street, Glasgow. We understand copies may also be had from the same address.

Oil Topics.

LONDON, July 18.

Galician Oil Trust.

It is said that the Galician Oil Trust has now reorganised its business. The offices at Boryslaw have been changed, and Mr. P. G. Friend has been appointed commercial manager. Mr. Styber will remain technical manager. What is quite as much to the point, the company has now settled all its differences with the vendors. It is to be hoped that Mr. Lewis Hamilton will take up the Galician Oil Trust seriously. He is a very capable and honest mining engineer, and he has had a long experience of Galician oil, for he was for many years with Messrs. Bergheim and MacGarvy, who, as everybody knows, made a large fortune out of Galician oil.

Premier Oil and Pipe Line.

The Premier Oil and Pipe Line, as is well known, offered £315,000 new preference shares in the combine that has just been formed. The shareholders did not take up more than £64,000 out of the total issue. Some people at once jumped to the conclusion that the Premier Oil and Pipe Line Company would be short of working capital. The board have therefore written to the Press to state what we should have thought anyone who had read the newspapers would have known—namely, that the Deutsche Erdol Aktiengesellschaft had guaranteed the whole of the working capital at par. The preference that were refused by the present shareholders will, of course, be taken up by the German group. It is a pity that the Premier Oil and Pipe Line Company cannot see its way to increase its working capital. It is a huge concern, and with ample funds at its back it might make a very fine business. But the oil trade all over the world—and Galicia is no exception to the rule—needs a large working capital.

Moreni Roumania Oilfields.

Moreni Roumania Oilfields, which is now going into the Roumanian Consolidated Combine, offer 110,000 ordinary shares to the public at 21s. per share. The money that has to be found would have, of course, to be part of the working capital of the combine. Shareholders in the Moreni Company receive 25s. in fully-paid shares of the combine for each share in the Moreni, and each 1s. deferred share will receive 10s. in fully-paid shares of the combine. It is rather a curious arrangement, because the combine have guaranteed the subscription of the whole of the 110,000 shares. The prospectus tells us that the well No. 4 at Bana yielded 3,675 tons of oil, that its well No. 5 produced 400 tons, and well No. 6 4,777 tons, so that the production to date from the Bana wells was 8,863 tons from four wells. One of the most valuable assets of the Moreni Company is the ground at Filipesti de Padure, of which everyone has a high opinion. The oil market is so dull at the present moment that it is probable that the public made a poor response to the issue. But there is no doubt that if Mr. Van Sickle, the general manager, is given a free hand he should make the Roumanian Consolidated into a very important company. But it will require a very large working capital to develop the big area of land that it has.

A Spouter at Moreni.

It is said that the Colombia, a French and Roumanian oil company, has found a spouter on its Moreni land which is yielding 2,500 tons of oil a day. The Colombia has a refinery at Plopeni, and can handle quite a large amount of crude. Indeed, the Colombia refinery is the seventh largest refinery in Roumania. The Colombia has an output of about 1,100 tons of oil a month, and most of this oil is obtained from its wells at Bustenari and Bordeni. This is not a large output, if we compare it with the Steaua Romana 35,000 tons, or the Astra 40,000 tons, or the Standard Oil Romano-Americana, which turns out from 18,000 to 20,000 tons of oil a month.

Deutsche Erdol in Roumania.

Whilst on the subject of Roumanian oil, it is interesting to note that the Deutsche Erdol, which is guaranteeing the working capital of the Roumanian Consolidated, hold 75 per cent. of the capital of the Concordia, a company that has a production in Bustenari of nearly 6,000 tons a month, and is also doing well in Bordeni, where the May production totals nearly 6,500 tons. In March, April, and May the Concordia turned out over 50,000 tons of crude. Deutsche Erdol hold 60 per cent. of the capital of the Vega, a refining company whose balance-sheet we criticised in a recent issue, and this same German enterprise holds 50 per cent. of the capital of the Credit Petrolifer. The Deutsche Erdol is financed by the Disconto Gesellschaft and Bleichroder. The net profits of the Deutsche Erdol for the past year were 2,860,494 marks, against 1,903,093 marks in 1910, and the company distributed a dividend of 23 per cent. on its old shares and 11½ per cent. on its new shares.

Nobel Brothers' Report.

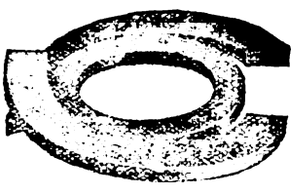
Nobel Brothers' report for 1911 is a most interesting document. This firm is, of course by far the greatest oil producer in Russia, and its Baku production is double that of any other firm. The business is managed with the most extraordinary genius, and everybody in the employ of the firm is treated in the most lavish manner. They have a great reputation throughout Russia for honesty, and everybody who does business with them speaks well of them. The total income of the firm for 1911 amounted to 133½ millions of roubles, and the gross profit to nearly 5½ million roubles. The firm itself uses 2½ million roubles of petroleum a year, and it carries over 30 millions of roubles of oil in stock; 4½ millions of roubles are paid away in salaries and wages, 3½ millions of roubles go in taxes to the Government, over 16 millions of roubles in excise duties, and more than 2½ millions of roubles are expended in boring and works, etc. Out of the gross profit of 5½ millions of roubles 2½ millions went to depreciation. The balance, after paying taxes, left 2,475,825 roubles, or, roughly, about £250,000 in English money. The staff received a bonus of 460,000 roubles, or 40 per cent., and, after paying 8 per cent. to the shareholders, another 690,495 roubles were distributed to them as a bonus, so that the Nobel shareholders got about 12 per cent. Nobel shares are nominally 5,000 roubles in value, and they are quoted on the St. Petersburg exchange at about 12.000 roubles, so that they do not give a particularly high return to a purchaser to-day. But they are a very sound investment, considering that the company controls the oil trade of Russia.

RUSSIAN GENERAL OIL CORPORATION.

(FROM OUR OWN CORRESPONDENT.)

ODESSA, July 14.

Judging from the tenor of the comments made by the commercial editors of the leading South-Russian journals on the prospectus issued by the newly formed Russian General Oil Corporation (Société Générale Naphtifère Russe), the directors of which are, with the exceptions of Lord Carrick, Mr. Chantrey Inchbald and the Vicomte de Breteuil, all Russians of influential standing in banking and industrial circles, there appears to exist a strong suspicion that the new corporation may ultimately develop into a monopolistic oil trust in this country like that of the Standard company in America, and public opinion and sentiment in Russia are distinctly antagonistic to all-powerful industrial trusts of any kind. The prospectus informs us, *inter alia*, that "the object ultimately aimed at is a powerful combination in which will be combined the three elements of production, refining and distribution of oil, thus enabling the new corporation to control beneficially (?) the oil market in Russia," and, further, that the corporation will interest itself in the principal producing districts of Baku, Balakhany, Romany, Sourakhany, etc. The view taken by these South-Russian commentators of the ulterior object of the new oil corporation may, of course, be a mistaken one; but the prospectus, studied by its actual statements and read between the lines, certainly lends itself to the interpretation put upon it by unfavourable critics.



It is noteworthy that in the briefly sketched outline of its prospective operations, the new corporation's prospectus makes no reference to the Maikop oilfields.

Russian investors have, so to say, turned their backs upon Maikop; they appear to have no faith in the continuity of the output from the Maikop wells, and the same may be said of many Russian petroleum experts and geologists who originially assisted to boom the Kuban region, in which there is now invested some £9,000,000 of British capital.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondents.)

Bucharest. July 12.

The news from the agricultural districts continues to be exceedingly favourable. The wheat harvest is now in full swing, and the results both as to quality and quantity, are fully up to expectations. The heavy rains which have occurred in some parts of the country have only caused local damage, and nothing to what the first alarmist reports portended. On the contrary, much rain has only tended to the benefit of the maize crops, which throughout the country present an excellent appearance.

Alexandria. July 11.

Owing to the low Nile, it is feared that the maize crop will be a failure.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East :—

Larnaca. July 4.

The locust-bean market is in a state of suspense, sellers not being disposed to make further sales before the months of August and September. I have been informed that a sale of 1,500 tons September-October shipment for an unknown port has been effected at 98s. 6d.

Three shipments took place at the beginning of the month, one of 900 tons for London, another of 800 tons for Hull, and a third of 200 tons for Malta. Freight for London and Hull, 18s.

There is nothing of interest to report this week as regards cereals.

Jaffa. July 2.

The price of oil is rising in view of the small quantity loaded at Smyrna. Current prices are P.J.106.30 to 106.40. 150 barrels have been imported.

Soap is firm at P.J.1,350 per kantar. 75 kantars were shipped during the week.

Dari-seed is in great demand, owing to low stocks. Prices, with a tendency to rise, at P.J.23½ the kilé.

Adrianople. July 10.

The activity of the market continues to be impaired by the political situation, and by the resulting rise in the discount tariff.

During the past week 20 waggons of cereals, 15 of building material, and 10 of hardware and other manufactured articles have been imported.

CONSULAR AND OTHER REPORTS.

Adrianople.

H.M. Consul (Major L. L. R. Samson) reports, under date July 3, that owing to the small rainfall in May the prospects of a really good harvest in the Adrianople vilayet, held out by the early spring months, have not been realised. It is estimated that sowings for the present crops were 20 per cent. in excess of those of the previous year, but the general result of the harvest will, in all probability, be from 25 to 30 per cent. less than that of last year.

A report of the Agence Telegraphe Bulgare, dated Adrianople, July 7th, states that hail storms have devasted the vineyards and fields in the region between Kirk-Kilisse and the sea, and that many cattle had been killed. In the neighbourhood of Baba-Eski and Kula-Bourgas there is a serious drought which has dried up all the springs; and, the message concludes, the crops in the Adrianople vilayet are thus certainly ruined this year.

Adana.

Mr. W. D. Matthews, British Vice-Consul, reports that the yield of wheat, barley, and oats in the Province of Adana is considerably below the average this year, and there will only be a small quantity available for export. The harvest in the vicinity of Adana is the worst experienced for several years, but in the Osmanieh and Ayas districts the yield is reported as fair. Cotton and sesame crops promise well at present, and satisfactory yields are anticipated. The sesame is collected in September and the cotton in October.

Crete.

Mr. A. C. Wratislaw, C.B., C.M.G., H.M. Consul-General at Canea, reports that owing to the lack of rain last year the olive crop of Crete is only expected to yield about 15,000 tons this season, or about half the yield of a "good" crop. The coming crop in the Candia district will probably be poor, and in Rethymo the prospects are so bad that merchants are holding back in anticipation of higher prices. About 8,000 to 10,000 tons of last season's oil still remain in Canea; about 4,000 tons each in the Candia and Lassithi districts; and about 2,600 tons in the Rethymo district. Prices at the end of June ranged from £37 3s. to £37 16s. per ton f.o.b. Canea; the prices for delivery up to September next ranging from £37 10s. to £39 16s. f.o.b. Canea.

Roumania.

The *Deutsch Orient-Korrespondenz* publishes excellent crop news from Roumania. Rape seed harvesting is over, and high prices are being paid, about 30,000 francs per waggon. Barley harvesting is likewise over; in many districts the yield was 5,000 kilos per hectar. Autumn harvesting promises well, more especially maize, which, it is believed, will be a record crop.

PRODUCE REPORT.

London, July 18.

There has been a marked activity in the markets during this past week, and in spite of the determined attitude of the strikers, goods are in better supply, although there is still much difficulty in obtaining delivery of some merchandise.

Sugar.

The value of speculative beet has moved upwards again in the face of favourable weather for the growing new crop and other conditions which might be reasonably quoted in favour of cheaper prices. The prices for beetroot advanced 9½d. to 1s. 1d. but later became weaker, and closed at 4⅜d. to 5⅜d. new crop. Refined sugar is firm, and 3d. per cwt. dearer, with a good demand. English, Tate's, No. 1 cubes, prompt, 22s. 9d.; Sept.-Oct., 22s. 3d. Foreign, refined: Dutch, 17s. 6d. to 18s. f.o.b. Amsterdam; German and Austrian, 17s. 3½d. to 18s. f.o.b. Hamburg. French, Say's, 18s. 6d. f.o.b. Paris. Russian crystals, ready, 14s. 6d. f.o.b. Danzig.

Coffee.

The market has been irregular, but with a quieter undertone. Quotations have fluctuated between 61s. 3d. and 62s. 6d. for the present month. East Indian holders are not anxious to sell at anything but full rates, while of Costa Rica the crop has practically been sold. Mocha has been steadily advancing and is now scarce and dearer.

Currants.

With a country demand, the spot market has shown distinct signs of improvement, and holders of the cheaper qualities ask and obtain 6d. to 1s. more than last week's rates. Fine Vostizza sell freely, and with no more to come along, the selection is being considerably narrowed down, and the difficulty is, once having set up a high standard of quality, to maintain it. It must be borne in mind that the first shipments of new fruit cannot be here for fully two months, and the general tendency has been to underestimate requirements up to them. It is still difficult to obtain reliable information with regard to the new crop.

Sultanas.

The better grades of Smyrna sultanas on the spot have been in good demand, and fresh, colourly fruit is scarce; on the other hand, the preponderance of lower qualities of all growths is daily becoming more apparent, and holders show some anxiety in inviting bids which would not have been accepted a little while ago.

Figs.

Offers of the three grades of new crop natural figs are now being made, but the prices named by some merchants cannot be regarded as in any way attractive at this juncture.

Dates.

Forward dates are also dealt in, but prices have opened above the average, and little is likely to be done for the time being.

Seeds.

Linseed market firm. London-Calcutta afloat sold 61s. 7½d. to 63s. Rapeseed July-August, 50s. 6d. Cottonseed inactive; London-Egyptian August, £8 16s. 3d., November-January, £8 8s. 9d. per ton.

Oil Cakes.

Cotton cakes, with only small shipments of Egyptian and decreasing stocks, values are, if anything, the turn dearer, ready parcels making £5 12s. 6d. to £5 13s. 9d. ex quay, while English are firmly held up at £5 17s. 6d. to £6. Linseed cakes, best London made, are quoted at £9 to £9 5s.

Wheat.

The market is steady but quiet. 38s. 9d. is required Azoff-Black Sea on sample loading. Barley is quiet and easier, 21s. 4½d. sellers South Russia August-October.

Various.

Locust beans: Only a small quantity of the old crop is available on spot, for which holders ask full prices of £6 5s. per ton for silo and £6 15s. per ton for kibbled. Egyptian onions, in bags about 1 cwt.: Finest bright sound, 7s.; fine, 6s. 6d.; good, 6s. Walnuts, Damascus, finest, shelled, choice boxes, about 55lb., 55s.; fine, 52s. 6d.; good, 50s.

WHEAT TRANSPORT.

(From Our Own Correspondent.)

Bucharest, July 12.

The annual vexed question of the want of land transport for cereals, in view of the specially heavy crop, is being actively discussed in grain circles. The Direction of the Railway Company is making every effort, in view of the increased demand, and has taken steps for the putting on of special supplementary trains during the coming campaign. Towards the commencement of August twenty of the seventy new locomotives lately ordered abroad will be available, besides which a number of older machines are under active and thorough repair; thus the Direction, with the large number of trucks now at their disposal, hope to be able to cope with all demands.

ESTABLISHED 1772.
HENRY'S CALCINED MAGNESIA
Continues to be prepared with scrupulous care in the greatest chemical purity, by
Messrs THOMAS & WILLIAM HENRY, 11, East Street, St. Peter's, Manchester.
And is sold in Bottles [illegible] Trade Mark, "Henry's Calcined Magnesia."
PRICE 4s 6d or 2s 9d.
NEW YORK: Messrs. SCHIEFFELIN & CO., William Street. PARIS: Messrs. ROBERTS & CO., 5, Rue de la Paix.

Cotton and Cotton Goods.

EGYPTIAN COTTON MARKET.

(From Our Own Correspondent.)

Alexandria, July 12, 1912.

Prices fell slightly in reaction from the sharp rise occasioned by the publication of the report of the Bureau of Agriculture on the condition of the crop and on the American acreage. This rise is due to American speculation, for nothing here seems to warrant increased prices, although the crop is in very favourable condition.

One fact seems established—that is, that our coming crop will be quickly sold in consequence of the strong demand which has existed until the present. In these circumstances the producers will be able to impose on buyers almost any prices they may wish, but it is doubtful whether the Egyptian cultivators will profit by these conditions, for they are habitually eager to sell, and are little inclined to concerted action.

Manchester.

Thursday.

Messrs. Reynolds and Gibson telegraph that the market there has been quiet but firm. The strength displayed in cotton prevents weakness in the manufactured article, except here and there, where concessions are made of small lots to fill in. Egyptian spinnings are dull, with only a very moderate business passing. Although there was fair business done in Egyptian spot at the commencement of the week in medium grades brown cotton, more recent transactions were on a smaller scale, and business on the whole has been of moderate proportions. Nubari continues in fair request at firm rate. Upper is in small demand, without change in price, and quotations of brown cotton advanced 1-16 per lb. Estimated sales, 2,500 bales.

Crop Reports.

The Alexandria General Produce Association, in its third report on the situation of the crop, says that in Lower Egypt the temperature has in general been favourable to the cotton plants. The young plants everywhere are healthy and strong, and the advancement of fifteen days given in the previous reports has been maintained. From all parts an increase in eggs and worms is reported, but, nevertheless, up to the present the damage is only insignificant, thanks to the vigilance of the Government and the activity displayed by cultivators. The complaints of insufficiency of water have been more general, but the increase in the levels in the high Nile Provinces has improved the situation. In Upper Egypt and the Fayoum the temperature has likewise been favourable. In these Provinces worms have made their appearance in small quantities, and complaints are also made of insufficiency of water.

The *Monthly Journal* of the British Chamber of Commerce of Egypt states that, notwithstanding that there have been complaints about the shortage of water in the Interior, and that a large amount of worm has appeared in almost all districts, the condition of the growing crop is reported to be excellent, and so far no harm has resulted from either of the above causes. There is no doubt that this will be an early crop if everything continues as well as hitherto.

The *Observer* estimates that the cotton crop conditions are nearly 20 per cent. above the average, thereby promising a crop of about 7,500,000 kantars. The outlook from the country is regarded as being distinctly satisfactory, and if the crop escapes the worm ravages, there should be a big impetus to Egyptian trade. The cotton crop is from fifteen to twenty days in advance of last year.

Cotton Goods for the Levant.

Manchester houses who buy cotton goods for the Levant ports, says the *Manchester Guardian*, find considerable difficulty in placing orders for the coming season. The Constantinople and Smyrna firms object to pay the existing high prices for their usual qualities, and the delivery question is also a source of trouble, as makers of well-known cloths are now engaged until the end of the year. The difficulty is aggravated by the total absence of stocks of Italian-made goods, as in former years cheap consignments of Italian drills, "cabots," and flannelettes were made to the distributing merchants in the Turkish markets. Stocks of suitable goods are difficult to buy in the Manchester warehouses, and "seconds" and clearing lots in prints and greys are in good demand. Calico printers and stock houses who supply the various small shippers with their miscellaneous assortments are busy in chintzes, cretonnes, and other fancy styles. Indigo blue and "Para" red drills are also in request for the Asia Minor ports, especially in the lower qualities. The Persian trade through Constantinople is exceedingly dull, and merchants are not anxious to forward goods until the political and financial situation shows some improvement. Shippers are only forwarding small assortments.

EGYPTIAN COTTON FIGURES.

For 45th week, ending July 12.

Supplied by Reynolds and Gibson.

P.S.—The figures marked thus (?) are postulates.

N.B.—Owing to the continued heavy takings of Lancashire and the Continent, we have had to increase our total "Out of Sight" figures by 19,000 bales, viz., Lancashire 10,000 and Continent 9,000.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending July 5, 1912:—This week again some eighteen cases of new current talequale changed hands at 18s. 6d. to 19s. as to quality for account of local and interior speculators. Buyers for the consuming markets have not yet come forward, which is evidence that manufacturers are not yet disposed to pay our figures. The arrivals are 369 cases, against 118 at same date last year.

NEWS FROM ALL SOURCES

A steamer service has been inaugurated on the Sea of Galilee by the Administration of the Hedjaz Railway. The steamer employed can hold 150 passengers, was purchased in England, and has been named the "Sheria."

An Adrianople mesage of the Agence Télégraphique Bulgare, dated the 7th inst., states that the Oriental Railway Co., not having received any payment for the transport of troops effected during a period of five months, would be compelled to refuse further military transport.

The offices of the Galician Oil Trust have been moved to 20, Copthall Avenue.

A deputation of five members of the Bucharest Municipal Council, headed by M. Dobresco, the Mayor, has left Bucharest to pay a visit to the Paris Municipal Council.

The death has taken place at Polefield House, Prestwich, Lancashire, of Mr. Benjamin Carver, who, as a member of the well-known firm of Carver Brothers and Co., Limited, Manchester, was largely interested in the importation of Egyptian cotton. The deceased was in his ninetieth year.

The series of pictorial postage stamps current in Bosnia and Herzegovina since 1906 has been augmented by the addition of three new values—a 12 heller stamp representing a street scene in the ancient Bosnian town of Jaice, a 60 heller stamp bearing a view of the town of Konjic, and a 72 heller stamp with a view of Vyschrad.

The Turkish Chamber has voted the Budget of the Ministry of Finance as well as a supplementary credit of £T27,000 to enable the Ottoman Navigation Company of Bagdad to participate in the transport of construction material for the Bagdad Railway.

The French Government has authorised the new Bulgarian loan to which we referred in a recent issue to be quoted on the Paris Bourse. A French group is, we understand, to participate in the loan to the extent of 14 per cent., the remaining 86 per cent. being taken up in France.

One of the recent purchases made by the Sultan of Lahej in Cairo is an electric dynamo for generating light in His Highness's palace at Lahej. A large number of electric lamps, wires and other fittings have also been bought. Accompanying the dynamo is an electrical engineer, who has been specially engaged to look after the plant.

On the occasion of the last inventory of the bonds of the Credit Foncier of Algeria and Tunis, the disappearance of three Ottoman bonds, valued at 295,000 frs., was discovered. An accusation is brought against an unknown person in connection with this affair.

It is stated that the plans for the construction of 156 kilometres of new lines in Lower Egypt by the Chemins de Fer de la Basse-Egypte have been approved by the Government, and that work will start without delay.

A new wooden bridge at Cairo is the temporary structure built by the Cleveland Bridge Building Company, to take the traffic of the present Pont des Anglais, which is to be demolished, and its place taken by a fine new swing bridge, the contract for which has been given to the same firm.

The successful tenderers for the supply of various forms, registers, etc., required by the Egyptian Railways and Telegraphs Administration were.—Messrs. McCorquodale and Co., Limited, London (Cairo Agent, J. E. Nacamuli); Messrs. Waterlow Bros and Layton, London; Messrs. T. W. Petersen and Co., Alexandria; and Messrs. Stross Bros., Alexandria.

The King of Italy has conferred the Insignia of Commander of the Crown of Italy Order on Sir Charles Macara for his services to the cotton industry and the International Institute of Agriculture.

Shipping Intelligence.

THE "TURKISTAN" CASE.

An action was brought, before Mr. Justice Bargrave Deane, by the owners, master, and crew of the steamship "Armanistan" to recover salvage remuneration for services rendered to the steamship "Turkistan," her cargo and freight, in the Mediterranean last December.

On the afternoon of December 2, 1911, the "Turkistan," when about sixteen miles to the north and west of Cape de Garde, to the west of Algeria, broke the second intermediate shaft of her propeller in the tunnel, and before steam could be shut off her engines were completely disabled. The "not under command" lights were hoisted, and the vessel drifted towards the coast. About 5.55 p.m. the "Armanistan" came up with her and agreed to tow her to Malta. The vessels drifted together till about 7.45 p.m. when they were only a few miles off the coast; by that time the towing hawsers had been properly secured, and the "Turkistan" was then turned round and a course set for Malta. The towage continued without particular incident until about midnight on December 4, when, after a voyage of about 360 miles, the vessels arrived off Valetta Harbour, and the "Turkistan" was handed over to a Government tug and towed to a safe berth in the harbour.

The "Armanistan," her cargo, and freight were valued at £131,584; and the "Turkistan" and her cargo at £183,000.

Both vessels belonged to the same owners, but this did not affect the question of salvage, it being a matter for the respective underwriters.

Mr. Justice Bargrave Deane, in giving judgment, said that the value of the two ships represented over £300,000, and he mentioned this because he was advised that the master of the "Armanistan" took considerable risk in getting fast, in view of the current prevailing at the time. The "Armanistan" was drifting faster than the "Turkistan," and his lordship was advised that after the north-west wind the current would get in towards the coast. He, therefore, had to recognise the services of the master. He awarded to the owners £1,825, to the master £200, and £475 to the crew—a total award of £2,500.

P. AND O. SAILINGS.

With regard to the P. and O. sailings from Egypt, they are a day late in leaving Port Said during the monsoon season. They thus sail on Tuesday instead of Monday during such period. The monsoons commenced last month. The present strike at Marseilles has, for the moment, disorganised the French mail service with Egypt.

ECHOES OF THE WAR.

The Commission appointed to inquire into the seizure of the French steamship "Tavignano" and the alleged firing upon two Tunisian fishing boats by an Italian destroyer on January 25 held its first sitting at Malta on Monday in a room at the dockyard. It consists of Captain Segrave, Royal Navy, president, Captain Somborm, and Lieutenant Viollette (France), and Captain the Marquis Genovese Zerbi and the Conte Gravina (Italy). The decision of the Commission will be made known in a fortnight.

CANADIAN TOURISTS.

Over three hundred Canadian teachers, who are making a tour of England and the Continent, arrived at Liverpool by the Allan liner "Virginian" on Saturday last. The party, on arrival, proceeded to London, but about half of them are returning to Liverpool in order to take passage by the Moss liner "Meroe," leaving the Mersey at the end of this week for Gibraltar, Algiers, Malta, Alexandria, etc.

THE "PERSIA."

The P. and C. liner "Persia," London for Bombay, ran ashore last week off Marseilles, but after having been considerably lightened was refloated by the efforts of the French cruiser "Jules Ferry" and Government tugs. 40s. per cent. premium was being paid "in specie only."

NATIONAL BANK OF TURKEY

ESTABLISHED 1909 BY IMPERIAL FIRMAN.

CAPITAL - - £1,000,000 Sterling.

BOARD OF DIRECTORS.

CONSTANTINOPLE.

SIR HENRY BABINGTON SMITH, K.C.B., C.S.I., Chairman.
SIR ADAM BLOCK, K.C.M.G.
F. EDWIN WHITTALL.
H.E. AHMED DJEMAL BEY.
HUSSEIN DJAHID BEY.
RECHID SADI BEY.

LONDON.

HON. SIDNEY PEEL, Chairman of London Committee.
HON. HUGO BARING.
HENRY BIRCHENOUGH, C.M.G.
C. S. GULBENKIAN.
R. H. MACAULAY.
E. N. MEYER.

Head Office: CONSTANTINOPLE (KENADJIAN HAN, STAMBOUL).
MANAGER - - H. P. KINGHAM.

London Agency: 50, CORNHILL, E.C.
MANAGER - - - R. HECHT.

The National Bank of Turkey undertakes every description of Banking business. It opens current accounts according to the custom of Bankers. Customers have the facility of discounting approved bills and of obtaining advances upon negotiable securities. The Bank will undertake the purchase and sale of bonds, shares, etc., on the London Stock Exchange, on the local and on all Continental Bourses, the safe custody of customers' securities and valuables, and the collection of drawn bonds and coupons when due. The Bank issues drafts and telegraphic transfers payable in all principal towns in the world. Letters of credit for the use of travellers are also issued. Advances made on merchandise. The purchase and sale of coupons, foreign bank notes, coin and bullion are undertaken. Bills negotiated or sent for collection. Mercantile credits opened.

Deposits received for fixed periods at rates of interest which can be ascertained on application.

BANK OF ROUMANIA, Ltd.

Head Office: 7, GREAT WINCHESTER STREET, LONDON, E.C.
Branch: 94, STRADA LIPSCANI, BUCHAREST.

CAPITAL (fully paid), £300,000. RESERVE FUNDS, £169,688.

DIRECTORS:

THE EARL OF BESSBOROUGH, C.V.O., C.B.
SIR R. HAMILTON LANG, K.C.M.G.
THE VISCOUNT GOSCHEN
E. W. H. BARRY, ESQ.
P. NAVILLE, ESQ.

The Bank was originally incorporated in 1869 under Roumanian law, but in 1903 was transformed into an English Company under the Companies Acts. It is the oldest bank in Roumania, and the only one with a London office.

A general banking business is carried on. Correspondence is invited from those doing business with Roumania, and should be addressed to THE MANAGER in LONDON or BUCHAREST.

ANGLO-EGYPTIAN BANK, LIMITED,

LONDON, PARIS, ALEXANDRIA, CAIRO, MALTA, GIBRALTAR, TANTAH, MANSURA, BENI-SUEF, ZAGAZIG, and PORT-SAID.

Subscribed Capital - -	£1,500,000.
Paid up Capital - -	500,000.
Reserve - - - - -	640,000.

The Bank undertakes every description of Banking Business on most favourable conditions.

BANK OF ATHENS.

(Incorporated in Greece.)
CAPITAL FULLY PAID - - Dr60,000,000
RESERVE FUNDS - - Dr10,480,000
Head Office: ATHENS.
London Office: 22, Lenchurch Street, E.C.
Branches:

GREECE: Piræus, Patras, Syra, Calamata, Tripolitza, Volo, Larissa, Agrinion and Carditza.
CRETE: Canea, Candia and Kethymo.
TURKEY: Constantinople (Galata, with Agency at Stamboul), Samsoun, Trebizonde, Kerassunde, Bafra, Mersina, Smyrna, Adana, Tarsus, Salonica, Serres, Cavalla, Xanthi, Janina, and Chio.
EGYPT: Alexandria (with agency in the quarter of Midan), Cairo (with agency in the quarter of Mousky), Zagazig, Mansourah, Mit Ghamr, Tantah and Beni Souef.
SUDAN: Khartum & Port Sudan. **CYPRUS:** Limassol.
HAMBURG: Domhof, Mönckebergstrasse 18.

Special facilities for Banking, Exchange and Commercial Business of every description with Greece, Egypt, Turkey, Crete, Cyprus and the Levant generally. Most favourable rates for Deposits, Collections, Cable Transfers, &c., on application.

THE IMPERIAL BANK OF PERSIA

(Incorporated by Royal Charter, 1889).

CAPITAL (fully paid) - - -	£800,000
RESERVE - - - - - -	£210,000
Reserve Liability of Shareholders	£1,000,000

London Office: 25, Abchurch Lane, E.C.
Chief Office in Persia: Teheran.

Branches at Ahwaz, Bushire, Hamadan, Isfahan, Kazvin, Kerman, Kermanshah, Meshed, Mohammerah, Nasratabad, Resht, Shiraz, Tabriz and Yezd.

The Bank is prepared to transact Banking business of every description in and connected with Persia; and in London grants Drafts, Telegraphic Transfers, and Letters of Credit, and negotiates or collects Bills on Persia.

IONIAN BANK, LIMITED.

INCORPORATED 1839.

SUBSCRIBED CAPITAL - - -	£600,000
PAID-UP CAPITAL - - - -	485,580
RESERVE FUND - - - - -	65,000

Head Office—LONDON.

BRANCHES—

Athens, Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, and Nauplia, in Greece; and at Alexandria, Tantah, Fayoum, Minieh, and Mansourah, in Egypt.

Every description of Banking Business undertaken on most favourable terms.

NATIONAL BANK OF EGYPT.

Paid-up Capital - £3,000,000 (In 300,000 Shares of £10 each, fully paid). **Reserve Fund - £1,500,000**

Governor—F. T. ROWLATT, ESQ.
London Committee—HON. HUGO BARING, SIR CARL MEYER, HON. ALGERNON MILLS, HON. SIDNEY PEEL.
London Agency—4 and 5, KING WILLIAM STREET, E.C.
Head Office—CAIRO.
Manager—J. T. BEATY-POWNALL, ESQ.
Asst.-Manager.—A. F. GILLBEE, ESQ.

Branches in all Principal Towns in Egypt and the Soudan.

Deposits received for a fixed term. Current Accounts opened. The Purchase and Sale of every kind of Stock and Shares undertaken Bills discounted. Every kind of Banking Business transacted. Full information can be obtained at any of the Offices of the Bank.

Stock and Share Markets.

Bank Rate 3 per cent. (May 9, 1912.)

SETTLING DAYS.

CONSOLS.
Thursday, August 1.
STOCKS AND SHARES.
In Mining Shares the next carry-over is July 23.

Continuation Days.	Ticket Days.	Pay Days.
Wed., July 24.	Thurs., July 25.	Fri., July 26.
Mon., Aug. 12.	Tues., Aug. 13.	Wed., Aug. 14.

LONDON, July 18.

The warm weather made the markets limp, and the perpetual selling of Consols is gradually producing a feeling of distrust. Probably the real reason for the sales will be found in the necessity of some great firm to provide money for its underwriting ventures. New issues have gone very badly. Even the City of Nicolaieff Five per Cent. bonds, which were supposed to have been over-subscribed, went short of 40 per cent. The Newfoundland bond issue was a complete failure; the price was much too high. Messrs. Rothschilds, however, managed to sell the Exchequer bonds, but their influence with the banks is very great. Very few joint-stock banks would refuse to take a line of bonds that had been offered them by this great house. During the next fortnight the railway dividends will be announced, and we may see a little movement in the Home Railway market. All the dealers are rather short, and if any of the companies exceed in distribution the anticipation of the market we might get a reasonable rise. Home Railways are a very sound 5 per cent. investment to-day.

Internationals Little Changed.

In the Foreign market there have been very few changes since last week. Bulgarians remain at 90½. The Chinese issues are all solidly supported; Egyptian Unified are unchanged; Greek Fours are a little weaker; Italians show no variation from last week. Japanese have been sold, but Turks have not been greatly affected by the news of the change of Ministry. Tintos were steadily attacked, and a big bull found his account closed. The Copper position is not so bad as the bears would make out. Now that the bulls have been shaken out a revival appears certain. The American market continues to sag. There is no chance of any rise here before the autumn. Even Copper shares have been weak, the big people giving no support. Rubber remains quiet, but there is certainly a little more business than there was a week ago. Mr. Lampard's figures seem to have pleased everybody. He has the knack of making a good speech.

Oils Firm.

The Oil market was very pleased at the flamboyant article in the *Daily Telegraph* prophesying that our navy would soon be oil-driven. If there is any market on the Stock Exchange that will continue to hold up its head during the holidays it will be that in oil. Spies look worth buying, but Urals are supported in a very suspicious manner. The Emba Oilfield, with its 3½ million pounds capital, is now promised us for next week. Tin looks more healthy than copper, and the Nigerians are hoping for some big returns which will put their market better. The Tin Trust, which is out to-day, intends to acquire some big Malaysian propositions. Marconis are strong and weak, as the liquidation ebbs and flows. No doubt they will be put better in readiness for the new issue.

Egyptians Uninteresting.

In the Egyptian market there has not been much talked about except the suggested alteration in the law regarding homesteads and its effect upon Agricultural Bank shares, which were sold. They are now quoted 5¾. This is 1-16 better, but even now the share is undervalued. The Delta Light Railway shows good traffic increases, and the shares have been hard. Although the Salt and Soda concession has been extended to 1941 and various other improvements made in the terms, Salt and Soda still remain at 15s. National Banks are a shade better, but most of the Egyptian list shows very little alteration. Business is dull and buyers are few.

NEW COMPANIES.

Constantinople Telephone Co.

Under the title of the "Société Anonyme Ottomane des Téléphones de Constantinople," particulars of a new company have been registered. The company has a capital of £T330,000 in 60,000 shares of £T5.50 each, and has been registered in the Turkish Empire. The British address is Broad Street Avenue.

Ural Petroleum Syndicate.

Under the above title a private company has been registered with a capital of £30,000 in 30,000 ordinary shares of £1 each and 1,000 founders' shares of 1s. each. The objects of the company are stated to be: To mine, refine, and deal in oil; to acquire, deal with, and turn to account any oil wells, oil-bearing and other properties. The offices of the company are at St. Benet Chambers, Fenchurch Street, E.C.

Transports Fluviaux en Orient.

Particulars have been received of the formation of this company, the object of which is stated to be the exploitation of fluvial transport in Turkish Arabia. The period of the concession is for fifteen years, and its offices are at Brussels, 7 and 9, due d'Arenberg. The capital is 2,500,000 francs in 5,000 shares of 500 francs, to which the Deutsche Bank and the Euphrates and Tigris Steam Navigation Company have each subscribed to the amount of 2,497 shares. The company has the right to issue debentures.

DIVIDEND ANNOUNCEMENTS.

Bank of Athens.—3.50 drs. per share, payable on and after July 15.

Société Ottomane Industrielle et Commerciale de Salonique.—On and after July 15, dividend payable for 1911, 5 francs per share.

Crédit Franco-Egyptien.—On and after July 1, dividend payment of 10.00 francs per nominal share and 9.00 francs to bearer (Coupon No. 3).

Compagnie Hellénique d'Electricité Système Thomson-Houston.—On July 15, Coupon No. 15 of debentures.

Tramways et Eclairage Electriques. — Dividends, 1911-1912, 6.20 francs per capital share and 5.50 francs per ordinary share (Coupon No. 8).

GREEK DEBT.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to May 31, 1912:—

Gross receipts from monopolies, tobacco, stamps, stamped paper, and Nagos emery for May, 1912, amounted to 2,943,209.26 drs., as against 2,888,807.14 drs. in 1911. Piræus Customs returns for 1912 amounted to 2,151,221.25 drs., as against 1,912,500.00 drs. in 1911.

INSURANCE AND THE WAR.

Judging by the amount of special insurance placed in London a good deal of uneasiness seems to be felt by merchants at Smyrna, says the *Times*. Large quantities of merchandise have been covered within the past few days against the direct risks of riots, strikes, civil commotions, civil war, war, and bombardment. The rate generally quoted was 30s. per cent. for cover during twelve months. In this connection a contract was recently made whereby the underwriters agree to pay the loss that a merchant suffered through inability caused by a bombardment of the port to ship figs during the present month, August, and September. For this indemnity 50s. per cent. was paid. Goods have also been covered against the direct risks of riots, civil commotion, etc., at Constantinople, the premiums quoted being from 15s. to 20s. per cent.

On July 12 the paper from which the above is quoted said that a risk had been offered in the market on the previous day which indicated some uneasiness respecting possible developments in the Turco-Italian war. The insurance was to provide for the payment of £100 for each day within the next two months on which the Dardanelles were closed to mercantile shipping. That is to say, the utmost liability of underwriters for a period of sixty days would be £6,000. The premium quoted was 20 per cent., representing a total payment of £1,200.

BULGARIAN LOAN.

The course of a true Bulgarian loan—that is, a loan without special security—never did run smooth, says the *Financial Times*. And yet since the country's first appeal to the European Money Market in 1892, when it borrowed nearly six million sterling at 6 per cent. through the Imperial Ottoman Bank, Bulgarian economic progress has been great and unmistakable. Whether it was the overshadowing of Turkish suzerainty until the recent declaration of independence, or the general effect of the highly-charged Balkan atmosphere, or the individual character of the loan negotiators, or simply the constitutional timidity of capital in its attitude to a newly emancipated country, it is hard to say, but there seem to have been an unusual number of ups and downs in the history of its borrowings for a country that has never since its first beginnings shown the least sign of defaulting on a debt. It borrowed once, and once only, as mentioned, in the nineteenth century, and secured the loan issued at 92¾ by a first mortgage on two railways and two harbours, and everything went well for ten years. In the beginning of the present century, 1902, it raised over four million sterling more through the same issuing house, with which was now associated the firm of Stern Brothers, and this time it had only to pay 5 per cent. for the accommodation, though as before the price of issue was still low, the £99 bond being issued at £89 10s. This loan was secured by the proceeds of tobacco taxes. Five years later it was able to borrow nearly £6,000,000 through Stern Brothers alone at 4½ per cent., though it still lost 10 per cent. through the discount due to the price of issue. This loan was secured by surplus tobacco taxes and also stamp duties.

ROUMANIAN MARINE.

The *Deutsche Orient-Korrespondenz* learns from Bucharest that the leader of the Roumanian merchant marine has gone abroad, accompanied by a committee of experts, with a view to arrange for the construction of two merchant vessels, at a total cost of about three million francs. The Government's wish to increase the marine is an open secret, but, unfortunately, the means at its disposal are not sufficient to enable it to augment its merchant fleet to any great extent.

POOK, BROS. & CO., Ltd., Merchant Bankers, Brokers and Contractors,

Ottoman Public Debt.

Question of the Reserve.

(Special to "The Near East.")

A good deal of attention has been paid to an article in the *Jeune Turc* concerning the reserve fund of £T2,000,000 of the Ottoman Public Debt Administration. It would appear that the wish is father to the thought, and there is little fear that the pious suggestions of the *Jeune Turc* that the money in question might be better employed, will ever take a concrete form.

Origin of Reserve Fund.

Let us consider what this reserve fund is and how it started. Articles X. and XI. of the Decree of Muharrem, 1881, provided for the creation of a fund for increasing the rate of interest paid on the Series Bonds, and at the time of the Unification, in 1903, a considerable amount of money had accumulated. This, of course, was not in any sense a reserve fund, but a fund for increasing the rate of interest, and, as such, it formed an integral part of the bondholders' money.

When the Decret Annexe of 1903, governing the Unification, was drawn up, Article VIII. stipulated the creation of a reserve fund which eventually was to reach a total of £T2,000,000. To start this fund the amount outstanding of the old "interest" fund was applied, and the Turkish Government agreed to pay an annuity of £T15,000 for a certain number of years to bring the amount up to the required total. The £T2,000,000 was reached last year, and the interest on this amount, some £T80,000, goes to swell the revenues of the Debt Administration, 75 per cent. of the surplus of which returns to Government and 25 per cent. is applied to extraordinary sinking fund purposes. Under present conditions this means that three-quarters of the interest on the reserve fund goes to the Government.

The Decret Annexe also lays down that when the capital of the debt has been reduced to £T16,000,000, the reserve fund shall also be reduced to £T1,000,000, and no definite statement is made as to how the million then available is to be disposed of. It would be premature, however, to take this sum into consideration at present.

Academic Question.

We see, therefore, very clearly that whatever may have been the situation previous to 1903—and any discussion on this point can now only be purely academic, because the existence of a fund, whether called "reserve" or not, was duly provided for—the creation of a real reserve fund of £T2,000,000 is one of the articles of the Decret Annexe, of which the Powers took account, and nothing short of a modification of this important decree could enable that money to be devoted to any other purpose than that for which it is intended—namely, a reserve fund to meet the payment of the coupon in case of insufficiency of revenue.

It is most improbable that any attempt would be made to modify the terms of the decree of 1903, all the more so as the scrupulous observance by the Ottoman Government of all the articles of the Decree of Muharrem and its annexe has been one of the most satisfactory points in the relationship between the Ministry of Finance and the Debt Council.

Steadying Influence of Fund.

The facts of the case being as stated above, the question of disposing of the reserve fund would seem to fall to the ground, as would also the question of the utility of its existence at present. There is little doubt that though the chances of its ever being needed are practically nil, nevertheless the unexpected may happen, and the very fact that this considerable reserve fund exists has a steadying effect upon the price of Turkish "Fours," and inspires the investor with more confidence than might otherwise be the case.

A final point has also been raised, and that is the possibility of investing the reserve fund in Turkish securities, thus saving the interest for the Government. As has been pointed out, nearly all the interest is already paid to Government in the form of surplus revenue, and, secondly, there is the obvious fact that should the Debt Council ever be forced to realise their holding, it would be at a time when Turkish stock would already be dropping owing to the fact that such a step were necessary, and a forced sale would only mean a further drop and greater loss. Indeed, this was so strongly felt that a few years ago the Council of the Debt decided to reduce their holding of Turkish stock, which was then very considerable, and made a more scientific geographical distribution of investments, Turkish securities, of course, being held to a certain extent.

NOTES FROM ALEXANDRIA.

Quietness on Bourse.

(From Our Own Correspondent.)

Alexandria, July 11, 1912.

In spite of an excellent opening, the market finished the week with little business and undecided tendency. The majority of our operators and large financiers are away in Europe, and the floor sometimes seems deserted. But the calm does not seem destined to last long. In fact, the business season will commence sooner than usual this year, for the cotton crop is early, and the first picking will take place towards the end of next month.

The strong rise in cotton and the brilliant prospects for the crop are a godsend for the country, which has been so grievously tried by the sensational failures of last winter. It is already estimated that the approaching cotton crop will bring £35,000,000 into the country, and if this estimate should be realised—of which there is little doubt—we believe that the present position will be very considerably improved. Prudent people should profit by the existing stagnation by picking up quietly certain securities with the object of realisation next winter. By judicious operation one might double one's capital in less than a year.

Further forced sales of securities to the amount of £60,000 have taken place this week. The prices obtained were in general higher than those of the official quotation, which proves that it is difficult, sometimes even impossible, to buy at the officiall quoted prices.

The Five Feddans Law.

The decision arrived at by Lord Kitchener to postpone application of this law until after the expiry of a period of three years has had a reassuring effect. It is generally considered that this law can never be brought into force. Nevertheless, the price of Agricultural Bank shares continues to decline. Financial experts say that, should the law ever be enforced, the Agricultural Bank would be driven to liquidation, and it must be remembered that in such case the holders of ordinary shares could not receive more than £4 apiece, for the immense bond issues would have to be repaid at par, as well as the ordinary shares. On the other hand, it would be necessary to enforce 33,000 expropriations, and it is not necessary to insist upon the cost of this procedure in Egypt, nor on the long period which it would require.

A remedy would be to authorise the Agricultural Bank to proceed by way of administrative expropriation instead of the usual judicial method. The administrative expropriations, which would be effected through the tax-collectors of the Government, would be much more expeditious, and would have the further advantage of costing almost nothing. The Egyptian Government would in principle have no objection to the Bank initiating a more rapid and less costly procedure, for the realisation of outstanding mortgage debts would serve for the repayment of the bonds issued with the Government guarantee. Meanwhile, the Agricultural Bank is commencing to buy in its bonds under par, namely, at 85, showing a profit of 15 points. Should the Five Feddans Law be enforced, the Agricultural Bank could, of course, continue its operations, provided that it obtained authorisation to make loans exceeding £500.

Sucreries et Raffinerie.

Notwithstanding the favourable results of the current year's working of the Société des Sucreries et de la Raffinerie, the ordinary shares will receive no dividend this year. The company recently sold some buildings, and with the resulting funds has brought in £E42,843 of bonds. In pursuing this policy of amortisation the company is gradually freeing itself from the heavy charges imposed by the bonds.

Commerce with Tripoli.

Trade between Egypt and Lybia has largely increased. We are sending from this country enormous quantities of provisions for the Italian army, and the Crown Brewery has had to double its output in order to fill the continually increasing orders for export to the different Tripolitan ports. A large number of Egyptian merchants are already established in these ports, and everything points towards an increase of trade between the two countries after the conclusion of the Italo-Turkish hostilities.

On the other hand, our trade with the Red Sea has sunk to almost nothing, in consequence of the blockade, and the pilgrimage does not seem destined to reach normal figures this year.

THE FIVE FEDDANS LAW.

The following is the text of the proposed new law, which has caused bitter controversy in Egypt, and to which reference has been made in these columns:—

"Distraint cannot be levied upon land farmed by a person not the owner thereof, the area of which is 5 feddans or less. Such immunity from distraint applies to the dwellings and outbuildings of such cultivators as well as to two beasts of burden and to the agricultural implements necessary for cultivation.

"This clause is effective against mortgage creditors or those holding the land as security for loans, but not against privileged creditors.

"This clause will not affect the rights of credits recorded or transcribed at the moment of this law, or the rights of simple contract creditors whose title has undoubtedly been acquired before the same date."

This law was published in the *Journal Officiel* on June 14, from which date three months must elapse before the Government can promulgate the decree enacting such law. During this time any Power can demand that the projected decree be submitted again to the Legislative Assembly with the modifications it considers necessary. If no such demand be made, then three months after the publication of the projected decree, i.e., on September 14 next, the Government can promulgate the law, or wait for a further three months before promulgation, by the end of which time if the law is not promulgated it can be considered as definitely abandoned.

EGYPTIAN EXCHANGE TABLES.

Messrs. Waterlow and Sons, Ltd., have just published a book of conversion tables for English and Egyptian currencies which will prove of great value to bankers, merchants, and others having financial dealings with Egypt. These elaborate tables, compiled by Mr. Howard T. Egerton, a member of the staff of the Anglo-Egyptian Bank, show many advantages not possessed by the well-known work of Monsieur Randone. The explanatory matter is given in both the English and French languages. The English equivalents of Egyptian currency are shown in decimal fractions as well as in pounds, shillings and pence, thus affording great assistance and saving much time in certain calculations of conversions. Further, the tables are more full than is usual in such works; and, last, but by no means least, the type is beautifully clear and large. The compiler is to be congratulated on the production of so useful and thorough a work. The price of the book, bound in cloth, is 21s. net.

Company Notes and Reports

Egyptian Delta Light Railways.

Sir William Garstin presided at the annual general meeting of the above company, held on Tuesday. Referring to the prospects of the new cotton crop, he said that some fears had been entertained on account of the shortness of the Nile supply, and of the appearance of both the boll worm and the ordinary cotton worm at an unprecedentedly early date. With regard to the former cause for anxiety, it was true that the river was lower this year than had ever previously been known, but the completion of the raised Assuan Dam had rendered it possible to store more water in the reservoir up-stream of the dam than was ever before the case. He did not think that the shareholders need have any fears upon this score, and, moreover, he could assure them that an exceptionally bountiful supply of water was not altogether an unmixed blessing to Egypt. The Fellah had an ingrained disposition to overwater his land should a plentiful supply be at his disposal. He would do this whenever he could, in spite of the efforts of the Irrigation Service to restrain him. The experience of the last twenty odd years had shown them that, in years of scanty water supply the yield and the quality of Egyptian cotton had been generally superior to that of those years in which reverse conditions have ruled. Thanks to the works for improving the distribution of water, carried out by the Government during this period, it was very rare indeed now to hear of a crop—even in the remotest parts of the country—failing for lack of sufficient water to irrigate it.

In regard to the second cause for alarm—namely, the worm—he did not deny that the anxiety that had existed as to the future of the crop was based upon serious grounds. It might be well, however, that the early discovery of the boll worm in the current season was due to the rigorous search that had this year been made for it. He felt confident that the measures now being taken would result in its destruction before grave damage had been done to the crop. Of course, the really critical season for the cotton crop had not yet arrived. That occurred in the months of early autumn. Much would depend upon the state of the Nile flood and upon the climatic conditions during that period. For the present, however, he did not think they had reason for serious anxiety as to this year's cotton crop. Notwithstanding the adverse circumstances, they had every reason to be satisfied with the result they had obtained in the year under discussion, and he considered they had equally good reason to feel confident about the future. In his opinion everything tended to show that the crisis was, at last, really passing away, and that better times were approaching in Egypt. The economic conditions of the country had been sound throughout, and had never been affected by the disastrous speculation that had brought ruin upon so many. Under Lord Kitchener's rule the political agitation that for many years past had disturbed the spirits of the Egyptians would seem to have almost entirely disappeared, or, at all events, to have been quelled for the time. In every part of the country confidence now reigned. The wise policy that had resulted in the commencement and execution of extensive drainage works in the Delta would assuredly, in a few years' time, produce a very considerable increase in the cultivated area and in the wealth of the country. Such increases must necessarily affect the company's railway system, if, as he hoped might be the case, they were in a position to take advantage of it. The report was adopted.

Corporation of Western Egypt.

The report of the Corporation of Western Egypt, Limited, to November 30, 1911, to be submitted to the meeting on the 24th inst., states that the directors have again to emphasise the fact that the progress in regard to the irrigation—and, consequently, the cultivation—of the company's lands is dependent entirely upon the water supply. At the time of the issue of the last report the board had decided that, as the natural flow of the wells was not giving a sufficient supply for the intended purposes of the company, pumping would have to be introduced. Mr. A. W. Wylie having been appointed assistant general manager and chief engineer in the autumn of last year, upon the instructions of the board, made a close study of the water position from the commercial point of view, the results of which were embodied in a report, the main conclusion arrived at being that the cost of pumping made land cultivation in the oasis, as a commercial proposition, impossible. The only possible solution of the difficulty was to obtain greater artesian flows. With this object in view boring was commenced with the intention of sinking to a depth of from 1,800 to 2,000 ft. On June 23, 1912, the new bore, No. 61, had reached a depth of 1,153 ft., and was cased to a depth of 1,093 ft., giving a flow of 123 gallons per minute. Upon the return of three of the directors from Egypt it was decided to convene a meeting of the principal shareholders and lay the position before them. A meeting was held on March 27, when the feeling was expressed that the new deep bore should be persevered with. In the event of success attending these operations a number of the largest shareholders expressed themselves as agreeable to a reconstruction or reorganisation of the capital. Certain of the shareholders have since expressed their willingness to find a temporary sum of money on debentures, in the event of the funds of the company becoming exhausted before the thorough testing of the new bore. The board feel that, until the result of the boring operations at well No. 61 is ascertained, they are unable to give any expression of opinion in regard to the future, but that it is manifest that, if these operations do not meet with a proper measure of success, the liquidation of the company will become inevitable.

Maikop Orient Oil.

The report for the period from May 1, 1911, to May 13, 1912 (April 30, 1912, O.S.), states that drilling was commenced on September 19 last, and continued until a depth of 536 ft. had been reached. Indications of gas and oil were met with at various depths, but no payable oil source was struck. The results of the development work, undertaken by this and other companies operating in the district, demonstrated the necessity of sinking wells to a greater depth than originally anticipated, to meet the payable oil horizons. In view of this, a conference of the representatives of the companies interested in the Maikop field was arranged to consider the advisability of co-operation. As a result of several meetings, the Maikop Deep Drilling Company was formed with a nominal capital of £100,000 in ordinary shares of £1 each, for the purpose of sinking deep wells. The working capital of that company was provided by various companies interested in the development of the oilfield. Mr. W. H. MacGarvey, who is in charge of the Maikop Deep Drilling Company's operations, has reported very favourably on the possibilities of the lower oil horizons. Under these circumstances, after consultation with the general managers, it was decided to sink three deep wells, and for the sites of two of these plots Nos. 108 and 321 have been chosen. On the first-named plot there was already a well drilled to a depth of over 2,000 ft. That well is now being deepened, and it is reported that there is already a fair showing of light oil. The Maikop Deep Drilling Company have also acquired, on account of its advantageous position, plot No. 507, belonging to the London and Maikop Oil Corporation, with the object of sinking a third well thereon. That plot is in close proximity to two belonging to this company.

ETHIOPIAN GENERAL TRADING CO.

Mr. Justice Neville delivered judgment on Tuesday in the action, Ethiopian General Trading Company, Ltd., v. Clayton and others, the defendants being Mr. Robert Clayton, Mr. Frank L'Estrange Heppard, and Clayton, Ghaleb and Co., Ltd.

The plaintiff company was formed for the purpose of supplying arms, ammunition, and general stores to Abyssinia. It is now in liquidation, and the charges made in the action were that the liquidator, Mr. Heppard, by two affidavits, which did not disclose the full facts, induced the County Palatine Court to sanction the sale of the assets for £20,550, the value of the debentures, to Clayton, Ghaleb and Co.

His lordship, in giving judgment, said unless the sale was obtained by fraud the transaction could not be set aside. Mr. Clayton appeared to have entirely lost sight of his responsibility to the plaintiff company, but it seemed to him (his lordship) he had no fraudulent intention. Mr. Ghaleb appeared to have acted properly throughout. Mr. Heppard came on the scene as liquidator, and he represented interests which might come into conflict; but it did not appear that there had been any fraud. He was of opinion that the order was not obtained by fraud, and it would be impossible to restore the parties to their original position, and the action would have to be dismissed, with costs.

FINANCIAL NEWS IN BRIEF

The receipts of the Smyrna-Aidin Railway for the week ending June 29 amounted to PT856,145, as against PT700,330.30.

The receipts of the Delta Helouan and Cairo Quarry lines of the Egypt Delta Light Railways for the ten days ending June 30 were £E7,112, as against £E6,431 for the corresponding period last year, or an increase of £E681.

The balance-sheet for 1911 of the Compagnie Française des Mines du Laurium shows a net profit of 652,000 frs., allowing of a dividend of 20.00 frs. per share, as against 17.50 frs. in 1910 and 15 frs. in 1909.

The following is a copy of a cablegram received by the Sudan Gold Field, Limited, from the superintendent at the mine, under date 17th inst. :—"Cyanide—Have commenced treatment; the machinery runs most satisfactorily."

Bank of Mitylene (in Liquidation).—Extraordinary meeting of shareholders in the offices of the bank at Galata, August 6, 1912.

NOTES OF THE WEEK.

Said Pasha has been succeeded by Ghazi Ahmed Mukhtar Pasha as Grand Vizier of Turkey. The Sultan's first choice fell upon Tewfik Pasha, Ambassador to the Court of St. James's, whose appointment was actually announced by Imperial Iradeh. His selection has been represented as an attempt on the part of the Committee of Union and Progress to retain control of the Cabinet, but inasmuch as his conditions for accepting office, which led to his being passed over, are said to have been the dissolution of the Chamber and the abolition of the Committee, it may be inferred that conjecture is still in vogue to account for the kaleidoscopic turn of events in Turkey. The new Cabinet was to include the following Ministers:—Noradunghian Effendi, Foreign Affairs; Ferid Pasha, Interior; Hussein Hilmi Pasha, Justice; Nazim Pasha, War; Mahmud Mukhtar Pasha, Marine; Said Bey, Education; Zia Pasha, Finance; Damas Sherif Pasha, Public Works, together with Kiamil Pasha as President of the Council of State. It is uncertain, however, whether Ferid Pasha will be induced to accept office. If a peaceful solution of the present crisis be possible, it ought to be attained by the new Ministry. Ghazi Mukhtar Pasha's Cabinet includes the most experienced statesmen of the Empire; three of the Ministers, Ferid Pasha, Hilmi Pasha, and Kiamil Pasha, are ex-Grand Viziers; Ferid Pasha is an Albanian, while Ghazi Mukhtar Pasha has a distinguished record in his country's service, and is especially popular in Albania. Public opinion has also been studied in the inclusion of Kiamil Pasha and Nazim Pasha, the former of whom was first offered the portfolio of Foreign Affairs, but declined it on grounds of "ill-health." The Cabinet starts under the very best auspices; it is free from party colouring, but may be supposed to enjoy the approval of the Military League.

As far as the inner history of Turkish affairs during the past week can be read, it would appear that the Sultan shared the general uncertainty regarding the relative strength of the Committee of Union and Progress and the Military League. A proclamation to the army on July 19 announced that Tewfik Pasha had been invited to take the post of Grand Vizier, and that the Sultan regarded it as necessary that the new Cabinet should be composed of personages with a wide experience of matters of State and with independent views, free from all influences. At the same time, a strong reprimand was administered to soldiers "who for the moment have forgotten their military obligations." The army was warned to hold itself aloof from politics, carry out the orders of superiors to the letter, and devote itself exclusively to the defence of the country. It was after the issue of this Iradeh that the Sultan and his advisers first realised that the army in Constantinople had ranged itself to a man against the Committee, and the inclusion of Kiamil Pasha in the new Ministry probably indicates his Majesty's acquiescence in the new order. In spite of the excellence of the *personnel* of the present Cabinet the influence of the officers of the army must be regarded as paramount for the moment in Turkey. This represents an unhealthy condition of things, and more is required of them than antagonism to the Committee to prove them the saviours of the country. If the earlier protestations of the Military League are to be credited, it desires nothing better than to see all the officers of the army freed from the trammels of politics, and is prepared, as soon as a satisfactory Government is firmly established, to pass a self-denying ordinance on all its members. Its ability to carry out its inclinations will depend largely on the attitude of the Committee and the Chamber. The dissolution of the latter has been mooted, but so far the intentions of the Cabinet on this subject have not been made known.

In addition to abolishing the state of siege in Constantinople and trial by court-martial the new Cabinet has lost no time in an attempt to grapple with the Albanian question. A peace mission is to be despatched at once, and the troops have been ordered to cease from aggressive action. It is feared, however, that the population may prove to have been aroused too much to give the Ministry time to carry out its pacific intentions. The general situation is said to be growing daily more and more serious; the markets at Mitrovitza, Prizrend, and Yenibazar are closed, the route from Prizrend to Scutari is besieged by rebels, and the former town is said to have fallen into their hands on Sunday. But a Cabinet that enters upon office with the special recommendations of the present one should have no difficulty in gaining the ear of the Albanians, when once its existence has become known throughout the province. A speedy settlement is the chief desideratum, for the Albanian problem under the Committee's *régime* had been allowed to assume proportions that rendered it almost as dangerous as the war with Italy.

On the night of Thursday, July 18, a squadron of five Italian torpedo boats entered the Dardanelles and succeeded in penetrating some fifteen miles up the Straits before they were forced to retire under shell fire from the Turkish batteries. The incident has provided more than the usual amount of conflicting accounts. According to the Turkish version six torpedo boats participated

Digitized by Google

in the attack, and two of these were sunk by the guns of the forts. To add an atmosphere of verisimilitude to this bald narrative, it was subsequently reported that a miscellany of naval paraphernalia ranging from a propeller to a lifebelt had been recovered as evidence of the sinking of one or more of the Italian vessels. At first the very idea of an attempt to force the Dardanelles was denied in Rome, but the next day the Italian Admiral announced that five of his torpedo boats had attempted to force the Dardanelles, or, as he expressed it, to make a reconnaissance in the Straits. The vessels were unable to penetrate beyond Kali Sultanieh, and, his report continues, "the intercrossing of the searchlights rendered it impossible to identify the Turkish ships and equally so to ascertain their approximate position." But the Italian commander considered that "he had fully succeeded in achieving the object of his reconnaissance," and ordered his flotilla to return. The torpedo boats, according to the Italian Admiral, "sustained merely trifling damage."

The Italian Navy has probably more reason to be pleased with the exploit than the Italian Government, which denied that it had taken place. To run the gauntlet of the Turkish batteries in the narrow waters of the Dardanelles called for no mean degree of seamanship and discipline, and the Italians, if they withdrew with their squadron intact, may congratulate themselves on having tested the strength of the Turkish defences at such a trifling expense. Whether their experience will encourage them to try an attack in force remains to be seen; but if the torpedo-boats found it unsafe to proceed more than a third of the distance to the point where the main Turkish fleet is understood to be anchored, it is hardly likely that an expedition offering an easier target would fare better. The Turks have wisely refrained from closing the Dardanelles, and have merely narrowed the channel left clear for the passage of ships. They may have reason to be glad of the opportunity for testing the strength of their defences, and will doubtless benefit by their experiences of Friday morning.

Rumour is again busy regarding negotiations for peace between Turkey and Italy. At first the conversations to this end were admittedly unofficial; but it is now reported that official political personages on both sides have also joined in the confidential negotiations. There can be little doubt that the two belligerents are weary of the war, and would welcome an adjustment of their differences suitable to both parties. The appearance of a new Ministry in Constantinople can only strengthen this attitude, and may possibly hasten the discovery of a peace formula that will enable both Italy and Turkey to recede without loss of face from an untenable position.

Five Egyptian Nationalists have been detained for trial in connection with the conspiracy against the lives of the Khedive, the Premier, and Lord Kitchener. Imam Wakid is cited as the chief offender, but it is hinted that interest in his doings and in those of his fellow-conspirators may be overshadowed by revelations concerning the measure of complicity of the Nationalist party. Of the leaders of this party Mohammed Bey Farid and Sheikh Abdel Aziz Shawish are voluntary exiles in Constantinople, Ali Bey Kamel is in prison on the charge of having published a seditious speech, and Hassan Kamel is at present under arrest in connection with Imam Wakid's conspiracy. If the evidence in the hands of the authorities is sufficient to convict any or all of these firebrands, the Egyptians may be able to rid themselves of an organisation that has only brought discredit upon the country, and may be free to follow out their political development on constitutional lines. The discovery of the conspiracy provides an unfortunate setting for the petition presented to the Khedive in Geneva on Monday by the "Permanent Young Egyptian Committee" in Europe, urging the grant of constitutional Government, which alone, it was pointed out, "was capable of putting an end to a state of affairs incompatible with the present spirit of Liberalism."

The situation in Persia occupied the attention of the House of Lords on Wednesday on the motion of Lord Lamington, who has recently returned from a tour in that country. By making the Anglo-Russian Convention the chief burden of his remarks, Lord Lamington gave the Government a convenient opening, and Lord Crewe was able to confine his reply mainly to the argument that the Convention had obviated either the definite partition of Persia or the occupation of a large part of Persia by Russia, with a possible abstention on our part from any similar step in the south. Lord Curzon, however, brought out the point that the present condition of the country was not so very different from the fate that it was supposed to have avoided. With 12,400 Russian troops in the north "it was a position of Russian supremacy and Russian military occupation very little short of annexation"; but, Lord Curzon might have added, without the corresponding degree of order and security that a recognised occupation would give, while in the south, owing to the reluctance of the British Government to perform similar functions, anarchy and despair are rampant. It is to be feared that unless the British and Russian Governments face the position that a definitely constructive policy is required of them if Persia is to be extricated from her troubles, partition or worse must inevitably ensue. Nothing could be more fatal than to allow the vicious circle—no order in the country without a loan and no loan without an order—to revolve indefinitely.

The naval policy of the British Government has been the subject of two important discussions in Parliament during the past week, but for the purposes of this review we may confine ourselves to that portion of it which affects the Mediterranean. Speaking in the House of Commons on Monday, the First Lord of the Admiralty announced that the former battleship squadron, six strong, based on Malta, would be replaced next winter by four battle cruisers of the "Invincible" type; the armoured cruiser squadron now based on Malta would be strengthened by the substitution of four "much more powerfully armed vessels," and it would also be necessary to add to the submarine and destroyer flotillas at Malta and to establish a new torpedo station at Alexandria. We do not require here to examine these dispositions in the light of their bearing on British naval policy as a whole, but in passing it may be remarked that one effect will be that Malta will soon be in the way of coming, in some measure, into her own again. The tenour of the two debates—for Mr. Churchill's statement in the Lower House was followed next day by a discussion initiated by Lord Selborne in the House of Lords—showed that any desire on the part of the Government to shirk our obligations in the Mediterranean had given place to wiser counsels. In this connection we may draw attention to a letter addressed by Lord Cromer to the *Times*, in which he refers to the question of Mediterranean garrisons. He deprecates in the strongest possible manner the suggestion that military garrisons and a strong naval force constitute alternative schemes. "The case of Malta and Gibraltar," continues Lord Cromer, "is, indeed, somewhat different from that of Egypt. I think it is to be regretted that the garrisons of these important fortresses were ever reduced, and if our naval strength in the Mediterranean is, as would appear, to be diminished, an additional reason is afforded for restoring them to at least their former strength. As regards Egypt, however, there cannot be a greater delusion than to suppose that the addition of a few thousand men to the garrison of that country would materially affect the situation. It would do nothing of the kind." The command of the sea, he points out, connotes the possibility of holding Egypt, and to increase the garrison beyond the actual requirements of the country would be, in the event of serious naval defeat, to add to the number of prisoners that would fall into the hands of the enemy. It is well that this dependence of Egypt upon the maintenance of our supremacy at sea should be emphasised at this time, for the tendency to concentrate upon one danger is apt to weaken our sense of our responsibilities elsewhere.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, July 20.

An Abnormal Situation.

A recent official communication to the Press informs us that "owing to recent incidents the situation continues abnormal," and it may safely be said that this statement was not in any way exaggerated. But, according to the views of a local paper never has there been such a muddle of affairs in the country, never have anarchical tendencies been manifested with such virulence, and never has the Ottoman Empire been surrounded by such perplexing difficulties, of which the solution cannot be safely deferred. And it goes on to say that what the country has urgent and vital need of is interior tranquillity, enough blood having been shed on the battlefields of Albania, enough hatred recklessly provoked between Ottomans who should dwell together as compatriots, enough harm done everywhere by means of the wretched and paltry policy of so-called "clubs." It is to be feared that neither is this an exaggeration; for in whatever direction one looks there is nothing but unrest and commotion. Further desertions of both officials and military continue to be reported, and frequent fighting is still going on in Albania. Even the Malissors, who were said to be keeping quiet, are now showing uneasiness, and the military authorities are taking stringent measures of precaution; but, according to one report, there has already been a stiff fight between them and the troops near Alessio in the Scutari vilayet, the losses being heavy on both sides. In the district of Pristina, too, the situation daily becomes worse, and a great revolutionary movement is said to be developing; while in Uskub meetings have been held in the mosques, and resolutions passed condemning the Cabinet and its works. And now this latter no longer exists; the sacrificing of Mahmud Shevket Pasha was evidently insufficient, and the whole Cabinet has been forced to go.

The Fall of the Cabinet.

It is believed here that Djavid and Talaat Beys were strenuously opposed to resigning at the dictation of malcontent officers, but that the Grand Vizier had different views. If there is any truth in this it is clear that he got his own way; but what it all portends is hidden in the future. In any case it is a momentous event, and its suddenness is difficult to account for when it is remembered that only a day or two before the Chamber had passed a vote of confidence by 194 votes to 4. The opinion had been held by some here that this Ministry, discredited and unpopular, would first make peace with Italy and then disappear from the scene; but that theory is now quite upset, and nobody dare venture to forecast what the next move will be. Tuesday next, the 23rd, is the anniversary of the proclaiming of the Constitution, and preparations are already being made for the usual illuminations, etc., but it is surprising that many are wondering what form of Constitution is going to be celebrated—the present or a different one? In fact, it has for some time been said that we might look for stirring events on that day.

Dardanelles Rumours.

And now, what has happened at the Dardanelles? We are told that eight Italian torpedo boats passed up by night, and bombarded the Sultanieh fort, that the batteries replied vigorously, sinking two of the boats, and so damaging some of the others that they all had to turn tail and run for it. It does not seem credible, however, that torpedo boats went up to bombard the forts; so we can only suppose the object of this attack was a dash through the Straits to torpedo the fleet. Of course, the real story may be altogether different; and it may be quite untrue that, a Council of War having been held at the Palace, it was decided to once more close the Dardanelles. But if this latter be true, it is much to be deplored; for with the shipment of grain just beginning in the Black Sea, commerce in those waters will again be at a standstill. Even in this district, through internal troubles, the outlook is exceedingly discouraging; for a great part of the Albanian crop markets up country are in many places closed altogether, as the farmers and country people dare not venture to attend them. Besides, with so many in the mountains and on the warpath, harvesting operations must be exceedingly difficult, if not entirely neglected.

The "Yeni Asr" Case.

The action by the authorities of Kossovo against the *Yeni Asr* for publishing an article by our Governor-General, which they considered was of a nature to cause "undesirable excitement," was tried here last Saturday. The Procureur-Général having duly read the article in question, maintained that he failed to see anything in it which could bring the editor within reach of the law, and he therefore demanded his acquittal. After he had closed his pleading the Court retired, deliberated in private for about half an hour, then returned and gave a judgment acquitting the defendant. The Court unanimously decided that the article did not come in the category of false news, that it was a simple criticism of past events, and that there existed no proof of its having contributed to the over-exciting of the people.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, July 20.

The Turkish Frontier Guards.

The correspondent of the journal *Dnevnik* at Gueshérco gives the following account of an event which took place at Devé Boir, and shows the state of the Turkish frontier guards:—"The officer of the Turkish frontier guard, Shukri Effendi, being angry because of the frequent desertions from the Turkish Army, gave a severe scolding to one of his men for not having warned him beforehand about those who wanted to run away. The soldier thereupon threw himself on the officer, knocked him down, and attempted to strangle him; and other soldiers joined their comrade against the officer. At that moment the Bulgarian frontier officer happened to pass, and he promptly took action and delivered Shukri Effendi. Afterwards he reproached the soldiers for their disrespect towards their officers. They, however, replied: "Samokovly Effendi, you had better go away! It is not your business to be here. There is discipline and order in your country. When a soldier comes to serve in the frontier guards he is registered, and when his time is up he goes home. It is not the same with us: none of us is registered, neither are we asked when we have come or told how long we are supposed to remain. We have been serving for eight or ten years, and we cannot tolerate any longer either our authorities or our lives. We want to get free, to run away wherever we can." The Bulgarian officer, after advising them not to repeat their conduct, but to refer to the Pasha if they had any complaints to make, left for Gueshérco.

Naby Bey's Departure.

The Turkish Minister in Sofia, Naby Bey, was suddenly recalled to Constantinople, and left at once. It is supposed that he will be given the office of Under-Secretary of State in the Ministry of Foreign Affairs.

Return of King Ferdinand.

King Ferdinand is expected to return to Sofia at the end of the present week or the beginning of the next. As is known, his Majesty has been away for about two months, and has lately been taking a cure in Pistchian, from which point he has visited his estates in Hungary.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 10.*

Lord Kitchener's Departure.

In consequence of the representations made by the police after the discovery of the political plot, Lord Kitchener's departure from Cairo on Thursday was shorn of the ceremony which has attended his comings and goings in this country. At the time it was not known exactly what the extent of the conspiracy was; and as the British Agent had been followed on his previous journey from the Delta it was decided to take the precaution of despatching the special train at 8.45 instead of at 9.20, the hour previously arranged. Very few officials were let into the secret, and as a consequence there were comparatively few people at the station, most of the residents arriving after the train had left. In some quarters this precaution has been adversely criticised, but in the circumstances the authorities were quite right in wanting to run no risks.

The Alexandria Municipal Scandal.

Matters are settling down in the Alexandria Municipality. The Council of Discipline has concluded its inquiry into the case of Mohammed Bey Osman, the Secretary-General. He had been suspended, as your readers will doubtless recollect, during the inquiry into the municipal scandals, and as certain charges had been levelled at him it was decided to bring him before a Council of Discipline. The Council found that the charge of embezzlement was unfounded, that the accusation of bribery was not proved, and that Osman Bey had not been working in a manner which would preclude all suspicion; consequently it decided to dismiss him, but to allow him to retain his right to a pension.

Cairo, July 17.

The Political Conspiracy.

The inquiry into the conspiracy against the Khedive, Lord Kitchener, and Mohammed Pasha Said, the Prime Minister, has at last been concluded, and Sarwat Pasha, the Procureur-General, left this morning in order to present his report to the Regent. No official declaration has so far been made beyond the communiqué referred to in a previous letter, and it is considered possible that no statement will be issued before the trial. As soon as the Regent has approved of the report, the dossier will be handed to the Juge d'Instruction—the official who carries out more or less the duties of a committing magistrate—and as he has to give his decision within eight days, the case will come before the August Assize Court.

During the past week so many people have been arrested and released that one has had to follow the course of affairs very closely indeed if one did not want to become hopelessly confused as to the men still left in custody. The police have been blamed for their precipitate action in effecting arrests, but it appears that there was method in their apparent madness. They were afraid that witnesses might be got at before their evidence could be recorded; and so, as soon as it was decided to call any particular man as a witness, he was formally arrested, instead of being served with the usual "citation," and if after he had given his evidence there appeared to be no grounds against him for suspicion he was released. Amongst the men arrested and liberated this past week have been Abdel Rahman El Arali, and Mahmoud Ramzi Nazim. The former was suspected in 1910 of complicity in the Wardani plot, and had at the outset of the present inquiry been arrested and subsequently released. It appears that the police maintain that some of the conspirators, including Imam Waked, met in Cairo on the Friday night—the 28th ult. This Waked denied, his statement being that he was in Alexandria at that time trying to get a loan for Aly Bey Kamel. His defence was that he left Cairo on the Thursday before the arrest at Shoubra (*i.e.*, June 27) for Birket El Sab, where he met Nazim, and the following day lunched with him and El Sabahi, afterwards leaving for Alexandria. The Parquet accordingly arrested El Sabahi and Nazim, partly in order to obtain their evidence on this point and partly because it was not certain of the nature of the relations that existed between the three men. El Sabahi and Nazim confirmed Waked's account of his visit to Birket el Sab, but maintained that he had left there on the Friday for Cairo and for Alexandria. This was borne out by several railway employees and other persons.

As the evidence of the two arrested men coincided with the police statement and no further proofs were forthcoming against them, the Procureur-General ordered their release, preferring to consider them as witnesses against Waked. The police theory is that Waked and El Arali left Cairo together, the last-named proceeding to Alexandria to assassinate the Premier. Waked returned to Cairo the next day, expecting to meet El Arali, who was to report on the success or non-success of his object. Not finding his confederate in the capital he proceeded to Alexandria, after meeting his other associates. At the port he could not trace El Arali. During his stay there he met some students who had just returned from Europe, and who have now testified that Waked was in a great state of nervous excitement and had informed them that he had lost sight of a friend in Alexandria. It is to be presumed that he feared that El Arali had been arrested, and the plot had been discovered.

Origin of the Plot.

In an interview which the Procureur-General accorded a representative of the *Egyptian Gazette*, he stated that there was no doubt that the plot had been arranged, and that evidence of an incriminating nature had been discovered; but he added that there were no traces of an organised secret society. With regard to the latter remark, one can only say that it is but natural that the authorities would not wish to make public all that they had discovered. That there is nothing to show that the plot was actually engineered by an organised secret society is highly probable, but that the existence of a secret society, possibly dating from before the Wardani affair, is proved by the documents in the hands of the police I am absolutely certain. For two reasons, however, the authorities are not inclined to admit its existence; firstly, because the documents which prove the complicity of the Nationalist party also contain references to certain high-placed persons, who have been associated with that party; secondly, because with the information they have now obtained they are better able to watch the political suspects, who, since they do not know for sure exactly what knowledge is in the hands of the authorities, will find themselves very much handicapped. Of course, independent proofs may be forthcoming later on, in which case the authorities will have their hands free to take action against the leaders.

Five prisoners now remain in custody:—Imam Waked, Mahmoud Taher El Arali, Hassan Kamel, Hassan Nafeh, and Mohammed Abdel Salam El Borai. Of the guilt of the three first named there is little doubt, for further evidence has been furnished that Hassan Kamel and his fellow-conspirators often met on a dahabeeyah, where they discussed politics and the way of revenging themselves on the authorities. It seems that the condemnation of his brother, Aly Bey Kamel, maddened Hassan and fired him to work for the assassination of those whom he conceived responsible for the sentence. He incited his comrades to join him in his mad plans. We know the rest. It is thought that Hassan Nafeh may be released owing to the insufficiency of the evidence against him. As for Mohammed Abdel Salam, it appears that if he was not actually in the employ of the secret police he, at any rate, carried out spy work for them; for at one of the perquisitions a report on the doings of certain suspected Nationalists, which he had drawn up, was found. It remains to be seen whether he was acting for the police in the matter of the conspiracy.

The French National Fete.

The French National Fête was celebrated in grand style in Cairo. The Esbekieh Gardens were most brilliantly illuminated, the scheme being highly artistic. The grand stand was packed with notable residents, the British officers in their uniforms being especially conspicuous. A novel feature was introduced in the shape

* Delayed in transmission.

Digitized by Google

of races on the skating rink, in which Thomas Atkins played a great part. The pipers of the Scots Guards had lent their services, and in between the musical selections played by the Egyptian Army and Suffolk Regiment's bands gave an exhibition of reel and sword dancing which aroused the keen interest of the throngs of spectators. One thing deserves special mention, and that is the great friendliness which, it was evident, existed between the British and French communities. On the official daïs, in remote corners of the gardens, and in the night cafés one continually heard cries of "Vive l'Entente Cordiale," followed by a murmur of applause from those sitting or standing around. It was a pleasing indication that the bonds of sympathy which drew the two nations together in such a wonderful manner 1904 are still as strong as ever—nay, stronger than ever.

The Homestead Law.

Lord Kitchener's Five Feddan Law still exercises the public mind. A representative delegation has waited on the Regent and Rushdi Pasha, the Minister of Justice, and has obtained from them two promises: One, that deeds of mortgage and loan, which shall have been registered before the law enters into force, shall carry the right of renewal during five years without losing during that period the security of the debtor's five feddans; the other, that debts of less than £E5 shall be registered at the Mixed Tribunals without payment of the usual fee of P.T.25. The first concession is a very important one, for it will relieve creditors from the obligation of calling in these loans, and probably losing heavily thereby, and it will save the fellah from being unduly pressed for money. Five years is, after all, an ample delay for the settlement of debts already incurred; and the knowledge that it must be done within that period may possibly make the fellah more careful in arranging his finances, though it is doubtful whether anything will ever teach him that.

ALEXANDRIA MERCHANT SEAMEN'S HOME.

Mr. D. A. Cameron, H.B.M.'s Consul-General at Alexandria, has issued an appeal to owners of vessels visiting the port of Alexandria on behalf of the Committee of the Alexandria Merchant Seamen's Home. Mr. Cameron states that the institution has been in existence since 1880, when it was founded by the liberality of shipowners and other contributors connected with Alexandria. The premises hired at that time having become totally inadequate for the growing requirements, application was made in 1898 to the Egyptian Government for the grant of a site on the quay for the purpose of building a new home. The lease of a suitable site was readily accorded on most liberal terms, and an appeal was issued, with the result that in September, 1899, the committee were able to sign the building contract, and the new home (having been in occupation since May, 1900) was formally opened, free of debt, on January 15, 1901. The admirable qualities of the building are highly appreciated by the seafaring classes, and the reading and recreation rooms are largely attended and are found to be a great boon to officers and men. The committee feel assured that the merchant shipping owners connected with the trade of Alexandria will recognise that it is unfair that an institution devoted almost exclusively to the good of seamen in their service should be dependent on local contributions from those on whom it has no claim, and has no hesitation in pressing upon those interested in the shipping of Alexandria the adoption of a plan which has for many years been attended at Constantinople and other foreign ports with the best results. There each merchant ship on its arrival imposes on itself a small contribution to the Seamen's Home.

The tax of 5s. per voyage on every ship calling at the port of Alexandria has been most kindly agreed to by the great majority of those shipowners to whom application has been made, and it is now hoped it will be accepted by all.

LETTRE D'ATHENES.

(De Notre Correspondant Particulier.)

Athenes, le 19 juillet.

Le crise en Turquie.

Les événements qui se déroulent en Turquie sont suivis avec une vive anxiété en Grèce. Les déclarations faites à la chambre ottomane par le grand vizir, Saïd Pacha, avant sa démission relativement à la Crète et à l'attitude pacifique de M. Vénizélos envers la Turquie, ont été commentées avec une ironie mordante par la presse officieuse d'Athènes. "Si la Grèce a suivi une telle politique dans la question crétoise, déclare carrément le *Patris*, elle ne l'a certainement pas fait pour plaire à la Porte, puisque la Crète ne dépend plus de la Turquie; le gouvernement s'est tout simplement conformé aux recommendations des puissances protectrices qui n'estimaient pas que le moment fût opportun pour l'union de l'île à la Grèce. Car, s'il en était autrement, la Grèce n'hésiterait pas à accepter des puissances ce qui lui appartient sans craindre nullement la Turquie."

La chute du Comité Union et Progrès, à laquelle paraît devoir aboutir la crise actuelle, est attendue ici avec une vive satisfaction d'autant plus naturelle que ce furent les députés grecs qui ont été les principales victimes des excès et des illégalités commis par les Jeunes Turcs aux dernières élections. Cependant on ne se fait pas non plus beaucoup d'illusions au sujet de la situation qui serait faite aux populations grecques par les "nouveaux chauvinistes du même acabit" qui cherchent à succéder aux Jeunes Turcs pour en faire autant qu'eux. Loin de présager du bien d'un tel changement, on craint au contraire qu'il ne provoque une explosion générale de toute ces passions allumées par la terrorisation exercée pendant trois ans et qui a détruit à tout jamais cette connexion qui existait entre les Turcs et les populations chrétiennes sous l'ancien régime. Dans ces conditions on est ici d'avis que ce n'est que par leur coalition que celles-ci pourront se défendre et écarter le danger d'être les victimes de la lutte à outrance qui pourra s'engager entre les Jeunes Turcs et les séditieux.

Le nouveau gouvernement cretois.

A la suite d'une divergence de vues qu'il a eue avec ses collègues dès la première séance du nouveau comité exécutif, son président, M. Hazzimichalis Yannaris, a donné sa démission. M. H. Yannaris préconisait l'idée d'envoyer une députation dans les capitales des puissances protectrices pour faire des démarches en faveur de l'union et de demander au prince Georges, qui, depuis que M. Vénizélos est au pouvoir, séjourne toujours à Paris, de se mettre à la tête de cette députation. Les trois autres membres du comité désirant ne pas se priver de sa collaboration et de son expérience, s'efforcent de lui persuader de renoncer à une telle idée qui d'ailleurs n'aurait pas beaucoup d'efficacité. Si, toutefois, leur démarche demeure infructueuse le comité restera composé de trois membres seulement, dont M. Michélidakis deviendra probablement le président.

La deputation des Grecs de Chypre.

M. Lanitis, député de Lemessos-Paphos et membre de la députation envoyée à Londres par la population grecque de Chypre, a fait un court séjour à Athènes se rendant à Paris où il se rencontrera avec les deux autres members de la députation, MM. Constantinidis et Théodotou.

M. Lanitis paraît être très modéré dans ses idées et grâce aussi aux bons conseils qui lui ont été donnés pendant son séjour à Athènes, il est à espérer que cette mission aura pour résultat d'aplanir et de faire disparaître tous les malentendus auxquels, au dire de M. Lanitis, a donné lieu le caractère par trop militaire et rigide du haut commissaire actuel. M. Lanitis nourrit l'espoir qu'après les explications et les éclaircissements que cette députation donnera de vive voix sur les griefs des Chypriotes, le ministre des colonies voudra bien accéder à leurs demandes, qui comprennent l'augmentation du nombre des députés grecs de neuf à douze et notamment le règlement de la question du tribut, ainsi qu'à l'affectation des excédénts budgétaires à des travaux d'utilite publique.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, July 19.

Crops v. Politics.

Roumania is busy harvesting, and politics are at a standstill. The Court is at Sinaia, most of the Government Departments at Bucharest are in charge of Under-Secretaries, and all the Senators and Deputies are dispersed among their country seats looking after their crops. One hears little of politics, and even the thorny Bucharest Tramway question, which was solved by the Court of Cassation's judgment in favour of the company and against the Government and the Bucharest Corporation, excited less interest than it would have done a month ago. The facts that a Ministerial crisis is impending in the autumn, that the Prime Minister, M. T. Maiorescu, had an interview abroad with M. Take Ionescu, the leader of the Conservative-Democratic party, and that he subsequently met MM. Carp and Marghiloman, the real leaders of his own party, are sometimes mentioned, but only as matters of no immediate importance. The present interest is the crop, as in an agricultural country such as Roumania everybody has a stake in it.

Should all hopes in this respect prove true, this will be the fourth good year in succession for Roumania, and the Minister of Finance will have the pleasant task of announcing another surplus. Land has gone up in value tremendously, so much so that it is hardly a profitable investment. It may not be generally known that foreigners and the *Heimatlos*, indigenous Jews, are not permitted by law to own rural property, though they are allowed to hold lands on lease. It is, of course, against the Jews that the law has been framed, and several foreigners who have inherited estates have not been forced to sell. There are no restrictions regarding property in towns.

The Sinaia Casino.

There are strong comments in a section of the Roumanian Press upon the opening of a casino, where baccarat, *petits-chevaux*, and other games of chance are to be allowed, at Sinaia, the Royal and fashionable summer resort in the Carpathians. The excuse that the Government give for granting the concession is that the wealthy Roumanian is a born gambler, and that it is better that he should lose his money in the country than at Monte Carlo, Nice, or Aix-les-Bains. There is a second casino at Constantza, the bathing resort on the Black Sea, but another which was opened lately at Lacul Serat, a watering-place near Braila, has since been closed by the Government as harmful to the interests of Braila, which is mainly a commercial town and port.

THE SINAIA SEASON.

(From Our Own Correspondent.)

Sinaia, July 14.

Sinaia's "season" has now begun. All the members of the Royal Family have already taken up residence for the summer, and the greater part of the members of the foreign Legations have followed suit. A goodly number of other visitors are also there, but principally those possessing villas of their own. July is, indeed, the most agreeable month, as the cheap tripper and "second class" have not yet appeared to spoil its sylvan quiet, and it is still possible to ramble through the many miles of delightful forest paths without meeting a soul, except perhaps it be a peasant or two. It is now that the Royal Family can enjoy the pleasures of private life. The King loves to wander quietly and alone (except for a single attendant) on foot among his favourite walks, or to take a motor spin to Busteni or elsewhere in company with the Queen, whilst the young Prince and Princesses are to be seen almost daily riding together. All, even the small Princess Ileana, seem to have inherited with their mother's extraordinary beauty her excellent horsemanship. Later on, on account of the above-mentioned visitors, these informal outings become impossible, and the Royal Family are seen abroad but little. The weather has so far been somewhat unfavourable, rain having fallen in more than sufficient quantities. But even this, after the tropical heat of this capital, is agreeable.

The Charm of Sinaia.

Sinaia should surely be more visited by the travelling Britisher. It is the centre of some of the most wonderful scenery of the Carpathians, which in more savage moods resemble the lower Alps and in their milder aspects the Thüringen Wald. The castle, lying sheltered in a fir-clad valley, is most delightfully situated, and is an easy walk from the village itself. The public paths lead close to it, whilst hard by is the monastery, the church dating back to the sixteenth century. The curious mural paintings, illustrating scenes from Bible history, are most quaint and interesting. Most of the monastery itself is new, the original buildings having been partly destroyed by fire a few years ago, but a part remains, a gem for the antiquary or the painter. There is, too, a small museum attached to the monastery, filled with a curious mixture of fossils, ancient native carpentry, priestly habiliments and ikons, with books, photographs, and prints, mostly modern. Every article, though, has its history and associations. The very rooms themselves are interesting as having formed the dwelling-place of King Charles and Queen Elisabeth in the young days of their reign, when they were glad to seek a moment of quiet in this sylvan spot when wearied with what were arduous and troublous times. Now in the castle hard by they take their well-earned rest.

The Casino Question.

Much has been said of late about the construction of the casino buildings at Sinaia, but one must perhaps look at the thing from the standpoint of those most concerned, the above-named "second-class" Roumanian. He loves what the Cockney terms "a flutter," and it is, after all, nobody's business but his own if he loses his money. He certainly does not mind. That the new building will serve to draw a number of very undesirable individuals, of both sexes, to the place there is no doubt, but the Graf von Habenichts and ladies in puce-coloured boots will most certainly keep to their own small circle in and around the Casino. The middle-class "Romun" will not care. There is nothing he likes so much as playing at "grown-ups" and, if he can, gambling a bit, never mind in what questionable company, whilst Madame Romun flaunts dresses a-many "of colour glaring." If they can stew together in a summer theatre and eat bad dinners at something like five times their real value they will both be supremely happy, imagining that they are doing the same as the upper tens of more Western Europe.

There is no need for those who love Sinaia for itself alone to be bothered by these people, who will never trouble the forests or make those delightful excursions on foot or on pony back. The cascade, "Varful cu dor," or "Omul," will know them not. Still, this modernising (?) of the most charming of summer resorts will do it no good, and it is to be feared that the Sinaia of to-morrow will not be that of the day before yesterday. One saving point, however, there is. The "Romun" soon tires of a new toy, and those who know, prophesy but a short life to the Casino. And I think they are right. I hope so, at any rate, and I know that in doing so I echo the opinion of a good half of those who annually visit Sinaia.

One of those straws that show which way the wind blows is to be seen at "Lacul Serat," the salt lake baths, near Braila, where the "entrepreneur" had also started roulette tables, etc. The play there has only been going on for a short time, and already the town authorities of Braila, as well as the Chamber of Commerce, are petitioning the Ministry to prohibit it, as it is found to be deleterious both to private and commercial interests. In fact, what was to be expected has happened in two cases, where the employees of two business houses have been discovered to have been embezzling, and have confessed that they did so with a view to playing at "Lacul Serat."

Next week the casino at Constanza, where play is also to be permitted, will be officially opened. "'Tis true, 'tis pity, pity 'tis 'tis true!"

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, July 21.

Mohammed Ali Shah.

The *Russkoye Slovo* stated the other day that it was in possession of authentic information to the effect that the ex-Shah is contemplating a second armed attempt to regain his lost throne, and that in addition to his numerous Persian adherents, who are again mobilising, a considerable force of Turcoman and Kurdish mercenaries and freebooters is being enlisted in the pretender's support. I can find no confirmation in any quarter of the Muscovite journal's announcement, and it is denied by Captain Khabaeff, the Russian adjutant attached to Mohammed Ali's suite in Odessa. The ex-Shah remains here, and continues to observe a strict seclusion. It was recently reported that he was seeking the permission of his Imperial host to go to Carlsbad for treatment of the diabetic affection from which he has suffered for some time past. Captain Khabaeff is specially charged with the duty of a close surveillance over the movements of Mohammed Ali and his intercourse with Persian emissaries; and it may be safely assumed that, should it be contemplated, a second attempt of the deposed Shah to enter Persian territory will be forcibly prevented. If the *Russkoye Slovo's* statement has any foundation in fact, it is unlikely that Mohammed Ali will receive the permission he seeks to undergo a cure at Carlsbad.

Events in Persia.

The Acting Viceroy of the Caucasus, General Shatiloff, gives the following account of the incidents in connection with the expedition he recently despatched to Ardebil. The Russian troops came in contact with the Schahsevans on the 12th inst. near the village of Schihamat, where the latter were endeavouring to establish a fortified base. This was prevented by the attack of three companies of the Salyan Regiment, with two machine guns, under the command of Captain Tetrueff. The engagement lasted from 7 a.m. till noon. The Schahsevans were routed and their base-works destroyed. The Russians lost only two men killed and one wounded; the Schahsevans lost forty killed and twice that number wounded. The second expedition under Colonel Tolmatcheff was equally successful in routing the Schahsevans near Kerbulan. The Governor of Agar came to the assistance of Colonel Tolmatcheff, who was also joined by the son of Rakhim Khan, Sardar Nusret, and his troopers. General Shatiloff says that the enemy opposed to the two expeditions numbered over 4,000. The Schahsevans are said to be running short of ammunition and food supplies.

Sir Edward Grey's latest utterance in the House of Commons with regard to the situation in Persia appears to be approved by the Russian official Press, but the opinion is expressed that the British Government were well advised to adopt more energetic and comprehensive measures in Southern Persia.

M. Gutchkoff.

M. Gutchkoff, formerly President of the Duma and now leader of the Octobrist party, left here a few days ago for Constantinople, whence he will proceed to Cettinje, Sofia, and Belgrade. To a local Press representative M. Gutchkoff said his tour of the Balkan capitals was not of an official character, but that he attached the greatest importance to his meeting and consultations with the Ministers-President of the Balkan Cabinets; beyond that he declined to make any detailed statement to his interviewer.

Mobilisation Arrangements.

The Grand Duke Sergei Mikhailovitch, Inspector-General of Artillery, arrived here yesterday, and will make an inspection of all the artillery divisions within the Southern and South-Western Military Provinces. Although there has been no actual mobilisation, as recently erroneously reported, of the South-Russian garrisons, these military centres are held in a complete state of readiness should the precarious situation in the Near East take an ugly turn; the Russian Black Sea battleship and cruiser squadron is also in such readiness that it can be mobilised for active service in twenty-four hours.

NEAR EAST IN PARLIAMENT.

The Turco-Italian War.

On Monday, in the House of Commons, Mr. Herbert asked the Foreign Secretary whether, in view of Great Britain's traditional friendship with Italy, and of her good relations with and interests in the Ottoman Empire, and in view of the changed situation in Turkey, His Majesty's Government would consider the immediate advisability of offering its good offices to both belligerents in order that the war between Italy and Turkey might be terminated?—Mr. Acland replied: "The Government are and always have been ready to co-operate with other Powers in anything which is likely to facilitate a settlement between Italy and Turkey. Good offices are only useful when offered on an intimation that they will be acceptable to both parties."

On Tuesday, replying to Mr. Morrell, who asked if he could say whether any negotiations were in progress for the termination of the war, Sir Edward Grey said: "I have no information on this subject from either of the Governments concerned."

The Attack on the Dardanelles.

On the same day, Mr. Acland, in a written reply to a question put by Mr. Lloyd regarding the reported attack on the Dardanelles, said: "There has been no blockade of the Straits. As to the attack on the Straits, I can only refer to the official communications to the Press by the Turkish and Italian Governments, who alone are cognisant of the fact. According to our latest information, the channel for merchant vessels has not been closed. I hope that such a step will not be made necessary."

Major Anstruther-Gray asked whether the Foreign Secretary could make any statement with regard to the closing of the Dardanelles, and what action His Majesty's Government intended to take in the matter in order to prevent a repetition of the holding up of British ships and merchandise, which had caused so much inconvenience in the past.

In reply, Sir E. Grey said there seemed no occasion at present to take any action.

Affairs in Persia.

In the House of Lords, on Thursday, Lord Lamington called attention to the position of affairs in Persia. At the present time the situation was pretty much the same as if no Anglo-Russian Convention existed. Through a great part of Northern Persia, Russian control was practically absolute, and he did not believe any important act could be undertaken by the Persian Government without the approval of Russia. In the southern portion there was a complete state of anarchy. The central Government was powerless to exercise any authority over a vast area. The prestige of Great Britain had suffered very considerably, the Persians considering that we had been timid and pusillanimous in not upholding their undoubted rights. He did not agree with those who held that the Persians were incapable of ruling or managing their own affairs. The fact of the matter was that the Anglo-Russian Convention had been used as a screen to prevent the British people from knowing what was the true state of affairs in Persia. The independence of that ancient kingdom hung by the very finest threads at the present time, and if it was to be saved, the present financial system in Persia, which commanded no confidence, must be got rid of, and there must be a complete change of attitude on the part of Great Britain and Russia towards the working of the Convention.

The Marquis of Crewe having warmly defended the Convention and the attitude of the Russian Government, Earl Curzon stated that, from the latest information he possessed, he was inclined to take an even more gloomy view than Lord Lamington. In Middle Persia the Government was impotent, the Treasury empty, and the finances in hands which were profoundly distrusted both by British and Persians, and which were alleged to be inspired by great sympathy with the views of the extremists on the Russian side. As to the south, the condition was undoubtedly one of anarchy. No sane man in that House or in the country would welcome the occupation on a large or small scale by British forces of any part of Southern Persia, but if the present state of affairs continued the result inevitably must be the drawing closer together of the Russian and British spheres of influence, and the British Government would be driven to do something in Southern Persia. There was not a single bright spot on the horizon, and he saw dark clouds rolling up pregnant with danger not merely to Persia but to our future relations with Russia.

THE LONDON DIRECTORY

(PUBLISHED ANNUALLY)

Enables traders throughout the World to communicate direct with

ENGLISH MANUFACTURERS AND DEALERS

in each class of goods. Besides being a complete commercial guide to London and its suburbs, the Directory contains lists of

EXPORT MERCHANTS

with the Goods they ship, and the Colonial and Foreign Markets they supply;

STEAMSHIP LINES

arranged under the Ports to which they sail, and indicating the approximate Sailings;

PROVINCIAL TRADE NOTICES

of leading Manufacturers, Merchants, etc., in the principal provincial towns and industrial centres of the United Kingdom.

A copy of the current edition will be forwarded, freight paid, on receipt of Postal Order for **20s.**

Dealers seeking Agencies can advertise their trade cards for **£1,** *or larger advertisements from* **£3.**

NOTES FROM PERSIA.

(From a Persian Correspondent.)

Teheran, May 24.

Yeprem's Funeral.

The body of the late Yeprem-Khan was brought from Hamadan here on Wednesday, May 22, and was received with military honours. The Cabinet Ministers went out of the city to meet the Sirdar's body; and Armenians, Persians, civil and military dignitaries, merchants, shopkeepers, and thousands of people of all classes were there to do honour to the late hero. The dust, raised by scores of carriages and hundreds of horses, was choking. Roofs of houses were filled with spectators, mostly ladies and children, and the streets proved all too narrow for the throng. A large crowd, waiting in a park outside the city, was made up of all classes. Besides the police, gendarmes, and soldiers, there were present Sipahdar's horsemen, under the command of his son, and Bakhtiari horsemen, under the command of Mohammed-Khan (son of Sardar-Assad). The funeral procession was headed by gendarmes, soldiers, and the police force with three different bands. These were followed by "yedaks," horses harnessed but without riders. Next came Yeprem's enlarged likeness in the midst of flowers; then a band of ladies in deep mourning; then Yeprem's blue horse, "Tsolag," carrying his late master's arms; and then the gun-carriage bearing the body of Yeprem covered in wreaths. The six horses were unharnessed and the gun-carriage was pulled by Yeprem's *fedayis* from the park to the burying-ground in the Armenian School-yard. Around the gun were delegates and representatives from different cities and societies. Behind followed thousands of people, 200 carriages, and last of all the Bakhtiari horsemen of Sardar-Assad. The police and gendarmes accompanying the procession had each a small bunch of flowers in the mouth of the barrel of his gun. The procession reached, first of all, Yeprem's palace, which was heavily draped in black; then they stopped in front of the police headquarters, and three guns were fired for the late Chief of Police and Gendarmes. Arriving at the Armenian School-yard at four o'clock, the procession was met by the Armenian clergy. Prominent Armenians and Persians delivered addresses, guns were fired several times, and at about seven o'clock the body was lowered slowly into its last resting-place.

All the members of the Cabinet attended the funeral. The Regent was represented by Momtaz-i-Sultan. The Sipahdar, his son and his cousins, Mohammed-Khan, the son of Sardar-Assad, Mohtaman-ul-Mulk (the President of Mejliss) were present, as were also the American Minister, the Councillor of the Turkish Embassy, M. Mornard (the new Treasurer-General), M. Le Coffre, the Swedish Head of Gendarmes, M. Yalmarsen, with his staff and entire force, and several American missionaries.

"Young Persians'" Manifesto.

The "Young Persia" Committee of Constantinople, on hearing of Yeprem's sudden death, issued a manifesto declaring that it had been planned before he left Teheran! How far this may be true, and who was the authority who consented to the "planning," I cannot say. Personally I do not believe it, as the official statement of the circumstances under which Yeprem met his death—made by his first A.D.C.—contradicts this declaration of the "Young Persia" Committee. Grish-Khan, his A.D.C., states that, "when we reached the village (Suridje) I begged Yeprem not to come in, but to wait outside and let me do some fighting on my own account. He consented, and I, with eighty or ninety horsemen, stormed the village. After half an hour's fighting the enemy surrendered, and we entered the chief's house to disarm them. They were over 300 strong. The leader, Bagher-Khan, with ten men, would not surrender. He was barricaded in his bala-khana (upper storey room), and was still resisting. Then Yeprem said to one of his men: 'Abraham, find Grish and get me some news. I hear no more firing.' Abraham came to me, and Yeprem, impatient for news, also advanced, but by a different way. The ten men in the bala-khana, seeing a party of horsemen coming, fired as soon as they turned the corner. Dr. Zohrab Khan was shot first. A *fedayi*, who went to pull him back, was shot, too. Then Yeprem started to go and bring in their bodies, but Hovhannes, his orderly, holding his arm, pulled him back, saying, 'Where are you going? Do not you see that they are shooting?' Yeprem, enraged at this bold behaviour of his orderly, slapped him on the face, and went forward, but as he turned the corner he, too, fell by the side of the doctor. The bullet entered the head over the left ear and left at the right cheek-bone." This statement leaves no doubt as to how Yeprem was killed. The leader of the enemy, Bagher-Khan, was captured and shot on the spot. Yeprem's body was transferred to Hamadan on a carriage the same night.

Armenians are planning to place a tablet on his tomb, and the Persian Government a bronze statue on Topkhana-Maidan (Gun Square). The Armenians are likely to carry out their project, but as for the Government's intention or plan, "it should be written on a block of ice and placed under the heat of the Persian sun," say those who are so placed as to know the value of similar statements made by the Persian Government on former occasions!

Tourist.

BRITISH OFFICERS AND GREEK NAVY.

The Athens correspondent of the *Times* reports, under date of the 21st inst., that the Minister of Marine, in giving his decision with regard to the accident which happened a year ago to the Greek cruiser "Georgios Averoff" in Plymouth Sound, rejects the charge of slander brought by Captain Damianos, who commanded, against the British officers, Captain Boyle and Lieut. Salmond, who were on board the cruiser at the time. Captain Damianos had based his charge on the fact that the officers had reported against him. The Minister finds that the officers had merely done their duty in obedience to orders from Admiral Tufnell, and that they had no intention of slandering Captain Damianos.

RED SEA ARMS TRAFFIC.

News received by Reuter's Agency from Abyssinia draws attention to the dangerous possibilities confronting the British Government in the Sudan and Northern Uganda as a result of the development of the arms traffic through Jibouti. It appears that the chief responsibility for this growing danger rests with France, and this in spite of the fact that ultimately she herself must also suffer in her Congo territories. It is not improbable that the severe and efficacious measures recently adopted in the Persian Gulf have had the effect of diverting the activities of the Muskat traders to Jibouti, where their French protection gives them ready access. It is stated that the single tribe of the Anuaks, whose territory lies along the Sudanese-Abyssinian border, is in possession of between 12,000 and 25,000 Gras rifles of modern pattern.

THE PROPOSED LONDON MOSQUE.

A subscription of £E10 from Mr. Ahmed Ramadan Ganem has been sent to the Right Hon. Syed Ameer Ali, through Mr. Robert Williams, towards the building fund of the proposed London mosque, and Mr. Ramadan Youssef has promised £E10 and a further £50 when the foundation-stone is laid, and M. Hassabo Bey Mohammed has also promised £E10. Subscriptions may be sent to the Right Hon. Syed Ameer Ali or to the treasurer, W. Abdeali S. M. Anik, 2, Fenchurch Avenue, London, E.C.

ALLIANCE

ASSURANCE COMPANY, LIMITED.

Head Office: BARTHOLOMEW LANE, LONDON, E.C.

Assets Exceed £23,000,000

Chairman: The Right Hon. LORD ROTHSCHILD, G.C.V.O.

Among the classes of Insurance Business transacted by the Company are the following:—

(1) **LIFE INSURANCE**, with and without Profits, with special provisions for the payment of Estate Duties.
(2) **FIRE INSURANCE** of every description.
(3) **INSURANCES TO COVER LOSS OF RENT, INTEREST AND PROFIT** consequent upon Fire damage to property.
(4) **MARINE INSURANCE.**
(5) **BURGLARY, THEFT, and PLATE GLASS INSURANCE.**
(6) **ACCIDENT**, including Personal Accident, Motor Car and Employers' Liability Insurance.

Fidelity Guarantee and Sinking Fund Policies are also granted.
Applications for Agencies are entertained, and Prospectuses with other papers may be had on written or personal application.

LETTERS TO THE EDITOR.

A PERSIAN ON PERSIA.

To the Editor of THE NEAR EAST.

Sir,—In your issue of July 12 a note appears under this heading, signed by Mirza Firooz Khan. The writer seems to know very little about Persians and the Persia of to-day, witness his calling the Russian Minister in Teheran Mr. Gazelle. Most Persians are tired of the long-continued disturbance, and would sacrifice much for peace, but certainly not at the cost of losing the last vestige of their independence. If Mirza Firooz Khan really thinks that Persians in general, or the people of Azerbaijan in particular, are ever likely to beg Russians to become their rulers—that, in his words, "Russia might be able to give some sunshine to the political cloud and mist overhanging Persia"—then we say that his knowledge of his countrymen is on a par with his acquaintance with the foreign ministers in Teheran. We should advise him to study again the character of his countrymen and the sacrifices made under his own eyes in Tabriz during the last few years.

Perhaps the Russian authorities in St. Petersburg could give him different ideas, more just and more honourable to his fellow citizens. Nobody is likely to be misled by such statements, and the last to be misled are the Russians, who know Persia better than Firooz Khan does.

All who desire peace and order for this poor, distracted people would do well to remember that Persians are extremely patriotic, fanatically attached to their national institutions, political, religious, or domestic. Those in power or influence are generally corrupt and ready to sacrifice much for money, and thus it comes to be thought among Europeans who see Persians superficially that in the European sense of the word there is no love of his country in a Persian, no true patriotism. This is an error. The honest Persian is intensely, fanatically nationalist; he hates all foreigners, and hates them in varying proportions—those who are most in position to do harm to Persia are hated the most.

An intelligent Persian friend reports to me that the Shahnameh ruins Persia. The poorest Persian lad gloats over the history of the conquest of India by Nadir Shah, or over the doings of the old heroes of Firdoussi. Nadir's conquest of Delhi forms the current subject in the text-books used in every hamlet in Iran. Properly used, the Shahnameh would regenerate Persia instead of ruining it.

The second point that the friends of Persia would do well to remember is this: Persia cannot afford to quarrel with her neighbours; she must live with them on friendly terms, she must even go out of her way to court and gain their favour. For her regeneration she needs their help in money and in men, and this indispensable help cannot be given except under efficient supervision. A handful of men in Teheran cannot expect that Europe will perpetually lend them money to spend lavishly as their fancy dictates for building up parks or fitting out expeditions to rout out opposing factions. What remains of Persian independence would soon vanish under such conditions. If Persians decided to live with their immediate neighbours on a system of give-and-take, if they courted them instead of pin-pricking them and attempting absurd tricks of boycotting, and hunting up of foreign markets for pecuniary and other help that will never come to them, then their troubles would soon come to an end, and they would have no need to invite the Russians or the English to come and govern them. For Persia is naturally too poor a country for such a luxury; only the very rich can afford the expenses of foreign occupation.

OBSERVER.

Constantinople, July 20.

THE COMING RAILWAY TO INDIA.

To the Editor of THE NEAR EAST.

Sir,—Sir Edward Grey's statement and Lord Morley's speech make it clear that the project of a railway to India is fast materialising. It is, of course, of the very first importance to Great Britain, for India is not yet a self-governing colony, and everything that tends to strengthen the link of Empire and accelerate communications between the home Government and the dependency must benefit the two countries and the Empire generally. It is hardly necessary here to examine the causes that have delayed the materialisation of this great Imperial need; the fact remains that the first step towards this end was due to foreign enterprise, and the natural corollary to the Suez Canal—i.e., the provision of a speedier overland route to India—seems not unlikely to be brought about by similar agency. In neither case has England taken the initiative, and the consequence is just what might have been foreseen. The Suez Canal was built with foreign capital in the teeth of the British Government's unreasoning opposition; the railway to India, though not actually opposed by Great Britain, is mainly promoted by foreign agency, and being pushed in a direction very far from consonant with British interests.

It is very unfortunate that the geography of the countries intermediate between India and the Mediterranean is so little understood by Englishmen. And yet the position is quite simple, and if editors and readers had time to study maps, as the late Lord Salisbury counselled them to do many years ago, they would see at a glance that neither the so-called trans-Persian nor the Baghdad railway is likely to commend itself to Great Britain as an ideal means of approaching India from the west. A railway to India is not conceived exclusively in the interests of the wealthy tourist who wishes to enter a railway carriage at Calais and not be compelled to emerge till he reaches Bombay or Delhi. Such a line ought to expedite the transit of tourists, civilians, and especially soldiers; it ought to conduce to the commercial exploitation of the British sphere in Asia; and it ought to be the speediest, shortest, and safest route for conveyance of British mails to and from India and the East. *None of these conditions is fulfilled by either the Baghdad or Russo-Persian railway.* The former runs north-west and south-east between Constantinople and Baghdad, and is designed, in Turco-German interests, to open up Asia Minor and the valleys of the Euphrates and Tigris. The alignment of the Russo-Persian line is not yet settled, but will run much in the same direction. A Société d'Etudes has been formed, with instructions to cast about and try and decide on some route agreeable to the majority of its members, who, be it remembered, are Russian and French, and not English. Any project, therefore, for running a direct British railway from Egypt across Arabia and Southern Persia to India is by the nature of things actually excluded from the scheme of both of these foreign undertakings. And yet there can be no doubt whatever that if a railway to India is to conduce to the security of India it ought to run east and west through the British sphere rather than diverge to the north-west and perversely try to deflect the current of trade from the East, so as to benefit Russia, Turkey, and Germany, rather than permit it to flow towards Egypt, which for centuries has been the natural emporium and place of distribution for the trade of the Mediterranean.

It is certainly regrettable that the task of examining the geography of these regions and deciding on the best route for a British railway to India, in which our nation is so vitally interested, should be entrusted to a foreign body who, spite of a few English members, can, in their corporate capacity, have but little sympathy with our national aims and requirements, and who will naturally be debarred from considering any British Egypto-Indian railway project as lying altogether outside their purview.

A far better medium of inquiry would have been a Select or Joint Committee of Parliament, such as was appointed in 1871, under the chairmanship of Sir G. Jenkinson, and whose investigation and examination of all the best experts and authorities of the day resulted in the accumulation of invaluable information designed to subserve British rather than Continental or alien interests. This course was indeed suggested last year to our Foreign Secretary by Lord Ronaldshay, and would undoubtedly have given full opportunity for a satisfactory examination of all the best routes; but Sir Edward Grey objected on the ground that at that time some of the investigations were confidential. It can, however, hardly be conceived now that matters have publicly materialised—that the project of a direct British railway, which would unite Egypt and India by the shortest possible connecting line and shorten the voyage to India by six whole days, should be lost sight of and remain unnoticed, unexamined, and ignored, simply because a body of gentlemen sitting in Paris have neither power nor wish to examine such a scheme. It would be a thousand pities if, after admitting that a railway to India could not be opposed on principle, and after hinting at a Government subsidy, Sir Edward Grey should assume a purely negative attitude, and do nothing to further exhaustive inquiry in a question of such great national importance.—Yours, etc.,

ANGLO-INDIAN.

London, July 18, 1912.

"TURKEY AND ENGLAND'S OPPORTUNITY."

To the Editor of THE NEAR EAST.

Sir,—The issue of June 28 last of your valuable periodical contained a letter from Mr. Henry M. Ami, entitled "Turkey and England's Opportunity." It is obvious that the writer speaks only from the European point of viewing things here, while from the native point of view things are entirely different.

If the views which Mr. Ami expresses embodied even the least truth regarding the natives as well, then the non-Moslem people under the Turkish yoke would be the happiest people in the world.

Digitized by Google

Allow me, Sir, to remark that no one in the short period of ten and a-half months (equal to Mr. Ami's stay in Turkey), can form a right idea about the people of that country, unless he has studied them for years and years. We natives (Greeks, Armenians, Jews) of this country can give to the Europeans a reliable idea about the occupants of this place, having been thoroughly acquainted and keeping in continual contact with them every day, every hour, and especially in these days of the Constitution (the Turkish Constitution is a Utopia or chimera), when their Chauvinism has reached its zenith.

It seems that Mr. Ami was enchanted by their affected policy, which they use to show, very cleverly, to every European who for the first time is visiting this country, trying to free themselves from any bias or prejudice. The Europeans who are permanent residents in Turkey *might* possibly have more or less formed a conception of this people and especially of the Young Turk Party. I say "might," because Europeans here enjoy every kind of liberty one can imagine, thanks to the Capitulations, and they think that the same is the case with the poor natives, who, on the contrary, are hardly oppressed and harshly treated. Needless to say that neither under the Constitutional Government nor under the Republic—if it should ever be established—nor even under the most liberal Government ever established, would they be the least altered. And we insist upon it that our position is *much worse* now than it used to be under the Sultan Hamid's imperial rule.

"The policy of the Young Turks," Mr. Ami says, "is righteous and progressive." Almost entirely the contrary was proved by the last elections, and I ask if Mr. Ami took this into consideration before expressing his ideas about the Young Turks? Or, why are the European Powers now at the point of intervening in the internal affairs of Turkey, since their ruling policy is righteous and progressive? This clearly proves that, owing to their bad way of ruling, a chaotic state of things prevails all over the country.

"There exists an earnest desire for peace," continues Mr. Ami. This statement is contrary to facts as well. "And where much already has been done," he goes on; but we, who were accustomed to see the miserable state of things in this country, fail to see this mass of things that the Young Turks have already done, and which Mr. Ami has seen during his short stay in Turkey. In exterminating the Christians in Macedonia and in the very city of Constantinople, I, and all the world with me, agree that they have been and are first-rate. By whose secret instigation, please, were the Metropolitan of Grevena and his company slaughtered?

One could fill pages with contradictions of Mr. Ami's encomiums of the Young Turks, whom he sees as the saviours of this country, while they are really her ruiners. Although every one is free to express his own opinions, it is wise to do so only after he has first weighed them well. I refer Mr. Ami to Mr. Noel Buxton and to Mr. Bouchier for information about his friends the Young Turks, whom he admires.

I wish to emphasise the point that Europeans, as a whole, are either really blind not to see, or they pretend not to see the brave (?) deeds of the Young Turks.—Yours faithfully,

A. JACOVON
(A Greek native of Turkey).

NEAR EAST BOOKSHELF.

A PERSIAN GULF PROBLEM.*

This book, written as the result of a winter's stay at Peshawar and a short visit to Mekran with the Mekran Field Force, cannot be regarded as of much permanent value. The essence of the whole problem is to be found neither in the Gulf nor on the North-Western Frontier. It is in Afghanistan itself that the pivotal point lies, and this country is evidently beyond the ken of the author, as far as personal experience is concerned. To a superficial observer it might seem that the gun-running in the Persian Gulf is merely a survival of the old piratical activities of the coastal tribes; yet such is the complexity of modern political interrelations that this question is one involving, in a more or less direct manner, diplomacy and political intrigue on the part of at least five great nations. The part played by France in Muskat is hardly that which would seem most consistent with the spirit of the Entente Cordiale. Cordiality in this instance appears to take the unaccustomed form of seeking to profit by the embarrassments of one's friend. This should serve to again impress on the minds of Englishmen the truism that in international affairs it is self-interest and not sentiment that in the last analysis influences action.

As we have said, the crux of the problem lies in its relation to Afghanistan; and the future activities and status of the Afghans and their country are most closely bound up with Indian affairs, and are to that extent therefore somewhat beyond the purview of THE NEAR EAST. For us the immediate interest and significance of the question lie in the fact that not only in the waters of the Persian Gulf, but in Persian territory also, we are called upon to undertake duties which should be performed by Persian coastguards, police, and military.

It will be of interest to readers of THE NEAR EAST to notice Mr. Keppel's views on the proposed Trans-Persian Railway:—

> It would be premature to attempt to forecast the actual route that a railway through Southern Persia would follow, but this much may possibly be hazarded with safety—that such a railway, if built, will pass through Persian Baluchistan, and connect with the Indian system, not at Quetta, as might be expected, but at Karachi. The difficult gradients in the neighbourhood of Nushki, and the desert zone which lies across the path of the more northerly route, combine to favour the idea that the more southerly, across Persian Baluchistan, will eventually be adopted. It is possible that to many the idea of developing Mekran will appear in the light of making a silk purse out of a sow's ear. I do not wish to claim too much for Mekran—*qui trop embrasse, mal étreint*—but in the construction of a railway it is necessary to take into account the material resources of the district through which it is to pass, and although no glowing future can be predicted for Mekran, as has been done for other parts of the Shah's dominions—at least, for many a long year to come—yet it is capable of sufficient development to provide valuable feeders for the trunk line.

While evidently in sympathy with native races, the author shows, it seems to us, a lack of understanding of the principles of Islam, which often fatally precludes a true grasp of some of the most essential aspects of problems connected with Moslem peoples.

R. M.-S.

NEAR EAST BOOK NOTES.

The Deutsch-Oesterreichischer Verlag, of Vienna and Leipzig, has recently published a volume by Siegmund Münz entitled "Balkanherrscher und Staatsmaenner"—"Balkan Rulers and Statesmen." This work is an account of a tour undertaken in the spring of 1910 with Sir Max Waechter in his yacht "Rovenska," and narrates impressions of interviews with Mahmoud Shevket Pasha, Djavid Bey, Tewfik Bey, Assim Bey, Ahmed Riza Bey, Hakki Pasha, Rifaat Pasha, Ferid Pasha, and many other Turkish political personalities. The author was received by the Sultan of Turkey and the Heir Apparent, King Ferdinand of Bulgaria, King Carol of Roumania, and the King of the Hellenes, and has something of interest to relate of them all.

* "Gun Running and the North-Western Frontier." By the Hon. Arnold Keppel. (John Murray, 9s. net.)

THE PRESS ON THE NEAR EAST.

Turkish Cabinet's Resignation.

Commenting upon the resignation of Said Pasha's Cabinet, the *Daily News* remarks:—

The reign of the Young Turks has ended just as it began. The chief reason for the dissatisfaction with their administration must be sought in their policy of centralisation, which caused continuous rebellions in the outlying provinces. That it was the army which took upon itself the mission which elsewhere, in similar cases, falls upon the civil population is due to the fact that it is and has all along been the only organised force in the country capable of united action. Presumably the succeeding Cabinet will be one of less pronounced Nationalist tendencies, but also one not so much attached to the constitutional *régime*, and more inclined to enhance the power of the Sultan at the expense of the Chamber.

Dealing with the same subject the *Daily Graphic* says:—

The fall of Said, however produced—and we are disposed to credit the rumour of the intervention of the Sultan rather than the official explanation of Cabinet discords—is an acknowledgment that some compromise with the disaffected elements is necessary, and we do not doubt that in that wise direction events will now shape themselves. It is all the more necessary if the patriotic resolution to persist with the war is to count for something more than a vain boast. Turkey can hold out for an indefinite time against the foreigner, but she cannot do this in a house divided against itself. It is eminently desirable that she should have peace both at home and abroad; but if she cannot have both she must at least have internal peace. As a first step towards this end all her friends will welcome the resignation of the Cabinet.

Mahmoud Shevket's Resignation.

The *Deutsche Tageszeitung* (July 15) concludes a biographical article on Mahmoud Shevket Pasha with the following plaint:—

Finally the German Empire loses her best friend in the Turkish Cabinet through the retirement of Mahmoud Shevket. The ex-Minister has always shown himself to be, through storm and sunshine, a true admirer of German institutions,

England and the Baghdad Railway.

A recent issue of *Le Gaulois* contains an article by M. René d'Aral on England's position in the Baghdad Railway question. From this interesting article we extract the following passages:—

Dans le récent discours que Sir Edward Grey a prononcé à la Chambre des Communes, le secrétaire du Foreign Office a tenu à expliquer le sentiment du gouvernement relativement au chemin de fer de Bagdad; il a déclaré que la question serait déjà résolue si la Turquie se décidait à reconnaître le *statu quo* dans le golfe Persique et les droits spéciaux que l'Angleterre possède dans cette région. C'était là une allusion très nette au refus de la Turquie jusqu'ici de se désister de ses prétentions sur le port de Koweit, situé sur le golfe Persique.

L'affaire du chemin de fer de Bagdad continue donc à être "accrochée": la faute en est sans doute à la Turquie, mais surtout à l'Allemagne, qui cherche, comme on le sait, à accaparer le contrôle de cette ligne et à faire obstacle à l'expansion anglaise du côté de la Perse.

After a review of the negotiations in 1903, and of subsequent events, the writer proceeds:—

La décision finale de l'Angleterre sur cette question—car aucune décision finale n'a encore été prise—doit dépendre, entre autres choses, de certaines considérations d'ordre à la fois commercial et politique. Il s'agit, notamment, de s'entendre sur le choix du point terminus.

La Turquie s'est déclarée en faveur du port de Basra, centre actuel du commerce de cette région, et qui laisserait la Turquie libre ce reconnaître le cheik de Koweit comme un souverain autonome sous le protectorat anglais, sans préjudice des droits que le Sultan peut réclamer.

Mais l'Allemagne adhèrera-t-elle à cette combinaison? Ce sera là, évidemment, l'objet des premières conversations que le baron Marschall va engager avec le Foreign-Office. Il sera curieux d'en constater les résultats.

The Cyprus Question.—A French View.

In the course of an interesting article in the *Questions Diplomatiques et Coloniales* of July 16 on the political position of the Greek islands, Monsieur Y. M. Goblet writes:—

Il faut tenir compte à l'administration anglaise de ce qu'elle a géré les intérêts de l'île en bon père de famille. Elle l'a assainie. La population s'est élevée en trente ans de 186.000 à 260.000 âmes. L'ordre règne et la paix entre les confessions. Les irrigations fertilisent les vallées; les montagnes sont replantées d'arbres. Les ports sont encore insuffisants, mais un petit railway relie Famagouste à Morphou, par Nicosie. Cette île redevient l'une des plus prospères de la Méditerranée orientale.

Pourtant les réclamations populaires sont maintenant violentes. On s'est battu à Limassol le 29 mai aux fêtes du Kataklysmos, dernier vestige du culte d'Aphrodite, et il y a eu des blessés et des morts. Il en a été de même le 7 juin. Or, on s'est battu—aux cris de: "Vive l'Union à la Grèce!"—contre les Musulmans, mais non parce que Musulmans; peut-être simplement parce que, pour se battre, il faut un adversaire et que les Musulmans étaient seuls à pouvoir jouer ce rôle, les Maronites vivant trop loin, dans leur canton isolé du Nord-Est. Les députés grecs ont donné bruyamment leur démission en annonçant que l'Europe retentirait de leur protestation. Qu'on ne sourie pas; nous sommes au pays des dieux et il faut savoir gré aux Chypriotes d'avoir pris seulement l'Europe à témoin et non pas la terre et le ciel. Des élections vont avoir lieu. Et les fonctionnaires anglais hochent la tête avec une expression un peu méprisante, un peu agacée, un peu menaçante aussi.

And further on in the same article:—

Or, comme tout être vivant, la race a évolué, surtout dans les îles plus heureuses, telle que la lointaine Chypre ou encore dans les îles qui ont beaucoup de leurs fils enrichis à l'étranger. Les revendications chypriotes sont dues pour une bonne part à la paix anglaise, qui a permis les fécondes cultures, les transactions fructueuses, et donc la diffusion de l'instruction, le désir du mieux-être et de la liberté. Lorsque l'occupation italienne a rémis en question le statut des îles, ce sont les Egéens d'Egypte qui ont rédigé en un memorandum, capable de servir de base à une discussion, les aspirations de leurs concitoyens du vieux pays. Tandis qu'à Patmos les démogérontes candides proclameront l'autonomie des îles, les Egéens d'Egypte remontreront aux puissances que les Sporades orientales sont une unité géographique qui a servi de base à une unité administrative: thème byzantin, puis vilayet turc, et qu'on ne saurait leur enlever ce caractère; que leurs privilèges ont été consentis par la Turquie et garantis par les puissances, et qu'on ne saurait les leur retirer; que la langue grecque est celle du pays, même dans ses rapports avec Constantinople, et qu'on ne saurait faire du turc la langue officielle. Voilà la protestation ferme, calme, fortement motivée, conçue dans un esprit moderne.

The Mesopotamian Irrigation Project.

Under the title "Ein Fehlschlag" (A Fiasco), the *Deutsche Orient Korrespondenz* of the 19th inst. publishes some comments upon the delays in—or should it be the abandonment of?—the execution of the Mesopotamia irrigation works. The writer says:—

The negotiations regarding the new irrigation works in Mesopotamia have now taken a turn which puts the attitude of the Turkish Government in a perfectly incomprehensible light. For the fourth time tenders for the works were invited last month, but under such conditions as rendered it impossible for the two English firms concerned to submit any tender whatever. The contractors were required, for instance, to undertake the obligation of guaranteeing the regular carrying out of the loan business connected with the financing of the works, and that even in case obstacles should arise by reason of *force majeur*. The contractor would further be bound to accept the quantity measurements established some time ago by Sir William Willcocks, even though in the course of time the necessity of a departure from the established figures should be demonstrated. The purpose of the Government in making these utterly unreasonable conditions is quite undiscoverable. An explanation is only conceivable if one supposes that the Turkish officials entrusted with the preparation of the business are quite incompetent. The gigantic proportions of the project have dazed them; they have lost their bearings and cling desperately, without sense or understanding, to any requirements which might relieve them of all responsibility, no matter how draconic and unreasoning such stipulations might be. Poor Mesopotamia! The beneficent irrigation canals are denied thee, thanks to the stupidity of the Turkish officials, until—*another* comes, and *from the direction of the Persian Gulf* brings order into this confused business.

CURRENT COMMENTS.

We see that the Khedivial Agricultural Society has initiated what is in principle an excellent scheme. Its secretary general has been stumping the country and has been giving lantern slide lectures to the fellaheen on the life history of the cotton worm and the havoc it works in the various crops. The idea is most praiseworthy, for it will forcibly impress the matter on the none too receptive mind of the Egyptian fellah. To many of the natives, who have never seen such things before, the attending of a lantern-slide lecture savours of a "fantasia." The occasion thus becomes a memorable one, and, provided that they do not sleep through the entire lecture, as one or two of their elders do at times, they will in all probability never forget the pictures thrown on the white screen. Seeing is believing to the fellah, and the sight of the pictures will do more than any amount of talking to teach him what insects or worms he is to destroy, what to preserve, and why he is so to do.

***

But whilst the idea commends itself to our mind, we cannot help feeling that the time chosen is singularly unsuitable. From May to August the attention of the fellaheen is required to be concentrated on their fields, where everything depends on their assiduously picking the worm-eaten and egg-covered leaves. The Government Department of Agriculture has been exerting every effort to impress on the natives the vital importance of their being up betimes in order, so to speak, to catch the early worm. Yet here we have the K.A.S.—a State-subsidised concern—appearing on the scene at the height of the cotton-worm campaign, and, doubtless with every good intention, giving lantern-slide lectures in the chief towns of the Delta. The natural effect must inevitably be to attract the fellah from the villages to the towns. It may be said that the lecture only lasts an evening, but as it is not always possible for the fellah to get back to his village the same night, and as one morning's neglect may undo several weeks' work, it is obvious that a great error of judgment has been made in choosing mid-summer for the carrying out of this laudable scheme.

***

When we originally learned that the K.A.S. was to be kept going, notwithstanding the creation of the Department of Agriculture, we had our misgivings, and the above incident serves to convince us more than anything else that there should be some clear line drawn between the sphere of work of the society and that of the Department. Too many cooks spoil the broth, and if the Egyptian Government seriously intends that the Department of Agriculture should be successful in its efforts to protect and improve the country's agriculture it should surely see that the K.A.S. keeps to its nitrate distribution, its live stock rearing, and its research work, leaving the active supervision of the country and the other duties such supervision involves to the Department. Only by such an arrangement can the clashing of interests and the undoing of or interference in good work—however unintentional it may be—be avoided.

***

A Cairo correspondent writes:—A sigh of relief has gone up from Anglo-Egypt. Lord Kitchener has gone on leave, and for at least two months officialdom will be relieved from the ceaseless "hustle" which it has endured since last September, and from the anxious strain caused by the British Agent's love of detail and habit of calling for information at a moment's notice on apparently unimportant questions. The administrations are not being allowed to be idle during his absence, however, for he has left instructions that various projects, including that of the "Halakas," are to be in active operation by September, and that full reports on other contemplated reforms and on certain administrative matters that are being inquired into are to be ready on his table when he returns.

***

We are glad to notice an outspoken editorial paragraph in the *Pall Mall Gazette* regarding the responsibility of France in connection with the growing arms traffic in Africa. The policy of compensations, initiated and utilised with so masterly a hand by our German friends, seems to have found most ardent supporters in our partners in the *entente cordiale*. Having themselves received such convincing proofs of the efficacy of this policy, its employment by France is, perhaps, not unnatural. We could, however, have wished, and even expected, that the pistol had not been held to our own head. This, however, is apparently the condition with which we are faced on both sides of the Arabian Peninsula. With the circumstances of the arms traffic at Muskat we have been long painfully familiar, and it now seems that we are faced by a somewhat similar state of affairs in the Red Sea. In both places France spreads her protecting wing over the traffic, with the object, one would say, of ultimately extorting "compensations" from the sufferers. It is decidedly unfortunate that we should be selected for subjects for the practising of France's 'prentice hand. Could she not learn more, and at the same time spare us by trying a fall with her teacher?

***

A well-known German writer, Herr Davis Trietsch, in a brochure just published by the Orient-Verlag in Berlin, advocates a line of policy which scarcely seems to harmonise with the advice recently tendered to Turkey by the *Neues Wiener Tageblatt*. The Viennese journal, it will be remembered, pointed out to Turkey the great value to her of British protection and friendship, while Herr Trietsch, whose views on Near Eastern matters are entitled to respect, advocates an alliance between Germany, Austria-Hungary, and Turkey. In this combination and relationship lies, we are assured, the only defence procurable by Turkey against ultimate total collapse and dismemberment. What benefit the two Teutonic partners in this arrangement are to derive we are not specifically told, but as Herr Trietsch is known chiefly as a political economist, we may perhaps surmise that the Teutonic *quid pro quo* would be in the domain of economics. For some unaccountable reason Germany and Austria-Hungary are represented as the most natural allies and protectors of Islam, while of all European States these two are, as a matter of fact, those having the smallest Mohammedan interests.

***

For the last few years Mr. Lance Thackeray has devoted his facile brush to the depicting of Egyptian scenes and scenery, and many of his latter-day studies have been on view this week at his studio in Ladbroke Grove for the delectation of his friends. Among the sketches there exhibited are various of those taken during the late visit of the artist in and about Damietta, a locality which has afforded him full opportunity for the sympathetic exercise of his art. Both his landscape and figure studies show an originality of treatment and an appreciation of form and atmosphere which are particularly pleasing, and which prove him as fully capable of sustaining a reputation as a serious artist, as his "Light Side of Egypt" proved him the kindliest, aptest humorist of modern days to make the acquaintance of the country.

PERSONAL & SOCIAL

Sir Francis Elliot, British Minister at Athens, has arrived at Ginge Manor, Wantage, Berks.

Sir William Willcocks, K.C.M.G., left Liverpool for Canada on Saturday last by the Allan liner "Virginian."

Sir John Maxwell arrived at Alexandria from Europe on the 15th inst, and proceeded at once to Cairo.

Sir J. Roper Parkington, Consul-General for Montenegro, and Lady Roper Parkington have left Green Street, Park Lane, for Harrogate.

Mr. R. W. Graves, C.M.G., Member of the Turkish Commission for Financial Reforms, arrived in London last Saturday, and expects to be here until the end of the month.

Said Pasha, the Egyptian Prime Minister, left Alexandria for Europe on the 18th. He will visit London next month.

Prince Christopher of Greece, Prince George of Greece, and Prince Paul Kara-Georgevitch honoured Lord and Lady Michelham with their presence at a ball at Strawberry Hill on Saturday night.

H. Chefik Bey, Third Secretary to the Turkish Embassy, has returned to London from Paris.

Mr. P. R. Boxwell, Inspector of the Delta Barrage Circle of Irrigation in Egypt, has been granted leave for two months and a-half, to date from the 25th instant.

Kaimakam Beamish Bey, Governor and Commandant of the Sinai Peninsula, went on leave on the 4th instant, and will resume his duties on November 2.

Major Moir, D.S.O., Royal Engineers, has been appointed to the Egyptian Army as Director of Telegraphs.

Captain David A. Fairbairn, West Riding Regiment, has been seconded for service with the Khedive's Army.

Mr. Goodman, Chief Inspector of the Egyptian Public Health Department and Acting Director-General, will be relieved of the latter post on August 15, when Colonel Garner, Sub-Director General, will have returned from leave.

Mr. Rimondi, Chief Engineer of Bridges in the Egyptian State Railways Administration, has left for Europe on a leave of three months.

Mr. Hebbard, of the Khedivial Training College, has been appointed Director of the European Office, Ministry of Education, in place of Mr. R. A. Brown, who has been promoted inspector.

We understand that Mr. Bianchi, Deputy-Director of the Administrative Service at the Egyptian Public Health Department, will be promoted to the post of Director of that service, vice Mr. Paul, who is retiring on pension.

Dr. Alfred Eïd has arrived at Paris from Cairo, and proceeds to Carlsbad in a few days.

Mr. Rowland Snelling, editor of the *Egyptian Gazette*, has left Alexandria on a journey through India.

The Hon. Mrs. Akers Douglas left Sinaia on the 17th inst. for England.

Digitized by Google

Jonkheer van der Does de Willebois, Minister for the Netherlands in Constantinople, has been granted leave for two months. He has left Turkey for The Hague with Mme. and Mlles. van der Does de Willebois.

Baroness Marschall von Bieberstein was received on Wednesday morning by Queen Alexandra at Marlborough House, and, together with His Excellency the German Ambassador, had the honour of being invited to luncheon with the King and Queen at Buckingham Palace on the same day.

The wedding of Mr. Philip P. Graves, *Times* correspondent in Constantinople, and Miss Millicent Gilchrist, took place on Wednesday, July 17, at All Saints' Church, Moda. The ceremony was conducted by the Rev. Langton Day, chaplain of All Saints'. The church was beautifully decorated with flowers, and hardly sufficed to accommodate the large number of British residents and officials present.

A marriage has been arranged between Christopher Richard Gurney, Sudan Irrigation Service, second son of the late Mr. R. H. J. Gurney and Mrs. Gurney, of Northrepps Hall, Norfolk, and Dorothy Clara, third daughter of Mr. and Mrs. Ruggles-Brise, of Spains Hall, Essex.

The German Ambassador and Baroness Marschall von Bieberstein and Field Marshal Viscount Kitchener of Khartoum were amongst the guests entertained at luncheon by the Marquess and Marchioness of Londonderry at Londonderry House, Park Lane, on Monday.

Sir George Barclay, the new British Minister to Roumania, is expected to arrive in that country towards the end of August. As the season will then be advanced he does not intend to proceed to Sinaia, but will take up his residence at Bucharest.

The Hon. A. Akers Douglas, who has been acting as British Chargé d'Affaires in Roumania, left Sinaia, where the Legation is in summer residence, on the 20th inst., to resume his duties at Vienna. Mr. John Charles Tudor Vaughan, M.V.O., has arrived to act as Chargé d'Affaires until the arrival of Sir George Barclay.

Leave of absence having been granted to Mr. G. Zannuit, Mr. S. Cremona, Assistant Director of the Public Registry, Malta, will take over the duties of Director of the Public Registry and Keeper of the Government Archives and of the Notarial Archives in that island.

Mr. P. Busuttil is acting as Superintendent of Public Works, Malta, during the absence on leave of the Hon. L. Gatt.

Mr. Hamilton Browne, British delegate on the European Commission of the Danube, has left Roumania for England on leave.

The Rev. J. H. and Mrs. Molesworth have left Cairo for Europe on leave, and the acting chaplain at All Saints', Dr. Spoer, has returned from Jerusalem.

Dr. Riza Tewfik, ex-M.P. for Adrianople, was entertained to luncheon at the Whitehall Rooms yesterday by his numerous literary and scientific friends in England. Dr. Tewfik is keenly interested in scientific research, and is at present engaged in studying the new sciences of andrology and organisation; he was a speaker at a recent meeting of the Royal Society when the subjects were dealt with in a lecture by Colonel B. Ward, R.E.

Prince Carol of Roumania (writes our Bucharest correspondent) has just been through some days of stiff examination in the presence of his father, the Crown Prince Ferdinand, and of King Carol. He passed with high honours and has now become a Baccalaureat. This degree, when gained by one of the people, exempts them from two years' military service. A Baccalaureat serves one year instead of three. H.M. King Carol, who himself put a number of questions, expressed himself very highly satisfied with the progress of the young Prince, as also with his professors, whom he decorated with the order of the Star of Roumania.

Sir Henry Felix Woods, K.C.V.O., who is an Admiral in the Turkish Navy, and is generally known as Woods Pasha, celebrated his sixty-ninth birthday on the 18th inst. He joined the Turkish Navy in 1872, after fourteen years' service in the navy of this country.

Sir John Harrington, of Lennox Gardens, Kensington, met with a motor-car accident last Friday afternoon at Long Ditton. He was driving with Lady Harrington when the car skidded on the wet surface, and dashed into a wall. Sir John was badly cut and bruised, and received medical attention from the local police surgeon; he was afterwards taken home in a private car, his own car having been smashed.

Lord Robert Edward Innes-Ker, who has just joined the Egyptian Army with the rank of Bimbashi, is the younger brother of Henry John Innes-Ker, Duke of Roxburghe. He has been posted to the 11th Sudanese, which battalion he joined at Omdurman on his arrival from the North on the 7th inst.

The wedding at Marylebone Parish Church on the 11th inst. of Mr. F. H. Teall, of the Egyptian Civil Service, and Miss Marjorie Cox attracted the attention of many of their mutual friends from Egypt, the bridegroom being one of the most popular and promising members of the Egyptian police force, while the bride quickly gained a place in the affections of Cairo society last winter when she was visiting her relatives, Dr. and Mrs. Madden. At the marriage ceremony the bride was attended by five small bridesmaids, her nieces, among whom was Miss Mary Madden. They carried silver baskets filled with shaded sweet peas and wore initial brooches of blue enamel, both the gifts of the bridegroom. Mr. Teall was supported by his brother, Mr. G. H. Teall, as best man. The honeymoon is being spent in Switzerland, en route for Egypt, where Mr. Teall is stationed for the present at Mansourah.

The Archbishop of Sinai, Mgr. Porphyrios, who (the *Egyptian Gazette* states) is lying seriously ill in Cairo with pneumonia, is one of the best known and most learned of Greek prelates. He is a personal friend of Lord Kitchener.

The Khedive has promoted M. Hovhannes Hagopian, head clerk in the Ministry of the Interior at Cairo, to the grade of Sania, carrying with it the title of Bey. M. Hagopian is the younger brother of M. G. Hagopian, who is a Professor of Oriental Languages in London.

Mr. Charles Rudy, a journalist who specialises in Near Eastern politics and who spent many years in Egypt, has been appointed to the staff of the *Daily Mail*.

Mustapha Pasha Ibadi, Governor of Alexandria, is leaving Alexandria for Europe, where he will spend the summer. He comes to London after visiting Constantinople.

Mr. de France, French Diplomatic Agent and Consul-General in Cairo, has had to put off his intended departure for Europe on the 16th instant to a later date. Mr. Siegfried will act for Mr. de France during his absence.

The *Agence Ottomane* publishes a telegram from Lord Cromer congratulating the Grand Vizier, and stating that now the friends of Turkey will have hope.

Mr. Henry A. Ormerod, B.A., late scholar of Queen's College, Oxford, has been elected to a Research Studentship at that college with a view to the continuance of the archæological researches made by him in Lycia and Pisidia during the years 1910 and 1911 as a member of the British School at Athens.

Herr von Miguel, the German Diplomatic Agent in Cairo, will present his credentials to H.H. the Khedive in September next.

Abd el Wahhab Bey Hassan, senior mathematical master at the Khedivieh School, and formerly of Borough Road College, London, has been appointed vice-principal of the Tewfikieh School, Cairo.

An engagement is announced between Miss Charnaud, daughter of Mr. Charles Charnaud, director of the Tobacco Regie, and Mr. John H. Bigland, commercial director of the Constantinople Telephone Company.

George Effendi Zeidan, a well-known Arabic historian and writer on Islamic subjects, and Daoud Bey Ammoon, a Cairo lawyer, have been made members of the Asiatic Scientific Society.

Mr. H. Higgs, C.B., is to succeed Mr. Middleton as Inspector-General in the Egyptian Ministry of Finance. He will not, however, go to Egypt till October, when Mr. Middleton's resignation will take effect.

Baron von Richtofen, who acted as German Diplomatic Agent in Egypt till the arrival of the new Diplomatic Agent, Herr von Miquel, left Egypt for Turkey on leave on the 15th inst.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

HECHT.—On the 23rd inst., at 16, Woodchurch Road, West Hampstead, the wife of Robert Hecht, of a daughter (stillborn).

TODD.—At Valletta, Malta, on the 23rd inst., the wife of Major C. Campbell Todd, A.P.D., of a daughter.

MARRIAGES.

HOPKINS—WYNN WILLIAMS.—On the 23rd inst., at St. James's Church, Abinger, Surrey, by the Rev. H. G. Hopkins, father of the bridegroom, assisted by the Rev. Canon Chichester, Rural Dean and vicar of Dorking, the Rev. T. F. Hobson, vicar of Leatherhead, and the Rev. J. Robinson, vicar of Summerstown, Kenneth Castell Hopkins, of the Agricultural Bank of Egypt, seventh son of the Rev. H. G. Hopkins, Shelley House, Leatherhead, to Alice Helen Alcie Wynn Williams, daughter of the late Trevor Wynn Williams, M.D.

MATTHEW—PEARSON.—On July 18, at St. Cross, Winchester, by the Rev. S. L. Brown, assisted by the Rev. Canon Madge, the Rev. L. R. Phelps, and the Rev. Canon Causton, Master of St. Cross, John Godfrey Matthew, Sudan Civil Service, to Edith Sibyl, only child of Captain Henry Pearson, R.N., and Mrs. Pearson, The Crescent, Winchester.

DEATH.

PETROCOCHINO.—On July 18, Charlotte Annie, widow of the late Pandia Petrocochino, after an operation, aged 38.

FRIDAY, JULY 26, 1912.

A SERBO-BULGARIAN ALLIANCE.

It is not so very many months ago that the possibilities of a pan-Balkan alliance were discussed in these pages. The grave disadvantages attaching to such a proposal were carefully weighed; the sinister page of the past relations of the countries interested was unrolled—the mutual distrust and jealousies embittered by the wholesale shuffle of territory and provinces after the Treaty of Berlin, the racial and religious discord separating Slav and Hellene, Exarchate and Patriarchate, and above all the bottomless greed which distinguishes the Great Powers, in spite of The Hague and all its doings. Now a certain section of the French Press is pluming itself on its perspicacity in detecting the existence, or possible existence, of an alliance between Servia and Bulgaria, and the question arises whether there is any more likelihood of this than of the grand confederation which was M. Trikoupis's dream. The first question asked by the Roman with regard to a doubtful proposition was typical of the common sense which built up a mighty empire. *Cui bono?* We may well apply this test to the present case. What good is the one nation to derive from co-operation with the other? What benefit will result to this dual combination? Bulgaria, strong, self-reliant, purposeful—how can she gain anything from a union with Servia? Even in an alliance the weak must go to the wall, and Servia, with the taste of Slivnitza still in her mouth, cannot hope to impose her claims or obligations on such a powerful neighbour. Should they take up arms against the Turk, the war would be but stale, flat, and unprofitable. Conquered, they could scarcely be said to have improved their position, even should the European Powers prevent any territorial aggrandisement on the part of the Turk, as in all human probability they would. Conquerors, they would not have the slightest chance of being allowed to supervise the partition of Macedonia, one of the fairest provinces left in Europe to whet the greed of statesmen, unless they were prepared to pay the price in blood and iron twice over. Austria and Russia would but consider that the allies had taken upon themselves the painful duty of pulling the chestnuts out of the fire; and if Austria demanded Salonika, Russia would counter by seizing Kavalla. Far better the Turk at Salonika than the Austrian. The complications of the European problem would know no end.

It must be admitted, however, that although an explosion in the Balkans would probably be followed by a lively game of grab on the part of the more powerful countries, it is impossible to point out from what quarter pressure is being applied on Sofia and Belgrade. Count Aehrenthal declared some time before his death that "Austria's foreign policy in the Near East is the furtherance of the independence and of the pacific development of Turkey, and the furtherance and a full and warm comprehension of the peaceful development of the Balkan States." Whatever importance one may be pleased to attach to declarations of this kind, it is inconceivable that the aged Emperor would support any but a pacific policy, and it is surely fairer to place some credence even in a platitudinous, after-dinner toast than to build up a web of intrigues and conspiracies from the journeys and visits of minor kings and crown princes. Austria has already had a tolerably large mouthful out of the Balkan apple flung to her by Bismarck, and since any further symptoms of appetite on her part would but encourage Russia to claim a share for herself, it is certain that the European Concert would prefer a strict maintenance of the present *status quo* to a leap into any policy which would inevitably foster and encourage danger and discontent. No *rapprochement* between Servia and Bulgaria could be considered complete without the inclusion of the Montenegrins, the other branch of the Serb race; and when one remembers the loving care and foresight shown by the representatives of the Great Powers at the Treaty of Berlin in setting up an elaborate system of partition walls between the various Slavonic States, it is difficult to conceive that they will assist in person to demolish that ingenious structure. Will Austria abandon her garrison rights in the Sandjak of Novibazar? Will the district of Pinod be restored to Servia or the Dobrudja to Bulgaria? The old territorial difficulty must be adjusted before the question of an offensive and defensive alliance can be discussed with equanimity; and Austria, Germany, and Russia have sufficient problems to face already without throwing another rod into troubled waters.

That some sort of understanding may have been reached between Servia and Bulgaria, by which the two countries are bound to protect their mutual interests in case of an aggressive move from elsewhere is a pleasant enough idea, but it can be little more than a *ballon d'essai*. Bulgaria is strong and capable enough to fight her own battles, without assuming additional responsibilities for which she cannot conceivably obtain a reasonable *quid pro quo*. Just as among the great European Powers every *détente*, *entente*, or *rapprochement* is eyed with considerable disfavour as tending to disarrange that delicate mechanical safeguard known as the balance of power; so on a smaller scale similar movements among the Balkan Governments are regarded with mistrust and suspicion. Equilibrium is as essential to a group of pigmy States as to their giant neighbours. The belief that Roumania was at any time prepared to throw in her lot with Turkey, should the latter be attacked, was a most valuable check on desires and ambitions however boundless and aggressive. Rumours circulated that this understanding no longer existed. Bulgaria held out the hand of friendship. The project of a pan-Balkan alliance made a seasonable reappearance, until it was made manifest that Roumania preferred a certain splendid isolation of her own to risky or indefinite friendships. The next event was the suggestion of this Serbo-Bulgarian alliance, a suggestion which, when fully considered, is too obvious an epilogue to the previous events to be merely a coincidence. That some amicable arrangement will disperse the clouds which have so long overshadowed the relations of Servia and Bulgaria is the hope of every student of Near Eastern politics, but there is no necessity for the existence of a cut-and-dried agreement. They have seen the futility or worthlessness of promises in the past, and a further study of past history must show that whatever sacrifices they make, they will have to rest content with the crumbs that fall from the rich man's table. In such circumstances it is wiser not to give their more bulky neighbours a chance of inviting themselves to the feast. Let them eat elsewhere.

ENGLISH BOYS' SCHOOL,
CONSTANTINOPLE.

The New School Building will be opened on September 15th. The School House has accommodation for forty boarders. Resident staff, six English masters and English matron.

Healthy situation on Nishantash Hill, facing open country; drainage sanitary fittings, baths and lavatories by English sanitary engineers

Preparation for Commercial Education Examination of London Chamber of Commerce. French and Turkish visiting masters. SPECIAL ATTENTION TO FRENCH. Turkish and Latin optional. English games. Fees moderate.

PROSPECTUS can be had on application to the Chairman of the School Committee—

A. T. WAUGH, Esq., *British Consulate-General,* **Constantinople**

ENGLISH SCHOOL,
NICOSIA, CYPRUS.

Preparation for Public Schools and for Commerce
Modern Languages. Turkish and Arabic if desired

ENGLISH GAMES.

Complete charge taken. Very healthy climate. Boys remaining for the summer holidays are taken to the Mountains. Moderate Terms.

Apply REV. CANON F. D. NEWHAM, B.A.Cantab., Director.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Events in Turkey have moved so rapidly that it is difficult to analyse the situation with any certainty. The two strongest men of the Committee, Shevket Pasha and Djavid Bey, have disappeared from the scene for the time being, but there is no saying when they will return. In the meantime the market has received the new order of things without fear or mistrust. If anything, it is inclined to be optimistic rather than pessimistic, but on the whole it can be said to be in a state of expectancy.

***

Zia Pasha, the new Minister of Finance, has not the personality of Djavid Bey, but he is recognised as careful and serious. The whole Cabinet is presumably one of serious men. There will be little change introduced into the policy obtaining at the Ministry of Finance, because Zia Pasha is presumably not a *Bahnbrecher* or pioneer in new fields. He will continue Djavid Bey's policy on grand lines, and if in need of money will doubtless negotiate an advance on Treasury Bills. Information which I have received shows that no such advance is on the *tapis* at the present moment, but it is not improbable at an early date. It will be interesting to see what conditions will govern the new financial operation, as compared with that recently concluded. It will be an indication of the money market's attitude to the new order. I foresee an increase in the rate of interest. This ought to convince Ottoman statesmen that borrowing cannot go on for ever, that Europe is at last getting sick and tired of the war, and that an honourable peace is very much to be desired. As for the creation of a special war loan, I doubt whether the market would have anything to do with it, and, consequently, it is unlikely that the Minister of Finance will suggest any such scheme for raising money.

***

On the whole, we can take it that the present Government will be extremely careful in money matters, and perhaps even slow to move. With the disappearance (for the time being) of the spirit of "Ottomanisation" will have disappeared any antagonism that may have existed against the foreign bondholder as an institution.

***

As regards the Mesopotamia irrigation works, nothing immediate will be done to further them. It is not likely, however, that the scheme will be abandoned; but if British firms are to tender, the absurd conditions of the last notification will have to be replaced by fairer ones. We reproduce on another page an extract from the *D.O.K.* ridiculing these conditions. The conclusion arrived at by our contemporary, that if Turkey does not favour Mesopotamia with water a Power will advance from the Persian Gulf and do so, is farcical, but it is consistent with Germany's veiled policy of intimidation. In so many words it amounts to this: either Mesopotamia becomes British, or Turkey, in view of the refusal of British contractors to comply with her stipulations, invites German engineers to step in. From a German point of view this solution would be delightful, but the Turks, after having practically thrown Alexandretta into the arms of the Triple Alliance, will hesitate before purchasing questionable Teutonic friendship by further grants of spheres of influence.

***

The report, emanating from the Teheran correspondent of the *Times*, that the Bakhtiari trade route will be opened, is a welcome item of news. The route, or the Lynch road, was built by Messrs. Lynch, and is another instance of the private enterprise of this firm. As a matter of fact, our enterprise in Persia has always been of a purely private nature; any prestige that we may have in that country is due to individuals rather than to a national policy or attitude. Similarly, I venture to suggest that if the trade route is opened, as expected, it will be mainly due to the initiative and energy of the firm alluded to above.

***

The Serbo-Bulgarian entente is the object of the sneers of the *D.O.K.*, whose article on the subject is reproduced on another page. Moreover, if the *D.O.K.* is opposed to the project, so are Germany and Austria, particularly the latter. *Divide et impera*, both in economic and political matters, is the keynote of Austria's policy in the Balkans, and a firm Serbo-Bulgarian Customs Alliance would hardly fit in with her aspirations. In any case this alliance cannot be realised for a few years, owing to existing commercial treaties. In the meantime, a campaign will have to be engineered having for its object the creation of ill-feeling between Servia and Bulgaria. I see that the *D.O.K.* has already begun it, but I hope that the two Balkan States will be able to thwart the plans of their friends the enemy.

***

The *Sudan Herald* picks up a rumour to the effect that a project is under consideration for linking up the French Wadai with the Sudan by rail via El Obeid. This rumour, says the journal in question, has reached London. If by London is meant certain irresponsible quarters in the City, I admit the accuracy of the statement, but, on the other hand, I deny that any responsible person gave credence to the report.

***

Like the Trans-African scheme (and to a certain extent the Cape-to-Cairo railway), it is purely speculative. From an economic point of view, the French would be opposed to any dependence of Wadai exports on Sudan railways, to which would have to be added the subsequent transport via Suez to Marseilles. The Sudan would certainly gain by the extension of the railway from El Obeid via El Fasher to the heart of Darfur, but, as the *Sudan Herald* points out, more important is the construction of railways in the territory to the east of the Nile, for which funds are still lacking. Even more important are irrigation works between the Blue and White Niles to the south of Khartum. If France were to put up the money for the Congo-Nile scheme, well and good. But France, I am sure, will not.

Irrigation is certainly the topic of the hour in more countries than one. Roumania is coming to the front with a scheme for turning the Buriagan desert between Bucharest and the Danube into a fertile garden. Preliminary surveys are being carefully made, and they are to be followed immediately by the digging of canals, etc. With our national reputation for irrigation engineers we should benefit by any extension of such works, and the case of Roumania ought to be no exception. It behoves us, however, to keep our "weather eye" open.

***

In Egypt, on the other hand, the Delta scheme is progressing favourably; in other words, rapidly. But in direct relation with the increase of lands available for the cultivation of cotton stands the increased importation by Egypt of specie from London. These imports are already high, and the greater the crop the more considerable do they become. The fellah must be taught to bank his money instead of hoarding it in the ground, and until he has learnt this lesson there must of necessity be a yearly loss to Egypt of many thousands occasioned by the transport of specie. This ought to be avoided, as I have pointed out on more than one previous occasion. It is, however, difficult to see how the inherent antipathy of the fellah towards banks is to be overcome. The first step would have to be the education—superficial, of course—of the peasants in matters pertaining to banks. The religious objection to the system is not so deep-rooted as some people make out, the aversion being chiefly the product of ignorance and mistrust.

***

While on the subject of Egypt, I must refer again to the Five Feddans law. I mentioned previously that one of the evils of the new law, namely, its tendency to make land banks impossible owing to the fact that small holders cannot be expropriated for debt, could be overcome by stipulating that in case the interest on the money lent was not usurious (the rate to be determined by the courts) the law should not hold good. Since writing the above, I have received from a correspondent the suggestion that the law should only be applicable in cases where the loan was not *risé* by the authorities. The idea is the same, only the procedure varying. Certainly something ought to be done to harmonise the interests of the fellah with those of the land banks organised, so to speak, under Government control. The usurer is the enemy, and not the bank.

***

At last Alexandria is to serve as a base for our Navy. But what sort of a base? For torpedo boats only. It is a step in the right direction, but what a small one, considering that there is not a single dry dock for Dreadnoughts in the whole of the Eastern Mediterranean. The construction of one at Alexandria, as has been stated over and over again, is necessary owing to the necessity for us to protect our trade route to the East. I hope that this will be brought home to the authorities, and that instead of only a torpedo base a naval base with a dry dock for the largest ships of the British Navy will be created at Alexandria.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, July 20.

To Be, or Not to Be?

It is not within my province to touch upon the political situation; but at the present time it so entirely overshadows and dominates the commercial situation that it is impossible to ignore it. We were informed yesterday morning that Italian torpedo boats had appeared in the Dardanelles, which, of course, meant the closing again of the Straits to commerce for an indefinite period. It was stated in an official interview that orders had already been given for the closing of the passage, but later this was contradicted. We are now informed that the width of the navigable channel will be reduced by means of mines from 400 metres to 150 metres. There is also at present some doubt thrown upon the whole story; but, be this as it may, it would appear as though we may expect to hear at any moment of the closing of the Dardanelles, with all the resulting loss to commerce and shipping.

The New Galata Bridge.

A Commission, composed of Mr. Auric, the chief of the technical service of the Prefecture of the city, a delegate of the Admiralty, and another of the Ministry of Public Works, is said to have given the Nüremberg-Maschinen-Fabrik, the builders of the new bridge across the Golden Horn from Galata to Stambul, a delay of four months in which to correct a series of thirty-five defects enumerated by the Commission, failing which a sum of £T4,000 will be deducted from the last instalment due to the company. Apart from the report in question, the most serious defect at once evident, and one which will, sooner or later, have to be remedied, is the total inadequacy of the only two openings through which the entire traffic between the inner and outer harbours has to pass. The constant obstruction and confusion around these two narrow openings is irrefutable evidence of their insufficiency for the important stream of traffic. In the old bridge, there were many lesser openings through which a large portion of the smaller craft were wont to pass, thus leaving the two larger arches more or less free for steam launches, lighters, and any other craft with a mast. All this traffic is now unavoidably directed towards the only two openings of the new bridge, which are ridiculously small, and a lighter has but to be slightly influenced by the current, wind, or the wash of the Bosphorus steamers manœuvring to get alongside their landing stages, to miss its passage, when there are immediately some five or six others upon it, bow-on, side-on, stern-on, obstructing the passage. The local bargee has much in common with his London contemporary, and the language bandied on such occasions, which are of very frequent occurrence, is not to be found in any dictionary.

This is one of the most important constructional defects of the new bridge, for which the city has waited long and patiently. Of its architectural features, nothing can be said, unless it be that it has none. The width of its asphalt sidewalks, as well as its granite paved centre, is ample, and is a very decided improvement on the old bridge. How its longitudinal pontoons can be removed when it will be necessary to do so, is a question that has been asked by many.

Aeroplanes for the Army.

Another aeroplane for the army has just arrived, and two more are said to be shortly expected. The first group of officers sent to France to study aviation have returned here, and it is now stated that others will be sent to England for the same purpose.

New Breweries.

The "Zenith" Brewery Company, Limited, has just been registered in London, with a capital of £73,500, and the company is said to have already acquired a site in the Golden Horn for the erection of its plant. The proposed formation of a Société Anonyme Ottomane under the style of "Brasserie Nationale Populaire" is now reported, with a capital of £T100,000, of which three-fourths is to be called up. This company, it is stated, has also chosen the Golden Horn for the site of its factory.

Inauguration of Railway.

The 45 kilometres of line built by the Oriental Railway Company, prolonging its Baba-Eski branch line to Kirk-Kilissé, was inaugurated yesterday by representatives of the Government and the railway company.

War Tax.

The Chamber of Deputies and the Senate have adopted, with little modification, a Bill presented by the Minister of Finance establishing certain war taxes.

Moratorium for Damascus.

The Chamber has also voted a law according a six months' moratorium to the commercial community of Damascus, victims of the recent conflagration in that city.

Port of Alexandretta.

The Ministry of Public Works has approved the plans of the Baghdad Railway Company for the construction of this port, and the work will be put in hand at once.

Treasury Returns.

The Treasury receipts for the financial year ended March 13, 1912, are given in an official publication, just issued, as £T30,374,119, compared with £T28,339,170 during the preceding year, and they exceed the budgetary provisions by £T2,618,377. The Customs receipts amount to £T4,696,614, and exceed those of the previous year by £T133,423. The steady growth in the Treasury receipts will be seen in the following table:—

1323—1907-8	£T23,914,268
1324—1908-9	£T25,175,818
1325—1909-10	£T26,986,406
1326—1910-11 .—	£T28,339,170
1327—1911-12	£T30,374,119

BLACK SEA RAILWAYS.

The pourparlers between the Turkish Government and the French financial syndicate with reference to the construction of railways in the Black Sea regions of Asia Minor have for some time been at a standstill. The reason for this is that the Russian Government raised objections to the plan under which the railways were to be built nominally by Turkey, but in reality with the help of capital raised by a French financial syndicate. The Russians allege that this would constitute a circumvention of the agreement between Russia and Turkey according to which the former should have a preferential right to the construction of the railways in question, should the Turkish Government not themselves undertake the work. The *Deutsche Orient-Korrespondenz* now learns from Paris that one of the tasks before the French Premier, M. Poincaré, on his approaching visit to St. Petersburg will consist in obtaining the withdrawal of the Russian pretensions and in arriving at the assurance that no objections will be raised by Russia to the construction of the lines with the help of French finance.

PORT SUDAN'S COMMERCE

(From Our Own Correspondent.)

Port Sudan, July 9.

The following are the figures for the total exports and imports at Port Sudan during the first four months of this year:—

	Tons.		Value.
Imports.			
January	9,069	..	£E101,577
February	9,127	..	84,805
March	10,623	..	127,163
April	11,832	..	105,026
Exports.			
January	2,513	..	53,047
February	3,134	..	73,011
March	2,788	.	74,264
April	4,214	..	121,591

Exports in April were nearly double those of March, as much cargo had been waiting for shipment here for over six weeks, owing to inadequate space on steamers that would accept cargo for Continental ports.

PORT SUDAN POSTAL SERVICE.

The *Journal* of the Sudan Chamber of Commerce publishes a letter from a correspondent complaining against the Port Sudan postal service. We believe that the evil could easily be remedied. We quote from the letter as follows:—

"We will deal firstly with the Brindisi-European Mail service: If this mail came by steamer it would be delivered on Saturday; as it is now we do not receive it in Port Sudan before Monday. Should the condition of the Nile delay the steamer, which has occurred recently, or should the railway line get washed away, the receipt of this mail cannot be relied upon, thus causing considerable inconvenience to merchants, banks, shipping, and forwarding agents, etc., owing to cargo arriving for which no documents have been received. Similar delays are likely to occur with the homeward service and the connection with the Port Said-Brindisi steamer missed.

"Secondly, the Sudan mail service could be greatly improved. A train leaves Port Sudan at 1 p.m. on Thursday, but no mails are sent by this. On Friday a train arrives from Khartoum at 11.15 a.m., but brings no mails. The Khartoum mails due at Port Sudan on Monday at 11.15 a.m., with European letters, are delayed at Atbara if the train from Halfa does not arrive in time to catch the Port Sudan connection. At this time of the year, when cargo is moving freely, consignments often arrive before receipt of the railway policy, which necessarily causes inconvenience to merchants.

"The departure of European mails from Port Sudan is apparently not definitely settled. We were informed by the local postmaster that the train taking Brindisi mails would leave on Tuesday at 11.45 a.m. Later this was altered to Wednesday at 11.45 a.m., but as no official notice was published the matter appears to be uncertain. If the European mails leave here on Tuesday we would point out that there is hardly time to answer the letters arriving on Monday and delivered here with undue delay."

BULGARO-SERVIAN CUSTOMS.

The *Deutsche Orient-Korrespondenz* learns from authoritative sources in Sofia that the reports of alleged negotiations concerning a Bulgaro-Servian Customs Union are not worthy of credence. The commercial relations between the two countries are not so extensive as to induce the wish, on either side, for an obliteration of the Customs boundary. Further, the conditions of production are largely similar in Servia and Bulgaria, so that the industries of the two countries would enter into competition should a Customs union be introduced. Politically, the two Governments are, it is true, in friendly relationship, but the existing matters of conflict are still considerable enough to influence public opinion unfavourably against the conclusion of a political alliance. Beyond the paying of compliments, in a general way, Sofia politicians are not disposed to engage themselves vis-à-vis Servia. Bulgaria desires to keep her hands free; she feels herself strong enough to pursue her political plans without the help of Servia.

Openings for Business.

ROUMANIAN REQUIREMENTS.

(From Our Own Correspondent.)

Bucharest, July 20.

Submarines and Destroyers.

Some time ago the War Office sent Commissions to England, France, and Germany. In accordance with the reports of these Commissions, the Minister of War has now decided to ask Parliament for a credit to obtain several submarines and torpedo destroyers. As these must be purchased abroad, British contractors for such undertakings should certainly lose no time in getting into communication with the War Ministry in this country.

Motor Cars.

The importation of motor-cars into Roumania during last year exceeded those of 1910 by 300,000 kgs. in weight and three and a-half million francs in value; while in 1910 the figures were 290,000 kgs. and 3,055,000 frs., and in 1909, 208,000 kgs. and 2,188,000 frs. In 1910 the countries importing were as follows:—France, 90,000 kgs.; Germany, 78,000 kgs.; Italy, 63,000 kgs.; Austria-Hungary, 27,000 kgs.; and Great Britain, only 7,000 kgs. Roumania has been uniformly neglected as a market for motor-cars by our British houses, and it is only very seldom that the names of British cars are seen. The market is a large and increasing one, but it looks as though other countries had got too strong a hold on it for Great Britain now to make much headway.

Hotels.

A company has acquired the site of the Hotel Frascati, in the Calea Victoriei. The present building will be demolished, and a large hotel on modern lines erected. Even so, the hotels of Bucharest will still be all too few. The demand is ever over the supply.

Roumanian Information Bureau.

The Ministry of Industries and Commerce has established an information bureau, which will give, free of all charge, to merchants, manufacturers, and all interested any information required concerning this country. Those requiring information should address themselves in writing, and will receive replies with the shortest possible delay. The agents are:—For France and Great Britain, Mr. M. Holban, 122, Rue de la Boetie, Paris. For Turkey, Mr. N. Raducan-Popescu, Roumanian Legation, Constantinople. For Egypt, Mr. F. N. Jonescu, 14, Rue Porte Rosette, Alexandria. For Smyrna, Mr. St. Lupascu, Post Autrichienne, Smyrna. For Belgium and Holland, Mr. St. Cezianu, Hotel de l'Europe, Antwerp. For Salonika, Mr. Gr. C. Ghica, Olympos Palace Hotel, Salonika. For Syria and Palestine, Mr. D. Gociu, Messrs. Weber and Co., Beyrout. For London, Mr. G. Boncescu, 18, Alexandra Road, S. Hampstead, will report specially on the state of the grain market.

Applications in writing should be made to the Palatul Ministerului Industrei si Comertuliu, Calea Victoriei, 147, Bucharest, marked "Birou de Informatia," and can be in either English, French, or German.

BUILDING MATERIALS IN ROUMANIA

According to the *Nachrichten für Handel und Industrie*, Berlin, arrangements have been made for the construction of five new large hotels at Bucharest. Moreover, there is also to be built a Senate House, a Town Hall, a University, a military club, the Roumanian Credit Bank, and the offices of the Agricola Insurance Company. The manufacturers of cement in Roumania will only be able to supply 12,000 wagons of cement this year. They have orders for more than 20,000 wagons of this material.

Societa Commissionaria Orientale,
MILAN, ITALY. Ltd.
PIECE GOODS Dept. } For the
HARDWARE ,, } EASTERN

First Class Banking Connections.

SUGAR IN TURKEY.

The importation of sugar into Salonika is very active (says the *Oesterreichisch-Ungarische Konsular Korrespondenz*, Vienna) owing to the exhaustion of stocks. In April last the merchants at Salonika ordered 115 wagons of sugar. During the same month there arrived on that market, either by railway or by water, 10,000 sacks from Austria. For the first time Germany also made some consignments of both lump and moist sugar. At the end of April the prices were as under:—Lump sugar, free Belgrade, 45 crowns; lump sugar, c.i.f. Salonika, 46 crowns; crushed sugar, free Belgrade, 45 crowns; crushed sugar, c.i.f. Salonika, 46 crowns; cube sugar, free Belgrade, 47 crowns; lump suger, c.i.f. Salonika, 48 crowns; crystallised sugar, c.i.f. Salonika, 38 crowns.

TARPAULINS FOR GREEK ARMY.

With reference to the notice in our last week's issue relative to a call for tenders for the supply of 4,650 waterproof (tarpaulin) covers for wagons and pack saddles, in three lots, required for the Greek Army, it is notified by H.M. Legation at Athens that the time for the receipt of tenders has again been extended, and the date of closing is now fixed as July 30.

BRITISH GOODS IN RUSSIA.

In his report upon the trade of the Kharkov district in 1911 (which will shortly be issued), the British Vice-Consul, Mr. C. Blakey, writes:—"I cannot urge too strongly the opening of branches of British firms for such goods as find a large sale on the Russian market, but of which the sale requires closer touch with the purchaser or is dependent upon credit being given. The sale of British goods, more particularly in the engineering trades, backed as they are by superior quality and reasonable prices, would receive a strong impetus by such sales organisations. An independent agent cannot be relied on to put his energies and capital into the sale of a British firm's goods if he sees his way to more profitable business by pushing competing goods or by starting the manufacture himself. Pushing and reliable agents are rare, and the loss of such an agent may mean the loss of the trade."

These remarks are of particular interest in connection with the notes on British machines in Russia and Turkey in our last issue; but they apply to other countries as well, and traders who wish to push their wares in the markets of the Near East would do well to ponder them.

TENDERS INVITED.

EGYPT.

Drugs, Medicines, Dressings, etc.—Tenders are invited by the Egyptian Ministry of the Interior for the supply of drugs, medicines, dressings, etc., required by the Department of Public Health during the year 1913. Sealed tenders will be received by the Director of Stores, Department of Public Health, Cairo, from whom specifications and forms of tender can be obtained. A deposit of 2 per cent. of the value of the offer is required with each tender. Legal "domicile" in Egypt is necessary. Date, September 25 (noon).

Italian Hemp Rope; Cotton Drill.—The London Agent for the Egyptian War Office (Mr. A. L. Webb, C.M.G.) notifies that the Department named invite tenders for the supply of (1) 50 cwts. of Italian hemp rope, and (2) 9,000 yards of chocolate-coloured cotton drill. Tender forms and all particulars may be obtained at Mr. Webb's offices, Queen Anne's Chambers, Broadway, Westminster, S.W., where tenders will be received. Firms who have not previously held a contract with the Egyptian War Office must enclose with their tender two references, one of which is to be a bank. Dates: (1) August 7, (2) August 21.

Supply of Binding Cloth.—Tenders are invited for the supply of binding cloth required by the Printing Department of the Egyptian Government during the year 1913. The conditions of contract and schedule of quantities may be obtained at the Secretariat of the Ministry of Finance and at the Printing Department, Bulaq. Tenders should be forwarded to the Director, Printing Department. Date, September 12 (noon).

Supply of Clothing Required during the years 1913, 1914, and 1915.—Tenders will be received at the office of the Chief of the Administrative Service, Public Works Ministry, Cairo, for the supply of clothing required by the Cairo City Inspectorate, during three years, commencing from January 1, 1913, and ending on December 31, 1915. Conditions of tender, specification, and conditions of contract, at the offices of the Cairo City Inspectorate. Samples shall be deposited at the Stores of the Cairo City Inspectorate, before noon, on September 1, 1912. Date, September 1 (noon).

Supply of Machines.—Tenders are invited by the Department of Agricultural, Technical and Commercial Education for the supply of machines to the Model Workshops at Assiut, as shown on the specifications with description of machines to be obtained at the office of the Department, 14, Sharia Abdine, on any day, Fridays and general holidays excepted, between 9 a.m. and noon. Tenders in accordance with the specifications, etc., will be received by the Director-General of the Department of Agricultural, Technical and Commercial Education. Date, September 1 (noon).

CRETE.

Electric Tramway Construction; Water Supply Installation.—Tenders will be received at the "Bureau de la Mairie," Canea, for (1) a fifty years' concession to construct and work an overhead system of electric tramways in Canea and the neighbourhood; and (2) a fifty years' concession for the installation and maintenance of the water supply of Canea and suburbs. Copies of the Cretan *Official Gazette*, containing the conditions and further particulars regarding these concessions, may be seen by British contractors at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C. Date, October 21.

GREECE.

Motor-car Services.—Tenders are invited at the Ministry of the Interior, Athens, for motor-car services for passengers and goods between Tripolitsa and Sparta, and Lamia and Karpenissi, respectively. Date, September 31.

MALTA.

Stoneware Pipes and Specials; Cast Iron Pipes; Manhole Covers.—Sealed tenders will be received at the office of the Receiver-General and Director of Contracts, Valletta, for the supply of (1) stoneware pipes and specials, (2) galvanised cast-iron pipes, and (3) cast-iron manhole covers. Tenders are to be accompanied by a deposit of £100 in the case of (1), £20 in the case of (2), and £30 in the case of (3). Copies of the specifications and forms of tender may be obtained on application to the Crown Agents for the Colonies, Whitehall Gardens, London, S.W. Date, August 8 (11 a.m.).

ROUMANIA.

Supply of Zinc Sheets, Tools, Steel Bars, etc.—Tenders invited by direction of Roumanian State Railways for supply of 5,000 kil. of zinc sheets, in one lot; (2) various tools (six lots); 83,000 kil. of round steel bars, for bolts (one lot); 5,000 kil. of antimony (one lot); and 10,000 kil. tin ingots. Date, August 6.

Enlargement of a Station.—Tenders invited for the extension of Buzau Station. Apply Direction of Roumanian State Railways, Bucharest. Date, August 12.

Engineering Notes.

Agricultural Machinery in Thessaly.

M. Jullien, Commercial Adviser of France at Volo, in his recent report, states that the use of machinery for agricultural pursuits is greatly increasing throughout Thessaly, and this, he considers, is of special interest, since 60 per cent. of the cereals produced in the kingdom of Greece are grown in that district—namely, about 2,500,000 hectolitres. He asserts that this production will be doubled owing to the adoption of new scientific agricultural methods and the bringing under cultivation of the vast areas which hitherto remained uncultivated. M. Jullien considers it a great opportunity for French manufacturers to get a footing, and believes that when once the French machines are successfully introduced there is no doubt that they will become popular and be also used in Phthiotis and other districts of Greece. Among the machines that he mentions as being in demand are threshing machines, of which 150 have been imported into Thessaly by English firms. They are 4 ft. 6 ins. wide, with engines of 30 to 35 horse-power. He calculates that 300 more of such threshing sets are wanted in Thessaly, and 400 in the other districts of Greece, to meet the requirements of the land. These threshing machines, M. Jullien states, are most perfect, with double cleaning apparatus, two drums (one for cutting and the other for bruising the straw), and with winnowing arrangement under the wheels. All shaft bearings are with automatic lubrication. M. Jullien, however, finds a fault in the wooden parts of the machines, and thinks that for the climate of Greece metal should be used. Evidently M. Jullien does not know that such a machine, iron bound, was once imported, but failed to give satisfaction, and the wooden construction adopted by English makers on wrought-iron road wheels has never failed.

The price of one of the above described threshing machines is stated to be £269 f.o.b. Liverpool, including a 15 per cent. commission for the representative. Terms of payment are a quarter with the order, a quarter on receipt of the machine, and the remainder payable by two instalments in two years with interest at 5 per cent. The representative, for security, takes a mortgage on the machine until same is entirely paid for.

Traction Engines.

This class of engine is now in more general use for driving threshing machinery than portable engines. They are supplied by English firms. A traction engine of 60 horse power, compound, weighing 10,925 kilos (10 tons 15 cwt.), is delivered at a price of £487 f.o.b. Liverpool, including the commission for the representative. An American firm also is introducing into Thessaly traction engines of 110 horse power and of 75 horse power, weighing respectively 15 and 10 tons. In Greece, therefore, and especially in Thessaly, the traction engine is permanently introduced, and many orders are given.

Harvesting Machines.

In the course of the two last years, according to M. Jullien, 250 reaping-and-binding machines were sold in Thessaly by an American firm, and owing to the easy terms offered there is a demand for 4,000 more. The price of a harvesting machine, 1 m. 50 (4 ft. 11 ins.), weighing about 730 kilos (14 cwt. 1 qr. 15 lbs.) with steering gear and pole for four horses, is £27 f.o.b. Volo. M. Jullien advises the French manufacturers to act at once and to take example from their competitors in appointing local representatives in Thessaly and giving credit as the others do. If they do not do that, he says, they must not hope to do any business in Thessaly.

Use of Advertisements.

A correspondent writes:—The business-like remark of the British Consul at Stockholm applies, as you suggested in your notes, to the purchasers in the Near East, but those who cannot make a personal visit I would advise to advertise. Having a long experience of Oriental purchasers, I can say that an advertisement with the manufacturer's name and address attracts the attention and the confidence of the Oriental buyer, and conduces to booking the order far more efficiently and rapidly than the best loquacity of the local agent. By a natural habit the Oriental cannot help suspecting a middleman, but when he can communicate with the manufacturer direct he is pleased and feels "safe," and does not mind if the manufacturer deals afterwards with him through the local agent. I know of a case in which an order for a threshing set—a portable engine and a threshing machine—of the value of £510 has been secured by a British firm through an illustrated advertisement which happened to be in a paper that was stuck on the wall of a very humble native coffee-house not far from Smyrna. A landowner happened to see it, and with the permission of the owner he cut it down from the wall, yellowed by smoke and time, and with the assistance of one who could write English, he has written to the manufacturer. The latter answered, and through his local agent booked the order. The agent on inquiring why he did not apply to him direct received the answer: "I preferred to get into touch with the makers first, and now I know I am all right with you. This"—showing the yellow, soiled advertisement—"has done it."

Machinery at Aleppo.

According to a report by the German Consul at Aleppo (says the *Handelsmuseum*, Vienna), since the railway has reached that place the population has utilised the line for the introduction of numerous machines.

The market has become more important latterly for the sale of motors, mills, pumps, ice-making and agricultural machines, etc.

The natives have commenced the installation of pumps on the banks of the Euphrates for the irrigation of the cornfields, and this method is to be extended to Mesopotamia. The same means will be applied at Mosul, when, in two or three years' time, that country is crossed by the Baghdad Railway.

But if the outlet is great, adds the German Consul, it is absolutely indispensable in treating for business to comply with the conditions of sale and payments in vogue in those countries. The latter are generally effected as follows: One-fifth or one-eighth of the amount on completion of sale; a similar amount, or nearly so, against delivery of documents; and the balance, against guarantees, by a draft, the payment of which may be eighteen months from the arrival of the goods at Tripoli (Syria).

A German house which has done business for many years on these conditions has never sustained the least loss.

Koumanova-Kustendje Line.

Under date of the 15th inst., the Constantinople correspondent of the Agence Telegraphique Bulgare reported that M. Haffner, who was instructed to study the route for the Koumanova-Kustendje line (to which our Sofia correspondent referred in his letter of the 5th—see page 298, THE NEAR EAST, July 12), has forwarded his report and plans to the Oriental Railway Co. The company, adds the correspondent, will very shortly submit definite proposals for the construction of the line to the Government.

Cairo's New Bridge.

Cairo's new bridge at Boulac is of the patent Scherzer rolling-lift type. It is 274.5 metres long, and 20 metres wide, of which 12 metres form the tram and vehicle road, in the middle, while two footpaths of four metres each run along either side. It is worked by a 500-volt current supplied by the Tramway Company, and its two rolling segments can be brought into a vertical position in something less than two minutes. The great advantage of the Scherzer system is that in opening the segments vertically the greatest amount of space possible is allowed for the passage of water traffic. As soon as a wheel is turned and the electric current is switched on, the huge segments begin to roll backward. The area left free for the passage of boats is 27 square metres. The floor of the segments that open is wooden, while that of the rest of the bridge is made of asphalt.

The *Egyptian Gazette* states that it took three and a-half years to build this bridge, much time having been spent on the foundations, which were laid at a depth of 18 metres below sea level, and 33 metres below Nile level. To the £E200,000 supplied by the Cairo Tramway Company, the Government had to add the sum of £E300,000 in order to pay the cost of the bridge, as well as to effect certain improvements in the Ponts des Anglais. The recent tests which a Government commission applied to convince itself of the strength of the bridge have all proved very satisfactory, and the Public Works Ministry can congratulate itself on having added one more useful construction for the convenience and comfort of the citizens of Cairo.

LONDON, July 25.

The Emba Caspian.

The Emba Caspian, the huge company that is being brought out by Messrs. Chaplin, Milne, Grenfell, and Company, is held up until the result of the Emba-Caspienne liquidators' claim against Mr. Lehmann and others has been settled. As the case is *sub judice*, we are, of course, unable to comment on it, but the promoters of the big £3,500,000 company do not care to bring out their concern until the lawsuit is settled. We mentioned in our issue of July 18 that the new company would float the Stacheyeff properties. These properties were bought from Mr. Lehmann, who was the original concessionaire, and, of course, they are held under exceptional circumstances as regards royalty. The NEAR EAST was probably the only paper in London to give complete details of the property. Why these properties should have been capitalised at 3½ millions we cannot say. It will be impossible to form any opinion as to the actual value of the concern until the prospectus has been issued, and it will not be made public, as we have mentioned, until the lawsuit is settled. We understand that this case could have been settled out of Court for a very small sum of money at one time, and it seems a pity that this was not done, for the delay has been a bad thing for the promotion, and, indeed, the only people who can benefit will be the lawyers.

Spies New Issue.

The Spies Petroleum Company are offering 208,335 shares of 10s. each at 22s. per share to their own shareholders, who must apply before August 10. Shareholders have the right to have allotted to them one new share in respect of every six shares now held by them, and those shareholders who wish for share warrants to bearer must also send the tax and fee, which amounts to 5s. 6d. on every 25 shares. The New Oil Properties, Ltd., agree to underwrite 200,000 shares at a commission of a shilling a share, and an option to purchase 50,000 shares at 24s. per share, the option to extend to May 1, 1913. As the Spies Petroleum is quite the best company in the Grozny field, and is one of the best-managed oil companies on the London market, there is very little doubt that the shareholders will readily apply for and take up all the shares to which they are entitled. No doubt the directors were wise in underwriting, but it is a question whether the shareholders would not have preferred to have had the shares offered to them at 21s per share instead of 22s.

North Caucasian Oilfields.

The North Caucasian Oilfields have sent out their report for the year ending December 31. The property of the company is at Grozny, and during 1911 it produced 1,195,779 poods. It sold 666,912 poods at an average price of 23.871 copecks, as against 15.33 copecks in the preceding year. The company seems to have used a very large quantity of oil for development and general purposes, no less than 456,000 poods having thus gone. This is an enormous proportion. The gross profit on the oil sold amounts to £12,032. But £7,640 has been eaten up in office salaries and London expenses, consequently the net profit of the company is only £4,395. Only £10,682 appears to have been written off for depreciation since the company re-arranged its capital. This is a very small sum. It will be remembered that the North Caucasian issued £100,000 worth of debentures some time back, but this item does not, of course, appear in the balance-sheet, which, to be quite candid, is a very unsatisfactory document. However, Mr. MacGarvy estimates the production for the current year at 3,000,000 poods, and as the present price in Baku is over 37 copecks per pood, and the report states that it is 30 copecks in Grozny, the current year should show better results than that for which the report is issued. But some shareholder should certainly attend the meeting, which is to be held on the 29th, and bring up the question of depreciation. Unless oil wells are properly depreciated shareholders stand in an entirely false position. They think that they are making a good profit when actually the company is being run at a heavy loss.

Russian General Oil.

The Russian General Oil Corporation announce that Monsieur Paul Goukassow, President of the Société de Naphte Caspienne and the Société de Naphte Moscow-Caucase, has joined the board of the company. It is claimed that the two oil companies abovementioned have a yearly output of 40,000,000 poods. We are rather inclined to doubt whether this new company has the enormous production claimed for it in the newspapers. The Russian correspondent of the *Financial News* states that the company has wells producing 75,000,000 poods annually, and he tells us that the Russo-Asiatic Bank, the International Bank for Commerce and Industry, the Siberian Bank, the Russian Bank for Foreign Trade, the Russian Commercial and Industrial Bank, the Private Trading Bank, and the Disconto Bank are all interested in the promotion. Our own correspondent in Odessa sent us a note last week which should be carefully read. There is certainly nothing to justify the high premium to which the shares have been pushed in the market.

Maikop Productions.

Some of the Maikop productions appear to be falling off, for some reason or another. Black Sea has only produced 71,440 poods as against 74,155 poods in the previous week. Maikop Victory have fallen from 42,954 to 41,205 poods; but the Maikop New Producers jumped from 8,700 to 13,043 poods, and British Maikop reports a production of 27,500 poods. This latter company will have its second well down in the course of the next few days, when it will drain more oil from the Victory ground. No doubt the British Maikop has got a very good plot, and it is a great pity that the company has not enough money to sink a dozen wells and thus take advantage of the present very high price of oil. It is hardly likely that oil will long remain at 37 kopecks, and thus oil companies that can sink their wells rapidly and bale day and night will make a large fortune. It will be remembered that some time ago the big producers in Baku petitioned the Government to grant them 100 dessiatines of land on which to bore. The Government were to take 30 per cent. royalty, and the producers estimated that they would be able to make 2 copecks a pood. Everybody who had wells in Baku was to be allowed to subscribe to the company pro rata according to their production. The Duma did not like the idea, and now somebody has petitioned the Government to allow them to form a company. According to *The Stockbroker*, this company will agree to sink wells enough to give a production of 20,000,000 poods for the second year, 30,000,000 poods for the third year, and 40,000,000 for the fourth year. It will sell such oil to the Government at 13 copecks from Sabunchi and Romani, and 14 copecks from Bibi Eybat, plus 2 copecks profit to the producing company. The concessionaires would, out of their profits, set aside half a copeck per pood for the prospecting of new land. The scheme is, of course, much more favourable to the Russian Goverment than that put forward by the Baku producers, who would not have exploited the new land as long as their old wells kept baling, and it secures a constant supply of oil to the railways at a definite fixed price. The profit of 2 copecks a pood will leave a handsome income to the lucky people who have upset the Gukassov scheme. After paying expenses, which would be more than covered by the price, the Government will pay for the oil, and, after setting aside the half copeck for prospecting, I calculate that the proposed new company will make about £40,000 a year.

Standard Oil Refinery of Roumania, Limited.

A company with the above title was registered on July 16 by Walter Webb and Co., 31, Budge Row, E.C., with a capital of £140,000 in £1 shares (100,000 preference). The object of the company is to carry on the business of refiners and distillers of and dealers in petroleum and other mineral oils, and to acquire and deal in property and any interests in respect of lands in Roumania and elsewhere, and to adopt agreements (1) with Semion Aisinman for (inter alia) the acquisition of the whole of the issued shares of the Standard Societate Anonima Romana de Petrol, (2) with S. Aisinman, relating to management, (3) with S. Aisinman and the Ploesci Syndicate, Ltd., for (inter alia) the underwriting of 25,000 preference shares, and (4) an agreement referred to in last-mentioned agreement whereby F. S. E. Drury and E. J. Hammond guarantee the due fulfilment by the syndicate of the agreement. Minimum cash subscription, 25 per cent. of the share capital offered to the public. First directors:—F. S. E. Drury (chairman), E. Tozer, E. J. Hammond, and Dr. S. Aisinman (managing director). Qualification, 250 preference or ordinary shares. Remuneration, £200 each per annum (chairman £250) and a percentage of the profits. Registered office, 20, Eastcheap, E.C.

Training for Petroleum Specialists.

A scheme for the systematic training of petroleum specialists has been arranged at Birmingham University. The staff includes: Mining, Professor John Cadman; Geology, Professor Charles Lapworth; Chemistry, Professor P. F. Frankland; Physics, Professor, J. H. Poynting. For some years the University of Birmingham has provided special courses in Petroleum Mining. It is, however, felt that further action should be taken in this direction, and a syllabus to cover the course for the degree of B.Sc. (in Petroleum Mining) and the Diploma in Petroleum Mining has been prepared in consultation with Sir Boverton Redwood, Petroleum Advisor to the Admiralty, Home Office, and India Office, and Consulting Adviser to the Colonial Office.

An Egyptian paper states that owing to the public complaint of the high cost of petroleum in Egypt, the Government has decided to delegate two of its officials—one of the Finance Ministry and the other of the Mines Department—to go to Roumania this summer and study the petroleum market there with the object of elaborating a special law for regulating the sale of petroleum in Egypt.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondents.)

Braila. July 21.

We have this year a fair average wheat crop, about 20 per cent. less than last year, which, however, was an exceptionally good one. The maize, the next important cereal grown in the country, had been seriously threatened by the drought, but the abundant and general rains that we have had this week have considerably improved crop prospects.

Bucharest. July 20.

The harvest is in full swing. Wheat is already coming forward on the markets in large quantities. Some of the samples are not up to last year's quality, but in general the crop is excellent. On an average 18 to 22 hectolitres are produced, blight and mildew having done their work in some districts during the last weeks.

The autumn barley should be especially rich in quantity, the quality being only middling. Millet and beans look very well. Maize equally so. Only in the South, where the fall of rain was much less than sufficient, do the plants show signs of damage.

Other seeds show need of rain in certain districts, though lately rain has been almost general.

Odessa July 22.

The continued torrential rainfalls and abnormally violent hailstorms in many districts of Southern Russia have considerably marred the previously excellent prospects of a superabundant *récolte* in all cereals, and more particularly in barley, wheat, and rye. Much of the already cut but unsheafed grain has been irreparably damaged by rain and hail, and for the moment, there is no apparent sign of a cessation of the ruinous downpours. The Bessarabian maize crop has suffered very extensively.

It is hoped, however, that, on the whole, at least a fair middling yield will be obtained, if not the unusually abundant result anticipated a month ago.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East:—

Basrah. June 28.

Imports.—There is still very little doing in our market. Merchants complain more and more of underselling, and orders are therefore limited to immediate requirements.

Exports.—Owing to a slight fall in the price of cereals there were signs of a recovery at the beginning of the week. Karun wheat was dealt in at £T9 per togar of 1½ tons, and sifted barley at £T7 per togar, when a certain dealer who was in urgent need of completing a cargo bought a lot of 800 tons of barley at £T7½, and this had the effect of breaking the market.

Since the 7th instant about 12,000 tons of cereals have been shipped, of which 4,000-4,500 are for Hamburg, 1,000-1,500 for Jeddah, and the remainder for London. The vessels loading are:—

Tangistan.....	2,500 tons for London.
Nicomédia	4,000 tons for Hamburg.
Gogovale	4,500 tons for London.
Bahrein.....	1,500 tons for Jeddah.

The date market remains firm; sellers are very reserved. Quotations are:—

14/- for Halawi.
13/- for Khedrawi.
11/- for Sayer.

Perhaps bargaining might be able to induce some concessions on the first two prices quoted, but the price of sayer is kept firm, this variety of fruit being about 30 per cent. in deficit as compared with last year.

Angora. July 13.

Mohair.—The market continues to display the same animation as throughout the last fortnight; important purchases have been made by the large export houses at gradually increasing prices, and these purchases have absorbed the whole of the arrivals of new merchandise, and have also largely reduced the old stocks.

Arrivals commence to diminish, and it becomes increasingly evident that the production of mohair is this year far inferior in quantity to that of 1911. Business is becoming difficult, as holders of stocks are growing pretentious, and are now insisting on higher prices.

Cereals.—Prices are still keeping up, and the export for Constantinople is very active. Stocks of wheat, tender and hard, are scarcely more than about 300 wagons—that is, 4,500 tons at most.

The hope which was entertained of a medium crop for this year is not being realised, and the present forecast is somewhat bad. The rains have been insufficient in certain districts which are usually very productive.

It is estimated at present that the coming crops—wheat as well as barley—will show a 40 per cent. deficit as compared with those of 1911, and about 20 per cent. deficit on the figures of the average crop.

Adrianople. July 16.

The tightening of credit has brought about a pronounced lull in business, and we do not look forward to a recovery until the political situation has cleared a little. The following are the figures of imports and exports for the past week:—

	Imports.	Exports.
Sundries	20 wagons	15 wagons
Eggs	5 ,,	7 ,,
Oil	110 ,,	2 ,,
Flour.....	10 ,,	15 ,,
Cereals	20 ,,	8 ,,
Iron.....	10 ,,	2 ,,
Cheese	10 ,,	5 ,,
Hides.....	10 ,,	— ,,
Skins	10 ,,	5 ,,

Mitylene. July 13.

The export of oil for Turkish ports has been very restricted during the whole of the week. A lot of 300 barrels of an approximate value of £2,000 was, however, despatched to-day to London. Imports have been on a very small scale. As regards the crop, the great drought continues, to the great prejudice of the next olive crop.

Larnaca. July 12.

Locust Beans.—It is estimated that forward sales made to the United Kingdom amount to 20,000 tons, shipment August/September and September/October. In consequence of these sales local prices are well maintained, the price now asked being equivalent to 99s. 6d. c.i.f.

Barley.—Up to the present the only shipments made have been for Alexandria.

CONSULAR REPORTS.

Patras.

H.M. Consul at Patras (Mr. F. B. Wood, I.S.O.) reports, under date July 6, that the growing crop of currants in that district promises to be a fine and abundant one if the weather continues favourable during the month. The present estimate is for a total crop of from 165,000 to 170,000 tons, which, after allowing for the retention of 35 per cent. of the Morea fruit and 40 per cent. of the produce of the Ionian Islands, would leave, with some 7,500 tons of old currants and retention warrants, about 132,500 tons available for export, or about 10,000 to 15,000 tons more than the average annual export of the last few years. It must be borne in mind, however, that the "Société Hellenique de Vins et Spiritueux" buys a large quantity of the fresh fruit for wine making, the purchases last year being equivalent to about 7,000 tons of dried currants, and these purchases must be deducted from the amount shown as available for export.

Adrianople.

The French Vice-Consul at Adrianople reports that the favourable harvesting outlook of two months ago is not being realised. The persistent drought and the winds from the south have since prevented the development of the cereals. Although it is difficult to issue any pronouncement on the result of the harvest before the month of October, there is every appearance that the production will be below the average in several regions.

There is, however, every probability of a good quality of hard corn and barley sown on the plains. The vintage crop promises to be good if the weather conditions continue satisfactory.

PRODUCE REPORT.

London, July 25.

There has been a moderate activity in the markets during the past week, and prices, with few exceptions, remained unaltered.

Sugar.

Beet is a little dearer. August was sold 13s. 1½d.; September, 12s. 7d. to 12s. 9d.; October, 10s. 7½d.; November-December, 10s. 6½d. Refined, English, Tate's No. 1 cubes, prompt, and August, 22s. 9d.; September-October, 22s. 3d.; November-December, 19s. 6d. No 2, cubes, prompt, and August, 22s. 6d. Foreign cubes quiet. Meyers, prompt, 18s. 4½d., f.o.b., Hamburg; Dutch, 18s. 7½d., f.o.b., Amsterdam; Russian crystals ready, 14s. 6d., f.o.b., Danzig.

Coffee.

Market quiet at about late prices. Colombian, fair to good bold greenish, 79s. to 82s. 6d.; mid., 74s. 6d. to 79s. 6d.; peas, 80s. to 84s. Futures easier; September sold 61s.; December, 60s.4½d. Closing: July, 61s.; December, 60s. 3d.

Currants.

The market is rather quiet, but prices are firm. There has been a marked demand for better qualities, which are getting very scarce. Prices are, for provincial, 26s. 6d. to 27s.; Amalias, 27s. 3d. to 28s.; Patras, 28s. to 29s. 6d.; Vostizza, 30s. to 32s. 6d.

Sultanas.

The demand for better grades of Smyrna fruit on the spot continues. Holders of ordinary and common fruit seem willing to come a little down, but few sales were realised.

Figs.

The crop is looking equal to last year, but the prices asked by some cannot be obtained.

Dates.

The market continues quiet without any alterations in prices quoted recently, and little is expected to be done for some time yet.

Seeds.

Linseed very firm. Calcutta, per 410 lbs., July-August, 62s. 6d. Rapeseed, July-August, 51s. Cottonseed quiet; Egyptian August, £8 15s. 6d.

Oils.

Linseed steady, spot pipes, landed, 35s. 9d.; barrels, ditto, 36s. 3d.; September-December, 33s. 10d. Cotton, quiet; crude spot, 25s. 4½d.; Hull, 23s. 9d.; refined, sweet, 31s.; ordinary pale, 27s.; Hull, 25s. 6d. Petroleum unaltered.

Oil Cakes.

Cotton cakes are a little dearer. Egyptian, £5 13s. 6d. to £5 14s., ex. quay. English, £5 18s. to £6 2s. 6d. Linseed cakes, best London made, £9 5s. 6d.

Wheat.

South Russian, on sample, prompt, 38s. to 38s. 9d. Maize firm. Barley is dearer and sparingly offered. Azoff, Black Sea, September-October, sellers, 22s. Oats quiet. Owing to reports of fine harvest weather in South Russian buyers appear somewhat indifferent.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending July 12:—Nothing has been done on our market this week; nevertheless, our sellers continue to maintain a very firm attitude, and nothing will make them give buyers the slightest hope of lower figures in the near future. Prices continue, therefore, at 16s. to 18s. for common lower grades Old or New, and from 19s. to 23s. for Old as to quality and strength. The arrivals amount now to 469 cases against 182 at same date last year.

Cotton and Cotton Goods.

EGYPTIAN COTTON.

New Laws Introduced.

(From Our Own Correspondent.)

Cairo, July 10.*

Two very important laws have been promulgated this past week. The first forbids the transport of unginned cotton from Upper to Lower Egypt, or vice-versa. The Rodah Bridge to the south of Cairo has been fixed as the boundary line, and no boats will be allowed to pass under it if they carry cotton that has not been ginned. Similarly, the Railway Administration will decline to convey consignments of that nature across the line, which has been traced right out into the desert on either side of the Rodah Bridge. For reasons with which readers of The Near East are doubtless quite familiar by now, the prohibition is a most necessary one.

The other measure referred to deals with the question of the destruction of the cotton plants at the end of the season. It enacts that the roots and stalks of the cotton, til (hemp), and bamia plants must be pulled up every year before December 15 in the provinces of Beni-Suef, Fayum, Minia, Assiut, Girga, Kena, and Assuan, and before December 31 in the provinces of Giza, Galiubia, Sharkia, Gharbà, Dakahia, Behera, and Menufia. In certain districts situated in the extreme north the date is prolonged until January 15. The importance of this measure reposes in the fact that the cotton-worm lives on the shoots which spring from the roots of the above-mentioned plants during the winter season, and so is enabled to exist until the following spring. If all those roots are torn up, the worm's means of existence will disappear, and so the ravages in the following season will be considerably minimised. Indeed, the authorities are confident that this measure will almost entirely exterminate the old generation. A similar law was issued in 1909, but the present one is much more comprehensive, and will be enforced much more rigorously. It is to be noted that both of these new measures have received the sanction of the General Assembly and of the Mixed Court of Appeal.

LORD KITCHENER AND EGYPTIAN COTTON.

In connection with the forthcoming visit to Egypt of a delegation of the International Federation of Master Cotton Spinners' and Manufacturers' Associations, Sir Charles W. Macara, the president, and Mr. Arno Schmidt, the secretary, had an interview on Wednesday with Lord Kitchener, who, as is well known, is doing such excellent work for the promotion of the cotton growing industry of Egypt. Lord Kitchener discussed the outlines of the programmes of the delegation's tour and evinced great interest in its details.

The delegation will consist of about 100 members representing twelve nationalities. They will arrive at Alexandria on October 27. Three days will be spent in Alexandria holding conferences with the members of the Alexandria General Produce Association and visiting cotton presses, oil factories, and the neighbouring Aboukir Estate. Two or three days will be spent between Alexandria and Cairo, inspecting some of the finest cotton fields of Egypt, ginning stations, and State domains. Five to six days will be spent in Cairo, where meetings have been arranged with the planters who are members of the Khedivial Agricultural Society.

The preparations are being made by an Egyptian Commission consisting of the Egyptian Secretary of State for Foreign Affairs, the Director-General of Agriculture, and the Secretary-General of the Khedivial Agricultural Society.

It may be remembered that the International Cotton Federation sent in 1907 a similar delegation to America, which resulted in the introduction of important improvements in the packing and handling of cotton.

* Delayed in transmission.

MANCHESTER REPORT.

Messrs. Reynolds and Gibson telegraph that the latest rise in the Cotton market has had the effect of checking business. Buyers refuse to be persuaded of the stability of present values, and consider present commitments, which are still large, sufficient for the time being.

Yarn.—Egyptian spinnings show little improvement, and altogether the yarn trade is distinctly quiet. Egyptian spot is in moderate demand, and after showing a little decline at the beginning of the week has recovered. Upper is being sold at easy rates, owing to the near approach of the new crop. Quotations of Brown are raised ⅛ for F. and G.F., 1-16 for F.G.F., while G. and Fine are unchanged. Upper is reduced 1-16 for all grades. Estimated sales, 2,600 bales.

Manchester Goods in Egypt.

According to the *Monthly Journal* of the British Chamber of Commerce of Egypt, June has not witnessed any appreciable change in the position of manufacturers in general, except, perhaps, that they have come somewhat nearer to the end of their contracts. Though the sum total of the month's sales falls far short of the production, manufacturers are still able to maintain their quotations, the various small orders which have been booked having been put through on the basis of present rates.

EGYPTIAN COTTON FIGURES.

Prem. of Egyptian over American		3·34		3·46		3·95

P.S.—The figures marked thus (?) are postulates.

N.B.—Owing to the continued heavy takings of Lancashire and the Continent, we have had to increase our total "Out of Sight" figures by 19,000 bales, viz., Lancashire 10,000 and Continent 9,000.

NEWS FROM ALL SOURCES

The Imperial Ottoman Bank announce that they have recently opened a branch at Sandikli, as a sub-office to their branch at Afion-Carahissar.

There is now a good demand for modern books of account in Turkey, which has lately taken kindly to their use. Office furnishings are also said to be in good demand.

The *Sabah* reports that the contract of M. Joly, Inspector-General of the Ministry of Finance, has been renewed till January 1 next.

The Sultan has presented a handsome carpet made at the Héréké factory for the new mosque built at Constanza at the cost of £T20.000. The Ottoman Consul at Constanza has telegraphed to the Imperial Palace expressing the thanks of the Mussulman community of Constanza.

Our Roumanian correspondent writes that the Bucharest Syndicate of Journalists met recently to discuss the question of constructing a club-house. The sum of £4,000 has already been collected; but as the cost of approved plans exceed this sum considerably it was decided that the construction must be put off till further amounts have been collected.

An Alexandria message, dated the 23rd, states that a bunker fire broke out on board the British steamer "Inverness," but was extinguished promptly, and that very slight damage was done.

A telegram from Tashkent announces the inauguration of the branch railway line from Khokand to Namangan.

The tender of the Vacuum Oil Company for the supply of petroleum to the Egyptian Police has been accepted.

The Hamburg and Anglo-American Nile Co. of Cairo have successfully tendered for the supply and erection of a tank and chimney for the coastguard condenser at Kosseir.

Messrs. Thos. Cook and Son (Egypt), Ltd., have been entrusted by the Egyptian Ports and Lighthouses Administration with the supply of a boiler for the Government tug "Marte."

The successful tenderers for sundry articles required by the Egyptian State Railways are Messrs. Morgan, Crossley and Co., Limited, Manchester, for the supply of cotton lamp wick; Messrs. Kannreuther and Co., Limited, Birmingham, cast steel round-nosed shovels, etc.; Messrs. Thos. Hinshelwood and Co., Limited, Alexandria, soda, resin, starch, etc.; Messrs. Th. W. Petersen and Co., Limited, Alexandria, Candia soap, emery powder, glue, etc., also for pick-axes, cast steel hammer heads, etc.

The recently constructed railway line between Baba-Eski and Kirk-Kilisse was formally opened on the 19th inst.

It has been decided to lay a second telegraph line between Constantinople and Smyrna, and Faik Bey, Inspector-General of Turkish Posts and Telegraphs, has gone to Smyrna in connection with the project.

Messrs. Priestman, Sunderland, have booked an order for a cargo steamer on account of Greek owners.

The Egyptian Ports and Lighthouses Administration give notice that the Gabbary dry dock will be ready for docking vessels from August 1 next.

Mr. Dunlop, Adviser to the Egyptian Department of Education, has been authorised to select, while on leave in England, sixteen teachers of English for service in the Government schools. Similarly, Mr. Graham, Director of the Public Health Department, has been asked to choose twelve veterinary surgeons for service in his department.

Shipping Intelligence.

THE DARDANELLES.

Black Sea Grain Shippers' Protest.

(From Our Own Correspondent.)

Odessa, July 22.

The reported renewed attack upon the Dardanelles by the Italians, and the probable re-closing of the Straits, has caused a veritable panic among the Black Sea grain-shippers, and urgent protests have been telegraphed to the Ministry of Ways and Communications by the Bourse Committees in Odessa, Nicolaieff, Kherson, Taganrog, and Rostoff. A re-closing of the Dardanelles would be disastrous to the grain-shipping trade in these waters just when the new season's crops are being garnered for export.

BRAILA NOTES.

Low Freight Rates.

(From Our Own Correspondent.)

Braila, July 19.

The abundant and general rains that we have had this week have considerably improved the prospects of the maize crop, but have rendered work in the fields temporarily impossible, so that arrivals of new wheat will be considerably delayed. This fact, coupled with the sudden and substantial fall in the grain markets, is causing the stagnation of business, which has now prevailed for some time, to continue. Steamers are finding considerable difficulty in booking cargo, and cannot obtain more than 10s. 3d. for either Antwerp or Rotterdam, though this rate is fully 1s. 6d. lower than that at which prompt steamers can be fixed in London.

The Mediterranean market is also lifeless, though Italy is at present the best paying customer for new wheat. The rate from the Danube is keeping steady at 12.50 frs. to 13 frs. for Venice, Naples, or Genoa. There is practically no demand whatever for Marseilles, and a Belgian liner of only 4,000 tons that has been berthed for that port has been loading here since the 29th of last month without having yet succeeded in booking her entire cargo.

Sulina is very quiet, and no cargo can reach that port for some considerable time yet. Spot rates are nominally 10s. for Antwerp and 9s. 9d. for Rotterdam, but there is hardly any inquiry.

For all that one would not be pessimistic, as large quantities of grain are due to arrive shortly, were it not that the news has just reached us of the closing of the Dardanelles. If confirmed to-morrow morning, it means enforced idleness and heavy losses to all connected with the shipping trade of the Black Sea.

The depth of water in the Danube is unchanged, river draft being 22 ft. 9 ins. and Sulina bar draft 23 ft.

ROUMANIAN AND BRITISH STEAMERS IN COLLISION.

The British steamer "Assiout," while entering Constantinople harbour on the 17th inst., was driven against the Roumanian tank steamer "Stella," which was anchored off Beshiktash. A rent was opened in the side of the "Stella," and she was beached between Cab-a-tach and Dolma Baghiché. She hailed from Batoum with a cargo of oil. She was subsequently refloated and, after temporary repairs, was towed to Chiboukli, where she unloaded her cargo, which was destined for Beyrout. She is to complete her repairs in the Golden Horn.

The yearly report of the Verein Hamburger Reever (syndicate of Hamburg owners) has just been issued, and we observe the following remarks regarding shipping to the Near East:—"Naturally, traffic to the Levant just after the war broke out suffered to a considerable extent, but it has now assumed its normal state, favoured by the 100 per cent. levied by the Turkish Government on Italian merchandise. Tramp owners have had a satisfactory year, although the closing of the Dardanelles has caused serious damage."

Stock and Share Markets.

Bank Rate 3 per cent. (May 9, 1912.)

SETTLING DAYS.

CONSOLS.
Thursday, August 1.
STOCKS AND SHARES.
In Mining Shares the next carry-over is August 9.

Continuation Days.	Ticket Days.	Pay Days.
Mon., Aug. 12.	Tues., Aug. 13.	Wed., Aug. 14.
Tues., Aug. 27.	Wed., Aug. 28.	Thurs., Aug. 29.

LONDON, July 25.

The markets were dull last week. They have been duller than ever this week. Consols are steadily sold. It is now said that the executors of a millionaire are disposing of shares in order to pay the death duty. The sales have all been done through a bank, and a ridiculous rumour ran round the Stock Exchange yesterday to the effect that some bank was in trouble. There was not the smallest reason for this tale; the explanation was perfectly simple.

Internationals.

The new issues still go badly. The Emba Caspian Corporation hangs fire. The money market shows a great disinclination to discount bills except at higher rates. The Government is holding up money, and no one can understand why. However, the war scare appears to be dying down, and foreign stocks were much stronger on Wednesday. German Threes, which had been done as low as 78½, recovered at 79, after having made up at 78¾. This is a preposterously low price, and compares very badly with the best English securities. Bulgarians are hardly mentioned. They made up at 91½, Egyptian Unified at 100¼ were dull. French Rentes did not benefit much by the speech of M. Klotz. There is talk of a syndicate being formed to hold Rentes at par. It is hardly likely to come to anything. Tintos move very irregularly, but as the copper market in the United States is strong, the general tendency for the next few months is bound to be upward. Russians are steady. Japanese showed slight weakness on the news of the serious illness of the Emperor, but no selling of any importance has taken place. Turkish Unified at 89¼ are ¼ per cent. up since the make-up. This is probably due to the circumstantial statement that Italy and Turkey had arranged terms of peace. This rumour has not been denied, and in Paris peace is considered a certainty.

Home Rails Flat.

The Home Railway market has been very flat on the dividend declarations, which are much worse than even the greatest pessimist imagined. Apparently all the railways went into the market and purchased coal at much above the usual contract price in order to be prepared for the coal strike. The Great Eastern lost £20,000 in this way, and the South Eastern and Chatham over £30,000. In addition to the bad dividends, the selling of stock from a deceased estate accentuated the fall. The stale bulls got nervous, and the whole market became demoralised. Now is, therefore, the time to buy, because traffics for the current half year are good.

American Prospects.

Americans should go better, as the crop prospects are excellent. Rubber is to be put up now that the big dealers have bought their stocks for the current season. This may make the rubber market firmer. Oil shares are dull. The bulls are trying to get out, but find a difficulty in getting the dealers to take shares. Mines are hardly mentioned, but Barnatos are said to be arranging a bull campaign in Kaffirs, and Sir Abe Bailey one in Rhodesians. Amalgamated Props are talked much higher.

Van Den Berghs.

Judging by the activity which is being evinced in the market in connection with these shares, the public is evidently fully alive to their merits as an industrial investment, and purchasers are not likely to long have the chance of picking them up at their present price of 50s. 6d. Indeed, if market opinion is worth anything, they will later on have to pay as much as £2 more per share. The company is exceedingly prosperous, and in the matter of dividends the outlook for the full current year is most satisfactory.

Egyptians.

The event of the week in the Egyptian market has undoubtedly been the meeting of the Egyptian Investment and Agency, at which Mr. Ably announced that the Lord St. Davids group would take an interest in the company, and that the Investment and Agency would widen its scope. As it has not any liquid assets, presumably Lord St. Davids will find the necessary working capital. Abdys, therefore, look cheap at 8s. 6d. Aboukirs carried over at 1⅝, Agricultural Banks at 5¾. It is rumoured that some amendment in the Five Feddans Law will be made. It seems impossible to believe that the Egyptian Government would pass a law that could injure its own bank. Perhaps the Agricultural Bank will be exempted from the law. The Delta Light Railway carried over at 8, and are now a shade harder. They are a very good purchase. The Government intends to buy the Helouan line, and has concluded a very favourable agreement with the railway with regard to its extension. The crops look good, being well above the average. Therefore, it seems wise to purchase Egyptian shares now whilst they are low. Some small buying has taken place during the last few days, but nothing of any moment.

NEW COMPANIES.

Samos Wine Co., Ltd.

On July 16 a new company with the above title was registered by Jordan and Sons, Ltd., 116-17, Chancery Lane, W.C., with a capital of £210,000, in £5 shares. The objects are to carry on the business of vineyard proprietors, wine-growers, producers of grapes and wines of all kinds, dealers in wines, bottles, casks, corks and stoppers, and to acquire the businesses carried on at Samos, Turkey, and elsewhere, as L. J. Missih and Co., J. and H. Nicolareizis, and Charles Fidao, jun. The signatories are: H. E. Wilkin, Vathy, Samos, commission agent; O. Missir, Vathy, Samos, merchant; C. Fidao, jun., Parallel Street, Smyrna, merchant. The company is private. The first directors (to number not less than five nor more than nine) are: L. Missir, J. Nicolareizis, H. Nicolareizis, C. Fidao, jun., and O. Missih. Qualification, £2,000. Remuneration, according to profits.

Anglo Balkan Trust, Ltd.

A company with the above title was registered July 15 by W. Webb, 175, Dashwood House, New Broad Street, E.C., with a capital of £2,400, in 2,000 preference shares of £1 each and 8,000 deferred shares of 1s. each. The objects are indicated by the title. Private company. The subscribers are to appoint the first directors. Qualification, 200 shares of either class. Registered office, 173-5, Dashwood House, New Broad Street, E.C.

COMPANY NOTES.

United Egyptian Lands.

This company has lately concluded the sale of three lots of land of a total area of 2,400 square metres of their building lands at Rodah Island, Cairo. The price obtained was P.T. 97½ (£1) per square metre for one lot, and P.T. 75 for the other two, working out at an average of P.T. 85 per square metre. The lots sold were part of the property (ex Kholoussi) figuring in the company's last balance-sheet (March 31, 1912) at L.E. 9,212 for the 11,930 square metres, or an average cost price of P.T. 77 per square metre. The amount of the sale price, viz., about £2,000, was paid two-thirds cash and one-third in two equal yearly instalments. Although the price obtained does not show a big profit for the company, it is a good one, taking into consideration that the three plots were all sold to a rich native, who will immediately start building on them, and that the terms of payment were advantageous, especially in view of the present state of the market, practically no sales being now effected in building lands in Egypt.

Agricultural Bank.

In connection with the proposed Five Feddans Law in Egypt, to which reference has already been made in these columns, there are people who argue that, even if the law should be enacted, the Agricultural Bank would probably be compensated by being allowed to lend in future larger amounts like the other mortgage banks, but they overlook the fact that such a solution might bring about a clash of interests detrimental to all concerned. The only equitable solution of the difficulty, in view of the Agricultural Bank's concession, according to a correspondent, would be to exempt the latter institution from the provisions of the suggested new law should it be enacted. It must not be forgotten that the bank was created by Khedivial Decree, and granted a concession for the express purpose of rescuing the small native cultivators from the hands of usurers, by granting them small loans at very moderate rates of interest, and it is consequently entitled to exceptional treatment at the hands of the Egyptian Government.

Corporation of Western Egypt.

At the meeting of the Corporation of Western Egypt on Wednesday, Mr. Robert Miller dwelt on the difficulty of the water supply. Their engineer had made a close study of the subject from a commercial point of view, and had come to the conclusion that the cost of pumping made land cultivation in the Oasis, as a commercial proposition, impossible. In cases where pumping operations were carried on the artesian flows increased, but other wells in the district were adversely affected, so that the supply of water in the aggregate was no greater. In face of these conclusions they had commenced boring with the intention of sinking to a depth of from 1,800ft. to 2,000ft. in the hope of proving a true, permanent, and sufficient artesian supply. If those operations did not meet with a proper measure of success the liquidation of the company would become inevitable.

PERSIAN POSTAL CLAIMS.

H.M. Legation at Teheran report that the Persian Government have issued new regulations respecting postal claims. Registers have been sent to all local directors for the notification of all claims at present outstanding, and any such claims not registered before January 6 next will not be recognised. In future all claims in connection with goods lost or damaged in the post must be notified to the Persian postal authorities within a period of six months for parcels in the interior service, and within one year for parcels in the international service.

THE FIVE FEDDANS LAW.

In a letter dated July 10 (which was delayed in transmission) our Cairo correspondent wrote as follows concerning the "Five Feddans," or "Homestead," Law :—

The "Homestead" Law has aroused a great deal of comment. The commercial community has been much perturbed, as it was afraid that the law would be put into effect before time had been given to consider the situation created by it. As a matter of fact, as the law had to have the consent of the Mixed Court of Appeal to make it binding on foreigners, it cannot be enforced, under the new arrangement made with regard to the promulgation of such measures, until three months after the approval of that Court has been obtained. The law is not intended to be retrospective, and so a sort of panic ensued amongst those to whom the fellaheen landowners owed money, and the Mixed Courts were inundated with loan-deeds and bills, which it was desired should be stamped and registered. The various Chambers of Commerce held a mass meeting, and decided that each should request its Diplomatic Agent to take steps to ensure that the law should not be put into effect until there had been sufficient time to study the question. The German Chamber of Commerce went so far as to sent a deputation to Lord Kitchener, who received it just before his departure, and is understood to have expressed his willlingness to reduce the undistrainable area to two and a-half feddans, and to postpone the enactment of the proposed law.

It must not be thought for one moment that the commercial community is hostile to this measure. One and all are ready to recognise the excellent intention of the British Agent, and the great benefit that the country as a whole would derive from the institution of a "homestead." But the idea seems to be that the relations between the fellaheen and the commercial element are of such a nature that the question requires very careful examination, and that any hasty decision might have unexpected disastrous effects on all concerned. From the reply given by Lord Kitchener to the German deputation, it is evident that due consideration will be given to the commercial interests involved. Indeed, it is quite contrary to the reputation of the British Agent to take a hasty decision in any matter, and the readiness with which he has listened to all manner of representations during the past nine months should be sufficient to reassure the public on the point of the enforcement of the proposed law.

In a later letter, dated the 17th inst., our correspondent writes :—

Last week I referred to the fact that the proposed introduction of this new law had caused a tremendous rush on the registration office of the Mixed Tribunals. The following figures give some idea of the extra work entailed : Between June 1 and 30 last year 1,215 deeds were registered; in the same period this year the number was 2,097; between June 20 and July 3,1911, only 810 registrations were made; whilst this year during these thirteen days no less than 5,846 deeds were presented for registration.

BANK OF EGYPT.

Official Receiver's Statement.

The following statement, dated July 18, has been issued by the Senior Official Receiver and the special manager of the Bank of Egypt, Limited (in liquidation) :—

"The Official Receiver and Special Manager desire to refer to the circular of May 17 last, which accompanied the application for payment of the first instalment of the call, and to inform you that all efforts both in England and abroad for the disposal of the assets to another company have failed. The only course now open is to proceed with the collection of the further calls, which, under the order of court, are payable on July 31 and September 30. The Official Receiver is pleased to be able to report that the has been very successful in the collection of the first instalment of the call, and that out of a total amount of £208,000 as much as £192,682 has been received up to the present, and he wishes to thank the shareholders for so readily responding to his application. Out of the sum thus collected £180,000 has been paid to the bankers in part discharge of the money borrowed from them at the commencement of the liquidation. The realisation of the assets in Egypt will proceed, and the Official Receiver and the Special Manager hope that, with care and economy, the three instalments of the call will eventually be returned; but, for reasons already conveyed to the shareholders, it is impossible for them to express a definite opinion.

"The total collections and payments from the commencement of the liquidation to the 10th inst are as follow :—Receipts.—Collections in London and Egypt (including cash balances at date of suspension). £1,276,276 2s. 10d.; amounts borrowed from bankers, £550.000; first instalment of call due May 31, 1912, £192,682 18s. 1d.; total, £2,018,959 0s. 11d. Payments.—To unsecured creditors, part redemption of loan certificates and bankers' advances, salaries, rents, charges, fees, etc., in London and Egypt, £1,970.879 7s. 5d.; leaving cash balances amounting to £48.079 13s. 6d. The payments made to the loan certificate-holders since the commencement of the liquidation represent 15s. 6d. in the pound in the original amount of the debt, which now stands at £328,529 14s. 3d., apart from interest, and the bankers have received £317,500 on account of their advances, thus reducing the amount due to them to £232,500.

"The financial position on July 10, 1912, is as under: Outstanding liabilities to loan certificate-holders, banks for advances, and creditors in London and Egypt, £602.567 13s. 11d. Less—Cash balances, £48,079 13s. 6d.; balance of purchase price of Khartoum premises, £6,750; leaving a balance of outstanding liabilities of £547,738 0s. 5d. to be provided by realisation of the Egyptian assets, and further calls on the reserve liability on the shares.

"In the circular of May 17 it was stated that a case had been laid before counsel to advise with regard to the position of the directors. The opinion has been obtained, and is to the effect: (a) That in order to make the directors liable for paying unearned dividends it would be necessary to establish (which counsel did not think could be done) that they were not justified in believing that the capital was intact, there being, according to the secretary's report to the board, a large margin in the reserves. (b) That with regard to their liability for mismanagement of the bank, counsel consider the directors under a heavy responsibility; but that, in the circumstances they set forth, it would be extremely difficult, if not impossible, to prove the damage the bank had suffered. (c) With regard to the auditors, counsel considered that there would be the same difficulty as there is against the directors in proving the actual damage. Counsel were, therefore, unable to advise proceedings being instituted against either directors or auditors.

"The opinion has been fully discussed with the committee of inspection appointed on the shareholders' behalf, and they concur with the Official Receiver that, having regard to counsel's opinion, it is not advisable to institute proceedings against either the directors or auditors."

FINANCIAL NEWS IN BRIEF.

The half-yearly interest due August 1 on the bonds of the Privileged Company to Protect Production and Trade in Currants 5 per cent. loan, drawn for redemption, will be paid on that and any succeeding day at the offices of Messrs. Emile Erlanger and Co., 8, Crosby Square, E.C.

The numbers are announced of bonds of the Société Privilegiée pour Favoriser la Production et de le Commerce du Raisin de Corinthe, drawn for redemption at par on August 1 at the offices of Messrs. Emile Erlanger and Co., 8, Crosby Square, E.C.

The Imperial Ottoman Bank announce the payment at their office of the coupons and drawn bonds of the Ottoman, Smyrna, and Cassaba Railway and Extension Company, 1894 issue due August 1.

The *Egyptian Gazette* reproduces a rumour to the effect that a syndicate will be formed, consisting of M. Emmanuel Zervudachi, M. Zaphiropoulo, of Marseilles, and other European capitalists, to take over the liabilities and assets of the Zervudachi estate, and to obtain a concordat from the creditors.

The National Bank of Servia has, in order to protect its gold reserve, raised the rate which it imposes on all cash payments in gold from 5 to 6 per cent. in the case of banks, and from 6 to 7 per cent. in the case of private individuals.

Messrs. Stern Brothers publish the numbers of 590 bonds of the Bulgarian Four-and-a-Half per Cent. Gold Loan of 1907, which have been drawn for repayment at par, and will, together with coupon No. 11, due on August 1, be payable at their offices on that date.

Nestor Gianaclis.—The numbers are published of 5 per cent. debentures drawn by lot at the Bank of Athens, 22, Fenchurch Street, E.C. Debentures may be presented for payment at the Bank of Athens daily between the hours of 11 a.m. and 2 p.m. (Saturdays excepted).

The receipts of the Ottoman Railway for the week ending July 20 amounted to £9,366, thus showing an increase of £1,818.

The revenue returns of the Egyptian Markets, Limited, for the week ending July 18 show a decrease of £161, being £617.

The Persian Government's most pressing need is money, but the receipt of financial assistance from Great Britain and Russia appears at present to be far off, says Reuter's Teheran correspondent.

Application has been made to the Committee of the Stock Exchange for admission to the official list of 35,000 shares of £4 each fully-paid, Nos. 1 to 35,000 (warrants to bearer) of the Hamburg and Anglo-American Nile Company.

The receipts of the Turkish Tobacco Régie for the month of June amounted to 21,100,000 piastres, as against 23,200,000 piastres for the corresponding period of last year.

EGYPTIAN INVESTMENT AND AGENCY.

Proposed Arrangement with a Powerful City Group.

The eighth ordinary general meeting of the shareholders of Egyptian Investment and Agency, Limited, was held on Wednesday last, at Egypt House, 36, New Broad Street, E.C., Mr. R. C. Abdy (the chairman) presiding.

The Secretary (Mr. H. O. King, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The report has been printed and sent to all the registered shareholders, and is at present on the table for those who have not had it sent to them, so I propose that we take it as read. (Cries of "Agreed.") A shareholder wrote to say that our annual meeting was constantly held at a rather later date each year, and is being held very late this year. The reason is that we have been running our company on very economical lines, with a board of three, and those three are very busy people, and have not been able to meet together in London until to-day. I myself only arrived in England on Friday last, and it was to save the company the expense of special journeys that we retarded the meeting this year. Business has been virtually dead, so far as financial transactions in Egypt were concerned, during the past twelve months, and we had little to report beyond stating that we were standing on the positions we already held, so that the meeting is not so important as it would have been had we had flourishing business to talk about. Out of our capital of £190.000 our investments have cost us about £160,000, and these show a very considerable depreciation, which, I am afraid, is the prevalent condition of Egyptian stocks and shares. We are very much in the gloom at present, but the real state of the country is very much better than it has been for some time past. The fellaheen are well-to-do; they have never been in such a prosperous condition as they are in now, and undoubtedly, as all the country turns on cotton and on agriculture, I think the future, either near or distant, will be very much better than the prices in the stock and share list show to-day. Our own investments, I like to think, are as good as can be, so far as Egyptian securities are concerned. The list is before you in the balance-sheet, and I always like to think that being on our list is the mark of a sound security and respectability for stocks and shares in Egypt. As I have said, there is a very considerable depreciation, but it is nothing to what might have been had we not been very careful in our investments.

It is evident that, going on in the present way, we are bound to incur considerable annual expenses—though we have cut them down to the lowest possible figure, namely, about £2.000 a year—without having an adequate return, and any new business which is offering is of scarcely an encouraging enough nature for us to launch out into it. We have, therefore, for some years past been trying to find a more promising line of action for the future of our company, and I am happy to say that since the issue of our report we have come to terms for a sort of fusion of interests with a very powerful group in the City of London, who are now acquiring a substantial shareholding in this company, and I am certain that great benefit will result from this in future. I refer to the group of trust companies with which Lord St. Davids is associated—namely, the Government Stock and Other Securities, the Omnium, the Premier, and the International Financial, and he has also a group in Scotland. I am certain that when I come to explain the nature of the changes we are going to ask you in the future to authorise in connection with our company you will see that it will be the wisest step for us to take. The first thing will be that we propose to enlarge the scope of the field of action of our company. In the past we were entirely limited to Egypt. Unfortunately, Egypt in the last five years has not been encouraging, nor do I see in the very near future any very great prospect of a sudden revival of activity there in financial business. What we propose to do is to call a special meeting, notice of which will be sent out at the close of the present meeting, with a view not only to making certain changes in the name of the company, which we propose to call the Egyptian and Foreign Trust, Limited, but also to enlarge the scope of the undertaking, so as to allow us to work outside Egypt and to benefit by a mutual exchange of business with these different trust companies. Mr. A. F. P. Roger (one of the managers of Lord St. Davids's trusts) has joined the board, and we shall later on ask you to confirm his election. He has only just accepted office, and, unfortunately, has been called away by special business to America, or he would have been delighted to be present to-day to meet you. These trust companies to which I have referred will associate our company with them in their various transactions, and with the powerful lines of business they have they will enable us to utilise our capital and our activity very much more than we could if we were confined to the Egyptian field. The name of Lord St. Davids is, I think, a happy one to put before you, and will be a very good augury for the future.

As regards business in Egypt itself, agriculture, as I have told you, is good. The crop promises well, and we have in Lord Kitchener a first-class administrator who is pushing reform in every direction. Perhaps we are going rather fast with some of the laws, which are rather difficult to put in black and white in a satisfactory form, such as the Five Feddans Law, which, I think, will be evaded to a great extent by the little people, but not by the big, and which, no doubt, will be supplemented by other laws such as there are in other countries, to say that fellaheen may not sell their land except to fellaheen. If that law is supplemented by other laws, it will undoubtedly be of great value in restraining usury in that country. If it is not, I am afraid it will be got round and evaded very considerably. The cotton crop promises exceedingly well. That should give great work to our Ginners Company, which has just, I believe, completed a most satisfactory year; in fact, they have ginned only about 50,000 cantars less than the record crop they had the year before. That should ensure a very satisfactory dividend, and we have a considerable holding there—some 30,000 shares. Last year they paid a little over 7 per cent., but they put very large sums to reserve. They should do even better, perhaps, this year, or at least as well, and pay as satisfactory a dividend. The Sidi Salem Company, in which also we have a large holding, and are continually picking up cheap parcels of shares, is developing its land in a really first-class manner. Land development in Egypt must always be a matter of a long time, though in the long run it undoubtedly is very attractive, and returns the capital employed many times over. It is not in dividends that land reclamation can show its result, but in the increase in capital value in the long run. Those are our two principal holdings. Another of our holdings is in the Agricultural Bank, which I, personally, think is doing uncommonly well. This new law may upset its business a little, but no doubt, in the long run, it will be provided for by the Government, who take a great interest in its future. I do not think I have anything further to say, except to warmly recommend your acceptance of the election of Mr. Roger to the board and the interest taken by Lord St. Davids's group in our shares. I beg to propose: "That the directors' report and annual statement of accounts for the year ended December 31, 1911, be adopted."

Mr. R. Percy Sellon, M.I.E.E., seconded the motion.

Mr. Kahn congratulated the directors upon the arrangements they were about to make with Lord St. Davids's group, and asked whether it was proposed to continue the Commercial and Agency Company of Egypt.

Mr. Rikoff expressed his approval of the board's proposals, and wished to know how the company could guarantee a credit up to £5,000 in the case mentioned in the report, having regard to the fact that they appeared to have no ready cash.

Mr. Davenport said he would like to join in the chorus of praise with regard to the arrangement referred to by the chairman, but he felt that before he could do so some details should be given of the proposed working arrangement. Did it involve a reorganisation, reduction, or increase of capital, and were the shareholders to receive shares in another company?

The Chairman, in reply, said the Commercial and Agency Company had had to draw in its business owing to the unsatisfactory nature of Egyptian credit in the interior, but the year had resulted in a small profit and in getting the assets which they had originally into a more liquid form. The £5,000 was covered to this company by merchandise and bills, and to-day the amount was only about £1,500. So far as their finances were concerned, Mr. Rikoff appeared to think they had no liquid capital; but they had very considerable credit, and the gentlemen who were joining them evidently thought so too. The question of capitalisation must be left until the return of Mr. Roger from America. At the meeting to be held on August 9 not only would the shareholders be asked to change the name of the company, but also to alter one line in the memorandum of association, in order to give the company power to trade in any part of the world. He might add that Mr. Cruikshank, of the Aberdeen Trust, who was present at the meeting, had consented to join the board after the new arrangement had been carried through. The board would be reorganised and made larger.

The resolution was unanimously adopted.

Mr. R. C. Abdy was re-elected a director, and, in thanking the shareholders for this mark of their confidence, mentioned that it was most likely he would not be chairman of the reconstituted board, and might not even be on the board at all, as he would be in Egypt. They would, however, have a first-class board to look after their interests in London.

The election of Mr. Roger to the board was unanimously confirmed, and Messrs. Russell, Harris and Co. having been reappointed auditors, the proceedings terminated with a vote of thanks to the chairman and directors.

A NEW DEPARTURE in Marine Engineering. All drawings made and complete Patent granted. Estimated speed to be obtained 80 to 100 miles per hour. About £2,000 required to build working model. One half share offered. Principals or solicitors only apply in first instance to Q., NEAR EAST, 16-17, Devonshire Square, Bishopsgate Street, E.C.

NOTES OF THE WEEK.

Although the situation in Turkey is discussed elsewhere in this issue, space must be found here for a recital of the events that have crowded one upon the other during the past week. Certain changes have had to be made in the personnel of the Cabinet, and, according to its latest composition, Zia Pasha will exchange the portfolio of Finance for that of the Interior, being succeeded in the former Ministry by Abdurrahman Bey, a member of the Commission of Financial Reforms. Ferid Pasha, who could not be persuaded to accept the portfolio of the Interior, becomes President of the Senate. Reshid Akif, who had been appointed President of the Commission of Reforms for Albania, has retired in favour of Marshal Ibrahim Pasha, the former Vali of Tripoli, and remains in Constantinople. It is reported that Reshid Akif resigned his appointment because he regarded the powers conferred upon him as inadequate to the task before the Commission. Other official changes are in progress throughout the country, owing in part to the resignations of various Valis who have been prominent partisans of the Committee of Union and Progress. In the Palace the First Chamberlain and the First Secretary to the Sultan, both strong adherents of the Committee, have been relieved of their posts.

No small sensation was caused in Constantinople when on July 25 the President of the Chamber read out to the House a letter purporting to have been addressed to him by the Military League. The message, which was couched in somewhat truculent terms, called upon Halil Bey to retire and to dissolve the Chamber within forty-eight hours. As was to be expected, this ultimatum stirred the deputies to a great display of eloquence and fighting spirit, and the expiry of the time limit promised the most critical developments. The Government at once undertook to inquire into the circumstances of the letter, but no official explanation of it has as yet been given. It is, however, generally accepted that the "ultimatum," if not purely a practical joke, emanated from military extremists acting without the authority of the Military League or from agents of the Committee of Union and Progress, who counted on throwing discredit upon the corps of officers. The Committee has spared no pains in exploiting the incident in its own interests, but excess of zeal has helped to defeat its aims. Whatever may have been the origin of the letter, it reflects accurately the fact that the problem of the Chamber is pressing seriously upon the new Cabinet. As the avowed nominees of the Committee, the deputies must prove a source of embarrassment to a Government that has set to work to undo the mistakes of the last Cabinet, and their presence in Constantinople is certainly a standing provocation to the Albanians. The arbitrary dissolution of the Chamber could be denounced as an unconstitutional act, and the Cabinet is, therefore, compelled to find other means of ridding itself of a Parliament that was manifestly elected for the most part by illegal methods. On Tuesday the Grand Vizier met the Chamber and delivered a statement of the Government's policy. The occasion was made a trial of strength between the Committee of Union and Progress and the new Cabinet; but the latter held its ground and insisted upon the Chamber recording its vote, whether of confidence or no confidence, the same day. A dissolution would rob the Committee of its last bulwark in the country, and it was, therefore, to its interest to avoid pushing matters to an extreme. After an acrimonious debate the House gave its approval to the Government's programme by 113 votes to 45. This majority, however, cannot be held to have solved the problem of the Chamber. While the Cabinet, or most of its members, might be content to try to work with the present Parliament, after subjecting some of the more flagrant cases of "made" elections to a judicial investigation, the Military League is supposed to be bent upon fresh elections, and the Albanians have hitherto insisted upon a dissolution as a *sine quâ non* for the cessation of hostilities. The Cabinet can count on a very short lease of life unless it is upheld by the League, and although the latter might be persuaded to agree to an indefinite adjournment of the Chamber over the period of the war with Italy, it is by no means certain that this compromise would prove acceptable to the Albanians.

On Wednesday the Cabinet submitted to Parliament a Bill for the modification of Article VII. of the Constitution which would allow the Sultan to dissolve the Chamber without the assent of the Senate (as is now necessary), provided he summoned a new Chamber within six months. After another stormy debate the sitting was suspended for lack of a quorum, but the discussion was to be renewed the following day, and the Government has expressed its determination to push the Bill through the House this week. The proceedings in the House indicate the Cabinet is veering round to the view that dissolution is inevitable. It is on this point, however, that the Committee of Union and Progress is likely to offer all the resistance in its power. According to a report from Salonika, members of the central organisation have been visiting that town with the object of gauging the local feeling

Digitized by Google

towards their party. Although the investigation is not expected to afford them much encouragement, it is clear that the Committee is not inclined to give in without a struggle, and for this reason the Cabinet would probably be consulting the best interests of the country, if it lost no time in an attempt to separate the moderates from the extremists among their opponents. The determination of some of the Ministers to have no parleying with the Committee may make this course difficult; but, for reasons that are set forth elsewhere, it would seem to be the soundest policy to pursue.

An armistice prevails in Albania. The Parliamentary Commission sent by the new Cabinet has arrived at Prishtina, and negotiations are proceeding with the insurgent chiefs. Practically the whole of the province is under rebel control, and as the bulk of the army has sided with the insurgents it is clear that the Government will be confronted with a very serious situation, if it fails to come to terms with the Albanians. Before the conclusion of the armistice the latter had already been victorious over Government troops. In an engagement in the Prizrend district on July 18 two battalions of regulars were defeated; three hundred Turkish soldiers fell fighting, six hundred others were taken prisoners. The commandant, who had been accused of cruelty to Albanians, was tried by court-martial, and hanged within a hollow square composed of captive troops. Successes of this nature may lead to more extravagant demands on the part of the Albanians, unless the negotiations are handled with great skill by the peace mission. The statement that the Committee of Union and Progress has stipulated as a *quid pro quo* for its acquiescence in the new order that its policy of centralisation should be maintained by the Cabinet indicates that it is afraid of the demand for an autonomous Albania. It is difficult, however, to believe that any Turkish Government would go to this extreme except after a fierce struggle, if only for the reason that the autonomy of Albania would necessarily be followed by a similar demand from Macedonia. If the Albanians can secure redress of their chief grievances, they have little to gain in the long run by adopting a policy which must result sooner or later in violent alterations to the map of the Balkans.

The Grand Vizier's references to the war with Italy on the occasion of his statement of policy delivered in the Chamber are regarded as having been couched in less bellicose terms than those employed by the late Cabinet. Ghazi Mukhtar Pasha declared that, until bases of peace compatible with Turkish rights, honour and dignity had been found, the Government would continue with rigid resolution to defend the country and protect its rights. When an attempt was made to interpret this pronouncement as an undertaking to continue the war so long as peace was not concluded on the basis of the maintenance of Ottoman suzerainty, the Government's spokesman repudiated the motion on the ground that the Cabinet's intentions had only been expressed in general terms. As the surrender of Ottoman territory, except in a clear issue of *force majeure*, is held to be contrary to Moslem law, it is of interest to note that the tenets of Islam have wisely provided for an occasion when the Sultan, without actual defeat in battle, may find it necessary to "delegate" some of his authority over certain districts to a non-Moslem vicegerent. The situation in Tripoli may on investigation be found to provide just those circumstances in which the latitude thus allowed to the Sultan might be applied. If a ruling to this effect could be given, it should not be difficult to bring the two belligerents to a common meeting ground in regard to the actual terms of peace.

The only overt act of war between the Italians and the Turks during the week has been the bombardment by two Italian men-of-war of the Turkish encampment and forts situated to the north of Hodeida. Two forts are reported to have been destroyed, together with the ammunition stored in them, while the explosion of a magazine in the camp completed the havoc wrought in that direction by the naval guns. According to the official report of the Italian raid on the Dardanelles, the object of the attack was to torpedo the Turkish fleet. The attempt failed, all the five torpedo-boats except one being hit, though, it is stated, without damage.

The Egyptian conspirators have been committed for trial at the August assizes. It is now stated in a telegram from Cairo that the investigations of the police indicate that the Nationalist party has had no connection with the alleged plotters in so far as it might be implicated in the charge with which the men arrested stand accused. The precise value, if any, of the documents seized by the authorities is, however, not likely to be revealed at this juncture, and there is no need to follow the speculations regarding the existence of a secret society. As our Cairo correspondent points out in his letter this week, neither the limited conspiracy nor the discovery, if such has been made, of any secret organisation would detract to any serious extent from the political and economic peace that Egypt is now enjoying. The aspirations of the extremists of the Nationalist party are known, but so long as the bulk of the people keep aloof from political agitation and are able to devote their energies to the promotion of their own material prosperity, the chief objects of ordered government are being attained.

Further inquiries addressed to the Secretary of State for Foreign Affairs in the House of Commons on Tuesday failed to elicit any more favourable report of the situation in Persia. Sir Edward Grey could only acknowledge that the want of money was a great difficulty in the matter of securing any improvement in the conditions of the country, while on the other hand it was impossible to secure a loan unless the British Government would be sure that the money was going to be well invested. An agitation is being maintained in Tabriz against the Sipahdar, who has been appointed Governor-General of Azerbaijan, and there has been a recrudescence of trouble at Kerman, where it is reported that a number of people have taken refuge at the British consulate.

Reports from Sofia state that the "Inner Organisation" of the Macedonian revolutionary committees is preparing for further activity in Macedonia, and at the same time to force the Bulgarian Premier to abandon his "Turcophil" policy. If there be any truth in this statement, it is to be hoped that the Bulgarian Government will be able to compel this body to stay its hand. The new Cabinet in Constantinople has given evidence of its desire to adopt a more liberal policy towards the subject races, and there could be no more inopportune moment than the present for an attempt to revive a campaign of outrages in Macedonia. The Bulgarians of Salonika are said to have issued a manifesto condemning the action of the "Inner Organisation," which, in its anxiety to embroil the Macedonian population, would seem not to stop at "all manner of misdeeds and crimes" against its own fellow-countrymen in that province.

CONSTANTINOPLE LETTER.

(From Our Own Correspondent.)

Constantinople, July 27.

On Sunday last the new Cabinet, which its admirers have already described as the "Great Ministry," was formed under the presidency of Ghazi Mukhtar Pasha, Its composition was as follows:—

Grand Vizier	Ghazi Mukhtar Pasha.
Sheikh ul Islam	Djemal-ed-din Effendi.
President of the Council of State	Kiamil Pasha.
Minister of Justice	Hilmi Pasha.
War	Nazim Pasha.
Marine	Mahmud Mukhtar Pasha.
Foreign Affairs	Gabriel Nuradunghian Effendi.
Agriculture	Reshid Pasha.
Education	Said Bey.
Evkaf	Damad Sherif Pasha.
Public Works	Mehmed Pasha.
Finance	Zia Pasha

The news of the appointment, and still more of the composition, of the new Ministry delighted the populace and filled the Committee of Union and Progress with consternation. The *Tanin* described the new Ministry as a "Ministry of revenge," and was supported by the *Hakk*, and to a certain extent by the *Jeune Turc*, in its campaign. The more cool-headed observers of the situation shared neither the optimism of the masses nor the pessimism of the Committee extremists. They realised that the latter were not really indispensable, and that the Constitution ran no risk from the Cabinet of elder statesmen; but they understood clearly enough that a Cabinet which had come to power against the wishes of an overwhelming majority of a packed Parliament, and still more of the Central Committee organisation, ran great risks from an offensive return of the Young Turks if it failed to dissolve Parliament. They also were aware that differences of opinion between Mukhtar and Kiamil on the Constitutional question were to be feared; that it was only fear of the military and of the Albanians that forced the majority of the Young Turks to accept the *fait accompli*, and that the "Cabinet of all the talents" would have to "sit upon bayonets," an uncomfortable throne, till the question of the dissolution of Parliament was settled in its favour. The event has somewhat justified their apprehensions. In the first place the ex-Grand Vizier Ferid Pasha refused the portfolio of the Interior, and this most important Ministry remains without a Minister. Next the Committee extremists, after recovering from the first shock, began to show their teeth. On Thursday afternoon Halil Bey, the President of the Chamber, produced a missive couched in the most violent terms, which purported to come from the Military League, and which he had received the previous night. It compared the Chamber of Deputies to a club, or a "penny gaff," and called upon it to dissolve itself within twenty-four hours or take the consequences. The House was immediately seized with hysteria. No one thought of asking whether the "ultimatum" came from the Military League or not. Talaat, Said, and Halil Beys announced their intention of dying for their country and the Constitution. Omar Nadji Bey, Vartkes, Masliah, all the Jewish, Armenian, and Caucasian "fedais" in the House, began to gesticulate like semaphores and rant like barnstormers. Eventually the Minister of War appeared and remarked that the threatening letter was in all probability a bluff, that "bluffing" had become a common practice since the Constitution, and that Halil's cook and guardian policeman, who had received the letter, would be summoned to give evidence on Saturday. The whole extremist Press, however, followed the lead given by Halil, and is now vigorously engaged in attempting to discredit the Military League. There is some reason to believe that the whole business was nothing more than a practical joke concocted by a few cadets and second lieutenants, and artfully used by the Committee to strengthen its position. It is certainly most singular that Halil Bey during the twelve hours that elapsed between the receipt of this letter and his production of it in the Chamber should have made no communication whatever concerning its contents to the Minister of War, the Grand Vizier, or the Palace. Meantime the Committee Clubs are doing their utmost to make capital out of their version of the incident, the soldiers are furious at the attacks made on their honour, and between Committee extremists and soldier politicians the Government is in a most difficult position.

Albania.

But if the situation in Constantinople is grave, that in Albania is graver still. During the last ten days the whole, or nearly the whole, of the forces in Kossovo have either joined the Albanian insurgents or refused to attack them. The revolt has spread south into the Tosk country; the Government officials are powerless or in flight, and Djakova appears to be the centre of a sort of provisional Government composed of mutinous colonels and Albanian chiefs; while Prishtina, which commands the Uskub-Mitrovitza railway, has fallen with all its stores, three batteries of artillery, several maxims, and about 5,000 stands of arms into the hands of an army of some 20,000 insurgents stiffened by military deserters and led by Hassan, ex-M.P. for Prishtina, Riza Bairaktar, ex-M.P. for Djakova, Idris Sefer, Hassan Hussein, and other chiefs and politicians. Two battalions which showed fight at Tchernoleva were attacked and cut to pieces by Riza's column from Djakova and Prisrend, and their leader, Haireddin Bey, whom the Albanians accused of gross severity during the recent outbreak and in 1911, was taken prisoner, tried, and hanged by the neck. After the battle which occurred on the 19th, Riza marched east, joined hands with Hassan and his men, and summoned Ghilan to arms. Ghilan sent 2,000 men to the front; 5,000 more are reported as arriving from Vuchitra under Bairaktar Abubekr, and Yahia of Prisrend has now raised Lyima. Further west and south everybody who is of note seems to have taken to the hills, several towns have been occupied by the insurgents, and the arms depôts at Avlona, Argyrocastro and Berat are reported to have been plundered. Altogether an unpleasant situation, and one which excuses the reluctance of any elder statesman to accept the portfolio of the Interior.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 24.

Official Report on the Conspiracy.

The Government issued on Sunday a communiqué giving details of the result of the inquiry into the conspiracy. It appears that the number of proscribed persons was five, and not three as supposed up to now, for M. Platon Dilberoglu and H.E. Mohammed Magdi Pasha, both Councillors of the Native Court of Appeal, were also threatened. It is interesting to note that M. Dilberoglu presided over the trial of Ibrahim El Wardani for the murder of Boutros Pasha Ghali in 1910, and that Magdi Pasha fulfilled a like duty at the trial a short time ago of Mohammed Bey Farid and Ali Bey Kamel. The motive for the conspiracy against these two judges is, therefore, fairly obvious.

The act of indictment drawn up by the Procureur-General accuses Imam Waked, student, aged twenty-four; Mahmoud Taher El Arabi, pupil, aged eighteen; and Mohammed Abdel Salam, of the *Lewa* staff, aged twenty-four, of having associated themselves in order to carry out the murder of the Khedive, the Prime Minister, the British Agent, M. Dilberoglu, and H.E. Mohammed Magdi Pasha. It accuses El Arabi of having proceeded to Alexandria on June 26 with the intention of accomplishing the assassination of Said Pasha, of having returned to Cairo and lain in wait with the same intention for Lord Kitchener at the Cairo station on June 30. The indictment accuses Imam Waked of having originated the conspiracy, of having incited his two companions to make the proposed attempts, of having accompanied El Arabi to Alexandria in order to advise him of the best way to attain his object, and of having supplied him with money to cover his expenses whilst in Alexandria. The three prisoners are further accused of having renewed their criminal agreement on the night of July 1. In the circumstances they stand charged with having committed the crime provided for in the law dealing with criminal conspiracies, which was promulgated in 1910 after the Boutros Ghali assassination. In consequence, the Procureur-General, who will personally lead for the prosecution at the trial, demands that they shall be sent before the Assize Court, and that El Arabi and Abdel Salam shall be punished for active participation in the plot in accordance with the second paragraph of the new law. With regard to Imam Waked, the indictment claims that the fourth paragraph shall be applied to him. That paragraph inflicts a heavier sentence on those who have organised or incited a criminal conspiracy.

With regard to Hassan Kamel, the brother of the celebrated Nationalist leader, who is also accused of complicity in the plot, it has been decided to keep his case back until the arrival of certain evidence from Italy. One of the witnesses, a Mr. Joseph Mosseri, who had heard Hassan Kamel utter threats against the Khedive and Lord Kitchener when he was in Alexandria, had in the meantime left for Italy; and as his evidence has now assumed great importance, it has been necessary to apply for it through the Italian Courts. As soon as this has been accomplished—and it is not expected to take long—the case against Hassan Kamel will follow the proper legal course. The case against Hassan Nafeh, the fifth prisoner, has been filed provisionally, owing to insufficient evidence as to his complicity, and he has been liberated. Considerable curiosity exists as to the identity of the fourth accomplice, who escaped when the arrest was made at the Shoubra café. It is fairly certain now that he was an agent of the secret police. The committing magistrate has already received the dossier, and the prisoners have been summoned to appear before him to-morrow. It is expected that the case will come before the August Assizes, as the committing magistrate has to give his decision within eight days of the receipt of the dossier.

Exaggerated Reports in Europe.

The exaggerated reports regarding this conspiracy and the state of the country which have been circulated in Europe, and which must by now have reached England, have caused considerable annoyance out here, and have served to increase the general indignation evoked by the discovery of the plot. It is, to say the least of it, ridiculous in the extreme to assert that because a criminal conspiracy against the head of the State and other high personages has been discovered, the country is in a dangerous condition. As a matter of fact, Egypt is enjoying a state of political and economical peace that has not fallen to her lot for over six years; and the discovery of the conspiracy and the secret society, far from disturbing that state, will enable the authorities to ensure its continuance. For the discovery has placed them in complete possession of information regarding the Nationalist party, the lack of which has considerably hampered their supervision of the disturbing element during the past few years. Of course, we know whence these exaggerated rumours have sprung. Our past experience has led us to expect such distortion of the true facts of any occurrence in Egypt. It is as well, however, to nip these false statements in the bud thus early.

Utilisation of Water Power at Assuan.

The Egyptian Government has entrusted Mr. Murdoch Macdonald, the Under-Secretary of State for Public Works, with the carrying out of several missions during his absence on leave this summer. The most important of these is the one which will necessitate Mr. Macdonald's visiting Sweden, where he will study the means by which water-power is utilised in that country for the production of nitrate of potassium, which is required for the fabrication of artificial manure. In view of the recent announcement made by The Near East, this mission will be followed with great interest.

The Nile Flood.

Considerable anxiety is still expressed as to the Nile flood, and there are many complaints of absolute lack of water to irrigate the fields. It appears that the reason of the shortage in water has been the absence of the little flood, which usually comes down in May or June and reaches Lower Egypt about the end of the latter month. This little flood comes just at the time when the Nile is somewhat low, and most water is required for irrigation purposes. Its failure this year meant the strict institution of rotations, but it does not necessarily mean that the main flood will be short. Indeed, from a diagram issued by the Survey Department, it is evident that the levels on the Upper Nile are now rising quite normally, and consequently we may look for the great rise within the next ten days.

The Prime Minister.

H.E. Mohammed Pasha Said, the Prime Minister, who has been acting as Regent, left for Europe on Thursday. He was accorded a magnificent send-off, and was waited on before his departure by quite a large number of provincial deputations, who had been specially commissioned to tender their congratulations at the fortunate discovery of the plot. H.E. Hussein Rushdi Pasha, the Minister of Justice, will act as Regent until the Khedive's return, which is expected to take place on August 14.

The Torpedo-boat Station at Alexandria.

The announcement made by Mr. Winston Churchill yesterday that a torpedo-boat station was to be created at Alexandria serves to throw some light on an event which has been puzzling the local mind not a little, and at the same time it gives a colour of accuracy to a recent announcement made by the *Tachydermos*. Ever since Sir Archibald Berkeley Milne arrived at Alexandria on board H.M.S. *Good Hope* speculation has been rife as to the meaning of this visit, and the conclusion was come to that it had something to do with the Mediterranean question. It is now evident that that deduction was correct. The announcement made by the *Tachydermos* was to the effect that a British naval base is to be made between Mex and the island of Agami (Fort Agami). It remains to be seen whether this paper, which so accurately anticipated Mr. Churchill's statement, is as correct in its other details. Out here it is considered that the decision to create a torpedo-boat station at Alexandria is a signal victory for Lord Kitchener.

NOTES FROM SMYRNA.

(From Our Own Correspondent.)

Smyrna, July 22.

Military Preparations.

Events during the past few weeks have been mainly connected with the considerable military preparations resulting in the concentration of large bodies of troops in this neighbourhood, with a view to repelling any hostile action of the Italians on the coast line. The presence of thousands of men camped round Smyrna, in the close vicinity of ripening crops, vineyards, and fruit farms, was for a moment viewed with concern, if not consternation, both by farmers and by the inhabitants of the villages in the district. It was feared that if the predatory instincts of the troops, as remembered in the Hamidian times, were not checked the consequences would prove disastrous to farmers. The troops have come in their thousands; camps lie in all the surrounding villages, and crown many of the small hills over miles of country; and manœuvres, route marches, sham fights, and reviews are constantly in progress, but it is now generally admitted that the conduct of the troops is beyond all praise. Neither damage to crops nor molestation to persons have been reported, nor has a single incident occurred reflecting the least discredit on the army.

Praise for the Turkish Soldier.

The following extracts from a letter written by the Baroness van Hemstra to her father, Mr. Richard Whittall, and from which I am kindly permitted to quote, give eloquent expression to facts that are now fully recognised. Baron van Hemstra, I may add, farms a large property fifteen miles distant from Smyrna, where the bulk of the troops are camped:—

I can hardly believe that only six weeks ago I dreaded the thought of an encampment on our farm. It seemed impossible that we should escape annoyance with 9,000 reserves knocking about the place during harvest time! But the impossible is just what *has* happened. We have had no complaint to make. The behaviour of the soldiers has been exemplary, and I think that great credit is due to their officers, because, although the vast majority of the men are quite honest peasants, they were, after all, but undisciplined fellows when they arrived here, and it is marvellous to see the improvement in their general looks and bearing in that short space of time. As for the officers, we have been in almost daily communication with them, and have had the pleasantest interchange of hospitality and friendliness. It has been a real privilege to know the Colonel in command, Sucri Bey, in whom we have been enabled to see a fine example of the true Turkish gentleman and active soldier.

Yesterday evening we drove to the Develikemy camp to have dinner with Prince Azis. His Highness was very charming, and I would not have missed dining in a Turkish camp for anything. It was an evening to be remembered. The picturesque encampment on the border of the Develikemy pinewood and our dinner among Turkish officers in time of war, all very nice men, speaking French and German (and just imagine! one youngster among them, an Arab with an intelligent face, is an enthusiastic supported of the raising of women to equality with men, and has just written a book on the subject!), and all this to the accompaniment of delightful music!

Here's a rather pleasing incident which took place the evening before we dined there:—An old Greek went to see his son, who was serving in the Develikemy division, and, as he had his daughter with him, the eleven Turkish soldiers who shared quarters with the young Greek turned out of their tent and spent the night in the open, so as to allow their brother-in-arms to have his old father and sister with him. The act came quite spontaneously from the good fellows. I wish you could have seen the hospital; I am sure it would have interested you. It consists of six large tents. We visited three of them, and were struck with the cleanliness and ventilation. In the pharmacy the same order prevailed. There were piles of cases of all the necessaries. . . . On our return the Prince insisted on having us accompanied by a mounted escort of his "boys," as he calls them.

They talk of disbanding the reserves soon, and, instead of feeling relieved at the thought, I find myself regretting their departure. So much for the dread of six weeks ago!

The War and Business.

Business is steadily reviving with the movement of the crops for shipment. The situation is naturally watched with anxiety, and the news of a torpedo attack at the Dardanelles is creating fresh uneasiness, but the hope is latent that the war will soon terminate. Telegraphic communications with Europe, subjected for months to vexatious delays and interruptions, have now been established on a proper basis. Some credit is due to the Turkish postal and telegraphic authorities, who have taken the matter in hand and have made the have made the necessary arrangements for new connection with the foreign cables.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, July 24.

Accession Anniversary Fetes.

The plans for the celebration of the twenty-fifth anniversary of the accession of H.M. King Ferdinand have now been completed. Contrary to what was first supposed, the celebrations will be of a very simple character, owing to the critical condition of political affairs in Turkey. They will not take place in Sofia, but at the historic old capital, Tirnova, on August 15th. The festival will be for one day only, and the next day his Majesty will return. On his way back he will stop at Swagué, a place some sixty miles distant from Sofia, in the defile of the River Isker, where the opening of a hospital for consumptives that has been erected at his expense will take place.

The celebrations at Tirnova will be attended by the Diplomatic Corps, the Ministers, the Deputies of the Sobranje, the Generals, and deputations from the regiments of which his Majesty is the Honorary Chief and Commander. All other invitations have been cancelled. His Majesty, with his entire suite, will have his quarters at the Prebrajensky (Transfiguration) Monastery, five miles from Tirnova, which was formerly a favourite place with the old Bulgarian Tsars.

M. Gutchkoff on the Turkish Situation.

The ex-President of the Russian Duma, M. Alexander Gutchkoff, who arrived in Sofia ostensibly for the purpose of opening a new branch of the Russian insurance company "Rossia," received the representatives of the Bulgarian Press at the Russian Legation on the afternoon of the 19th inst., and discoursed to them at some length on questions of the day. It may be mentioned that M. Gutchkoff reached Sofia by way of Constantinople, where he had excellent opportunities of becoming acquainted with the present situation in Turkey; and his declarations on the political crisis are regarded here as being of considerable importance.

The high hopes which both Europe and Turkey had placed in the Committee of Union and Progress had not, M. Gutchkoff declared, been justified, and the Young Turks' policy was continually leading the country into fresh misfortunes. The prevalent feeling of dissatisfaction was due not only to the insolvency of ideas and disagreement on questions of principle, but also to dislike of certain personalities. The present disorders in the army were due chiefly to hostility against the leaders of the Salonika Committee, who are mostly of Jewish origin; for the Turks could not reconcile their national feeling with the prevalence of the influence of the Freemason Jews. The Christian population, on the other hand, could not tolerate the centralising tendencies of the Young Turks. The mutinies in the army and the changes in the Cabinet showed that there was no settled, steadfast power in Turkey. The unrest in Albania was due to far more serious causes. The Albanians had been favoured and granted special privileges under the old régime, and they could not reconcile their past position with the present. But the real cause of their dissatisfaction was their tendency towards independence. "The Albanians are fighting for autonomy. In spite of the optimistic views of the Government, the revolution in Albania is of a serious character, and will have real consequences. The revolutionists are helped from different countries." Then, turning to the Macedonian question, the Russian statesman spoke of the unanimity of public opinion in Bulgaria on the subject, and remarked that only when all political parties accepted one and the same principle would there be a good prospect of a solution to the question. "Present events in Turkey," he concluded, "are leading you towards a favourable solution. Bulgaria may wait quietly for a happy issue, thanks to the efforts of General Savoff and his assistant officers, which have succeeded in creating an excellent army and making Bulgaria a strong military State in the Balkans."

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, July 28.

Bulgaria and Turkey.

The local *Yuzhnaia Myssl* publishes a despatch from a competent source in Sofia categorically denying the recently circulated reports of the spread of a warlike agitation in the Balkan Kingdom against Turkey, and the increasing prevalence of the same inimical sentiment among the commissioned ranks of the Bulgarian army. There is not the slightest foundation, the despatch asserts, for these mischievous rumours, but, on the contrary, a genuine sympathy is felt in political circles in Sofia with the Ottoman Government in its present and passing internal troubles, and the relations between King Ferdinand's Cabinet and the Porte remain correct and friendly. The *Yuzhnaia Myssl* expresses its great satisfaction with this authoritative *démenti* and reassurance, as the peace of the Near East, in the existing precarious state of affairs in the Balkan peninsula, depends very much upon the maintenance of Bulgaria's attitude of neutral reserve.

The Turkish Crisis.

The South Russian Press takes a very grave view of the internal situation in Turkey, but finds a ray of hope for a pacific solution of the crisis in the presence of Kiamil Pasha in the reconstructed Cabinet. These journals make a prominent point of affirming that Russia has not the remotest idea or intention of taking any political advantage of the temporarily shaken stability of the Ottoman Government, but, at the same time, urge the vital necessity of Turkey's accepting without further and dangerous hesitation the re-proffered good offices of Russia, England, and France in order to bring to a speedy termination the hopeless struggle with Italy.

Expulsion of Jews from Nicolaieff.

Fifteen hundred Jewish families, numbering about 5,400 souls, have been ordered to leave the town and port of Nicolaieff within six weeks. The expulsory order should have been put into force last year, but it was postponed by the grace of the naval governor of the port. The decree affects all Jews and their families who have settled in the Bug port since July 1, 1906, O.S.

Events in Northern Persia.

The official organ *Rossia* says in connection with the punitive expedition sent against the Shahsevans:—"Our operations against the wild and freebooting nomads who, since 1908, have harried and plundered the Persians and attacked our frontier posts, are devoid of any political colour. It is a local expedition necessitated by our local interests. The statement circulated in certain foreign newspapers that Russia has undertaken the task of punishing and dispersing the united Shahsevan tribes in support of the Persian party opposed to the existing régime is utterly and absolutely false. As a matter of fact, the Shahsevans have no political aim. They are freebooters pure and simple, and their plundering raids across the Russian frontier have become intolerable. In our own interests, and for the protection of the peaceable Persians, we have been compelled to take drastic measures for the complete and final suppression of the Shahsevans."

The expedition against the Shahsevans has been further strengthened by a second Russian division under General Fidaroff.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, July 27.

A Great Storm.

On Monday night a terrible cyclone struck this city, followed by torrents of rain. Great damage was done both to house property and to the many thousands of trees which fill the gardens, public and private, and line the principal streets and boulevards. The lower part of the town was flooded, many parts being quite impassable, the water being in most places over six inches deep, and in some spots reaching even a foot.

The torrents of rain flooding the streets quickly interrupted the tramway service, and the telephone service was also stopped by the elements. A number of accidents from falling shop signs, chimneys, etc., were recorded, but happily no actual loss of life, which seems extraordinary in view of the severity of the hurricane. "It is an ill wind," etc., however. The storm has certainly cooled the air considerably, and made life more bearable.

Despite the inclement weather King Carol and Queen Elizabeth have not been deterred from venturing out, and are often seen in their motor-car. One day they went as far as Derestre, over the Hungarian frontier, and another to Telega, where they paid a surprise visit to the schools. His Majesty, accompanied by the Crown Prince and Princess, officiated at the opening of the Casino at Sinaia last Sunday evening.

Austro-Roumanian Friendships.

A group of about sixty members of the German Choral Society, "Liedertafel," of Bucharest, who are to visit Nuremburg and other German towns, arrived on Thursday at Vienna, where they were the guests of the city and the various Viennese choral societies, by whom a banquet was given in the evening in honour of the visitors. The healths of the Austrian Emperor and King Carol were drunk with great enthusiasm. The extremely friendly relations existing between the two countries have been shown of late in a very marked manner on every possible occasion.

General Alexandre Averesco, Commander-in-Chief of the Roumanian Army, is leaving to attend the British autumn manœuvres.

NEAR EAST IN PARLIAMENT.

The Situation in Persia.

On Tuesday Sir E. Grey, replying to various questions, said that he had nothing to add to the recent statements on the situation in Persia. He was sorry that the state of affairs in Persia remained very unsettled. The arrangement of a further loan is intimately connected with the state of affairs in Persia, but it is impossible to secure a loan unless one can guarantee that the money is going to be well and effectively spent. Regarding the Russian troops sent to Resht, Enzeli, and Kazvin at the time of the ultimatum last year, there were now considerably fewer troops at the places named altogether than was the case at the time referred to, but it does not follow that the total number of Russian troops in Northern Persia is fewer.

Trans-Persian Railway.

The Earl of Ronaldshay raised the question of the Trans-Persian Railway. He assumed that if any such railway were constructed, that portion of the line east of the Persian frontier would be a purely Indian undertaking, and he declared that the obstacles in the way of the Government of India constructing that portion of the railway were, to say the least of it, formidable. The chief supporters of the scheme in India were the Karachi Chamber of Commerce. They desired the line to run along the coast for as short a distance as possible. The military authorities, on the other hand, desired it to run along the coast for as long a distance as possible. The Indian Government had enough difficulty already in raising money for the development of productive railways in India itself, and ought not to undertake large expenditure on an unproductive railway outside India.

NOTES FROM PERSIA.

(From Our Own Correspondent.)

Teheran, July 4.

The Trans-Persian Railway.

The Trans-Persian Railway scheme is again the absorbing topic. With the exception of those who expect to benefit directly by the consummation of the proposals, the labours of the Société d'Etudes excites but little enthusiasm amongst the native population here, whilst there are many who regard the scheme with suspicion, and consider it as another step in the direction of absorption.

The same forces which produced the Persian Customs Tariff of 1902 are now being employed to bring about the construction of the Trans-Persian Railway. The Customs Tariff was made in Russia to benefit Russian trade at the expense of British, and a mere glance at the trade statistics of this country is sufficient to show how well the plot succeeded. The process is now being continued in the present negotiations for the railway. The benefits which will accrue to British commerce, and, if any, to Persia, are incidental. The condition of the Persian transport service is chaotic, although only in so far as the routes to the South are concerned. Persia's great need is to remedy this state of affairs, and she fails to see a satisfactory remedy in the construction of the proposed railway. The insecurity of the southern roads has brought immense benefits to Russian trade; the Trans-Persian line will enhance those benefits. To say that the line will be unprofitable is probably incorrect. Most of the world's railways have justified their existence. If they do not meet the demand they create it. In the present instance, however, the creation of the demand would be a lengthy process, and it would be many years before the line could be considered as a commercial success.

At the same time Persia needs railways. Her great need is a scheme for the linking up of the industrial and agricultural centres with the coast, not with the desert. A demand for a railway, or for a scheme of railways, already exists along, or as near as possible to, the lines of the present flow of traffic. Surely this is the best guide? Such a scheme would be fair to Russia, it would be fair to England, and, above all, it would be fair to Persia. The commercial development which would follow the construction of the Gulf to Caspian line by way of Luristan might in the years to come warrant the more ambitious scheme, though even this is very problematical. If, therefore, Russia persists in forcing through the Trans-Persian Railway scheme, the argument that she is influenced by political and strategic rather than by commercial reasons would seem to be conclusive. The sanction of Persia will have to be obtained under pressure, for it is no exaggeration to say that the bulk of Persian opinion is opposed to it, whilst it is just as true to state that the most popular scheme here is that which will satisfy in large measure her present needs.

SHAHSEVANS v. COSSACKS.

(From a Persian Correspondent.)

Tauris, July 6.

The Government army of Shuja-ed-Dowleh, sent from here some ten to fifteen days ago, under Sardar Rashid-el-Mulk, to punish the Shahsevan tribes who had dared to attack and massacre some 25-30 Russians in Mishkin, are hard pressed by the Shahsevans and "put in a hole" for the time being. Rashid-el-Mulk is in Sarab (two days' march east of Tauris) with his army, but dare not leave the town and pursue the trouble-makers. The tribes, confident in their prowess, are looting and plundering the numerous villages that lie between Ardebil and Sarab, and Sarab and Tauris. There is no one to hinder them, no one who can stop them. Arfay-Sultan, the Governor of Ardebil appointed by Shuja-ed-Dowleh, has fled from Ardebil back to Tauris, and Shahsevan horsemen have come so near Tauris that Namatabad was threatened by them. Namatabad is the village where Russian Consuls-General pass their summer months, and it is owned by a Russian subject. M. Brobrajensky, the Acting Russian Consul-General, left Namatabad and returned to Tauris, which is a comparatively safe place, only ten miles away, although he had some fifty Cossacks there for the protection of the summer consulate.

Yesterday, so I hear, the great Mujtahid and other prominent men came to the Russian Consulate and begged the Consul-General to take some measures to prevent further plundering by the Shahsevans, as the villages plundered are numerous, and the peasants have been left without a home, living out under the open sky. There are some villagers now in the city declaring that their homes are looted by the Shahsevans, and begging a mouthful of bread. I hear that the Russian Consul-General, acceding to the request of the prominent citizens, will send a few hundred troops to assist Rashid-el-Mulk in Sarab. It was plain from the beginning that the Persians could not do much against the tribes single-handed; but they went, because they had to go. There are several versions as to why these tribes are making trouble. One is that the Teheran Cabinet is telling them to make trouble deliberately, in order to keep the self-appointed Governor-General Shuja-ed-Dowleh busy; the other is that the tribes are dissatisfied with Shuja-ed-Dowleh. The latter had promised them to have Mohammed Ali Shah on the throne if they would come and assist him in fighting at Tabriz. They did come, did fight, and did take Tabriz, but there is no sign yet to show that Mohammed Ali will ever be seated upon the throne again.

Shuja-ed-Dowleh's Occupations.

In the meanwhile Shuja-ed-Dowleh is taking things easy in his new palace here, and is busy piling up money. His income is said to be anywhere from 5,000-20,000 tomans per day (£1,000-£4,000). These sums come in mostly in the form of fines, bribes, presents, and so on. You may be sure that ten thousand tomans a day is not earned, and cannot be earned, by digging ditches. I have been told that in the first days of his Governorship the money, paid unwillingly by the helpless merchants, was counted; but later on, finding it almost impossible to count so large sums in silver krans, it was decided to receive the "presents" by weighing—counting so many tomans a "batman" (one "batman" is equivalent to about ten pounds). He is paying royal salaries to his officers and men, and maintains a royal kitchen. He has been building a summer residence at Namatabad which is to have fifty rooms in it, but I doubt whether he will ever live there. He evidently thinks he is going to live in Tabriz as Governor-General all his life, but rumours have been circulating in the city that for the last few days that "Shuja-ed-Dowleh has been called to Teheran," or that "Shuja-el-Dowleh must leave Tabriz within ten days," or that "Shuja-ed-Dowleh has been appointed Governor-General of Kerman, and must go," or again the "Shuja-ed-Dowleh is going to Maragha, his native town, because the Sipahdar is coming here as Governor-General of this province."

The Shahsevans' Confidence.

Ignoring these rumours, one thing is plain: that the position of Shuja-ed-Dowleh is shaky, and has been so for the last few days, and he knows it. Who is his opponent, where and why, I do not know yet, but it will be known soon. Secrets cannot be kept a very long time in Persia. He has already stopped the work on the new building in Namatabad, which was to be his summer palace. He was in there last week, but fled back into the city, fearing the advancing Shahsevans, who have routed his troops sent against them, killing 300 of them, so report says, and sending a message to Shuja-ed-Dowleh as follows:—"Do not send any more Mussulman soldiers against us. We do not care to kill our Mussulman brethren, but send all the Russians you can. We will settle our account with those yellow dogs!" At one time the mere name of the "yellow dog" was enough to strike them with terror. Now they do not seem to care even for the largest Russian guns, although the Russians are the same Russians, and their guns have not grown any smaller in calibre. The boldness of the rebel tribes can be explained only by one fact, and that is, they must have some one backing them, who is much stronger than they are, or else they would not dare to send threatening messages to Russians or to Shuja-ed-Dowleh, their commander-in-chief last summer.

Mirza Firooz-Khan.

THE LEBANON PROVINCE.

(From Our Own Correspondent.)

Beyrout, July 22.

The Question of Governor-General.

After the establishment of the Constitutional régime the Young Turks in their ardent desire for Ottomanisation wished to draw into the body politic even the privileged province of the Lebanon, and by offering the Lebanese representation in Parliament made them see therein a means of bettering their condition. Matters in the Lebanon were, and are still, far from satisfactory; and a party was actually in favour of taking this step even at the risk of losing a part of their privileges, arguing that it was better to belong to Turkey regenerated than to remain in a sort of neglected semi-independence, where the protecting Powers' action could be translated only into harmful interference rather than beneficent intervention. Since then the wine of the dream has turned sour, and there has been such a universal clamour for reform in the Lebanon that the six Powers, apparently in the tow of France, quickened by revived interests in Syria, have had to move; and, contrary to all expectation, they now are making the appointment of a new Governor-General to the Lebanon, subject to the acceptance by the Porte of the revision of the Constitution. The Porte, however, seeing in this revision the granting of further extended reforms calculated to increase the autonomous powers of the province and its severance from the body of the Empire, has naturally enough sought to shirk the question, and with characteristic Turkish finesse proposed that the new Governor should first study the matter close at hand and report to them for their eventual consideration and sanction. They meantime also kept Youssouf Pasha, whose mandat had expired on the 8th inst., in ambiguous authority, hoping tha in case the Ambassadors should persist in their uncompromising attitude, and make the revision a *sine quâ non* of their sanction of the Porte's appointment of the new Governor, it (the Porte) might to a certain extent indefinitely keep Youssouf Pasha with temporary powers, and thus gain time to circumvent the question of the revision. But the Porte was this time outwitted by France, whose Ambassador at once sent instructions to the Consul-General here to intimate to Youssouf Pasha that his mandat is considered as ended. Soon afterwards the other Consuls of the six protecting Powers received similar instructions from their respective Ambassadors. The Porte had, therefore, at last to instruct Youssouf Pasha to hand the provisional government over to the Vice-President of the Administrative Council. The latter being absent, however, the Maronite doyen of the members of the Council was entrusted with the Acting Governorship.

Proposed Reforms.

What the reforms are which the Ambassadors propose introducing in the Organic Law one cannot exactly tell, but it is safe to assume that they comprise the principal if not the majority of the following changes which the Arabic Press here, and at one time in Egypt, have published and commented upon.

1. The revision of the Cadastre.
2. The withdrawal of the prohibition of steamship communication with at least the leading Lebanese port, Junieh.
3. The formation of a Lebanese Commercial Court. So far all commercial cases in the Lebanon had to be judged in the commercial tribunal of the vilayet.
4. The payment into the Lebanese Treasury of the receipts of the Lebanese Posts and Telegraphs, as well as of the Custom House.
5. The creation of a Cour de Cassation in the Lebanon so that Lebanese cases need no more be referred from the Court of Appeal to Constantinople.
6. The reform of the mode of election of the members of the Administrative Council by making it more a direct expression of the popular vote, and not as it is carried on now through the mayors (sheikhs) of the villages, who are usually influenced largely by the members of the Council while holding office prior to the next elections.
7. The restriction of the powers of the Governor-General, failing the reform of the mode of election of the members of the Council.
8. The suppression of the powers of the Governor-General for discharging officials of the executive, such as Mudirs and Caimacams, without trial and the establishment of the evidence of delinquency.
9. The reform of the gendarmerie by increasing the existing number for the better policing of the mountain, the raising of salaries, and the appointment of inspectors to raise the standard of efficiency of the Lebanese Militia.
10. The fixing of the residential winter quarters of the Governor-General in the Lebanon. Many of the Governors-General have so far chosen to reside in Beyrout except during the summer months.

Some of the demands of the extreme reformists include also the extension of the Lebanon frontier to some parts of the Bekaa, according to the original plan of delimitation suggested by England, but which the Porte, with the passive assistance of France, succeeded at the time in curtailing to the present limits.

Last Friday there was an explosion at the powder magazine of the Lebanon Government at Beit Eddine. So far four persons, including the sentinel, are reported killed. Lovers of Saracenic art will learn with regret that the fine portals of the Palace of Emir Bechir fame have been badly damaged, while the interior parts have been slightly damaged. All sorts of wild versions are current; but it seems more or less certain that the explosion was not due to accidental causes, especially as it took place in the night.

LETTER TO THE EDITOR.

CONCERNING YEPREM.

To the Editor of The Near East.

Sir,—In your issue of July 5 you publish some notes on Yeprem's services. Your Persian correspondent's estimate of the high position Yeprem filled in Persia is just; but he has made an important error in stating that "after the expedition to Azerbaijan Yeprem himself wished to leave and retire to Europe. But Mr. Morgan Shuster, the Treasurer-General, begged him to remain, promising him support, financial and otherwise, and Yeprem listened to his entreaties and stayed—only to die." Yeprem had never expressed the wish to leave and retire to Europe. What had taken place is this: He had been made to believe that he was suffering from cancer of the stomach, and that a journey to Europe was absolutely necessary to him for a serious operation. Later on, when he was assured that there was no cause to believe that he had cancer, and that consequently he need not expose himself to all the risks and fatigues that a journey from Teheran to Tabriz and thence through Asiatic Turkey to Europe would involve, he himself gave up the idea of asking leave for a journey to Europe. We can absolutely vouch for the fact that Yeprem gave up the idea of going to Europe independently of any request of Mr. Morgan Shuster. Besides, it is well known that Yeprem came in collision with Mr. Shuster soon after the latter arrived in Teheran. Friends had to intervene and smooth over the difficulties. Later on, also, when the Shua es Sultanah comedy was acted, and the famous letter in the *Times* was published and its translation spread widely in Teheran, Yeprem felt deeply that the interests of Persia had been mismanaged. Yeprem was one of the bravest of men, unflinching when he knew he could wrench out a victory; but he also knew where to give way. He knew that Mr. Shuster had commenced with fairly good cards and had spoiled the game for Persia by playing them badly.

LA CRISE OTTOMANE ET LES TURCS EN EUROPE.

L'empire turc a été si souvent ébranlé jusque dans ses fondements, sans cependant disparaître, qu'en occident, en dépit des événements actuels, on a tendance à croire qu'après une période plus ou moins longue de difficultés graves, l'homme malade retrouvera encore assez de forces pour se maintenir en Europe. Voici si longtemps qu'on annonce que les Turcs seront expulsés du Continent sans que l'événement se produise, qu'on a fini par s'habituer à l'idée qu'il n'arrivera jamais. Or, c'est là un optimisme qui semble excessif pour peu qu'on analyse la situation actuelle.

La crise turque présente est composée d'éléments extérieurs et intérieurs—a l'extérieur, il est évident que la guerre avec l'Italie prendra fin sans qu'on puisse encore prévoir quand ni comment. Il est également certain que, quoiqu'il arrive, la Turquie sera amputée de la Tripolitaine. Le sort des îles de la mer Egée, occupées par l'Italie, est plus douteux, mais il est vraisemblable que finalement la souveraineté ottomane y sera singulièrement restreinte. Ce sont là des conséquences de la guerre avec l'Italie qui ne peuvent qu'être désastreuses pour la Turquie. Elles semblent cependant devoir être encore moins funestes que les suites de la situation intérieure turque présente. Ce qui fait l'extrême péril de celle-ci résulte moins encore de la lutte intestine si passionnée, si acharnée, si pleine d'inconnu que se livrent actuellement les divers partis politiciens turcs, que de la situation existante en Albanie et en Macédoine, car cette situation menace de poser à bref délai dans des conditions d'urgence sans précédent, la question du maintien des Turcs en Europe.

Voici pourquoi :

En réalité, la question albanaise, avec son cortège de complications, est un fruit du nouveau régime et des maladresses sans nombre des Jeunes Turcs. C'est, en effet, sous l'influence de ces erreurs manifestes que depuis 1909 une union, au moins relative, s'est faite peu à peu entre les clans albanais jusqu'alors si profondément divisés. Sans doute bien des chefs albanais combattent encore, mus par le désir de conserver leurs privilèges féodaux, incompatibles avec le centralisme turc ; mais on ne saurait contester que les Albanais sont arrivés depuis 1909, donc très rapidement, à la conception d'un véritable mouvement national albanais, puisque l'ensemble de leurs réclamations se résume en une demande formelle d'autonomie. Or, nous voyons qu'à l'heure actuelle, sous la pression des événements multiples qui assiègent le gouvernement de Constantinople, celui-ci est prêt à faire toutes les concessions aux Albanais. Evidemment, il n'est pas probable qu'il concède à ceux-ci une autonomie en droit, mais pratiquement il s'agira d'un régime qui lui ressemblera beaucoup en fait ; or, il est impossible que le gouvernement de Constantinople concède pratiquement des éléments d'autonomie aux Albanais, sans les accorder en même temps aux Chrétiens de Macédoine qui les réclament eux-mêmes depuis si longtemps et qui sont socialement infiniment plus éduqués que les Albanais. On voit donc qu'il existe un lien très étroit entre la question d'Albanie et celle de Macédoine. Or, l'Albanie et la Macédoine, occupant la presque totalité du territoire de la Turquie d'Europe, et par le seul fait que la question d'Albanie commence à se poser, il faut s'attendre à ce que celle de Macédoine la suive fatalement ; la coexistence à l'état aigu, de ces deux problèmes, posera la question des Turcs en Europe, car, en fait, les autonomies albanaise et macédonienne sont inconciliables avec le maintien prolongé de la suprématie turque sur ces deux régions.

Comme il est bien évident que des questions de cette importance ne peuvent pas se résoudre sans l'intervention de l'Autriche-Hongrie, de la Bulgarie, de la Serbie, il en résulte que la crise intérieure actuelle de la Turquie semble devoir aboutir finalement à la fameuse crise européenne de la question d'orient attendue par les uns, redoutée par les autres depuis tant d'années.

Il serait désirable qu'en Angleterre comme en France, on consentit à envisager ces éventualités. Le *statu quo* balkanique ne sera pas maintenu par le seul fait qu'il serait préférable pour la quiétude des diplomates d'occident. La force des événements sera plus puissante que leur désir de paix. Sans doute, on ne peut pas prévoir le moment exact des événements qui s'approchent. La question des Turcs en Europe peut demander pour arriver à maturité peut-être encore quelques années ou seulement quelques mois ou même quelques semaines. Il serait néanmoins désirable que dès maintenant on s'habituât à Londres et à Paris à voir les choses comme elles sont afin de ne pas laisser à l'Allemagne mieux informée, moins illusionnée, la faculté de jouer sa partie avec vraiment trop d'aisance. Quand la question des Turcs en Europe se posera, il est bien certain que l'Autriche-Hongrie sera la puissance la mieux placée pour intervenir. Au lieu que son action se fasse uniquement comme conséquence de son accord avec Berlin, ne serait-il pas préférable qu'elle ait lieu comme suite d'une entente préalable avec la France, la Russie et l'Angleterre ? Il y a là, pour les diplomates de ces divers pays, matière à des négociations, délicates sans doute, mais qui pourraient être singulièrement profitables et qui peut-être, finalement permettraient à l'Autriche-Hongrie d'avoir dans la Méditerranée un rôle qui ne serait plus en opposition avec les intérêts de la France et de l'Angleterre. L'Autriche-Hongrie, avec ses populations de majorité slave, nettement anti-allemandes, n'a actuellement avec Berlin qu'une alliance purement dynastique. Sa politique extérieure est destinée à se modifier par le seul fait des incontestables progrès de ses éléments slaves. Dès maintenant, on peut même discerner que dans quelques années, l'Autriche-Hongrie est destinée à devenir le grand état pondérateur de la puissance germanique en Europe centrale. Il appartient à ceux qui dirigent à Londres et à Paris de comprendre cette vérité dès aujourd'hui afin d'en tenir largement compte dans le règlement de la question d'orient qui approche.

ANDRÉ CHÉRADAME.

A GARDEN SUBURB FOR JERUSALEM.

(FROM A CORRESPONDENT.)

The population of Jerusalem, and especially the Jewish population, has grown with remarkable rapidity during the last thirty years. In 1880 there were not more than 10,000 Jews in the city ; to-day, out of a total population of 80,000 to 90,000, not less than 50,000 belong to their race. The Jewish quarter within the walled city has long been crowded to the point of congestion, and the new arrivals from Russia and Galicia, Bokhara and Yemen, Persia and Morocco have spread over the outskirts of the city mainly in suburbs to the north-west, off the Jaffa road. Sir Moses Montefiore, the great Anglo-Jewish philanthropist of the nineteenth century, who made seven pilgrimages to the Holy Land, did much for the amelioration of the housing conditions of the Jewish population of Jerusalem, which up to that time had been wretched in the extreme. And in his honour a testimonial fund of about £10,000 was collected in England to mark his centenary, which has been employed in the continuation of the work that he inaugurated.

The money is used to make advances to local building societies on condition of the members of the societies finding part of the cost from other sources, and submitting their building plans to the representatives of the committee for approval. The advances are repayable without interest in ten years from the completion of the scheme, and the money is then again advanced for a fresh enterprise. In this way five suburban colonies (as the quarters are called) have been erected, each containing between sixty and seventy houses, and in the newest of them the minimum amount spent on each dwelling was £200. Their construction throughout is neat and substantial, though, owing to the remarkable rise in the price of land near the city, the site on which this colony is built cost four times as much per square yard as that of the older settlements. More space has been allowed for the roads, and trees have been planted along them. One or two other Jewish organisations have made similar attempts at providing decent houses

Digitized by Google

for the growing population, but for the most part the jerry-builder holds undisputed sway. The result has been the erection on the outskirts of Jerusalem of rows of unsanitary, unsightly, ill-kept, barrack-like dwellings let out in tenements, which constitute a new Ghetto and hopelessly disfigure the natural beauty of the hills around the city. There is no pretence at planning, and there is no garden space, and the people are herded in the dwellings without sufficient light and air for health.

Other religious denominations have erected immense buildings around Jerusalem, such as the Orthodox Greek convents on the Jaffa road and the Mount of Olives, the Roman Catholic orphanage, and the German Protestant institutions by the Damascus Gate and on the northern heights. But they have not done anything considerable for the improvement of housing or the good laying out of the suburbs. The result is that between the abundance of great stone churches and institutes there are rows of wretched slums. A few wealthy Bokhara Jews have built themselves fine mansions; but there are very few rich members among the other Jewish communities of Jerusalem, and few who can afford to build for themselves a decent house. If the present bad conditions are to be remedied the Jewish communities in other countries must come to the help of their Palestinian brethren. The project has, therefore, been mooted in England of forming a small garden suburb outside Jerusalem in which the houses could be let to the better-class artisans who can afford to pay a rent of £8 to £10 a year. The idea of garden suburbs has achieved striking popularity in England and Germany, and it is recognised as offering the best solution for the housing problem of the large industrial cities of our time, and at the same time as fostering the love of the land and of nature, which the modern concentration of the population in towns has threatened. At some little distance from Jerusalem land can still be purchased fairly cheaply, and it is calculated that a substantial little house with two deunums (about half an acre) of land could be provided for about £200. The garden space could be planted with figs and olives and garden produce, for which there is a ready market in the city, and thus the tenant would be able to make a little income by the care of his land. The houses would be laid out according to a plan, which would preserve the natural beauty of the site, and the supervision of the dwellings and the upkeep of the roads and the common buildings would be in the hands of a local committee. Communications with the city would be established by a diligence or 'bus, unless the tramway concession, of which so much has been heard, materialises, in which case the line might be brought out to the suburb. The success of the Jewish suburban colony outside Jaffa, known as Tel-Aviv, augurs well for the progress of a similar movement for Jerusalem. In Tel-Aviv, on the sandhills beyond the town, some 200 houses have been erected in the last three years, and almost every one is occupied, and the best streets lined with trees give a most pleasing appearance. The need for such a well-laid-out suburb is even greater at Jerusalem than at Jaffa, and it is hoped that if an example is set of a little garden colony it will soon be followed, and there will be less of the wretched jerry-building and congestion, and the beauty of the hills around the city will be preserved. It may be mentioned that Sir John Gray-Hill, who for thirty years has possessed a beautiful mansion on one of the spurs of the Mount of Olives and who takes a deep concern in the development of Jerusalem, is very interested in this scheme of a garden suburb. At the Palestine Bazaar, recently held at Liverpool, he made an eloquent appeal to the Anglo-Jewish community to engage in some enterprise of the kind for the improvement of the city which was once the glory of the Jewish people, and his words made a deep impression.

Mr. Edward Fothergill, author of "Five Years in the Sudan" and a well-known writer on the Near East, is now engaged upon a work of fiction in which the present-day Sudan plays a prominent part. Mr. Fothergill was formerly editor of the *Sphinx* and Cairo editor of the *Egyptian Gazette*.

NEAR EAST BOOKSHELF.

THE WAR IN TRIPOLI.*

We have recently received a pamphlet, "The Struggle Over Tripoli," by a German writer, whose identity is veiled by the pseudonym Dr. Mehemed Emin Effendi, and we think that many readers of THE NEAR EAST would find it of interest. Adumbrating some of the graver political contingencies facing Turkey in the future, the writer urges in the interests of that State, the paramount necessity of immediately terminating the struggle in Tripoli. Suggested terms and conditions of settlement are set forth in some detail, but whether the suggestions are wholly practical time alone can show us. One sentence on page 9 does not tend to encourage reliance on the author's judgment. He writes: "It is true that England oppresses Mussulman nations." Is this prejudice or ignorance, or is it an echo of that simple-minded policy under which Germany so fatuously strives to pose as the protector of Islam?

ARABIC IDIOMS.†

Students of Arabic will be glad to learn that Canon R. Sterling, whose "Grammar of the Arabic Language" is so deservedly esteemed, has just published a companion volume under the title, "Arabic and English Idiom." The aim of this work is to exhibit the principles and structure of the language by a carefully chosen series of examples, and the plan followed is that of working up from the elementary constructions to the complete sentence, and subsequently treating the various kinds of sentences in their grammatical order. The greatest difficulty encountered by students of the Arabic tongue lies, of course, in its idiom, and for such valuable help in this direction all will feel grateful to Canon Sterling. We are glad to observe that no transliteration of the Arabic words and phrases is given, for this has often proved a hindrance to students who are in earnest.

R. M.-S.

NEAR EAST BOOK NOTES.

With great pleasure we notice a delightful book published by Sir Isaac Pitman and Sons, in their Countries and Peoples Series, under the title "Japan of the Japanese." This volume, like those which have preceded it, is from the pen of a writer thoroughly familiar with his subject—Mr. Joseph H. Longford, formerly H.B.M.'s Consul at Nagasaki, and now Professor of Japanese at King's College, London. The highest compliment we can pay to author and publishers is to say that this work is well worthy of its place in the very admirable series of which it forms part. We observe with satisfaction that the publishers have added a map to the present volume, and believe that all future issues in the series will also be provided with this invaluable adjunct.

Two views of the Turco-Italian campaign will shortly be published by Mr. Murray, one of which, "With the Italians in Tripoli," by Chevalier Tullio Irace, has been specially written under the auspices of the Italian Government, which has caused to be prepared an official account of the war by naval and military officers who have taken part in it. The book is being published in English alone at present, the Italian Government being specially anxious that the English public should know the facts of the case. The other work is entitled "The Arabs in Tripoli, with an Account of the Desert War," and is principally written from the point of view of the Arab auxiliaries of the Turkish garrison. The author, Mr. Alan Ostler, lived for some time in the Arab camps at the front.

BOOK RECEIVED.

THE PRESS ON THE NEAR EAST.

The Bagdadbahn and the Bedouin.

The *Deutsche Orient Korrespondenz* learns from Constantinople that the nomadic Arab tribes between the Euphrates and the Tigris, west of the Jebel Sinjar, are again making their presence disagreeably felt. In the neighbourhood of Urfa they have attacked and plundered two Armenian villages. Such incidents are in recent years no longer rare in this region; it is remarkable however, that the Turkish Government does not take repressive measures against these Arab marauders, seeing that the survey operations for the Baghdad Railway are in full activity southward of Urfa. On the contrary, according to reports from that town, the Vali quite openly confesses his inability to chastise the Arabs for their plunderings, with the troops at his disposal. This throws no favourable light on the future development of those regions. It is only to be hoped that the Constantinople Government will, after the completion of the railway, show more zeal in freeing these potentially important agricultural districts from the plague of the Arab bands.

Macedonia and the Powers.

The Special Commissioner of the *Daily News* writes in the course of a dispatch from Monastir, under date of July 10, regarding the situation in Macedonia:—

So far as my observation goes during the present tour of the province, its condition is worse than it was in 1908, when I saw the Mürzteg programme at work. Ineffective as that programme was, it did give the Powers a certain control over Turkish administration. Now there is none. The Turks can do as they like, and the foreign Consuls have no authority to intervene. During the four years Hilmi Pasha ruled in Macedonia he did nothing but mischief, but the mischief would have been much greater had he possessed the unrestricted powers now given to the Governors-General of the three vilayets of Macedonia. Perhaps the worst feature of the situation is that all the increased revenue which has come into the Turkish Exchequer since the downfall of Sultan Abdul Hamid owing to the exertions of such men as Sir Richard Crawford, is being spent not on the promised reforms for improving the condition of the people, but in providing means for their further subjugation.

After laborious inquiry and long consultations with those who have the knowledge, but are not free to speak, I am convinced that no other solution of the Macedonian problem is possible except the detachment of the province from executive Turkish rule, and the resuscitation of European control under conditions which will convert Macedonia into an autonomous State with a self-chosen Governor, responsible to the Sultan as Suzerain, and to the Powers for the conduct of his executive functions. Further than this, I feel sure that I am correctly voicing the views of those who are most competent to judge when I say that any attempt to give effect to Article XXIII. of the Berlin Treaty under Turkish supervision will prove abortive, and only add to the present tension, which, while it lasts, is provocative of war.

There are difficulties in the way of the solution proposed, but they are not insuperable. Lord Lansdowne gave a strong lead in 1903, and Sir Edward Grey a still stronger one in 1908. What is now wanted is to revive the Reval programme, which was postponed in that year to give the new Turkish Government the chance which it has failed to take. The Turks are on sufferance in Europe, and are powerless to resist the combined pressure of a United European concert. This is where diplomacy can come in. With a strong German Ambassador in London the moment is favourable for bringing about a general agreement which will relieve an intolerable situation.

We cannot agree entirely with the views expressed by the writer; notably, we must emphatically repel any suggestion that "the Turks are on sufferance in Europe," while mention of a "United European concert" in this matter seems positively grotesque.

Army Rule in Turkey.

The *Daily Chronicle*, generally well informed on Turkish affairs, states in the issue of July 27:—

As at present constituted, of course, the Chamber is a farce; but a Parliament which surrenders its opinions to force will be even a greater peril. On the other hand, no little risk attends the throwing down, thus early, of a deliberate challenge to the Committee, which has apparently not lost all its strength. The difficulty of securing a genuine Chamber must still be great, and it would appear to be wisdom to go slowly. But the League is evidently determined to force the pace, and it may be in a position to bring into existence a League Chamber. But elections worked by a power beyond public opinion are not favourable to the strengthening of Parliamentary government. All the signs point to thinly disguised Army rule. That it will be a good thing for Turkey will, of course, depend on whether it is honest. If it is, it may serve an immediate purpose, acting as a protection while the sensitave plant of Parliamentary institutions gains strength. But it seems playing with a dangerous weapon. The pacification of the Yemen and of Albania, however, will mean much for internal peace and domestic reform, and in that case democracy may become strong enough for the Army to see that it will be best for it and for the Empire that it should return to its real sphere—alliance with and not domination of the Government. Friends of Turkey will trust that that hope will be realised.

Progressive Bulgaria.

In the course of an interview with a representative of the *Evening Standard*, Mr. Jacob Heilborn, European manager of an important American industrial corporation, who has just returned from a tour in the Near East, states:—

Bulgaria to my mind is a highly progressive country, and Sofia, its capital, is as clean as Berlin. In fact, the contrast between Bulgaria and Turkey is as great as is night from day. Servia also affords a big distinction from Bulgaria, and the conditions there remind me more of those which prevail in Turkey.

Roumania is now prospering greatly, chiefly owing to the extensive oil industry. The people, unfortunately, are becoming very extravagant, and Bucharest, like Paris, is becoming more and more a night town.

England and Greece.

A correspondent signing himself "Parthenos" writes to the *Nation* (July 27) an interesting letter on the attitude of England towards Greece, from which we extract the following:—

Greece is no more a negligible quantity in the Near East—she is capable of defending both herself and her own affairs. In the inevitable partition of a certain State in the near future England may need a friend. An alliance of the Balkan States is not an impossibility, and in that event the friendship of Greece would be a valuable adjunct. But, interests apart, impartial justice demands that England should at any rate examine for herself the splendid struggle of a lonely little State, and should, according to her ancient and high traditions, aid her with all the means in her power.

Articles to Note.

"Improvement in the Arab's Fighting Qualities," in the *Manchester Guardian* (July 24).

"Old Turks and Young," in the *Nation* (July 27).

"Defence of Egypt," letter by the Military Correspondent of the *Times* (July 27).

"Mistakes of the Committee," in the *Times* (July 27).

"The Dissolution Question," in the *Daily Telegraph* (July 29).

"Morality of Excavation," by A. E. P. B. Weigall, in the *Nineteenth Century* (August).

"The Garden of Eden and its Restoration," by Sir William Willcocks, in the *Geographical Journal* (August).

"Liquidation—Alla Turca," in *Die Zukunft* (July 20).

"Die Wasserwirtschaft in Babylonien," in the *Vossische Zeitung* (July 7).

CURRENT COMMENTS.

In the *Pall Mall Gazette* we recently noticed a message from Cairo reporting the conversion of a well-known English official to Islam. There is nothing extraordinary in this circumstance; *bien au contraire*, to some of us it will seem a not astonishing or unpraiseworthy step. There are excellencies in Islam which make a tremendous appeal to some natures, and it is perfectly fitting and admirable that such appeal should attain a natural consummation. What did, however, astonish some of us was the news that our compatriot, of whose identity we are unaware, applied at the same time for his naturalisation papers as a Turkish subject. Such a change would probably be regarded by most people as a work of supererogation, especially in view of the critical present state of Turkey.

***

A recent Constantinople telegram to the *Wiener Allgemeine Zeitung* credits Enver Bey with the ambition of aspiring to the Khalifate in the event of Turkey experiencing trouble with her Arab populations on the conclusion of the war with Italy. It is indicated that he, as son-in-law of the Sultan, nourishes hopes of establishing a separate Arab Khalifate. A duplication of the exalted office is, of course, not unknown in Mohammedan history, but it is very questionable whether any attempt to-day to establish a second Khalifate would meet with success. It may be of interest to recall that, under the strict Moslem tradition, the Khalif must always be of the tribe of Koreish—that is, the tribe of the Prophet. This condition is, of course, not fulfilled by the Sultan of Turkey.

***

We observe that the Egyptian Government is on the point of making considerable additions to the numbers of the English officials employed in the different Government departments. This is a sign of the times, and a visible and welcome evidence of the final abandonment of the policy initiated under the late Sir Eldon Gorst. It will be remembered that, after the retirement of Lord Cromer, in pursuance of the "Egypt for the Egyptians" idea, the services of quite a number of English officials were dispensed with in favour of native Egyptians. This policy has evidently been found unsuitable—at any rate, at the present day—but we hope that the time is not distant when the Egyptian will have developed more fully those mental and moral instincts which go to make up the character distinguishing so pre-eminently our Indian and Colonial officials, and will thus have more justification for his demands for full self-government.

***

It seems to be assumed by almost all writers on the proposed Trans-Persian Railway that the district of Persian Baluchistan, which is to be traversed by the line—when? we wonder—is a waste of sand and stone, incapable of furnishing traffic and insusceptible of any extended development. We are therefore interested to learn from the Hon. Arnold Keppel's book, "Gun-running and the North-Western Frontier," that the potential future of Mekran is one of considerable prosperity. Mr. Keppel thinks that the waters of the many small perennial rivers—skilfully controlled—could effect quite a transformation in the country—similar, in small degree, to what has been done in Scind. The cost of the works, we are told, need not be excessive; but poor Persia, whose purse is as yet inadequate for such modest works of undoubted utility, must apparently first be burdened with a prodigiously costly railway which she does not want. Did we not know that our friends the Russians were burning with zeal for Persia's good, we might imagine, in a moment of abstraction, that we were back again in the kindly days of the *peine forte et dure*. Under this procedure, it will be remembered, the poor prisoner was put in "a low, dark chamber, stripped, and laid on the bare floor, and as great a weight of iron as he could bear, or more, was put on his body. On the first day he was given three morsels of the worst bread, on the second three draughts of standing water, and so on alternately until he died or answered." Truly, Persia, between great railways and little loans, thy woes as a buffer State are neither few nor easy to be borne!

***

In 1906 the inhabitants of Port Said saw the necessity for taking urgent steps against the mosquitoes, and accordingly a campaign was started by the then medical officer of the town. The measures adopted were at first applied only to the European quarter, but in the following year they were extended to the native quarter of the town. Immediate results were obtained, and the number of mosquitoes was so greatly reduced that in the majority of houses it was possible to dispense with mosquito nets. The work was carried out so satisfactorily that it had the enthusiastic support of all sections of the community. It is, however, a matter of common experience that as satisfactory results are obtained and appreciated in a town, the inhabitants become more and more critical in their attitude, and require a higher and higher standard of efficiency, while at the same time their personal efforts are liable to become relaxed. Now the question of mosquitoes has arisen again in the town, and was the subject of much discussion at a recent municipal meeting. The increase causes much anxiety to the doctors, who state that the health of the town is seriously affected by the mosquitoes, and that children especially suffer from the effect of their bites. The public do not realise that it is a question which concerns the general welfare, but consider it in the light of luxury to be without a mosquito. The municipality came to the conclusion that the renewal of this nuisance was in a great part due to the people, who not only do not aid the authorities, but even hinder their precautions by refusing to admit the staff employed to fight the pest.

***

Once more the Egyptian Government has risen to the occasion, and its latest action—the postponement of the Tanta and Dessuk Mouleds—shows that it is determined to set the welfare of the cotton crop before all other considerations. It should be explained that a Mouled is a fair, which takes place on the birthday of the particular saint in whose honour it is held, and it lasts anything up to a week. The Mouled at Tanta—that of the much-revered Sidi Ahmed El Bedain—is the most important one of the year, even eclipsing the Mouled El Nabi (birthday of the prophet), and that at Dessuk is almost as big. Having at one time or other been present at the Tanta Mouled, we are able to express our unbounded approval of the latest measure. Thousands upon thousands of natives—some put the number at over one hundred thousand—flock into the district from the uttermost parts of Egypt and spend a week in pleasure-seeking and absolute idleness. No one would complain if this respite from the year's work came at any other season. The Mouleds of Tanta and Dessuk fall, however, just at the period when the cotton and boll-worms are at their most dangerous state. It is truly eloquent of the careless spirit and fatalism of the fellah that he is willing to leave his fields at this time of the year to look after themselves for about ten days, whilst he light-heartedly enjoys the fun of the fair. No greater proof of the difficulties which the Egyptian authorities encounter in their endeavours to get the fellah to protect his crops could be required. There is no doubt that a fair proportion of the damage done in recent years at this season by the cotton and boll-worms has been due to the counter attraction set up by the Mouleds, which, by drawing the fellaheen away from the fields for a short seven days, have conduced to the stultification of all the good work done during the preceding three months. By its most commendable decision the Egyptian Government has ensured that right up to the end of the cotton-worm campaign there shall be an adequate amount of labour in the fields to give the requisite attention to the crop.

***

The Royal Netherlands Steamship Company of Amsterdam has just made the discovery that there is still a good deal in a name, despite the old saw and the vaunted advance of wisdom, which is supposed to banish superstitious beliefs. For, having purchased a Clyde-built steamer for service in the Levant, they named it—perhaps with a dim idea of compliment to the Greeks!—"Charon." But the dockers at Greek ports, evidently not wishing to make acquaintance with the Styx ferryman, positively refused to work the cargo out of the vessel, and the owners have had to re-name their boat "Jason."

***

The Zoo has recently become indebted to Sir Reginald Wingate for a specimen of the whale-headed stork—the first that has been exhibited in the gardens for over fifty years. These curious birds are found chiefly on the banks of the White Nile. There they appear to pass the greater part of their lives standing in the water lost in contemplation; but woe betide the luckless fish or frog that, misled by their appearance of absent-mindedness, ventures within reach of their formidable bills! It is the bill, which is extraordinarily wide, that gives the bird its name, and certainly it does lend him some resemblance to a whale as regards the head. But it is even more like an overturned slipper of the curved pattern that is worn in some parts of the Near East, and the name, "shoe-bill," by which the bird is sometimes known, is at least as appropriate as "whale-head." The colouring is grey, with black wings and tail, and when fully grown the birds are over 4 ft. in height. The Zoo specimen, however, is a youngster, and only some 3 ft. 6 ins. tall. It was secured when a nestling by Mr. A. L. Butler, Chief of the Game Preservation Department of the Sudan Government, was reared by hand, and appears to have taken quite kindly to its new quarters.

***

The *Orient* says: "The *Tanin* is greatly amused by the new Italian Colonial Ministry. 'Ten months of war, four handfuls of earth, a Colonial Ministry, a survey of the new colonies! If the Italians only knew the story of Nasreddin Khoja and his three horse shoes, with only the horse lacking!'" The *Orient* makes no comment. We feel that, even in these columns, we cannot do better than follow its example.

PERSONAL & SOCIAL

Princess Helen of Greece travelled from town on Saturday to Eastbourne.

Sir Reginald Oakes left Cairo on July 21 for Europe.

Baron Wangenheim, the new German Ambassador in Turkey, arrived in Constantinople last Friday, somewhat earlier than he was expected.

Amongst the guests who have been entertained at Sandringham this week by Queen Alexandra are the Grand Duke and Grand Duchess George of Russia and Prince Christopher of Greece. The Grand Duchess George is the only daughter of the King of the Hellenes.

Baron Slatin Pasha, Inspector-General of the Sudan Government, will pay a visit to the King of Saxony on the 16th inst., and will stay with His Majesty until the 20th inst. At the end of August Slatin Pasha will come to England, where he will be the guest of the King and Queen at Balmoral.

His Excellency Mohammed Said Pasha (President of the Council and Minister of the Interior of Egypt) was received by his Majesty on Monday afternoon, when the King conferred upon him the Insignia of the Grand Cross of the Most Distinguished Order of St. Michael and St. George. His Excellency, who stayed at the Hyde Park Hotel during his visit, left on Wednesday for the Continent.

Major Blakeney, Deputy Manager of the Egyptian State Railways, arrived in Cairo last week from England.

It is stated that Mr. Philon, the Diplomatic Agent of Greece, will not return to Egypt on the expiration of his leave.

Mr. J. A. Todd, Lecturer in Economics at the Khedivial Law School in Cairo, has been appointed Professor of Economics at Nottingham University.

Col. Garner, Deputy Director of the Public Health Department, Cairo, is expected back in Cairo from leave on the 7th inst.

Dr. Maclean, Chief Inspector of the Ophthalmic Hospitals, has left Egypt for Europe on two-and-a-half months' leave.

Mr. W. J. Berry, Chief Constructor H.M. Dockyard, Malta, has been appointed Director of Naval Construction.

Commander F. A. L. Andrews has been appointed King's Harbour Master, Malta.

Adjutant-General Asser Pasha is now at Khartum, where he will act for General Sir Reginald Wingate during his absence on leave.

During the absence on leave of the U.S. Consul, Mr. James Oliver Laing, Vice-Consul Mr. J. A. Turnbull will have charge of the affairs of the American Consulate in Malta.

El Lewa Hunter Pasha, Director-General of Egyptian Coast Guards, is now in England on leave.

Amongst the numerous highly placed Sudan officials who have recently arrived, or are about to arrive, on leave in this country are:—Miralai Midwinter Bey, Director of the Sudan Railways; Miralai Owen Bey, Governor of Mongalla; Miralai Grant Bey, Director of the Works Department, Sudan Government; and Judges Morgan and Peacock.

Mr. J. Langley, Inspector-General of Irrigation, Upper Egypt, is acting as Under-Secretary of State in the Ministry of Public Works during the absence on leave of Mr. Macdonald.

Mr. W. F. Mun Gavin, of the Egyptian Ministry of Education, left Egypt for Switzerland on leave on July 20.

Miralai Grant Bey, Commandant of the Suez Canal Police, Port Said, left Egypt on July 16, and is now in this country on 3½ months' leave.

Colonel G. W. Fitton, Army Pay Department, has been appointed to succeed Colonel Dorling, D.S.O., as Command Paymaster, Malta Command. Colonel J. Dorling has been posted to South Africa for duty.

Serkis Bey, Second Secretary to the Turkish Embassy, left London on Saturday for Paris on short leave.

Sir Neville Lyttelton, Commander of the Forces in Ireland, who is to be appointed to the governorship of Chelsea Hospital in succession to the late Field-Marshal Sir George White, V.C., took a prominent part in the Egyptian campaign in 1882, when he commanded a brigade in the expedition to the Sudan which resulted in the death of the Mahdi and the recapture of the country.

On Thursday of last week, at St. Paul's Cathedral, the Archbishop of Canterbury consecrated the Rev. C. H. Stileman, M.A., who was for many years a missionary of the C.M.S. in Persia, and recently secretary of the Church of England Zenana Missionary Society, as Bishop in Persia, with the superintendence of the Church of England missions in that country. The new Bishop was educated at Trinity College, Cambridge, and Ridley Hall, and was ordained in 1887. He went out to Baghdad in 1889.

Lewa Edham Pasha, late Commander of the Turkish forces at Tobruk, recently passed through Alexandria on his way to Syria, travelling strictly incognito.

The *Glasgow News* reports that the surgeon whom Lord Kitchener will see when he goes to Scotland presently is Sir William MacEwen. His lordship's anxiety is in regard to the fracture caused to one of his legs by a fall in India some ten years ago, and the limb has given him trouble recently.

Captain Flower, Director-General of the Zoological Gardens at Gizeh, who recently returned to Egypt from a long hunting trip in the Sudan and Central Africa, brought to the Gardens a rare collection of animals and birds. Among the collection are two gazelles which Slatin Pasha had presented to the Zoo, but which had been kept in Khartum for Captain Flower to pick up on his way to Cairo.

Mr. Paul Cassar, of the British Consulate, Alexandria, was married on July 17 to Miss Lucie Sacco at St. Eugenie Church, Port Said.

Sir Gerard Lowther, His Majesty's Ambassador at Constantinople, arrived in England from the Continent on Wednesday.

Sir John Jackson, M.P., and Lady Jackson are going to Cowes at the end of this week.

Borton Pasha, Postmaster-General of Egypt, has arrived in England on leave.

Mr. H. Aspinal has arrived in London from Cairo.

The King has been graciously pleased to appoint Mr. H. B. Johnstone to be Vice-Consul at Tangier; Mr. E. Bristow to be Vice-Consul for the Provinces of Persia on the south of the Caspian Sea, to reside at Resht; and Mr. H. L. Rabino to be Vice-Consul at Mogador (July 1).

KHEDIVIAL DECORATIONS.

Among the lists of honours conferred in connection with the Accession Anniversary of the Khedive, published in the *Journal Officiel* of June 10, we notice:—

Imperial Order of the Medjidieh.—First class: Lord Edward Cecil, Under-Secretary of State; Birch Pasha, Administrator of State Domains. Second class: Mr. H. M. Anthony, Controller of Immeubles Libres; Hopkinson Pasha, Commandant of Alexandria Police; Mr. W. R. Williams, Inspector-General of Irrigation in Lower Egypt; Mr. P. M. Tottenham, Inspector-General of Irrigation in the Sudan; Major R. B. D. Blakeney, Joint General Manager of the State Railways. Third class: Mr. E. M. Dowson, Director-General of the Survey Department; Mr. T. B. Etherington Smith, Assistant Director-General of State Accounts; Mr. R. S. Patterson, Controller of State Accounts; Mr. R. H. Greaves, Chief Inspector of Mines; Mr. Arminjon, Professor in the Khedivial Law School; Mr. Crowfoot and Mr. Stewart, Inspectors of the Ministry of Public Instruction; Dr. Phillips, Professor in the School of Medicine; Mr. Monteith-Smith, Director of the Press Service; Dr. Rudolphe Amster, Director of Stores in the Public Health Department; Mr. W. Delanoy, Director of Stores in the Prisons Department; Kaimakam Russell Bey, Sub-Commandant of the Alexandria Police; Mr. P. R. Boxwell, Inspector of Irrigation, Delta Barrages; Mr. L. N. Cooper, Inspector of the Third Irrigation Circle; Mr. J. H. Grieve, Provisional Engineer of the General Inspection of Irrigation for the Sudan; Mr. C. B. Clapcott, Judge, Cairo Tribunal; Mr. J. F. Kershaw, Judge, Alexandria Tribunal; Mr. A. J. Wakeman Long, Judge, Tantah Tribunal. Fourth class: Mr. C. C. Curwen, Sub-Director of Customs, Alexandria; Mr. H. Harrington, Local Director of the Alexandria Post Office; Mr. Smithard, Sub-Inspector to the Agricultural Education Administration; Mr. Murray, Engineer-Inspector in the Municipalities Section; Mr. W. de Courcy, Chief Engineer in the Quarantine Department; Mr. E. Tillard, Chief Engineer in the Prisons Department; Bimbashi H. Archer, Police Inspector in Cairo; Mr. E. W. Buckley, Director of Works in the First Circle of Irrigation; Mr. E. P. Shakerly, Director of Works in the General Inspection of Irrigation for the Sudan; Mr. D. A. F. Watt, Provisional Director of Works at the Assouan Reservoir; Mr. F. Hylands, Divisional Chief, State Railways Department.

Imperial Order of the Osmanieh.—Third class: Major Elgood, Controller of State Accounts; Dr. C. Goodman, Director of the Bacteriological Service of the Public Health Department. Fourth class: Dr. R. G. White, Bacteriologist in the Public Health Department.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

MARRIAGE.

PAVLIDES—CANNING.—On July 25, at St. Luke's Church, South Kensington, by the Rev. H. R. Anderson, vicar, and afterwards at the Greek Church, Bayswater, by the Very Rev. Archimandrite Constantine Pagonis, Xenophon G. Pavlides, Barrister-at-law, Athens, son of the late Professor X. G. Pavlides, to Gwladys Ventry Canning, daughter of the late P. W. G. Canning, R.N., and of Mrs. L. Hartley, of 8, Redcliffe Gardens, and granddaughter of the late Hon. E. Palmer, Chief Justice of P.E.I.

THE SITUATION IN TURKEY.

Although a certain obscurity still veils the course of events in Turkey, there are many symptoms which indicate that the position of affairs is not necessarily hopeless. The present struggle is between two sections of Young Turks—the "Old" Turk may be regarded as having ceased to exist—and experience shows that in these circumstances Moslems are adepts at compromise, and rarely carry their differences to extremes. It has long been known that dissensions were rife in the Committee of Union and Progress, and that its policy has been dictated mainly by the extremists. Events, however, have proved that they reckoned without their host. The corps of officers represents the best-informed, and probably the strongest, body of public opinion in Turkey, and if the members are in agreement, they are likely to experience little difficulty in arranging things their own way. In the present instance they would appear to have arrived at the conclusion that the Committee was not making the best of its opportunities. Its régime was held to be prejudicial to the interests of the army. Apart from the hypothetical grievances of individual officers, who felt that the military administration was being conducted on partisan lines, it was clear that the policy of the Cabinet imposed an unnecessary strain upon the army. At a time when all military activity ought to have been concentrated on the foreign foe the army was called upon to deal with the Albanian insurgents. This state of affairs, it was held, was brought about directly by the attitude of the Committee of Union and Progress towards that province, and for the adoption of the misguided policy the extremists of the party were held responsible. The quarrel of the officers, therefore, was with the extremists. Three men in particular—Talaat Bey, Djavid Bey, and Mahmud Shevket Pasha—were regarded as the evil geniuses of the Committee, and opposition centred on them. As soon as the Military League was in a position to formulate a line of action its efforts were directed towards the removal of these three Ministers. It is not able, and probably has no desire, to set up as a rival political party; but as an influential body, strongly patriotic, it is prepared to enforce its wish that the State should be administered on lines agreeable to it. If as a result of its action the Committee's Cabinet, rent by internal dissensions, totters and falls, the Military League would still be right in arguing that the responsibilities of the officers as the nation's trustees did not impose upon them the duty of assuming the reins of Government.

It is in the belief that this diagnosis of the situation may yet be proved to be correct that we find grounds for regarding the outlook optimistically. Constitutional government in Turkey must always be subjected to the special restrictions imposed by the numerical preponderance of a non-Turkish population. The fact that its introduction was regarded abroad as implying something that the Turks themselves had not the least intention of introducing into the country does not imply that the new régime cannot be an improvement upon the old administration. The revolt against the methods of Abdul Hamid marked a certain stage in the progress of Turkey, and in the same way this later revolt against the policy of the extremists of the Committee is a further step in the right direction. In order to gain the widest possible support the Committee of Union and Progress inaugurated its revolt with the watchwords Liberty, Equality, and Fraternity; but as soon as it was firmly established in power it realised that the interpretation put upon this doctrine by the subject races of the Empire must ultimately destroy the sovereignty of the Turk in Europe. Lacking statesmanship and administrative experience, the Committee of Union and Progress struck out blindly with the instinct of self-preservation. A State in which Christian and Turk could co-operate harmoniously with a feeling of national solidarity was beyond its powers of conception, and it refused to believe that the various peoples of Macedonia could remain loyal to the Empire while endeavouring to promote their individual racial interests on constitutional lines. Accordingly, under the direction of the extremists of the party, a policy of suppression was started. The national organisations of the Greeks, Bulgarians, and other races of Macedonia were forcibly dissolved, and both the legitimate and illegitimate aspirations of these communities were compelled to make common cause and find vent in conspiracy and outlawry. Similar treatment was meted out to Albania, which it was thought could be saved for the Empire by a drastic system of "Ottomanization." Within three years this policy has borne its fruit, and the extremists of the Committee have been discredited. So superficially had liberal ideas been adopted by them that they failed even to remember the need of co-operating with the army that had raised them to power and kept them in office. The Committee's discomfiture opens the door to praetorianism; but it will be hoped that the good sense shown up to the present by the Military League will be maintained and will save the country from this fate.

The composition of the new Cabinet is the best possible earnest of the sincerity of the officers' declaration that they are anxious to keep themselves free from politics. It is a Ministry of Elder Statesmen, and as such offers the safest transition from the former Government to another Cabinet that will represent more accurately the moderate Liberalism that has found expression in the revolt against the Committee extremists. For whatever may be the faults of commission of the late Cabinet, it must be placed to its credit that it stood for a higher standard of individual integrity than probably any previous Turkish Ministry could claim. This fact constitutes a strong argument in favour of another strictly Young Turk Cabinet, which will uphold the reputation of the new order. In the meantime, however, the present Ministry has much work immediately before it. Its task in Albania may be simplified by the repeated assurances of the insurgent population that they still retain their loyalty to the Empire. Statements have been made that the acquiescence of the Committee of Union and Progress in the new order depends on the Cabinet's retention in its programme of a policy of centralisation. But the word can have no application to Albania. The habits and traditions of generations are not to be changed in a moment, and the Albanians have led too long a life of virtual independence of Constantinople to conform at once to the Committee's theories of government. Their national feeling is strong, and they have some justice in their contention that if they have failed to contribute to the Imperial purse, they have also failed to benefit by Imperial expenditure. The Porte's best policy will be to respect the national aspirations of the Albanians and to content itself by acquainting them with the advantages of civilisation in the way of roads and bridges, before it demands payment for these services. In Macedonia again the new Cabinet can benefit by the mistakes of its predecessor. The internal affairs of Turkey undoubtedly calls for its first attention. If it is able also to find a peace formula acceptable both to Italians and to Turks it will have served its country still more splendidly. As it contains none of the elements of a long-lived administration, it might well set itself this peace mission as a prelude to its final retirement. For by that time the Committee of Union and Progress ought to have rid itself of its extremists, and co-operation in the Cabinet between its moderates and some of the present Ministers would seem to offer the best solution of Turkey's constitutional crisis.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

In last last week's issue of THE NEAR EAST a correspondent, writing in the "Engineering Notes," points out the advisability for British firms to advertise in the Levant. The case quoted by the writer proves his contention, and should be taken to heart by our exporters. From the results obtained by those advertising in THE NEAR EAST, it would most certainly appear that judicious advertisements bear welcome fruit. Besides this medium, there are, of course, others of an equally acceptable nature, such as posters, etc. Comparatively little has been done in this respect, and the ground is almost virgin. Posters "telling a story" would be the most attractive, but they would have to be explained by means of a text in the language of the locality. Towering up over the roof of a house in the Ataba-el-Khadra, at Cairo, there is, or used to be, the bold lettering of a famous brand of Scotch whisky, illegible to the natives, for whose benefit it had doubtless been hoisted up. Such advertisements are, of course, a waste of money.

***

The German Consul-General at Constantinople states in a recent report that it is the Turkish Government's intention to establish a torpedo-boat harbour at Laz-Burnu, a strip of land on the Asia Minor bank opposite Stamboul. Tenders have been invited for quay works, etc., but now, owing to the change of Government, it is likely that the construction will be held in abeyance. It will be the fate of many similar works involving a big outlay. To all appearances the present Government intend to proceed carefully, and to reduce loans to an absolute minimum. Public works will suffer, but, from a Turkish point of view, it is perhaps wiser that it should be so, for the time being, at any rate. Because, frankly, it must be admitted that the Young Turks were apt to be too reliant on Europe's purse, and exceedingly free with the sums lent—often to our disadvantage.

***

I read that the Cyprus Government recently granted its postal subvention to the Khedivial Mail Line for a period of seven years. Unfortunately, the Government did so without obtaining the permission of that unruly Greek element which does its utmost to hamper our administration of the island. They therefore consider themselves justified in boycotting the Khedivial Mail Line. If this state of affairs is allowed to continue much longer, we shall soon be having a general boycott of British goods is one of our own possessions! There is already a local cloth factory in the island, which did well during our coal strike, and were a boycott of Manchester goods to take place (and I have heard rumours to that effect), it would kill that particular trade completely.

The American Consul at Patras, Mr. A. B. Cooke, states that high-grade limestone deposits were recently located in his district. This should prove a valuable asset to Greece's exports, the more so considering they can be easily worked. The expert analysis shows the following results:—Silica, 0.2 per cent.; iron and alum, 0.2; lime, 54.2; magnesium, 0.2; and carbonic acid, 43 per cent.

***

The *Daily Consular and Trade Reports* (Washington) of July 3 contains a well-balanced and lengthy article on Turkey's commerce by Consul-General Ravndal, of Constantinople. It is a review of the year 1911, and in it the writer states that neither the cholera epidemic nor the political disturbances which culminated in the Turco-Italian war seriously affected Turkey's trade during 1911, and the record of the year was characterised by prosperity and progress. It is, however, remarkable, he concludes by saying, how the country continued its economic advance. Quoting from THE NEAR EAST, he points out one of the peculiarities of Turkish economic life, namely, its power of resistance. "Turkey's business men have long been accustomed to a policy of wariness, necessitating the holding of resources in reserve. Throughout the Empire, especially in the rural districts, gold is hoarded in the form of jewellery and money." Thus it would seem that this obnoxious habit is not restricted to Egypt. Though inexcusable, it can be easily understood if we remember Hamidian days in Turkey and the rule of the Pashas in Egypt. Gold in those days was only safe when hidden away beyond the ken of a next door neighbour.

***

In his recent book "Gun-running and the North-Western Frontier" the Hon. Arnold Keppel calls attention to a possible opening for British enterprise in the Persian Gulf. The pearl trade of Bahrein, which amounts to the very considerable figure of £420,000 (1909-1910), is almost entirely in the hands of Indian traders, who make periodical visits from Bombay. Mr. Keppel gives what may prove to be a valuable hint in suggesting the advisability of some British firm sending out a representative during the season each year. Home buyers of pearls would do well to consider this suggestion.

***

In connection with the opposition to the Five Feddan or "Homestead" Law, is it not a sign of the times that the first deputation to be received by Lord Kitchener was one sent by the German Chamber of Commerce? Moreover, to its objections our Consul-General lent a willing ear, and "is understood to have expressed his willingness to reduce the undistrainable area to two and a-half feddans." I need draw no inference, leaving it to my readers to do so. That it proves the growing strength of a community until a few years ago considered almost *une quantité négligeable*, is beyond a doubt.

***

The reduction of the five feddans to two and a-half is, or would be, an improvement from many points of view, in spite of Mr. Blunt's objections, as expressed in his article in the August number of the *Fortnightly Review*. The two-and-a-half feddan landholders are, however, greatly in excess of those owning five acres, so that the alteration would not affect the great bulk of the fellaheen. It would thus leave the Agricultural Bank and its associates in much the same position as under the Five Feddan Law. As the latter is aimed at the usurer, and not at the banks, I still think that the rate of interest paid by the fellah should be the determining factor as regards the distrainability of the land.

***

Moreover, what will be the status of the agricultural co-operative societies under the new law? Members are separately and jointly responsible for the money lent by them to members. In case of default of repayment by a member, how is the loss to be met if the delinquent's land and crops are undistrainable? How can the society lend money on a security which after all is no security? These are questions which, if they are not definitely settled, will turn the new law into a muddle comparable with our happy-go-lucky insurance scheme.

***

Although, owing to the imposition of quite unreasonable conditions by the Turkish authorities, the invitation of tenders for irrigation works in Mesopotamia resulted in a fiasco, work on the Hindieh Barrage is still being carried on by Sir John Jackson and Co. under their provisional contract with the Government. I am now informed on very high authority that there is no question of the abandonment of the scheme of works, and that the recent changes in the personnel of the Ministry of Public Works will doubtless have a stimulating influence which should result in some practical solution of the difficulties that have hitherto impeded the placing of the contract. I am assured that the suggestion that international intrigue has been at work to prevent this contract being given to a British firm has no foundation.

***

In a report published in the Washington *Daily Consular and Trade Reports*, Mr. Consul Sauer states that the National Bank of Turkey intends opening a branch in Baghdad. As a matter of fact, I learn that the bank had originally the intention attributed to it, but has now decided to relinquish this idea. All Baghdad business of the National Bank of Turkey will, therefore, be carried on through the Eastern Bank.

***

I am glad to learn, on the best authority, that order is being rapidly established on the southern trade routes in Persia. The recent advance made by the Imperial Bank of Persia for this purpose seems to have had a magically potent effect, for already quite a considerable increase in the trade movement is noticeable. This is one more instance of the pre-eminent importance, for British economic interests, of far-sighted and ready financial support, unshackled by a superfluity of "red tape."

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, July 27.

The Situation.

In my last letter I expressed a dread of the probability of the re-closing of the Dardanelles to commerce. For the time being at least, however, the outlook is more hopeful, and unless Italy extends her naval operations during the present crisis, the likelihood of the Straits being closed is appreciably less. It is yet too early to be able to say anything in regard to the financial and industrial programme of the New Ministry, but one cannot refrain from expressing a hope for the speedy realisation of the many schemes for the economic regeneration of the Empire, and more especially those concerning railways, ports, and irrigation.

Railway Traffic Receipts.

The published traffic receipts for the first half of the year 1912 of the several Ottoman Railways show a considerable increase over those for the corresponding period of 1911. Thus, on the Haidar Pasha-Angora section of 578 kilometres of the Anatolian Railway the receipts to July 1 inclusive amounted to 14,821.32 frs. per kilometre, as compared with 12,418.72 frs. during the same period of 1911; and on the Eski Chehir-Konia section of 445 kilometres of the same company, the receipts to July 1 inclusive amounted to 10,546.46 frs., as compared with 8,889.14 frs. during the same period of 1911. The receipts of the Oriental Railways for the six months ended June 30, 1912, amounted to 8,174,154 frs., as compared with 6,990,814 frs. during the same period of the previous year. The average weekly receipts of the Smyrna-Aidin Railway during the half-year ended June 29, 1912, amounted to 708,307.25 ps., as compared with 592,945.10 ps. during the corresponding period of 1911.

Ports of Haidar Pasha and Alexandretta.

The gross receipts of the Haidar Pasha Port Company, which were £T38,163 in 1909 and £T58,052 in 1910, had increased to £T80,895 in 1911. The traffic of merchandise amounted to 343,402 tons in 1911, as compared with 226,692 tons in 1910, and 115,926 tons in 1909. The number of vessels loading and discharging had grown from 82 steamships and 108 sailing ships in 1909, and 105 steamships and 285 sailing ships in 1910, to 178 steamships and 288 sailing ships in 1911, of a total tonnage of 108,026, 153,667, and 269,394 respectively. The grain warehoused in 1909 was 19,315 tons, and had reached 135,505 tons in 1911.

The company is at present negotiating with the Government for the enlargement of the port in the direction of Scutari, according to its original project. For this purpose and also for the construction of the port of Alexandretta, of which it is the concessionnaire, the company called up the remaining 20 per cent. of its share capital of eight million francs in the latter part of last year. It was further authorised at an extraordinary general meeting held in November last to increase its capital to sixteen million francs. It can further issue debentures to the sum of one and a-half times the amount of its share capital, of which, so far, only eight million francs have been issued.

The Constantinople Omnibus and Autobus Co.

The result of the company's working during the year 1911, as laid before the shareholders at its second annual general meeting held on July 12, does not at all coincide with the board's anticipations as expressed at the previous annual meeting. While the receipts have increased from £T3,395 during 1910 to £T8,701 during 1911, the expenditure has also increased from £T7,122 during 1910 to £T13,064 during 1911, the increased expenditure being principally in the item for salaries and wages. Notwithstanding a loss representing almost one-fourth of its share capital (£T30,000) during the two years the company has been working, the board are still optimistic in view of the increase in the receipts, and, with the object of adding to the number of cars now running, propose to issue a further 3,000 shares of £T5 each, as authorised at an extraordinary general meeting held in July of last year. On the basis of a report of a specialist representing the English founders who was sent from London to study the situation of the company, this English group has offered to take up the whole of the new issue on condition that the management of the concern is handed over to it. This proposition having been accepted, the new management is about to enter upon its duties, and the arrival of several new cars is shortly expected.

The Heraclea Coal Company.

Owing to various reasons, amongst which were heavy snowfalls stopping work for six weeks, a cholera epidemic, and a lack of labour, the output of the Heraclea mines was, during 1911, 600,449 tons, as against 620,467 in 1910, and the year's working showed a loss of 155,232 frs. On the other hand, the output during the first five months of the present year shows an increase of 50,000 tons, and with its industrial reorganisation a diminution of the first cost, besides a reduction of the dues paid the Government, and an increase of almost 3 frs. per ton on the sale price. The company has also acquired several new properties, including that of the Banque de Métélin, reported in an earlier letter, and another owned by an Italian group.

Water Canalisation.

The Ministry of Pious Foundations has prepared the specification for the canalisation of the locally much-appreciated water from the springs of Tach Delen and Alem Dagh to Scutari. These will shortly be published, and foreign contractors invited to tender.

Scutari Kadikeui Electric Trams.

There were three offers submitted for this concession. One, that of a local group, was rejected. The remaining competitors are Messrs. Ganz, of Budapest, and the Banque d'Athènes forming one group, and the Omnium Industriel Franco-Ottoman the other.

TURKISH RAILWAY RECEIPTS.

The Berlin correspondent of the "Financial News" writes: All those Turkish railways in which German capital is invested have now published their earnings for the first half of 1912. The group, comprising the Anatolian Railway, the Baghdad Railway, the railway from Mersina to Adana, the Orient lines, and the route from Salonika to Monastir, have taken 17,603,510 francs, as against 15,201,862 francs in the first half of 1911, 13,075,161 francs in the first six months of 1910, and 10,955,545 francs in the corresponding period of 1909. With the exception of the short route from Mersina to Adana, all the lines show steady improvement, in spite of the various impediments resulting from the Italo-Turkish War. The advances are most noticeable with the Anatolian Railway and with the Orient lines. The returns of the Anatolian Railway for the half-year under review amounted to 6,700,000 francs, as compared with 5,600,000 francs in the corresponding period of 1911 and with 3,200,000 francs for the first six months of 1909; while the receipts of the Orient lines advanced from 5,800,000 francs in the first half of 1909 and 7,000,000 francs in the same period of 1911 to 8,200,000 francs for the months of January to June, inclusive, of the current year. The aggregate takings of all the railways mentioned show for the first half of 1912 an increase of 2,400,000 francs over the corresponding period of 1911, and an advance of not less than 6,600,000 francs, as compared with the first six months of 1909.

NEW TELEGRAPHIC CODE.

We have received from Messrs. McCorquodale and Co. a copy of a new five-letter telegraphic code, published by them under the title "Courier International Telegraphic Code." This compilation is not designed to compete with the more expensive business codes, but is intended for use in private communications. The method of combining the five-letter units so as to form ten-letter words enables one to effect a double economy in telegraphic charges. All phrases are given in five languages—English, French, German, Spanish, and Italian. A point to be noted is that a duplicate copy (paper-bound) is given with each code, and not the least remarkable feature of the publication is its price—2s. 6d.

ROUMANIAN BUSINESS NOTES.

(From Our Own Correspondent.)

Bucharest, July 27.

Treasury Receipts.

A proof of the wonderful progress in commerce and industry, as in everything else, which this country is making, is adduced by the facts that the receipts of the Public Treasury during the past month (June) amounted to 45,863,000 frs., an increase of 9,099,000 frs. in comparison with the like period of last year. For the first three months of the present financial year, April 1 to June 30, 1912, the receipts were 112,401,467 frs., an increase of 26,910,000 frs., as against the three corresponding months of 1911. As to the encashments effected by the Treasury for the present financial year up to June 30, the figures are 527,475,327 frs., which exceed by 59,800,000 frs. the receipts of the same period of last year, and by 49,080,000 frs. the estimates for these months, which were 478,395,000 frs. The expenditure during the same period amounted to 445,022,000 frs.

There was, therefore, on June 30, 1912, an excess of receipts over expenditure of 82,403,299 frs. Taking into consideration that there are two more months of the financial year to run, till September 30, it is easily possible that the excess will then not be far short of 100 million frs.

Agricultural Land Values.

Another significant proof is the extraordinary rise in the price of agricultural land. A few days ago an estate was let by public auction, and part of it—the domain of Ulesthi—which was let a year ago for 65,000 frs., was let for 100,000 frs., whilst the other portion of the estate, Cegani, let six years ago for 80,000 frs., fetched 220,000 frs., or almost four times the former rental.

Sericulture.

For some years past great efforts have been made by the Government to introduce and encourage the silk-worm industry, which has met with every success. There are at present in 1,786 communes 34,651 persons, principally peasants, engaged in this industry. Last year the Government distributed gratuitously 48 kgs. eggs and the Tzesatoarea Society 59 kgs., whilst 96 kgs. were produced by the cultivators. The cocoon yield amounted to 190,993 kgs. of cocoons, or about 935 grams of cocoons per gram of silkworms' eggs.

The Ministry of Agriculture has concluded with the firm of Reidinger, of Augsbourg, a contract for the supply of the necessary refrigerating machinery for the new fish market buildings, which are about to be erected at Galatz. The amount involved in the contract is 253,280 frs.

Mr. George Butza, a Roumanian engineer, for many years resident in Buenos Ayres, is at present in this country, entrusted by the Argentine Government with a mission for bringing about commercial relations between the two States.

THE TRADE OF HAMAH.

(From a Correspondent.)

Hamah, July 18.

Before the opening of a branch of the Imperial Ottoman Bank at Hamah, this town was tributary, from the Treasury point of view, to Damascus, Beyrout, Aleppo and Tripoli. The foundation of a branch at Hamah for banking business, and especially advances on signatures, has rendered commercial transactions easy, and has checkmated the moneylenders, who used to make advances at usurious rates.

The region of Hamah is one of the most important centres in Turkey for cattle breeding and the production of cereals, wool and butter. The article of export most interesting to the United Kingdom is cereals, notably barley, of which the export to British ports is very great, the quality of Hamah barley being of high repute amongst brewers.

A Reuter's message, dated July 27, states that the population of Crete is dwindling in the most alarming manner, owing to emigration, even the Mussulmans being concerned in the movement. Large numbers of cattle and mules sold by the emigrants are also being exported. The farmers experience the greatest difficulty in finding labourers to till the soil.

Openings for Business.

MACHINERY IN TURKEY.

In the U.S. Daily Consular and Trade Reports we read that the increasing cost of labour in Turkey, amounting to about 50 per cent. in the past two years, and the impetus given by the new conditions to the industrial development of the country are causing rapid growth in Turkey's machinery requirements, both in volume and variety. At present the strong demand is for motive power to develop the natural resources of the land, and the market is open for oil, gas, and electrical engines for use in shops, mills, factories, mines, docks, lifts, road building, harbour construction, irrigation works, heating and lighting plants, waterworks, and agricultural operations. Machinery for use in the same lines is also needed. Turkey affords an extensive field for the introduction of agricultural machinery, but there is also a widening chance for industrial machinery, as the spirit of industrial enterprise is taking hold of the people. Turkey has hitherto sent its raw materials abroad, to be returned in the form of manufactures, but the manufacture has already begun here, on a small scale, of flour, paper, glass, cloth, cottonseed oil, cement, tiles, furniture, leather, ice, and other necessities employing modern machinery, which the Government admits free of duty. Special opportunities exist in Turkey for the sale of machinery for flour mills, sawmills, pumping, wood and metal working, ice making, building, and electrical work. Laundry machinery is as yet unknown here, and cash registers, for which this country is now ripe, are practically so.

BUILDING MATERIALS FOR TURKEY.

Manufacturers of doors, sashes, and blinds, builders' hardware, central heating plants, plumbers' supplies, lifts, etc., should enter this field, as Turkey is entering upon an era of general building operations, which will include not only residences, blocks of flats, office buildings, and warehouses in the large cities, but also farmhouses, factories, and other erections throughout the interior provinces. The Government is also undertaking the construction of prisons, barracks, and other public buildings.

VARIOUS TURKISH REQUIREMENTS.

Some articles which should be especially pushed in Turkey, according to American Consular advices, include automobiles, bags, biscuits, face and fire brick, carriages, cement, cottonseed oil in cans, cordage, copper, clocks, canned groceries, drugs and medicines, fertilisers, fly paper, electrical appliances, hams, sausages, lamps and lighting devices, incubators, marine engines, metal bedsteads, machine oil, oilcloth, boiled linseed oil, paints and varnishes, playing cards, paper and stationery, phonographs, perfumes, photographic supplies, radiators, and refrigerators.

MOTOR SERVICES IN GREECE.

The Consul-General for Greece informs us that the Ministry of the Interior at Athens is open to receive tenders for the establishment of a service of motor vehicles for the transport of passengers and goods between Tripolis and Sparte on the one hand, and Lamia and Karpenissi on the other. All tenders should specify: (1) the manner in which the tenderer proposes to participate in the cost of putting the roads in proper repair before commencement of the service, and (2) the manner in which the tenderer proposes to assure the annual upkeep of the roads during the continuance of the concession. It will also be necessary to annex to the tender tables of fares for transport of passengers and goods for the whole of the route, and per kilometre for intermediate points. Further, the conditions must be specified under which the tenderer is willing to undertake the transport of mail bags for the whole extent of the route and also for any intermediate points.

Tenders must be submitted to the Ministry of the Interior not later than September 30, 1912.

STEAMSHIP CONSTRUCTION.

The Hungarian Levant Steamship Company, Limited, are open to receive tenders for the building of a high-class passenger steamer of about 1,800 tons gross.

NICOSIA ELECTRIC LIGHTING.

Writing under date of July 18, a Nicosia correspondent informs us that the municipal authorities of that town have granted a concession for the electric lighting of the town to a Greek firm. The lighting will be by means of 630 lamps, and at the end of twenty-five years the whole plant, etc., is to become the property of the municipality. At the time of writing the Government had not confirmed the concession, but it is reasonably safe to assume that it will be confirmed, and English manufacturers of plant and lamps would do well to keep the opening for supplying goods in view.

BOILER FOR THE "SAREEA."

With reference to the call for tenders for the supply to the Egyptian Coast Guard Administration of a cylindrical steel boiler for the cruiser "Sareea," the Egyptian Ministry of Finance gives notice that as the dimensions of the boiler should have appeared in the specification as 7 ft. 6 ins. diameter by 7 ft. long (instead of 7 ft. diameter by 7 ft. long), the time for the receipt of tenders has been extended to August 31. Tenders, accompanied by a provisional deposit of 2 per cent. of the value of the offer, should be addressed to the Director of Stores, Coast Guard Administration, Alexandria, from whom copies of the specification, with form of tender, may be obtained. A copy of the specification and form of tender may also be seen by British makers at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

CLOTHING FOR EGYPT.

In a recent French Consular report on the trade of Egypt it is stated that the foreign colony resident in that country have contributed considerably to the adoption by the natives of European tastes and customs so far as dress is concerned. A large number of middle-class Egyptians, peopling the towns, who come into frequent contact with Europeans in their spheres of labour, have abandoned their ancient costumes and donned European clothes, which are certainly more suitable for those leading an active life. With the wearing of European clothes the native has developed a very marked tendency for style. Their notion of "style" is, strictly speaking, very often primitive in the majority of cases, and showy garments often have their preference. But the inclination for European attire and finery, not only amongst the men but also as regards the women, has considerably increased the demand for cotton of all kinds, and Egypt is capable of becoming an important outlet for manufacturers, who are willing to sell their goods cheaply and stretch a point in the matter of credit.

TENDERS INVITED.

EGYPT.

Machines for Model Workshops.—Tenders are invited by the Ministry of Education for the supply of the following machines to the model workshops at Assiout:—A melting cupola and blowing fan, an overhead travelling crane, six foundry ladles, a self-delivering fixed pan, foundry sand and loam mill, and a face-plate boring and surfacing lathe. Sealed tenders, on stamped paper of 30 millièmes (7½d.) (obtainable from Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster, S.W.), will be received at the Department of Agricultural, Technical and Commercial Education, Cairo, where also copies of the specification may be obtained. A deposit of 2 per cent. of the value of the offer is required with each tender. (Legal "domicile" necessary.) Date, September 1 (noon).

Cloth for Binding.—Tenders are invited by the Ministry of Finance for the supply of about 35,000 metres of black binding cloth required for the Printing Department during 1913. Sealed tenders to be made out on the proper form and enclosed in two envelopes, the inner marked "Tender for the Supply of Binding Cloth," and the outer addressed to the Director, Printing Department, Cairo. Copies of the conditions, with form of tender, may be obtained from the same address. A deposit equal to 2 per cent. of the value of the offer is required with each tender. Date, September 12 (noon).

Supply of Paper, Bristol Board, and Millboard.—Tenders are invited for the supply of paper, Bristol board, and mill-board required by the Printing Department of the Egyptian Government during the year 1913. The conditions of contract and schedule of quantities may be obtained at the Secretariat of the Ministry of Finance and at the Printing Department, Bulaq. Tenders to be sent to the Director, Printing Department. Date, September 10 (noon).

Supply of General Stores.—Tenders invited by the Ports and Lighthouses Administration for the supply of general stores for the year 1913 according to the conditions of tender and specifications, copy of which can be obtained from the Secretariat Department of the Administration. Tenders must be made on a 30-millième stamped paper, accompanied by a provisional deposit in accordance with conditions, and sent in double sealed envelopes, the outer one bearing the address of the Director-General, Administration of Ports and Lighthouses, Arsenal, Alexandria, and the inner one marked "Tender for supply of general stores for the year 1913." Date, September 6 (noon).

Supply of Various Articles.—Tenders are invited for the supply of lime, native and cement tiles, sanitary installations, water pump (air motor), iron water tank, etc., required by the Coast Guard Administration at Kerdassa Station (in the vicinity of Giza Pyramids). Conditions of tender and specification can be obtained from the headquarters, Coast Guard Administration, Bab el Louk, Cairo, or from the office of the Director, Coast Guard Western Directorate, Transit, Alexandria. Tenders must be made on stamped paper of 30 milliemes, and submitted with the conditions of tender and specification in sealed and registered envelopes, marked: "Tender for the supply of various articles for Kerdassa Station" to the Director-General, Coast Guard Administration, Cairo. Date, August 15.

BULGARIA.

Supply of Rails, etc.—Tenders invited by the Direction-General of Bulgarian State Railways for the supply of rails, fishplates, chairs, bolts, and dog-spikes, fifty sets of switches and crossings, and twenty pairs of points. Estimated value about £27,250. Tenders may be for the whole or for (1) rails, fishplates, and chairs; (2) bolts and dog-spikes; (3) switches and points. Those tendering must forward undertaking to deposit 5 per cent. if declared successful; and those who have not previously supplied the B.S.R. should submit a certificate from a railway company that they have supplied similar goods to their satisfaction. Tenders to be addressed to the Direction-Generale des Chemins de Fer Bulgares, Sofia, in envelopes marked "Offre pour la fourniture de rails, du petit matériel et d'appareils de changement et croisement de voies." Specifications, etc., may be obtained from the Direction on payment of 5 frs. for those concerning the rails and small material and of 15 frs. for the switches, etc. Copies may also be seen by British manufacturers at the Commercial Intelligence branch of the Board of Trade, 73, Basinghall Street, E.C. Date, August 17 (3 p.m.).

Tubes.—Tenders are invited by the Municipality of Slivna, Bulgaria, for the supply of 660 metres tubes. Particulars of Chief Magistrate. Date, August 5.

Shovels.—Tenders are invited by the Finance Administration, Sofia, for the supply of shovels required by the Direction des Matériaux, Chemins de Fer Bulgares. Date, August 7.

U.S. COTTONSEED OIL EXPORTS TO TURKEY.

Cottonseed oil represents the largest value of any single item of export from the United States to Turkey (says a New York contemporary), amounting in 1911 to about 50,000 barrels, valued at about 1,500,000 dollars as compared with 36,000 barrels in 1910 and 20,000 barrels in 1909. These shipments seem likely to continue growing in favour, both as a substitute for butter and lard and in the manufacture of so-called olive oil.

Engineering Notes.

A CLEVER "HARVESTER."

(From Our Own Correspondent.)

Port Said, July 17.

Yesterday a very interesting cargo arrived here by the North German Lloyd steamer for transhipment, in the shape of ten patent harvester machines. One expects many things from the Commonwealth of Australia, but most people will be surprised—perhaps a little startled—to find that we have rivals in the machinery export trade in Australia. For the last eight or nine years, however, H. V. McKay, of Melbourne, have been exporting their patent harvesters to the Argentine and Buenos Ayres. The cargo I have referred to is en route for Odessa, and is sent as an experiment. Russia has no machinery of the sort, but employs the old methods for the harvest of stooking and carting in stack buildings, and the farmers must undergo wearisome waiting for the threshing-machines, with all the expenses entailed thereby. It seems that the "Sunshire" harvester, as the machine is called, completes all these operations at once. This novel machine, which, with one man and four horses, cuts the grain, and by a series of operations prepares it for the mill before leaving the machine, would, it seems, be particularly suitable for work in the Sudan.

In the fore part there is a comb which takes off only the ears of grain in passing. The grain falls first into an elevator, then, regularly, into the threshing-drum, and again on to a sort of riddle, and is winnowed by a fan which revolves rapidly in a well-fitted drum. After undergoing this process the grain enters a diagonally slotted revolving steel cylinder, and, by means of a worm, is made to travel over 9 ft. of slotted surface before it escapes. The small seeds and broken grain are thus divided from the plump grain, enabling the farmer to show good samples of his grain. The final receptacle for the grain is a large grain-box, and when the slide-door is opened by means of its lever the grain empties out into a bag, which is held in position by means of a toothed bow. The farmer has then nothing to do but to sew up his bag and send it for export or to the mill.

The machine is no good for any country where the ears do not ripen on the stalk. It is drawn by four horses, and can be managed with ease by one man, be he ever so inexperienced. It has been most successful in South America, where 1,500 were exported last year. The ten machines now here for transhipment are packed in pieces, in eighty-five cases, and are accompanied by an expert, who will piece them together on their arrival and superintend their preliminary trials. This novel cargo will leave Port Said, probably on a Russian steamer, on the 19th inst., and is expected to arrive in Russia on the 30th.

Oil Drilling Gear.

The Standard Oil Company's subsidiary in Roumania, the Romano-Americana, has an extensive drilling campaign ahead of it (says the *Financier*), and has ordered fifteen derricks from Pittsburg, Pennsylvania, and a carload of wire ropes from an English manufacturer. The derricks are all steel, fastened together with clamps, and can be taken down and moved to another location when the well has been drilled, if so desired. They cost (exclusive of freight) about double the price of a timber derrick, but save money in every other way, their lightness, the cheapness of the freight, their portability, and their small maintenance charges being all in their favour. An example may be quoted of a steel derrick 80ft. high, the cost of which, including foundation and all fittings, would be between £240 and £300, or, say, £270. A timber derrick for the same duties would cost £130 or £140 These prices are to port of shipment. The order to an English manufacturer for so large a consignment of wire ropes shows that even such good judges and enormous consumers as the Standard get satisfaction from our goods, though they have the whole world to choose from, and it may be added that the said order is only the most recent of a series. It is a concrete reply to the complaint one so often hears in the wire-rope trade that British makers cannot compete against Continental manufacturers because of the import duty. It is quite true that the duty is remitted by the Roumanian Government on new material to be used in the oil industry; but the British wire rope maker is no better off than the Austrian or the German, and the freight is heavily against him.

Flour Mills in Asia Minor.

Grinding mills, with one or two pair of stones on wooden frames, and worked by small steam-engines or oil-engines, are in good demand in Syria, and a good number are already at work in the districts of Mersina, Adana, Alexandretta, Aleppo, Aintab, etc. The sizes of these mills are from 36in. to 54in., capable of producing 8 to 15 bushels of ordinary flour per hour. The natives prefer millstones producing flour leaving as little bran in the sieve as possible. This cannot be done by French burr stones, with which some manufacturers supply the mills, and disappointment is the result. Other manufacturers who know the kind of grain that the mills will grind supply Derbyshire millstones, which are softer than French burr, with better results. But the best results are given by native millstones, especially by those obtained at some quarries near Smyrna, and in the island of Millos. If an enterprising firm would send out a thoroughly competent man to study the quality and dressing of the native stones, and then supply really efficient mills at moderate prices, and of simple construction, the amount of business which might be obtained would be simply enormous. Iron cylinder, roller, or disc mills are of no value there, the people having a strong prejudice against all kinds of iron mills.

Ice Making Plant.

Up to recently, during the great summer heats, towns that were near the mountains used to obtain snow in large quantities from those sources and send it, packed in felt, to the more distant towns. But now large ice-making plants are being set up in nearly every town of importance in Asia Minor, working day and night during the summer months to meet the demand. Most of the plants are of German manufacture. Very few English firms have attempted to secure orders, possibly owing to want of knowledge of the business that can be done in that class of machinery. Soda-water plants are very much used, and the demand for same is yearly increasing, as iced mineral waters are greatly appreciated in summer even by the lower classes.

Caucasus Tea Cultivation.

The attention of British manufacturers of tea-dressing machinery should be drawn to the great progress of tea cultivation in the Caucasus. Tea plantations along the coast of the Black Sea near Batoum are progressing very satisfactorily. The total area of land under tea in the district is approximately 300 dessiatines (810 acres), which includes, besides Imperial estates, 270 acres on the property of several small proprietors. Hitherto the owners of these plantations, by paying a fixed rate of 20 cop. (5d.) for every pound of ready-made tea turned out by the factory, were able to send the production of their tea estates to the tea-making factory belonging to the Imperial domains for manipulation. But in consequence of the increase during the coming year in the output of tea from the plantations on their own estates, the Imperial Domain Authorities do not expect that they will be able any longer to undertake the manipulation of tea for outside growers, and the latter will probably be obliged to erect small factories for themselves, or else to construct a factory large enough to meet their combined requirements for joint account. The Administration of the Imperial Domain intend to increase the area under the cultivation of tea within the limits of their estates to 200 dessiatines (540 acres), and also to erect a second tea factory later on; but in the meantime it has been decided that the existing factory is to undergo certain alterations, among which will be the addition of a new mechanical drying-room to the old establishment.

A bridge on the Uskub railway between Gievgeli and Mirovtche has been destroyed by a bomb.

The official inauguration of the heightened Assouan Reservoir dam will take place on September 26 next. The Khedive, Lord Kitchener, and the Ministers will be present at the ceremony.

The new water supply of Beni Suef will soon be in working order, the mains and pipes having already been laid. The town's new system of electric lighting was inaugurated a fortnight ago.

ON ADMIRALTY LISTS.

The "Lamrig" Washer.

An Absolutely Reliable Washer.

MECHANICALLY SOUND.
SELF FIXING. CHEAP.

For Price List and Samples apply to:—

Oil Topics.

Anglo-Maikop.

Anglo-Maikop interim report has now been made. The directors think that the profits already ascertained would justifiy the declaration of an interim dividend. But as the accounts from Russia have not been received, it is advisable to wait. We are told that the cash in hand was over £180,000, and that the company holds debentures in the Maikop Pipeline and the Maikop Mutual Oil Transport amounting to £76,000. It has freehold land exceeding 900 acres, and options over 810 acres. It also has large oil storages, pumping and electrical installations; barges, a steamer, and seven houses. It has established an oil distributing organisation, and we are told that the market for Maikop petrol has already been extended to Berlin. The oil contains from 15 per cent. to 17 per cent. of petrol. The area from which the Maikop oil is produced has been increasing. The first six months of the current year have averaged over 900,000 poods a month. The Black Sea Oilfields, in which the Anglo-Maikop is interested, produced nearly 2½ million poods in the six months. The Maikop Victory, which is another company in which the Anglo-Maikop hold an interest, has also had a very successful year, and has distributed interim dividends of 16 2-3 per cent. on its ordinary capital. Its production for the first six months of the current year was over a million and a-half poods. On plot 439, a deep well struck oil at 1,480 ft., but the well is being continued, and is now down 1,941 ft. The Maikop Valley, which is another affiliated company, has not done well. But some of the other concerns in which the Anglo-Maikop are interested, are drilling a deep well on this property, and a Russian engineer is also working on plot 134, which belongs to the Maikop Valley, on a royalty basis. The Maikop Midland is doing nothing with its Maikop properties, and has turned its attention to the new oilfield at Krimskaya. It got a producing well, but had water troubles. The Levanskoe is a new company, only formed last year, and it purchased 270 acres of land from the Anglo-Maikop, which owns 126,000 shares in the company. It was in this company that, at the end of June, oil was struck at a depth of 1,327ft., and the gusher caught fire and occasioned considerable loss of life and injury. The Kuban Black Sea is working in Taman, and oil has been struck in two wells. The Maikop New Producers is also a company in which the Anglo-Maikop hold shares, and they have an interest in the Maikop Refineries, which has just treated three million poods at a net profit of £26,745, and declared a dividend of 50 per cent. The refinery is being enlarged in order to handle an increased output. Another company that the Anglo-Maikop are interested in is the Maikop Pipeline, which has had a gross revenue for the first five months of this year at the rate of £96,000 per annum. Maikop Pipeline holds 60 per cent. of the Maikop refineries, so it should be doing fairly well, and the shares look cheap. Maikop Premier is boring two wells, and the Anglo-Maikop is, of course, largely interested in the Maikop Deep Drilling Co., which struck oil at 2,040ft. The well is, however, being continued. In addition to all these interests, Anglo-Maikop has an option over 810 acres of the Prince Melikoff estate of Krimskaya, and various other plots in the Kuban district, and it proposes to reorganise and amalgamate four other Maikop companies. So evidently, Anglo-Maikop, under the energetic guidance of Mr. Tweedy, is gradually eating up the English companies in the Maikop field. We hope that it will not suffer from indigestion in consequence. We confess that we do not think that the Maikop field has turned out a great success hitherto. However, Mr. Tweedy is a very capable oil man, and if anyone can make a success of Maikop, he can.

Emba Caspian.

At last the long lawsuit against the Emba Caspienne has ended in a compromise, the terms of which were not mentioned in court. But it is well known in the City that the plaintiffs obtained £6,000 in cash and 22,000 shares; in addition to this, all their costs were paid. It is also said that the Shell group made them an offer of £3 5s. for their block of shares, but this was refused. It was supposed that the lawsuit was delaying the issue of the great Chaplin, Milne, Grenfell prospectus, but we are assured that this was not the case, the delay having been due to a difficulty in getting the company underwritten.

The long talked-of Emba Caspian Oil Company prospectus has now made its appearance. The authorised capital is £3,210,000, and the public are asked to subscribe for 1,140,000 shares, which will be used for working capital after payment of the preliminary expenses, which are estimated at £35,000, in addition to underwriting and over-riding commissions. This will amount to about £85,300. The company will acquire 574 plots, at the outside, in the well-known oilfield that has been made famous by the Ural Caspian on the north-east shore of the Caspian Sea. The purchase price is 10,000,000 roubles, or £1,070,000. In our opinion this is an excessive price to pay, because the Ural Caspian themselves only paid £327,500 for approximately 624 plots, and it is understood that they have since acquired a very much larger area of land, and it must be remembered that the Ural Caspian was at work under another name in 1909. The Ural Caspian has only £500,000 issued. Therefore, it has not only got a very much larger area of land, but its total paid-up capital is not a fifth of that of the new company. Both work under exactly the same regulations with regard to royalties. The prospectus states that no royalties whatever are paid in respect of oil produced from the areas selected out of this company's plots. But surely this is hardly correct, because the whole of the Lehmann concession has to pay a kopeck a pood tax to the local administration. Whilst we are discussing this Emba Caspian promotion, it is important to point out that in the preliminary advertisements and literature that was distributed as a herald of the prospectus, it was claimed that the oil would be able to supply the markets of the world. Now everybody knows that the oil from the north-east coast of the Caspian Sea could not possibly compete with oil either from Roumania or from those oilfields of Russia that are on the coast. It will be able to compete with Baku oil, because it is understood that Nobels and the Ural Caspian are building a pipeline to Astrachan, whence the oil will be loaded into barges and distributed throughout Russia through the Volga. But no one who knew anything about finance would dream of applying for shares in this company when they could buy Ural Caspian shares round about £3, for the latter company has a much larger area, is capitalised at one-fourth of the price, and is besides a going concern under the management of the greatest oil experts in the world.

ROUMANIAN NOTES.

(From Our Cairo Correspondent.)

Bucharest, July 27.

As already announced, this year's autumn manœuvres will be held in the Dobroudja. This fact is causing much uneasiness in petroleum circles, as it is greatly feared that the transport of petroleum to Constantza will be much impeded by the movements of the troops throughout the country before, during, and after the manœuvres. In fact, a temporary total cessation is foreseen. A deputation and petition to the military authorities on the part of those interested in the petroleum industry is seriously discussed.

The Greek Market.

A new market for Roumanian petroleum will present itself when the steps now being taken by Greek manufacturers in general for the removing, wholly or in part, of the present duty on petroleum in that country bear fruit. It is quite decided by factory proprietors as a body to employ petroleum residue as heating material in place of coal.

The production of raw oil (petroleum) for the first six months of this year was as follows:—January, 127,883 tons (compared with 112,513 tons in 1911; increase, 15,370 tons); February, 145,333 tons (compared with 94,555 tons in 1911; increase, 50,778 tons); March, 140,362 tons (compared with 113,601 tons in 1911; increase, 26,761 tons); April, 143,705 tons (compared with 112,312 tons in 1911; increase, 31,393 tons); May, 141,423 tons (compared with 123,584 tons in 1911; increase, 17,839 tons); June, 154,695 tons (compared with 136,685 tons in 1911; increase, 17,910 tons). The total for the first six months of this year was thus 853,401 tons, compared with 693,350 tons in the corresponding period of 1911.

It is to be seen from the above that the increase (160,051 tons) in comparison with the first six months of last year is an important one, 24 per cent. It is confidently expected that the output of petroleum will reach 1,700,000 tons this season.

GREEK PETROLEUM MONOPOLY.

Greek commercial circles have started a movement for the exemption, or partial exemption, of fuel residue from import tariffs, says the "Financier." Mr. C. Nicolaide, local manager of the Thomson-Houston Electric Company, has sent to the Roumanian Legation at Athens a memorial, in which he shows that if the tariff on residue were abolished or even largely reduced by the Greek Government in the course of the coming revision, even the Government establishments would be able to adopt liquid fuel. The Athens Press has taken up the matter, and is urging the Government to secure from the international commission to which the petroleum monopoly is guaranteed the freeing of at least petroleum-fuel residue from tariffs, in the interests of industry and shipping.

U.S. Petroleum in Turkey.

An American writer states that petroleum, with its allied products, is forging into first rank among American exports to Turkey, with the growing demand there as a consequence of the industrial awakening of the country. An American company is operating from Cairo along the Syrian and Karamanian coasts, with depots at Jaffa, Beirut, and Mersina, and the Standard Oil Company is branching out from Constantinople, maintaining tanks and warehouses at Smyrna and Salonika. The latter company began its active pushing of sales in Turkey in 1911.

Near East Markets.

SPECIAL REPORTS.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East :—

Baghdad. July 4.

As soon as calm had been restored at Kermanshah and Hamadan our market immediately resumed its activity. Hardly had the news spread that the communications with Persia were again safe, than the merchants of our town commenced to prepare caravans. During the last fortnight they have despatched about £T50,000 worth of merchandise, principally cotton goods and sugar, which were suffering from storage in transit warehouses. The stocks stored are still important, but cannot for the moment be shipped for lack of transport animals, all those available having been already loaded.

Manufactured goods have risen 5-6 per cent., and sugar also.

It should be noted that in Persia also, in consequence of the revival of business and in spite of import shipments afloat, prices are also rising. The Manchester shipments, which had been temporarily suspended by general agreement among manufacturers, are recommencing, and the first ship loaded, the "Tangistan," has already arrived at Basra.

Our market dealings are firm, and business in produce has largely developed. Buying of coffee is brisk.

Prices of copper, although continuing to rise, have not yet attained the European level.

Basrah. July 6.

Imports.—Responding to the optimistic news received from the adjoining kingdom, the market showed a certain improvement. On the other hand, local stocks have been greatly reduced; relatively important orders have been placed for cotton goods and general produce.

Exports.—This week 5,500 tons of cereals have been loaded, of which 1,700 were for Jeddah, and the remainder for Antwerp and Hamburg. By reason of these shipments almost the whole stocks of the exporters are exhausted. However, owing to large arrivals from the interior, and faced with a certain reserve on the part of the merchants sellers seem decidedly prepared to give way. Prices, which have still further receded on those of last week, have enabled exporters to carry through some business.

The date market remains firm; the prices obtained are higher than those of last year.

Vessels loading cereals are :—The "Edenhall" (full cargo), 3,800 tons, for Antwerp and Hamburg (English flag), and the "Naseri," 1,700 tons, for Jeddah.

Mitylene. July 20.

Exports.—Not much activity; for different Turkish and Bulgarian ports 350 barrels of oil, value approximately £2,000, and 580 sacks of earthnuts, value about £1,200.

Imports.—Very limited, especially in colonial produce.

Petroleum (Russian) from Batoum, 10,000 cans.

Beyrouth. July 22.

Market.—The market has been, in general, somewhat calm, except manufactured goods, which have shown some animation.

Imports and Exports.—The volume of business has not been satisfactory. The arrivals of English manufactures have been about 200-300 bales, against 350-400 last week, or a deficit of 45 per cent.

Cereals.—Prices of cereals remained stationary this week, in spite of orders for a large quantity of wheat for Marseilles.

Produce.—Stocks of Mocha coffee are totally exhausted, and importation is impossible owing to the Red Sea being blockaded by the Italians. Sugar continues to rise but very slowly.

Dry Cocoons and Syrian Silk.—The export of dry cocoons and silk for Europe leaves much to be desired, in consequence of the inferior quality of the cocoons and the French shipping strike, which has interrupted the service of the Messageries Maritimes.

Corfu.

The "Deutsch-Orient Korrespondenz" reports from Athens that the production of olive oil in Corfu has made important progress. The introduction of hydraulic presses has increased the yield of oil, and in other ways greater care is exercised in the extractive processes, so that now the superior kinds of Corfu oil are equal in quality to the most *recherché* Provence produce.

Bucharest. July 27.

The tax on bean of 2 frs. per 100 kgs., which was imposed about two years ago, with the object of preventing the export on account of want of forage produced by the drought has now been removed to the great satisfaction of bean and pollen exporters. Forage of every sort is more than plentiful this season.

CONSULAR AND OTHER REPORTS.

Smyrna.

H.M. Consul-General at Smyrna (Mr. H. D. Barnham, C.M.G.) reports, under date July 12, that the olive crop prospects are poor in the regions in his consular district where good crops were harvested last year—*e.g.*, Mitylene, Aidin, and Kuluk; in other regions there are signs of a good crop. Aivaly and Andramitti, the two districts which produce the finest eating oils, are likely to have better crops than last year.

Kordofan Province.

Recent reports from this province state that more dura has been arriving in the markets lately. There is still a shortage, which has to be met by bringing consignments from the Blue Nile and Sennar provinces. The price has eased slightly, and ranges from 140 P.T. to 145 P.T. per ardeb. Gum is still arriving in the Suk, and 22,507 kilos. have been sold. Prices have dropped to 105 P.T. per kantar.

Sudan Ivory.

The total value of the ivory shipped from the Sudan during the year 1911, according to the statistics of the Customs authorities, amounted to £E89,115, the weight of same being 117,628 kilos. This includes tusks weighing 17,792 kilos, valued at £E15,183, which were in "transit" from Abyssinia, the Congo Free State, and Uganda. London is the central market for the world's supply of ivory, and over £E80,000 worth of this commodity was exported direct from Port Sudan to Great Britain.

MONTHLY IVORY REPORT.

London, July 25.

The third quarterly sales of the year commenced on the 23rd and terminated on the 24th inst. The quantity offered totalled 71 tons, made up as follows:—13½ tons Zanzibar, etc., 30 tons Egyptian, 5½ tons West Coast Africa, Abyssinian 7½ tons, 9½ tons land carriage, 4 tons waste ivory, remainder walrus and rhinoceros horns. Throughout the sales the demand was excellent and prices were dearer all round. Billiard ball ivory met keen competition and realised extreme prices, being £5 to £8 dearer.

Egyptian and Tripoli.—In large supply, and sold with keen competition. Soft large and medium teeth of all descriptions realised £1 and £2 advance. Bangles were about £1 to £2 per cwt. dearer. Hard ivory £2 higher.

Abyssinian.—Small supply, and with good demand prices show an advance of £2 to £3 for large and medium teeth. Bangles £1 to £2 dearer. Ball scrivelloes sold steadily at £4 to £5 advance. Rhinoceros horns in moderate supply, and partly sold at steady values.

PRODUCE REPORT.

London, August 1.

The Produce markets have been rather quiet this past week, but values generally are steadily maintained. The strike is still interfering considerably with the delivery of goods. Sugar is quiet. Coffee steady. Currants a little dearer. Sultanas slow. Linseed firm. Seed Oils quiet and generally steady. Petroleum unchanged.

Sugar.

Business pursued a quiet course during the week. All foreign descriptions of refined continues to be unusually well patronised. A feature of last week proved the sale of four Java cargoes to British refiners, all for arrival next month. Beet Sugar :—Closing rates are : July, 12s. 9d.; August, 12s. 8¾d.; September, 12s. 5¼d.; October-December, 10s. 5¼d., f.o.b., Refined Sugar : English, Tate's, No. 1, cubes, spot, 22s. 9d.; August, 22s. 9d.; September-October, 22s. 3d. Lyle's goods, No. 1, granulated, 20s.; No. 2, 19s. 6d. Foreign, Say's cubes, prompt, 19s. 1½d.; loaves ready to August-September, 18s. 1½d., f.o.b., Paris. Dutch, cubes, prompt, 18s. 5¾d., f.o.b., Amsterdam. German and Austrian, cubes, Meyer, prompt, 18s. 6d., f.o.b., Hamburg.

Coffee.

The demand is very restricted, and although quotations may be regarded as unchanged a slight reduction has been taken. East Indian, small to mid., 76s. to 82s.; good mid. to bold, 85s. to 90s.; Mocha, long berry, 80s. to 85s.; short berry, 82s, to 100s. Costa Rica, low to ordinary, 76s. to 80s.; low mid. to good mid., 82s. to 87s. Mexican, 76s. to 86s. Brazil, 68s. to 86s.

Currants.

A much better demand for provincial kind, and bags have advanced 6d., and there is nothing now offering under 25s. Quarter cases have sold at 26s., with Patras and Gulf from 27s. 6d. to 29s., also Vostizza at 33s. New crop to arrive show no change in value, and reports are to hand that the crop will be good, and a fairly heavy one should nothing happen to reduce it between now and the cutting period.

Sultanas.

The demand is slow, and very little doing in Smyrna fruit. A few Samarkand bags have sold at 39s. to 40s., also Persians 38s. to 42s.

Seeds.

Business is on a restricted scale, although offers of new crop attract more attention. Linseed is firm in tone, but the demand is rather quiet. Calcutta, 63s. to 64s.; Russian, 71s. to 73s.. Canary seed, Turkish, 61s. to 62s.; Spanish, 80s. to 90s. Rapeseed, 90s. to 96s. Mustard, brown, bsh., 14s. to 16s.; white, 9s. to 14s.

Oils.

Linseed oil is in quiet demand, but steady; naked, spot, pipes, £35 15s.; barrels, £35 15s. to £36; July, £35 10s.; August, £35 5s.; September-December, £33 15s. Cotton oil, ordinary pale, refined, spot, £27 to £27 10s.; sweet, edible, £31 to £31 10s. Sova is firm. Olive oil, firm; Spanish, spot, £48 to £50; Levant, £46 to £48.

Petroleum.

Continues in quiet demand, and late quotations remain unchanged.

Corn, etc.

The demand for wheat rules generally quiet, while English continues scarce and dearer than ever. Beans, colonial and foreign (480 to 504 lbs.), 33s. to 41s. Maize, per 480 lbs., Russian 28s.-29s. Split lentils, 100 lbs., 11s. to 13s. Haricot beans (504 lbs.), Danubian, h.p., 65s. to 68s.

Oil Cakes.

Linseed, London made, per ton, £9 to £9 5s.; Russian, £8 15s. to £9. Cotton, London made, £5 17s. 6d. to £6.

Various.

Soda crystals, 42s. to 45s. per ton. Cream of tartar, foreign, including Greek, powder, per cwt., 83s. to 85s. Cloves, Zanzibar, 7½d. per lb. Cinnamon, per lb., firsts and superior, 1s. to 1s. 8d.; second quality, 10d. to 1s. 7d. Pepper, black, 5½d. to 5¾d. Almonds, Jordan, finest, £10 to £11 per cwt.: small, £7 to £8; Sicily, sweet, £5 to £5 10s.

Cotton and Cotton Goods.

EGYPTIAN COTTON MARKET.

(From Our Own Correspondent.)

Alexandria, July 21.

The market is calm, but the prices are well maintained. The crop prospects are still brilliant, and estimates reach eight million cantars. We regard these forecasts as premature, for the capsules have not yet made their appearance everywhere. It is, nevertheless, certain that the crop will be almost a record one, and that the picking will commence a fortnight earlier than usual. The cotton worm has disappeared in many districts, and the damage is negligible.

Contracts for November and January deliveries are being made, but speculation is less active. The bears, who have received many reverses lately, are not aggressive, and the bulls are powerless to push prices to any extent. The cotton-seed market is feeble.

MANCHESTER REPORT.

Messrs. Reynolds and Gibson telegraph that the market during the week presented a rather flat appearance, despite the unsettled outlook in the spinning trade. Pressure for delivery was not so great, but this may to some extent be attributed to the holidays, which are now general.

Bundle Yarns.—Fair inquiries for export, but business tending to be below normal. Egyptian cotton has been in only moderate demand, with rather easier tendencies, and quotations are reduced 1-16 for all grades of brown upper. Estimated sales, 2,200 bales.

THE COTTON TRADE IN JULY.

There has been a remarkable advance in prices during July, says the *Manchester Guardian*, and this is a secondary cause for the reduction in the volume of business. The prime cause is the large amount that has been done, and though there may be some exaggerations, and manufacturers have a way of discovering that they can give the delivery which they had declared to be impossible months before, it is clear that their engagements are very extensive. Prices of both American and Egyptian cotton have advanced steadily during the month, though naturally Egyptian has lagged behind a little, for the reports from Egypt of the growing crop are excellent. Between July 1 and July 30 fully good fair Egyptian advanced from 10 1-16d. to 10¼d.

It has been a good month in the cotton trade generally, though some spinners complain that their margins are vanishing.

There was a good Eastern demand for cloth early in the month. Though the war interferes considerably with the trade of Turkey, there are differences between the markets there, some being comparatively undisturbed.

Egyptian yarns have followed American in quotations, though at a little distance, and, though there has been some difficulty in establishing a higher level, spinners have done fairly.

The Direction of Roumanian State Monopolies has printed some special playing-cards for use at the Sinaia and Constantza Casinos.

The Chambers of Commerce of Braila and Galatz have petitioned the Government to undertake works for rendering navigable the Sereth River, in order to favour development of the grain trade and to relieve the railway traffic.

EGYPTIAN COTTON FIGURES.

For 47th week, ending July 26.

Supplied by Reynolds and Gibson.

Prem. of Egyptian over American	3·26		3·78		4·23	

N.B.—The figures marked thus (?) are postulates.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending July 19:—"Although nothing of interest has taken place in our market, early this week some excitement was caused by the rumour that the Japanese buyer from Constantinople was expected here on Wednesday to buy largely old selected druggists' qualities. This event, however, did not take place, but, anyway, it is said that the visit has been postponed until next week. The sales consist of only three cases new extra Carahissar at 19s., bought by one of our large American buyers, very probably to try the quality of this year's yield in this district. The arrivals amount to 546 cases, against 223 at same date last year."

ROUMANIAN CROPS IN 1911.

(From Our Own Correspondent.)

Braila, July 19.

The Roumanian Government has just published statistics regarding the 1911 crop. The total value of the crop was 1,394 millions francs, which is the highest amount that has as yet been reached.

The wheat crop was worth 469 million francs; maize, 410 millions; barley, 85 millions; oats, 54 millions; and the straw of all these cereals attained a value of 120 millions. Forage plants, 81 millions; grapes, 46 millions; beans, 32 millions; potatoes, 7 millions; beet and tobacco, 6½ millions; vegetables, 16½ millions; rapeseed, 11 millions; prunes, 9½ millions. Tobacco yielded 672 frs. per hectare; vines, 746 frs.; potatoes, 575 frs.; vegetables, 512 frs.; beet, 483 frs.; and wheat, 242 frs.

NEWS FROM ALL SOURCES.

A sign of the times is the news of the opening of a new woollen mill in Baghdad, owned and operated by the Turkish military authorities. The old and new mills together are expected to supply all the uniform cloth and blankets required by the army in that military district. In the old mill the machinery was of French manufacture; the new mill is provided with German machinery. Why not British? we ask oursleves.

The importation into Greece of used paper and newspapers has been prohibited on sanitary grounds.

The importation into Servia of all products to be directly used in the manufacture of saccharine or other artificial sweetening substances has been prohibited by a law under date of April 24, 1912.

The municipality of Barlad, in Roumania, have placed at the disposal of the Ministry of Public Instruction an area of thirty hectares of land for the purpose of establishing a school of agriculture.

On behalf of the Craiova Municipality the Mayor of Craiova (M. J. Pessacov) signed the contract for the construction of a tramway system for the town on July 25. The work is being undertaken by a Belgian company.

M. Cillière, who has been Consul-General of France in Constantinople for fourteen years, has just been appointed Minister Plenipotentiary in Haiti, and will soon be leaving Turkey for his new post.

The heavy rise in the prices of meat in Roumania has lately been occupying the attention of the authorities. The Bucharest Municipality has attempted to introduce a tariff of prices, but this measure is meeting with determined opposition from the butchers.

At the London Bankruptcy Court on Tuesday the affairs of Shrager Bros., general merchants and commission agents, 4, Lloyd's Avenue, E.C., also of Alexandria, came before Mr. Registrar Linklater, upon the applications of John and Adolphe Shrager for orders of discharge. The Registrar imposed a further suspension of two years in the case of John, and of two years and three months of Adolphe Shrager.

THE EASTERN BANK, LIMITED.

Head Office: 4, CROSBY SQUARE, LONDON, E.C.

Subscribed Capital, £1,000,000. Paid up, £400,000. Reserved Liability of Shareholders, £600,000.

Shipping Intelligence.

BRAILA NOTES.

(From Our Own Correspondent.)
Braila, July 27.

Strike and Lock-out.

The labour unrest that has been fermenting here for some time came to a crisis last Sunday, when the tallymen employed in the grain trade informed merchants that they would no longer consent to being employed by selection, but would go on turn for work by rotation; at the same time they demanded an increase of wages. The merchants agreed in principle to the latter demand; but, seeing that the tallyman's work is one of trust, such as checking weights, sounding grain, tallying bags, etc., they flatly refused to employ men otherwise than by selection, and forthwith decided to stop buying and shipping any grain until the men gave way. Thereupon the carters and other workmen essential to the handling and loading of grain declared a strike, and all shipments of grain, except by elevator ceased in the harbour from Monday morning. The authorities intervened to settle matters, and after several days' negotiations the merchants drew up on Thursday evening a new scale of increased wages all round, but again refused to give way to the tallymen on the question of employment by rotation. The merchants' terms were accepted provisionally by the men's delegates, and work in the harbour was resumed yesterday morning. The settlement cannot, however, be considered as definite, as a general meeting of workmen is to be held to-morrow—Sunday—to confirm or reject their delegates' decision.

It is in a way fortunate that these labour difficulties arose at the present moment, when grain has not yet begun to arrive in very large quantities; later on the consequences would have been much more disastrous to the trade of the port. As it is, consignments of grain have been diverted to Galatz and Constantza by the railway authorities at the request of the merchants, in order not to create a congestion in the port of Braila, which would have been an additional weapon in the hands of the workmen.

Freight Market.

The freight market was naturally at a standstill during the strike, but opened yesterday at 11s. 6d. Antwerp, 11s. Rotterdam. Notwithstanding the fact that some tonnage accumulated here this week, the tendency is firm, as it is fully realised that, owing to the firmness of freight markets all round, the steamers in port can only be replaced at higher rates of freight.

The Mediterranean market is active, the chief demand coming from Naples. Cargo is being booked here at 13 frs. to 13.25 frs.

The Sulina freight market is still stagnant, as some time must yet elapse before cargo in barges can reach that port from up-river stations. Steamers loading at Sulina experience long delays and find difficulty in completing their cargoes. Two steamers have been obliged to book cargo at Braila for transhipment at Sulina by lighters.

The Dardanelles Bogey.

The Dardanelles bogey, which was the only topic of conversation when I wrote to you last week, has again vanished, but the fact that the Italians attacked the straits again has left an uneasiness upon the market, as it shows that there is no agreement on the subject amongst the Powers, and that they have been unable to prevail upon Italy to leave that fairway alone. Only optimists declare that since Turkey did not close the Dardanelles again after the last Italian attack, no fears need be entertained of her ever doing so.

The depth of water in the Danube rose three inches since last week, river draft and Sulina bar draft being both 23 ft., fresh water.

There are at present eighteen steamers at Braila, ten at Galatz, and six at Sulina, of which two, one, and two respectively are British, an unusually small proportion.

DANUBE SHIPPING.

(From Our Own Correspondent.)
Bucharest, July 24.

The European Commission of the Danube have published some interesting statistics of the movement in tonnage, etc., on the Danube and from Sulina during 1911. The number of steamers and sailing vessels loading in the up-ports during that season was as follows:—Germany, 35 steamers (net tonnage, 58,235); Austria, 111 (n.t., 232,483); Belgium, 35 (n.t., 44,914); Bulgaria, 2 (n.t., 60); Denmark, 7 (n.t., 11,751); France, 24 (n.t., 43,685); Great Britain, 535 (n.t., 1,182,867); Greece, 364 (n.t., 643,191); Holland, 8 (n.t., 18,294); Hungary, 89 (n.t., 170,173); Italy, 81 (n.t., 134,334); Norway, 4 (n.t., 8, 773); Roumania, 44 (n.t., 64,381); Russia, 53, and 13 lighters (n.t., 45,330); Samos, 6 (n.t., 5,958); Sweden, 4 (n.t., 7,306); Turkey, 116 (n.t., 38,905).

The steamers loading wholly or partly at Sulina were:—Germany, 4 (net tonnage, 7,944); Austria, 13 (n.t., 32,336); Belgium, 1 (n.t., 481); Bulgaria, 2 (n.t., 60); Denmark, 7 (n.t., 11,751); France, 5 (n.t., 9,756); Great Britain, 334 (n.t., 739,105), Greece, 113 (n.t., 217,771); Holland, 2 (n.t., 7,036); Hungary, 8 (n.t., 19,614); Italy, 11 (n.t., 20,360); Roumania, 13 (n.t., 20,693); Russia, 15 (n.t., 3,113); Sweden, 17 (n.t., 7,544); Turkey, 15 (n.t., 1,338).

The regular lines trading to and from the Danube were the Austrian Lloyd, Fraissinet and Co. (French), Levante Company (Hungarian), Soc. Naz. de Servizi Marittimi (Italian), Soc. Russe and Comp. Egée (Turkish).

The total dues encashed by the Commission on steamers passing up and down were 3,726,747.44 frs. The work done includes no special undertaking, having consisted almost entirely of dredging, bank repairing, and such routine work. The question of blowing up the rocks at Tulcea was under consideration, though no actual decision one way or the other was taken. It is a moot point, and one much discussed by Danube skippers, as to whether the presence of these rocks does or does not cause the difficult swirls and currents which so often have the effect of putting steamers aground at what is now practically the only difficult point of navigation on that portion of the river supervised by the Commission.

SUEZ CANAL TRAFFIC.

The return of shipping and tonnage relating to the Suez Canal for the years 1909, 1910, and 1911, issued on Monday, shows that there was an increase in the net tonnage last year of 1,742,896 tons, as compared with 1910, and an increase of 2,917,267 tons, as compared with 1909. The number of vessels which passed through the Canal was 4,239 in 1909, 4,533 in 1910, and 4,969 in 1911, of which 2,561 in 1909, 2,778 in 1910, and 3,089 in 1911 carried the British flag. The tonnage of British vessels amounted to 9,592,387 tons in 1909, 10,423,610 tons in 1910, and 11,715,947 tons in 1911. During the same period the tonnage of German vessels increased from 2,381,681 tons in 1909, and 2,563,749 tons in 1910 to 2,790,963 tons in 1911. The percentage of British vessels and their net tonnage increased in 1911 in comparison with 1910, being 62,2 and 64 respectively, as against 61.3 and 62.9 in 1910. and 60.4 and 62.3 in 1909. The percentage of German vessels and their net tonnage was 13.4 and 15.2 respectively, as compared with 14.0 and 15.5 in 1910, and 14.2 and 15.5 in 1909. Of the 3,846 merchant vessels and vessels in ballast passing through the Canal, 2,832 were British, being 74.6 per cent. of the whole number.

The number of civilian passengers amounted to 144,635 in 1911, being an increase of 16,464. The most important item of merchandise going from north to south was coal, of which a total of 1,091,223 tons passed through in the year, 96 per cent. of which originated from the United Kingdom. In the traffic from south to north the quantity of wheat transported amounted to 1,644,000 tons, 58 per cent. of which was for the United Kingdom.

DANUBE NAVIGATION.

An important event for the companies doing business on the Danube (says the United States Consul at Vienna, in his report on the trade of Hungary during 1911) was the opening of navigation from Ratisbon (Regensburg) to Vienna, so that goods can now be shipped by river to Servia, Roumania, and Bulgaria, and can be transhipped at Galatz for Black Sea and Mediterranean ports.

STEAMSHIP MOVEMENTS.

Cunard Line.

"Brescia."—Poti for Manchester. Passed Pera July 23. "Carpathia."—New York for Mediterranean. Left Gibraltar July 28. "Cypria."—Liverpool for Genoa. Left Swansea July 24. "Ivernia."—Left Fiume for New York July 27. "Lycia."—Left Liverpool for Gibraltar July 24. "Pannonia."—Naples for New York. Left Gibraltar July 22. "Pavia."—Left Barry for Alexandria July 17. "Phrygia."—Left Naples for Barry July 22. "Saxonia."—Arrived New York July 25. "Tyria."—Left Batoum for Mostyn July 21. "Veria."—Left Trieste for Fiume July 24.

The s.s. "Brescia," for Gibraltar, Malta, Corfu, Patras, Syra, Smyrna, Constantinople, Odessa, Batoum, Trebizonde, Samsoun, and Poti, will close for cargo at Liverpool on August 17.

Bibby Line.

"Gloucestershire."—Rangoon for London. At Colombo July 29. "Herefordshire."—Rangoon for London. Passed Gibraltar July 25. "Leicestershire."—Rangoon for Liverpool. At Suez July 28. "Worcestershire."—Liverpool for Rangoon. Passed Perim July 29.

The s.s. "Derbyshire," for Egypt, Colombo, and Rangoon; will close for cargo at Birkenhead on August 7.

Ellerman Line.

"Andalusian."—At Alexandria July 19. "Arabian."—At Liverpool. "Assiout."—Poti for Liverpool. Left Lisbon July 26. "Austrian."—At Smyrna July 27. "Bavarian."—Left Alexandria for Liverpool July 27. "Bosnian."—Liverpool for Alexandria. Left Malta July 26. "Bulgarian."—Eastham for Levant. Left Gibraltar July 24. "Fabian."—Left Fiume for Liverpool July 27. "Persian."—Left Algiers for Liverpool July 25. "Venetian."—At Tunis July 23.

The s.s. "Assiout," for Gibraltar, Malta, Syra, Smyrna, Constantinople, taking cargo for Odessa and Batoum, will close for cargo at Liverpool on August 10.

British India Steam Navigation.

"Berbera"—London for Calcutta. Passed Malta July 25. "Chanda."—Bombay for Antwerp. Passed Gibraltar July 28. "Chyebussa."—Left Bombay for Antwerp July 18. "Chupra."—Left London for Bombay July 26. "Colaba."—At London. "Culna."—At Karachi July 26. "Golconda."—Calcutta for London. Passed Gibraltar July 29. "Jelunga."—At Calcutta July 9. "Matiana."—Calcutta for London. Left Colombo July 18. "Mombassa."—London for Calcutta. Left Aden July 21. "Rewa."—At Southampton. "Rohilla."—At Southampton.

The s.s. "Sardan," for Kurrachee, Bombay, and Persian Gulf, will leave London on August 8.

Anchor Line.

"Anchoria."—Leghorn for London. Left Gibraltar July 29. "Assyria."—Liverpool for Calcutta. Passed Gibraltar July 25. "Bavaria."—Calcutta for Genoa. Left Port Said July 28. "Castalia."—At Bombay July 21. "Circassia."—Bombay for Liverpool. At Marseilles July 28. "Elysia."—Liverpool for Bombay. Left Port Said July 24. "Scindia."—Left Bombay for Liverpool July 20.

The s.s. "Olympia" for Bombay direct (via Gibraltar and Suez Canal) will close for cargo at Glasgow on August 3, and at Birkenhead on August 13.

Westcott and Laurance.

"Asturian."—London for Odessa. Left Alexandria July 23. "Barcelona."—At Smyrna. "Belgravian."—Left Malta July 25. "Eden Hall."—Left Malta July 25. "Egyptian."—At Poti July 25. "Gulf of Suez."—Left London for Malta July 24.

Digitized by Google

Papayanni Line.

"Alexandria."—Left Pera for Rodosto July 26. "City of Cambridge."—Left Pera for Algiers July 25. "City of Oxford."—Left Liverpool for Alexandria July 28.

The s.s. "Britannia," for Tangier, Algiers, Malta and Alexandria, will close for cargo at Liverpool on August 9.

Strick Line.

"Afghanistan."—At Algiers July 27. "Arabistan."—At Calcutta July 26. "Armanistan."—Newport for Bushire. Left Suez July 20. "Avristan."—Karachi for Hull. Left Port Said July 22. "Baluchistan."—Left Bushire for Karachi July 25. "Baristan."—Bombay for Algiers. Left Naples July 26. "Gulistan."—Bombay for Antwerp. Left Port Said July 24. "Muristan."—Left Zanzibar for Bombay July 23.

The s.s. "Mashona," for Port Sudan and the Persian Gulf, closed for cargo at Manchester on July 29.

Prince Line.

"Carib Prince."—On Syrian Coast July 9. "Egyptian Prince."—Left London for Alexandria July 27. "Imperial Prince."—Liverpool for Alexandria. At Tunis July 28. "Kaffir Prince."—At Alexandria. "Sailor Prince."—Left Manchester for Alexandria July 28. "Soldier Prince."—At Alexandria July 26. "Stuart Prince."—At Alexandria July 24.

The s.s. "Creole Prince," for Egypt and Syria, calling at Tunis and Malta, will close for cargo at Liverpool on August 6, and at Manchester at 5 p.m. on the following day.

P. & O. Steam Navigation.

"Assaye."—Shanghai for Bombay. At Colombo July 18. "Banca."—At Bombay July 7. "Caledonia."—Bombay for London. Left Marseilles July 28. "Devanha." Shanghai for Bombay. Left Singapore July 26. "Egypt."—Left Bombay for London July 27. "Himalaya."—London for Bombay. Left Marseilles July 26. "India."—At Aden July 25. "Nile."—Calcutta for London. Left Aden July 24. "Persia."—London for Bombay. Left Aden July 26. "Salsette."—At Bombay July 26. "Socotra."—Calcutta for London. Left Port Said July 22. "Sumatra."—At Calcutta July 25. "Sunda."—At London.

The s.s. "Arabia," for Bombay and Karachi, will leave London on August 2 and Marseilles on the 9th.

City Line.

"City of Calcutta."—Calcutta for London. Passed Ushant July 30. "City of Delhi."—Glasgow for Karachi. Passed Gibraltar July 25. "City of Glasgow." Liverpool for Calcutta. Passed Perim July 29. "City of London."—Calcutta for Port Said. Left Colombo July 25. "City of Manchester."—Left Karachi for Liverpool July 25. "City of Paris."—Karachi for Liverpool. Passed Perim July 26. "City of Sparta."—Calcutta for London. Left Perim July 26. "City of York."—At Karachi July 26.

The s.s. "City of Calcutta," for Bombay and Karachi, will close for cargo at Birkenhead on August 23.

Hall Line.

"Adalia."—Shields for Bussorah. Left Port Said July 25. "Anatolia."—Left Karachi for Birkenhead July 19. "City of Birmingham."—Left Calcutta for London July 27. "City of Bombay."—Pekalongan for Port Said. Left Colombo July 18. "City of Lincoln."—Samarang for Port Said. Left Colombo July 25. "Knowsley Hall."—Pekalongan for London.—Left Port Said July 30. "Langton Hall."—Left Passeracan for Port Said July 27. "Lockesley Hall."—Liverpool for Bombay. Left Port Said July 28. "Newby Hall."—Leaving Bombay August 3. "Stanley Hall."—Liverpool for Bombay. Left Port Said July 27. "Sutton Hall."—Madras for Marseilles. Left Perim July 27.

The s.s. "City of Naples," for Bombay, Karachi, and the Punjab (via Suez) will close for cargo at Birkenhead on August 6.

Johnston Line.

"Arranmore."—At Sulina July 25. "Barnesmore."—Left Galatz for Oran July 16. "Blairmore."—Liverpool for Braila. Passed Gibraltar July 26. "Foylemore."—At Galatz July 23. "Gorsemore."—At Piræus July 25. "Heathmore."—Left Sulina for Galatz July 25. "Jessmore."—At Varna July 24.

Moss Line.

"Esneh."—Liverpool for Alexandria. At Malta July 22. "Karnak."—Left Bombay for Liverpool July 24. "Menepthah."—Left Glasgow for Alexandria July 21. "Meroe."—Liverpool for Alexandria. At Gibraltar July 25. "Siptah."—Liverpool for Pera. At Malta July 17.

SHIPPING AMALGAMATION.

H.M. Legation at the Hague report that a combine has recently been effected between the Royal Netherlands Steamship Company and the Royal West Indian mail service, representing a total of 59 ships, with a gross tonnage of 110,556 and having a capital of £958,000. Their sphere of operations will include the Mediterranean and Baltic Seas.

PASSENGER LIST.

The s.s. "Seti," for Gibraltar, Algiers, Malta, Alexandria, Beyrout, Jaffa, Alexandretta, Port Said, Suez and Port Sudan, will close for cargo at Liverpool on August 14.

Passengers for Port Said per Hall Line, s.s "Trafford Hall," leaving the Mersey August 3rd, 1912:—Mr. C. Verbey, Mrs. Verbey, Miss Verbey, Mrs. E. Aston Shepherd.

Passengers to Port Said per Bibby Line, s.s. "Warwickshire," left Liverpool August 1:—Miss E. M. Ellis, Miss Goudey. Embarking at Marseilles:—Mr. R. O'Donnell, Mrs. O'Donnell, Dr. T. Naguib.

NEW ITALIAN SERVICES TO EGYPT.

Important legislation with the object of making the Italian export trade more independent of foreign shipowners is contained in two Bills (says a Cardiff contemporary) which have passed the Chamber of Deputies and are now before the Senate. The present Bills provide for an increase in the Mediterranean service of six steamers, with an aggregate tonnage of 18,580, an annual mileage of 329,726, and a subvention of 2,528,000 lire (£101,120). The Adriatic service is to be doubled as regards the number of ships, mileage and subvention. The Venice-Brindisi service is to receive a subvention of 1,603,000 lire (£61,040). The Egyptian service is dealt with in a Bill apart. Formerly two Italian lines ran, one from Naples (calling at Syracuse) to Alexandria, and a second from Brindisi. In accordance with a request from Venetian interests, the latter will now start from Venice and call at Brindisi on its way to Alexandria. Genoa petitioned to be made a starting-point for Egypt, but its claims were ruled out. The Egyptian service is to maintain a speed of 20 knots, and a reduction in the number of voyages from 30 to 22 in the year is conceded, and a subsidy of 2,500,000 lire (£100,000) has been granted. The law is to come into force on July 1, 1913, and the Minister of Marine is to be entrusted with its administration, financial and general.

The financial arrangements are noteworthy. No foreign capital is to be allowed to participate, either directly or indirectly, but Italian companies undertaking the new services are to be allowed to issue debentures up to twice the amount of their paid-up capital on the guarantee of the Government subvention. Net profits above 5½ per cent. must be applied to the reduction of freight rates, and the companies' accounts must be submitted to the Government auditors. In the present fervour of patriotic and industrial enthusiasm, the Senate seems certain to pass the Bills.

LONDON COUNTY & WESTMINSTER BANK, LIMITED.

ESTABLISHED IN 1836.

CAPITAL - £14,000,000, in 700,000 Shares of £20 each.
PAID-UP CAPITAL - £3,500,000. RESERVE - £4,000,000.

Joint Managers:
ALFRED MAYO HAWTHORN (*Head Office*). THOMAS JAMES RUSSELL (*Colonies and Agencies*).
FRANK WILLIAM HOWETT (*Country*).

Joint Secretaries: AUSTIN ARROW KEMPE; GEOFFREY PAGET.

HEAD OFFICE: 41, LOTHBURY, E.C. - - - - - A. M. Hawthorn, *Manager.*
LOMBARD STREET OFFICE: 21, LOMBARD STREET, E.C. - F. J. Barthorpe, *Manager.*
WEST END OFFICE: 1, ST. JAMES'S SQUARE, S.W. - - - A. Harding, *Manager.*
FOREIGN BRANCH: 82, CORNHILL, E.C. - - - - - - S. S. Kahn, *Manager.*
also 104 Metropolitan and Suburban Branches and 233 Country Branches and Agencies.

Current Accounts are opened on the usual terms. Customers are given facilities for the transfer of money to or from any office of the Bank.
Deposit Accounts.—Sums of £10 and upwards are received on deposit at interest, subject to notice of withdrawal, or by special agreement, in accordance with the usual custom.
Executor and Trustee business undertaken.
Purchase and Sale of Stocks and Shares effected. **Dividends, Annuities,** &c., received.
The Agency of Foreign and Country Banks is undertaken, and every description of Banking business transacted.
Currency Drafts, Circular Notes and Letters of Credit are issued, and **Telegraphic Transfers** made to all parts of the World.
Approved Foreign Drafts are purchased, and Collections undertaken.
Documentary Credits are established, and every facility given for dealing with Documents at home and abroad.

THE OFFICERS OF THE BANK ARE BOUND TO SECRECY.

NOTES FROM ALEXANDRIA.

(From Our Own Correspondent.)

Alexandria, July 22.

The week has been one of little activity, all attention having been concentrated on the auction sales, which follow one another with alarming rapidity. It was believed that the series of judicial sales had reached an end, but it appears that they are to recommence and go on endlessly. Last week £50,000 worth of securities were sold, and the sales announced for next week amount to £35,000. Until now almost £1,000,000 of securities from the failures—Zervudachi, Tilche, and others—have been sold, and it is said that shares to the value of about £100,000 are still to be sold under order of the Courts. However this may be, we believe that the present moment is not propitious for these sales. It would have been more advisable to await the winter season before realising, for at present most of our speculators and investors are away in Europe. Small investors are more prudent than ever, and everyone prefers to keep his capital liquid, fearing that the much-discussed Five Feddans Law will still further upset the economic condition of the country. In this connection we should mention that the Minister of Justice has made several reassuring declarations, which, however, have not had the effect of satisfying those having interests in this country. It is regrettable that this proposed law is not altogether abandoned, for its application would be disastrous for Egypt.

The law against usury and another regulating the farming of cultivated lands suffice for the protection of the fellah against the usurer, and chiefly against the rapacity of the large landowners, who demand under the form of rent more than the land can produce, thus precipitating the fellah into misery and complete destitution.

Zervudachi Failure.

Negotiations are taking place between the principal creditors and Mme. Despina Zervudachi with the object of obtaining, under this lady's guarantee, the benefit of a concordat préventif. In truth, the concordat préventif would constitute the best possible solution for all parties interested; it would assure a higher percentage to the creditors, for a judicial liquidation, lasting at least ten years, would leave them very little for distribution, as the enormous expenses of this method of procedure would absorb a considerable part of the assets.

New Railways.

Among the new railways to be built next year we may mention the following:—(1) From Tanta to Mit Ghamr and Zagazig; and (2) one connecting Menoufieh with Kafr Zayat, the cotton centre.

These new lines, and also the extension of the Delta Light Railways system to the north of the Delta, are of great importance from a commercial standpoint.

Cattle Plague.

For more than twelve years this epidemic persists in the country, and has done considerable damage. All efforts made to combat it have lamentably failed, and the only success has been in circumscribing the evil. Lord Kitchener, struck by the enormous loss thus occasioned to the agriculture of the country, has decided to take energetic measures. To this end he appointed a commission in April last, which has worked very actively, especially on the scientific side. The inquiry is still proceeding, and the commission has now undertaken experiments in immunisation, which have yielded unhoped-for results. Thanks to these fortunate experiments we may definitely look forward to the complete disappearance of this scourge, the despair of our agriculturists.

Electric Trams at Port Said.

The municipality of Port Said is in negotiation with the Société des Chemins de Fer de la Basse Egypte for a concession for electric trams. The conditions contained in the specifications seem, however, to be unacceptable, and the Brussels board of the company does not seem inclined to undertake so onerous a concession.

BULGARIA'S FINANCIAL DEVELOPMENT.

(From Our Own Correspondent.)

Sofia, July 24.

The prosperity and financial development of the country have given rise to two new financial institutions in Bulgaria. To the existing State banks—the National, the Agricultural and Co-operative banks—and eight other private and joint stock financial institutions, one more has lately been added, namely, the "Crédit Foncier Franco-Bulgare," with a capital of 20,000,000 frs.

A Franco-Bulgarian Institution.

The new bank will, for the present, have its head offices in Paris and Sofia. The Paris board is presided over by a Frenchman, and has as vice-president a Russian. The Sofia branch has a Bulgarian as president, the vice-president being a Frenchman. The shares of the new bank are equally divided among French, Russian and Bulgarian shareholders. The principal operations of the bank will consist in advancing money on mortgage, and in making loans to municipal authorities for public works, such as schools, canals, water works, and electric lighting installations. Advances are to be made on short terms, from one to five years, repayable in full at the end of the term, or on long terms, from five to forty years, repayable by annual instalments. The interest charged will vary from 5 per cent. to 7 per cent.

A Russian Move.

The second financial enterprise is that of the life and fire insurance company "Rossia," which is opening a new branch in Sofia. For the opening of the new branch Mr. Gutchkoff, the ex-President of the Duma, and one of the administrators of the society, came specially to Sofia. It was opened with great pomp. Mr. Gutchkoff had invited for the day the Prime Minister, Mr. Gueshoff; the President of the Chamber, Mr. Daneff; the Minister of Finance, Mr. Theodoroff; the Resident Russian Minister, Mr. Neeludoff; the President of the Chamber of Commerce, Mr. Grozeff; the directors of almost all financial institutions, local and foreign, and also the members of the local Press. After the Te Deum, followed by consecration with Holy Water, the guests were invited to a banquet, where Mr. Gutchkoff proposed cheers for his Majesty King Ferdinand and Bulgaria, and delivered the following speech: "In order to develop and fortify the bonds which unite Bulgaria with Russia we open a branch of our society, since commercial and financial bonds are far more efficacious than any others to unite different people in attaining one common end. Bulgaria proves to be, nowadays, one of the most advanced, economically, of the Southern Slav States. The nation shows great commercial capacities, and to your tenacity you owe the progress already attained."

NOTES FROM VARNA.

(From Our Own Correspondent.)

Varna, July 24.

New Bourse.

Until yesterday, dealings on our Bourse were confined to transactions in cereals, but to-day, for the first time in our commercial life, a general bourse, regulated by special law, was instituted. A Bourse Committee was formed, consisting of M. R. Rankoff, President; MM. T. Petroff and V. Mazrovitch, Vice-Presidents; M. André Ekimoff, Secretary; and MM. Raphael Calderon and I. Varvery. The Varna Chamber of Commerce delegated MM. A. Patamansky and J. Dimoff as its representatives on the Committee.

Port Strike.

A few days ago we had a strike of port labourers here, which happily did not last long, thanks to the united front shown by the employers. The object of the strike was, of course, to obtain an increase of pay, although the port labourers here are the best paid of any in Bulgaria, receiving more than 10 francs a day. Workers were imported from Listov to take the strikers' places, but they have now returned, and the old hands have resumed their work—having, let us hope, learned not to put any trust in the instigators of the strike, or socialistic leaders, in future.

The Cereal Market.

Just now we are in the dead season of our cereal market, and arrivals from the interior are very limited. The prices of winter wheat during the week varied between 19 and 19.50 frs. per hundred kilo, with 5 per cent. foreign substances for 58 to 56lbs. Maize was 12-13 frs., according to quality and the occasional needs of the exporters for Greece.

The following quantities of exported cereals passed through the Varna Customs House in the month of May this year, the figures in brackets being those for August, 1911, to May 31, 1912:—Winter wheat, 6,223,595 kgs. (67,802,286k.); summer wheat, 5,472 kgs. (15,452); rye, 307,020 kgs. (8,256,982); maize, 4,435,483 kgs. (152,894,019); beans, 45,505 kgs. (7,846,819); barley, 271,340 (10,086,258); oats, 210,073 kgs. (2,181,530); millet, 1,500 kgs. (358,286); colza —— (166,552); flour, 3,457,399 kgs. (26,558,354); bran, 976,356 kgs. (13,712,355).

FINANCIAL NEWS IN BRIEF

The receipts of the Egyptian Delta Light Railways for the ten days ended July 10 amounted to £E6,410, being a decrease of £E380 as compared with the corresponding period last year. The decrease in passenger receipts is stated to be due to several mouleds having been held during this period of 1911, which augmented receipts then, also to the prevalence of cattle plague restrictions and to farmers being busy in their fields.

We notice that the report of the Deutsche Bank for 1911 states that for the first time the Constantinople branch contributed to the bank's profits.

The directors of the Maikop Refineries, Ltd., announce that the profits for the period to April 13 last, after deducting all expenditure in Russia and in England, amount to £26,700, out of which a dividend of 50 per cent. has been declared.

Bulgarian Loan, 6 per Cent., 1902.—The Talons belonging to Bonds of this loan are to be sent direct to Sofia for the purpose of obtaining new coupons sheets, and not to Paris, as formerly notified. The numbers are announced of the bonds drawn on the 15th ult. in Constantinople of the Ottoman, Smyrna, and Cassaba Railway and Extension Company, 1894 issue. Copies of the list can be obtained at the offices of the Coupons Department of the Imperial Ottoman Bank, 27, Throgmorton Street.

BANKING IN BAGHDAD.

In a report recently published, Mr. Emil Sauer, U.S. Consul at Baghdad, writes:—"The opening of new banks here may be taken as an index of increased commercial activity in Bagdad and surrounding territory. . . . There is a special call for credit by importers here on account of the time required to bring goods to this market from abroad. Goods are transshipped from ocean vessels at Bassorah and carried from there on river steamers over 500 miles up the Tigris. There is quite often a congestion of traffic, especially in summer, and it requires four to eight months for goods shipped from New York to Baghdad to reach their destination. Furthermore, all retail dealers demand credit from the wholesalers, who, in turn, demand it from the importers. Hence the demand for credit from the foreign sellers and the demand for adequate banking facilities."

LONDON, August 1.

The tone throughout the Stock Exchange has considerably improved during the week. There is very little business, but the brokers are quite confident that a large trade will be done in the autumn. Messrs. Speyer Bros. brought out the debenture issue of the London General Omnibus Company, and most of the holders of securities in this company will exchange for the new debentures and income debentures. Messrs. Chaplin, Milne Grenfell and Co. made a success of the Emba Caspian, and the lists were closed almost as soon as they were opened. None of the other companies that have been offered to the public need any mention.

The Funds.

Consols are a shade harder, and all gilt-edged things have improved. The selling was overdone. There has been very little business doing in Foreigners. Chinese, in spite of the story that China did not intend to agree to the proposals of the Great Powers, remain quite firm, and Japanese are hardly affected by the death of the Emperor. Egyptian Unified are unchanged at 100¼. Bulgarians have not moved. Rentes are steady, and the Syndicate of French Bankers evidently hesitates to mark up the quotation. German Threes at 79 are the turn better. They are still too low. Greek Fours remain at the price at which they made up last week. Hungarian Rentes show no change. Italians are harder, and have been done at 96¼. Tintos still continue jumpy. No important upward movement is likely to take place here until the autumn. Russians have improved. The big Paris banks brought out the Altai Railway loan, and steadied the Russian market in order to make the loan a success. Turkish Unified have hardened half a point since the make-up on July 24, and are now quoted 89¼. Probably the rise is due to the general feeling that peace is being arranged.

Home Rails Rise.

The most important market in the Stock Exchange during the past week, has been that in Home Rails. On Saturday last some noisy jobbers bid furiously for everything, and the rise that occurred has not yet been lost. Central Londons are up 3 points, and Great Easterns are now quoted 65 ex dividend. Great Westerns, which made up at 115, have been dealt in at 117. Brums are also two points harder, and a similar rise has occurred in Midland deferred, and North-Eastern consols. The Stock Exchange believes in being in advance of the times. It is doubtful whether the present prices will hold.

Yankees, in spite of the good news about the crop, are irregular. It is said that an autumn boom has been arranged, and the Jefferson-Levy Syndicate has been bidding for Canadian Pacifics. The market was bare of stock, and Canadian Pacifics had a big rise. The return to an investor is very small, but so few people desire to part with their security that a very little buying has a great effect.

Rubber and Oil.

The Rubber market remains steady, and higher prices are talked. Oil shares are also firm. The excitement in the Oil market over the Emba Caspian prospectus gave a fillip to all Oil shares. Shells and Urals look good.

Mines Looking Up.

Mines have also participated in the cheerful feeling that has run through the House. Some of the shares show quite a respectable rise. The public, however, has not come in. The best things to buy are Knights, Johannesburg Consols, and City Deeps. Amalgamated Props did not move, but there is talk of another attempt to push up British Central Africa. Eldorados, in spite of the bad report, have moved on news that the reef has been found below the dyke.

Egyptians—and Lord St. Davids.

The public has not yet grasped the fact that Lord St. Davids has gone into Egypt. When it does it will probably come into the market and buy all the cheap shares. Ginners look a good purchase at par, as the dividend of 7 per cent. which was paid last year will probably be maintained. With regard to the Five Feddans law, the Minister of Justice states that the law will be amended and will authorise a renewal for five years of all debts contracted before the promulgation of the law. This is a step in the right direction, but it does not go far enough. Aboukirs are unchanged. There has been very little business in Agricultural Banks. Delta Lands look cheap. Delta Light Railways are firm. Salt and Sodas are unchanged at 15s., and National Banks at 17¼ are a shade easier. There is no business doing in United Egyptian Lands, in spite of the fact that the St. Davids group have bought some big blocks.

NEW COMPANIES.

Emba Caspian Oil Company, Ltd.

Registered July 22, by Linklater and Company, 2, Bond Court, Walbrook, E.C. Capital, £3,210,000, in £1 shares. Business: That of petroleum, naphtha and oil refiners, merchants and transporters, miners, coal and iron masters, to acquire certain oil, petroleum and mineral-bearing lands and claims and options and concessions over oil and petroleum producing and mineral properties in the Russian Empire and elsewhere, and to adopt an agreement with the Banque Internationale de Commerce à St. Petersbourg, and the Banque Russo-Asiatique of St. Petersburg and to acquire the property and rights referred to therein. Minimum cash subscription, seven shares. The first directors (to number not less than seven nor more than nine) are to be appointed by signatories. His Excellency Alexis Poutiloff (President of the Banque Russo-Asiatique), his Excellency Alexandre Wischnegradski (managing director of Banque Internationale à St. Petersbourg) and George Spies, of St. Petersburg, shall, after the first allotment of shares, each have the option, to be exercisable within three months after date of incorporation, of becoming a director, and shall in the event of such option being exercised become ipso facto directors and shall hold office until the annual general meeting in 1917. Qualification, £500. Remuneration, £300 each per annum (chairman £500) and 5 per cent. of the net profits available for distribution, divisible. Registered office, 3, Princes Street, E.C.

Russian and Eastern Agency, Ltd.

Registered July 23, by Spyer and Sons, Austin Friars, E.C. Capital, £125,000, in £1 shares. Objects: To acquire any oil, petroleum or mineral-bearing lands, mines, mining rights, options, concessions, metalliferous land or other property in Russia or elsewhere, to prospect for, open, work, explore, develop and maintain the same, to carry on the business of oil and petroleum refiners, miners, metallurgists, financiers, promoters, etc., and to adopt an agreement with E. Hume-Schweder. Minimum cash subscription, £2. The first directors (to number not less than three nor more than seven) are: E. Hume-Schweder, F. C. Schweder, and H. W. Sillem. Qualification of governing director, 1,000 shares; of others, 250 shares.

COMPANY NOTES.

Smyrna-Aidin Railway.

The half-yearly ordinary general meeting of the shareholders will be held at Winchester House, Old Broad Street, on Tuesday, September 24, at noon, to receive the report of the council, statements of accounts, and balance-sheet to June 30, 1912, and for the transaction of the general business of the company. Shareholders intending to take part in the proceedings at the above meeting must deposit their share certificates with the Secretary at Winchester House, or at the Company's Offices at Smyrna, or with the Imperial Ottoman Bank, Constantinople, at least fourteen days before that on which the meeting will be held.

Anglo-Maikop Corporation.

In an interim report covering the operations of the Corporation to June 30 last the directors state that the profits already ascertained would justify the declaration of an interim dividend, but as the certified accounts from Russia cannot be received for some time, the question of the dividend has been deferred until the accounts are completed and audited. The amount of cash in hand and receivable at the close of the year, it is stated, was over £180,000. Apart from its financial operations, the company has oil installations and distributing organisations throughout South-West Russia. The production of all the companies included in the Anglo-Maikop group, together with that purchased from the Maikop Spies, British Maikop, and Maikop Enem, is sold through the corporation. The report reviews the operations of the Maikop oil companies in which the corporation is interested. The revenue of the Maikop Pipeline and Transport Company for the current year is estimated at £96,000. It states that the Maikop Deep Drilling Company, which was formed by the Corporation and other companies for the purpose of sinking three or more deep wells of the Maikop field in order to test the strata at depth, has driven a well on Plot 108, which at the present time stands at a depth of 2,095 ft. On Plot 321 the company is also drilling a well. It has also exercised an option on Plot 507, on which it is intended to sink a deep well as soon as definite results are obtained from either of the wells being drilled.

Premier Oil and Pipeline.

The transfer to the Premier Oil and Pipeline Company, Ltd., of almost the whole of the properties concerned in the recent amalgamation has now taken place. The preference shares created, in accordance with the terms of the circular to shareholders on June 4, have all been subscribed, the amount of further working capital so provided being £186,000. The production of crude oil from the company's properties is well maintained.

Kadikeui Gas Co.

The gas company of Kadikeui has petitioned for a prolongation of twenty years to the existing concession, which has thirty years to run. In exchange, the company will pay £12,000 to the town, and will undertake to transfer its works from the valley of Chalcidon to the seaboard. This transfer would contribute to the cleanliness of the public road, which is much spoiled by the coal carts.

ESTABLISHED 1772.
HENRY'S CALCINED MAGNESIA
Continues to be prepared with scrupulous care, in the greatest chemical purity, by
Messrs. THOMAS & WILLIAM HENRY, 11, East Street, St. Peter's, Manchester,

NOTES OF THE WEEK.

Last week reference was made in these columns to the attempt on the part of the new Turkish Ministry to secure the approval of the Chamber to a modification of Article VII. of the Constitution in order that the Sultan should be in a position to dissolve the Chamber without the assent of the Senate. The Chamber decided to refer the subject to a committee, together with the question of form involved in the objection of the party of Union and Progress to an amendment similar to one already rejected by the Chamber being reintroduced before the expiry of two months. When, after an adjournment, the Government announced that it considered the Chamber's decision as tantamount to a rejection of its proposal and asked for a fresh vote, a majority of deputies, in order to avoid a conflict, agreed to withdraw the previous vote regarding the question of form. At the next meeting of the Chamber, however, the followers of the Committee assumed the offensive, and a resolution was proposed for an interpellation of the Minister of War in connection with the Cabinet's action in regard to various phases of the present crisis. After the suspension of the sitting a reply was read from Nazim Pasha offering to appear in the Chamber on Thursday; but the House by a large majority voted that the Minister of War should be invited to present himself on Monday.

The Government's reply to this challenge was to convene an extraordinary meeting of the Senate on Sunday. This body, as the result of a ten hours' sitting with closed doors, accorded its full support to the Cabinet. Having voted in favour of a modified version of Article XXXV. of the Constitution, by which the Sultan is empowered to dissolve Parliament in case of a repeated conflict between the Chamber of Deputies and the Ministry, the Senate passed a modification of Article XLIII., which has already been voted by the Chamber, determining the distinction between regular and extraordinary sessions of Parliament. It then proceeded to record its opinion by twenty-eight votes to five that the present session, under the meaning of the modified article, was an extraordinary session of the Parliament 1908 to 1912. Legal authority was thus given for the dissolution of the Chamber and for fresh elections for a new Parliament to meet next November.

After this preliminary skirmishing the adversaries in this strange constitutional duel closed with one another. On Sunday towards midnight an Irade was promulgated dissolving the Chamber, and at nine o'clock on Monday morning the Imperial decision was communicated to the Presidents of the Chamber and the Senate. The latter acknowledged the communication, but Halil Bey, President of the Chamber, either refused to accept delivery of the document or would not take cognisance of it, and at ten o'clock the House met. Halil Bey informed it of the Government's intentions, without stating whether he had received notification of the dissolution, and thereupon Djavid Bey delivered a long speech in defence of the Committee of Union and Progress. He denounced the new Cabinet, and called upon the patriotic element in the Army to come to the rescue of the Constitution. After a passage of arms between two deputies, in which revolvers were drawn, the Chamber proceeded to pass a vote of no confidence in the Government, and agreed upon its own adjournment pending convocation by the President. At this point the receipt of the Imperial Irade dissolving Parliament was announced to the Chamber, but by way of reply the President telephoned to the Grand Vizier that the House did not recognise the Ministry against which it had just passed a vote of no confidence. The Committee deputies then left the Chamber. At one o'clock the Grand Vizier arrived from the Senate to read the Irade to a few Albanian, Arab, and Anatolian deputies, and the official session of a remarkable Parliament came to an end.

The Committee of Union and Progress has now to make good its challenge to the new Ministry or to admit defeat, and at least temporary effacement. Reports differ regarding the value of its following in the Army, but if its utterances are to be believed it is prepared to risk a trial of strength. The new Cabinet, however, is equally in a fighting mood, and would appear to be making its dispositions with no little skill and thoroughness. When Halil Bey, on leaving the Chamber, presented himself at Yildiz Kiosk he was refused audience of the Sultan. A state of siege, which the Cabinet hastened to raise on entering upon office, has been proclaimed for forty days in Constantinople, and it is reported that the arrest of some of the principal members of the Committee of Union and Progress is being contemplated. It will be hoped that the Ministry will consider itself strong enough to keep order without having recourse to extreme measures. If it be correct that the officers of the Constantinople garrison have sworn fidelity to the Constitution and obedience to the Government, there can be little ground for the alleged optimism of the Committee, even though it affect to regard the voice of its followers at Adrianople or Salonika as representative of Turkey as a whole.

Moreover, the Government's threatened action contrasts unfavourably with its earlier measures. In addition to abolishing martial law in Constantinople, it published a list of 130 people who had been amnestied by Imperial Irade. Among these are a number of officials and Palace agents belonging to the Hamidian régime as well as certain persons accused of complicity

Digitized by Google

in the counter-revolution of 1909. This step, in so far as it affects some of the more notorious members of Abdul Hamid's *entourage*, may be justified by the fact that, even if the condition of their health enabled them to resume their old practices, they would find no available material in the new order of things on which to graft a revival of the Hamidian system. To the Committee of Union and Progress, however, the amnesty provided a further opportunity for criticising the new Government, on the ground that it had opened the door to reactionary tendencies, while in other circles the proceeding has been held to be of doubtful wisdom as well as unnecessary. In itself the amnesty, which may be regarded as being in keeping with the principles on which the new Ministry took office, is not likely to have any special effect on the course of events in Turkey. The rocks on which Ghazi Mukhtar Pasha's Cabinet may suffer shipwreck are of a more formidable character.

With the Chamber dissolved the Ministry will be in a stronger position for dealing with the Albanian problem. There can be no doubt that the Senate in acquiescing in its own undoing was actuated by a keen appreciation of the dangers threatening from this quarter. At Prishtina two hundred and fifty chiefs claimed to speak in the name of 60,000 hillmen in demanding the dissolution of Parliament, and declared that if the step were delayed they would be unable to keep their followers under control, and would not be responsible for future events. A similar message was sent from southern Albania, while numerous reports of the intentions of the Albanians indicated unmistakably the predicament in which the new Ministry would find itself, if it allowed the Chamber to remain in session. Now that Parliament has been dissolved, it remains to be seen whether the Albanians will readily make good their protestations of loyalty to the Government. The Military League is understood to be favourably disposed towards the bulk of the Albanian demands. It is prepared to go as far as it possibly can in regard to administrative autonomy, to allow Albania to have the disposal of the major portion of her revenues and to organise her schools on her own lines; but it will stubbornly oppose all suggestions for political autonomy. In some quarters fear is expressed that the success which has attended the Albanians' demands will add to their self-confidence, and lead to aspirations for complete independence. But if the Albanian leaders have any political shrewdness or are able to enlist advice from abroad, they will realise that no real support could be secured for such ambitions until the successors of the Committee of Union and Progress have been given an opportunity of applying a more enlightened policy in the administration of the European provinces of Turkey.

The close proximity of troops on each side of the Turco-Montenegrin frontier has frequently led to desultory skirmishes, and at one time it would hardly be straining a point to say that these encounters were regarded by the Montenegrins as useful alternatives to a far more costly scheme of peace manœuvres. On Saturday a conflict of an unusually fierce character took place near Mojkovatz, and resulted, according to Montenegrin reports, in the death of fifty Turkish soldiers and casualties to twenty-seven Montenegrins. The latter accuse the Turks of aggression in respect of an entrenchment thrown up on Montenegrin territory as an outwork for the protection of a blockhouse just over the frontier. Montenegrin troops had established themselves in front of this entrenchment, and were suddenly fired upon by the Turks. The engagement rapidly became general, and lasted throughout the day until the Montenegrins carried the Turkish entrenchment by storm and destroyed the blockhouse. Turkish reports attribute the aggression to the Montenegrins. A Note was at once presented by the Turkish Minister to the Montenegrin Government containing two formal demands, that the latter should give a written assurance that its soldiers would be instructed to withdraw from Turkish territory, and that the Montenegrin Government should express its regret at the behaviour of the frontier authorities in connection with the incident. In the reply of the Montenegrin Government it was stated that none of its soldiers was on Turkish territory, and that the Turks were responsible for the aggression. The Turkish Minister thereupon announced that, as he had not received the satisfaction that he had demanded, he had decided to leave Cettinje. In the meantime the fighting on the frontier has assumed more serious proportions. The Montenegrins, under cover of artillery fire, have occupied the Mojkovatz district, which by the Turco-Montenegrin protocol of last summer, was recognised as Montenegrin territory, but remained in Turkish occupation. The Turks have thus suffered several severe reverses, and, in view of the resolute action taken by the Porte in Cettinje, there is no immediate prospect of an amicable adjustment.

A further regrettable episode in the Balkans has to be recorded in a number of bomb explosions that took place in the market place of Kotchana, some twenty miles from the Bulgarian frontier near Kostendil. According to Bulgarian versions only eleven persons were killed as the result of the actual explosions, but the incident was followed by a promiscuous massacre of the inhabitants, in which 186 persons were killed or wounded. An investigation is to be made into the circumstances of the outrages, but meanwhile feeling is running high in Bulgaria.

The Italians have again shown signs of activity in Tripoli. A brigade of infantry was landed on August 4 on the coast near Zuara, while the Fifth Division advanced from Sidi Ali. In order to divert the attention of the enemy two demonstrations were simultaneously made at Ain Zara and Gargaresh. The Turco-Arab forces appear to have followed the Italian operations without being drawn into any serious engagement. Only a slight resistance was offered to the landing, and the Italian troops advanced to the edge of the oasis. In the Ægean Sea the only development reported is the secession of the island of Nikaria. The islanders deposed the Turkish authorities, imprisoning the Kaimakam, twelve civilian officials, one officer, and thirty gendarmes, and have declared their independence. As an excuse for this action it was alleged that the Kaimakam, a Greek renegade, had threatened vengeance on the population for the anti-Turkish attitude of the inhabitants of the islands occupied by Italy. It may be presumed, however, that Nikaria, fired by the prospects of independence held out by other Ægean islanders, was anxious to place itself on the same footing as the islands of which the Italians have taken possession.

In an article from its Teheran correspondent the *Times* publishes a depressing report of the condition of affairs in Persia. According to the writer, the situation grows steadily worse. There is little but the shell of the Persian organism left, he says, and the belief seems to be general that the shell can hardly last much longer. The political situation at Teheran presents no single element of stability, so that the ex-Shah may be excused for thinking that he may yet have a chance of recovering the Persian throne. From this correspondent's diagnosis of the whole situation it is evident that the Persian Government is as bankrupt of initiative as it is financially, and that the only hope for the country lies in the two friendly Powers taking concerted action to devise a definite constructive policy for the rehabilitation of Persia. The need for such a measure has been rendered still more urgent by the defeat of a force of *gendarmerie* under Swedish officers by Persian tribesmen. The gendarmes left Shiraz on Tuesday to give battle to some of Sowlet-ed-Dowleh's followers, whose exactions and depredations on the Shiraz-Bushire route have led to the complete stoppage of traffic. They encountered the tribesmen at a place ten miles to the south-west of Shiraz, and are said to have been utterly routed. A gun and nearly all their rifles were left in the hands of the enemy. Twenty gendarmes were killed and one of the Swedish officers was wounded.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, August 3.

Constitution Day.

The anniversary of the granting of the Constitution was formally observed here, but with very little animation or enthusiasm. The fact is, there was a general feeling of uneasy expectation throughout the day, and considerable relief when it had passed without anything happening.

Within the last fortnight, in addition to other causes of anxiety, there has been a series of bomb attempts. At Tikfisch a bomb exploded at the back of the municipal offices, somewhat damaging them and the surrounding buildings; and the same day an attempt was made on a goods train between Uskub and Adjarlar, fortunately without loss of life. In the latter case, it is supposed, the bomb was intended for a later mixed passenger and goods train. On the 25th a bridge was blown up between Miroftcha and Ghevgheli, so cutting the line; on the evening of the 27th an explosion blew in the door of the Governor's house and that of an officer in Resnia, happily without doing further damage; the following day a bomb was found under a bridge on the Salonika-Constantinople railway; and on the 1st inst. two exploded in the Kotchana bazaar, and are said to have killed and wounded several people and to have caused a general panic.

The C.U.P. and the Government.

Occasionally one meets with quaint ways of describing ordinary incidents in true official language. For instance, we are told that a severe fight took place between the troops and some insurgent Albanians in the Tchernalova Pass, but that, in view of the gravity of the situation, the officers stopped the firing and withdrew their men. In the circumstances, this was, no doubt, a very prudent course to adopt, which suggests the thought: Will the Union and Progress party, in view of the present situation, be equally cautious, and make a similar strategic advance to the rear? Judging from the local Press, general opinion is much divided as to what course the party will take; whether it will lie low and bide its time, or make immediate trouble. There is no doubt the whole order of things is undergoing change, and we are practically in the thick of a revolutionary upheaval. For one thing, there is not a single member of the Parliamentary majority in the new Cabinet, of which each member is supposed to be bitterly opposed to the Unionists. And this Government, as a beginning, is undoing all the work of its predecessors by raising the state of siege in the capital, ordering a truce in Albania, annulling the supplementary law regarding the Press and public meetings; even demanding a revision of the law just passed interdicting the interference of the Army in politics, on the plea that Mahmud Shevket Pasha did not consult the Superior Army Council before introducing the measure; while in the Senate the Army Commission has rejected the proposed law calling out for military service non-Mussulmans from the age of 28 to 45. All the pet schemes of the Unionists are being knocked on the head, and there is a loud outcry from all parts of the Empire for the dissolution of the Chamber. Meanwhile, the Albanians have issued an ultimatum and given the Government forty-eight hours in which to dissolve Parliament, threatening, unless this demand is satisfied, to march on Uskub—in case of need, on Salonika also, and even further, if necessary.

A drastic policy may be needed, but what might it not lead to? It is hard to believe that the majority of the Chamber have not still a strong party in the army and country, and that they will give in without a struggle for their existence. And Djavid Bey, sounding a warning note, says it must not be imagined that the Unionists, who have retired into the background lest existing misunderstandings let loose on the country unknown evils, have completely abdicated power. Such a belief, he adds, would be exceedingly misleading, as the Unionist organisation has ramifications even in the Empire. On the other hand, the army seems to be split up into several separate leagues: "Defence of the Fatherland," "Military Saviours," etc. And is it not somewhat rough on the new régime that, at the beginning of his opening declaration to Parliament, the new Grand Vizier says: "If we search for the causes of the present difficulties and of the discontent which is the consequence, we find they have been engendered in the course of the last four years"? Comment is quite unnecessary; and a local paper may well be excused when it prints a big headline saying "the situation is grave," adding, however, "but is not hopeless." We can only trust that this latter is true.

The Occupation of Prishtina.

The occupation of Prishtina by the Albanians must have been of a dramatic character, and the cause of considerable anxiety to the peaceful inhabitants. The chiefs of the movement had announced their intention to meet in the town to formulate their demands in the name of the whole of Albania; but on the morning of July 22 it became known that the Governor-General of the vilayet had sent orders to the Governor of the town to oppose them. To the inhabitants this seemed madness, as they could not believe that four or five battalions of troops could stop the 30,000 Albanians surrounding them on all sides from coming in. With visions of useless bloodshed before them, the chief men of the town went as a deputation to the military commander, but only to be told by him that it was his intention to make an energetic defence. They next sought out the Albanian chiefs to beg them to put off their entry, but again they met with a refusal. Meanwhile, more guns were being placed in position, and the troops worked at further entrenchments. The only ray of hope for the people was the knowledge that the Governor of the town was in favour of the Albanians being allowed to come in; in fact, he had threatened to resign should resistance be attempted; but this only resulted in the ex-Governor of Gilan being sent to replace him. In despair, realising the gravity of the situation, he went to the telegraph office with the chief men of the place, accompanied by a crowd of the inhabitants, to get into personal communication with the capital. Again his efforts were of no avail, and they only resulted in his being ordered to use cannon should the Albanians seek to enter the town. Hereupon, however, the commander of the gendarmerie came on the scene, went to the telegraph office, and wired: "I rebel, with all my men. Do you wish to destroy a whole town by relying on a handful of soldiers? Impossible! We are here to save the whole country." This gave rise to shouts of rejoicing on the part of the crowds assembled. The emotion was intense, and it was long before calm was restored. But, in view of this great excitement, the commander of the place abandoned the idea of using force, and consented to a peaceful entry of the Albanians. So at dusk they began to come in at a quick march, and, singing their national songs, they passed through the streets, which had been illuminated by the inhabitants to welcome them, some thirteen or fourteen mosques, as many schools, all the inns, and many private houses giving them accommodation and shelter.

On July 24 Issa Boletinatz entered Mitrovitza at the head of 5,000 men.

"The Comrade."

The leading weekly journal of India, conducted generally on the lines of the London **Spectator, Nation,** and **Saturday Review,** dealing with politics, education, literature and social questions of India, and the affairs of Eastern countries and Moslem governments, with great ability and independence. An excellent medium of advertisement on account of its large circulation among a select circle of readers in all provinces of India.

SUBSCRIPTION, FOREIGN, £1 PER ANNUM.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, July 31.

The Political Conspiracy.

A further step forward has been registered in the inquiry into the political conspiracy and the formalities preceding the prosecution of the men implicated therein. The *juge de renvoi* issued his *ordonnance* on Saturday, committing Imam Wakid, Mahmoud Taher El Arabi, and Mohammed Abdel Salam for trial before the August assizes. He declared that Wakid was, in his opinion, the chief ringleader, and ordered El Arabi to be examined by the lunacy authorities, as he had set up mental derangement as his defence. The judge added that he considered that this prisoner was quite responsible for his actions.

A day or so before the *ordonnance* was issued a fresh feature was introduced into the case by Abdel Salam, who, turning "Khedive's evidence," confessed the existence of the plot and the complicity therein of his fellow-prisoners and himself. He declared that he had taken part in the conspiracy in order to find out its details and communicate them to the police. It appears that he had applied a little while back to the Mamur Zapt for a position in the secret police, and that official, not being convinced of his sincerity or his ability—his antecedents were not as satisfactory as they might have been—had told him he must send in a specimen report. Abdel Salam alleged that he was obtaining information for this report when he was arrested, and that a preliminary draft was amongst the papers seized at his house by the police. This document was, in fact, forthcoming, but it only dealt with ordinary current affairs, and did not contain any reference to the plot. As a matter of fact, when Abdel Salam was being taken back to his cell after one of the recent interrogations, he was searched, and some notes on the conspiracy were found on him; but as these were seized after his confession, and he had been thoroughly searched on entering prison, it is evident that they had been written subsequently in order to prove the veracity of his statements. This confession necessitated a small supplementary inquiry, but no new facts came to light. Advantage was, however, taken of it to ascertain whether Mustapha Effendi Kamel, the editor of *El Lewa*, was in reality the mysterious fourth man who had escaped when the arrest was made at Shoubra. Unfortunately, the Mamur Zapt was not prepared to make a statement to that effect, as he said he had not been able to see his face. So the identity of the fourth conspirator is still "wropt in mystery," though considering that the secret police were watching the quartette for some time at the café and Mustapha Kamel was well known to them, it is decidedly curious that none of them were able to state whether he was there or not.

The *juge de renvoi*, whilst accepting Abdel Salam's confession, rejected his defence, which he characterised as a mere subterfuge, not borne out by circumstances. It is to be noted, that both Abdel Salam and El Arabi stand self-accused now; for the defence set up by the last-named, that he was not responsible for his actions owing to mental derangement, constitutes a tacit admission of his complicity. It is thought that the trial will take place about August 10, as it is expected that the existing assize cause list set down for next month will have been exhausted by that date. Up to the time of writing, the evidence against Hassan Kamel, which is being awaited from Italy, has not come to hand.

Canadian Teachers' Visit.

During the next week or so we shall be honoured by the presence of two parties of Canadian teachers, who, after a short sojourn in London, are making a cruise in the Mediterranean. The Egyptian educational authorities are straining every nerve to organise a fitting welcome for their colleagues from across the Herring Pond and have made the most elaborate arrangements for their entertainment. The first party is due to arrive at Port Said to-day and the second at Alexandria on August 4. In addition to the ordinary sight-seeing, an open-air concert will be given on Minden Day at the Citadel, by the Suffolk Regiment. H.E. Ismail Pasha Sirri, Acting-Minister of Education, will hold a reception at Shepheard's Hotel, where a garden *fête* will be given; a similar reception will take place on the eve of the teachers' departure, at the Zoological Gardens; the teachers will also be the guests of the British community at the Khedivial Sporting Club, Gezira, where they will be received by Mr. Milne Cheetham, the Acting-Agent and Consul-General, and where a gymkhana will he held; and, finally, Harvey Pasha has arranged in their honour a display by the Cairo Fire Brigade, of whose efficiency he is so justly proud.

The New Turkish Grand Vizier.

Mukhtar Pasha's conduct of public affairs as Turkish Grand Vizier will be watched with great interest out here. He was undoubtedly one of the best-known figures in Egypt from the early days of the Occupation right up to the time of the Turkish Revolution, when he returned once more to his native land. Mukhtar Pasha—El Ghazi Ahmed Mukhtar Pasha is his full name—was never intended to remain in Egypt. At any rate, such was not Great Britain's intention when the Convention was signed in 1885 with the Porte, whereby Sir Henry Drummond-Wolff and Mukhtar Pasha were appointed respectively British and Turkish High Commissioners, and were instructed to proceed to Egypt in order, amongst other things, to institute an inquiry in regard to the general settlement of Egyptian affairs. When the inquiries had been completed the British Commissioner left. But Mukhtar Pasha stopped on, to be a perpetual thorn in the side of the British and Egyptian Governments. He was required by his Imperial master to carry out many an unpleasant task, which entailed underhand work and intrigue on a very large scale. It will probably never be known to what extent he was responsible for the various unfortunate incidents which occurred in Egypt during his long residence, and rendered the task of the British officials so difficult. It is fairly certain, however, that Abdul Hamid wanted to kill two birds with one stone. The Ghazi enjoyed far too great popularity, owing to his military prowess, for it to be safe to keep him in Constantinople. By sending him to Cairo that danger was removed, and at the same time the Sultan was assured the services of a loyal servant, who would be useful in administering the pin-pricks with which his Majesty delighted to annoy the occupant of Egypt. And so Mukhtar Pasha was kept in Cairo from 1886 to 1908, without being in any way officially accredited—that was the most truly Oriental part of the whole business—for the Khedive is the sole representative that the Sultan can have in Egypt. It must surely have been a relief to this grand old soldier when he was able to retire from his anomalous position, which was as undignified as, I know, it was distasteful to him. Mukhtar Pasha, in spite of the unfortunate *rôle* he was forced to play in Egypt, was highly respected, even by those against whom he had to intrigue. He throughout displayed high personal character, and, as Lord Milner calls him, was a straightforward gentleman, whose loyal instincts overcame his personal feelings. None will rejoice more at his having attained this high position, where he can once more usefully serve his country, than those with whom he openly or covertly crossed swords in Egypt.

Two Prominent Nationalists Released.

On Saturday Ali Bey Hamel, of *El Lewa*, and Ismail Effendi Hafez, of *El Alam*, who were condemned in April last to three months' imprisonment for having published Farid Bey's seditious speech in their papers, were released from prison. It had been confidently expected that Ali Bey Hamel would be arrested immediately after his liberation, in connection with the conspiracy proceedings. It appears, however, that although the documents seized show his connection with the Nationalist secret society, there is no definite proof forthcoming that he was directly concerned with the plot. We can, however, expect this gentleman to be very closely watched henceforward, and we must hope that the knowledge that he is under supervision will keep him from indulging in any more seditious intrigue.

LETTRE D'ATHENES.

(De Notre Correspondant Particulier.)

Athenes, le 2 Août 1912.

Les reclamations des Albanais.

La situation chaotique et grosse de dangers dans laquelle se trouve la Turquie tient en émoi les cercles compétents et l'opinion publique en Grèce. Cette anxiété n'est que trop justifiée par les risques auxquels se trouveraient exposées les populations grecques si l'ordre venait à y être sérieusement troublé et en raison des intérêts d'ordre commercial et autres que la Grèce a dans l'Empire Ottoman.

L'extension que tend à prendre le mouvement albanais que favorise une telle situation n'est pas sans inspirer ici des inquiétudes. Les Albanais, forts de l'appui d'une certaine partie des troupes révoltées, n'ont pas hésité à comprendre parmi les vilayets albanais dont ils revendiquent l'autonomie, celui de Jannina, c'est-à-dire toute l'Epire, jusqu'à Prévésa, qui est un pays purement grec adjugé à la Grèce par le traité de Berlin. Une révendication aussi absurde qui, bien qu'elle a été démentie il y a quelques jours par le notable Albanais Khémal Bey, vient d'être nettement et impérieusement formulée par ses compatriotes auprès de la Porte, a soulevé en Grèce un sentiment de juste indignation. La presse officieuse tout en rappelant les liens qui unissent de vieille date—lorsque de nombreuses populations albanaises ont émigré en Grèce où elles ont pris une part très active aux guerres de l'indépendance grecque—et tout en témoignant les sympathies sincères des Grecs pour leur cause, déclare que si les Albanais désirent conserver ces relations fraternelles et veulent compter sur l'appui qu'à un moment donné la Grèce pourrait leur donner, ils doivent, dans leur propre intérêt, respecter ses droits sur cette région grecque. Dans le cas contraire ils trouveraient les Grecs prêts à les traiter en ennemis et en envahisseurs.

Toutefois on ne manque pas de comprendre à Athènes, que les Albanais, qui connaissent mieux que tout autre le caractère grec de l'Epire, n'eussent certes pas poussé jusque là leurs révendications s'ils n'y avaient pas été incités par des influences étrangères qui leur donnent à entendre qu'elle leur appartient, dans le but de les supplanter une fois qu'ils s'en seraient emparés. C'est ainsi que l'année dernière ces propagandes étrangères ont entrepris dans la section d'Argyrocastro quelques tentatives pour soulever les habitants, sans arriver à aucun résultat. D'ailleurs, ainsi que le fait observer très justement une feuille officieuse, il n'y a là pour la Grèce aucune raison de s'inquiéter puisque l'autonomie demandée ne saurait être accordée aux Albanais par la Turquie, mais d'un commun accord par toutes les puissances signataires du traité de Berlin, lesquelles ne pourraient pas se dédire en révoquant sans raison leurs résolutions primitives.

En dehors de cette question de l'Epire, les Grecs ne demanderaient pas mieux que de voir les "frères albanais," comme les appelle ordinairement la presse athénienne, obtenir aussi leur indépendance. Il ne faudrait pas en conclure cependant que les Grecs désirent voir se précipiter le démembrement de l'Empire Ottoman. Au contraire la Grèce ne souhaiterait nullement à l'état voisin des complications intérieures qui pourraient fournir à de puissants voisins, dont l'appétit a été excité par les grosses parts qu'ils se sont appropriées il n'y a pas longtemps, un prétexte de s'emparer de territoires habités en grande partie par des populations helléniques. La prolongation de l'existence de la Turquie en Europe permettrait par contre—et on s'en rend bien compte en Grèce—à ces populations congénères de se développer en paix et de mettre mieux en évidence leur caractère ethnique et leurs aptitudes civilisatrices. C'est pourquoi tout ce que la Grèce demande c'est que ces populations soient traitées sur le même pied d'égalité que les Turcs et qu'elles soient admises à continuer de jouir des privilèges qui leur sont acquis déjà depuis des siècles, ainsi que les Jeunes Turcs le leur avaient fait espérer au commencement. Si l'établissement d'un tel régime libéral devait être le résultat de la crise actuelle en Turquie tous les Grecs béniraient l'heure à laquelle elle a éclaté.

L'epilogue de l'accident du croiseur "Averoff."

Voilà qu'après plus d'un an depuis l'accident survenu au croiseur "Georges Averoff" qui avait échoué l'année dernière en entrant dans la baie de Plymouth après avoir pris part à la revue de Spithead, le gouvernement s'est avisé de traduire en justice le commandant capitaine Damianos pour constater ses responsabilités dans l'accident. Les questions posées au conseil d'enquête devant lequel il a été renvoyé sont de nature à entraîner, en cas d'affirmation, sa mise en non-activité par retrait d'emploi. La même mesure a été prise à l'égard de deux autres officiers supérieurs accusés par le capitaine Damianos d'avoir contribué à l'échouement du navire par espirit d'hostilité contre lui et afin de compromettre sa situation comme commandant responsable.

D'autre part le ministre a rejeté la plainte en calomnie que le capitaine Damianos avait portée contre les officiers de la mission anglaise, MM. Boyle et Salmond, qui se trouvaient à bord de "l'Averoff" au moment de son échouement. Ces deux officiers ont été dernièrement accusés par le capitaine Damianos de l'avoir injustement chargé dans leur rapport au ministre de Grèce à Londres fait à la suite de l'enquête qu'ils ont reçu la mission de faire dans le but de constater si le capitaine Damianos était vraiment l'instigateur de la mutinerie qui a eu lieu contre les autres officiers supérieurs de "l'Averoff" auxquels il imputait l'échouement. Le ministre de la marine ne s'est pas contenté de rejeter sa plainte; il a fait plus; sans attendre la décision du conseil d'enquête sur les autres charges dont il est incriminé, il a mis le capitaine Damianos en non-activité par suspension d'emploi pour avoir, contrairement aux principes de la discipline et aux devoirs de confraternité qui doivent exister entre officiers, porté une accusation infamante contre ses collègues anglais qui n'avaient fait que leur devoir suivant l'ordre qu'ils avaient reçu de l'amiral Tufnell sans aucune intention de dénigrer M. Damianos.

Commande d'un nouveau croiseur.

Parmi les diverses offres soumises au gouvernement par une dizaine de maisons étrangères pour la construction d'un croiseur cuirassé plus grand et plus fort que "l'Averoff," le gouvernement a trouvé plus avantageuse celle de la maison allemande Vulkan de Stettin, qui est descendu jusqu'à 27.871.200 francs. Le croiseur à construire sera d'un déplacement de 13.000 tonnes ("l'Averoff" n'en a que 10.000) avec 6 grands canons de 356 mm. système américain à Bethleem, et devra être livré dans deux ans. En vertu d'un accord qui aurait été conclu avant l'adjudication entre le Vulkan et la maison américaine Bethleem, l'artillerie du croiseur sera fournie par cette dernière. Il paraît cependant qu'à en croire l'opinion d'ingénieurs étrangers d'une compétence sans contredit de beaucoup supérieure à celle des ingénieurs du gouvernement grec, une si forte artillerie ne saurait être mise simultanément en action sur un navire de 13.000 tonnes et qu'il faudrait porter son tonnage à 14.500 tonnes ou à 14.000 au moins. Si l'on a voulu réduire le tonnage à 13.000 tonnes c'est pour que le cuirassé puisse entrer dans le nouveau bassin de radoub qu'on vient de construire au Pirée. Cependant on parle maintenant d'une augmentation du tonnage dont le motif apparent serait le désir d'obtenir une vitesse supérieure à 22 nœuds.

Les manœuvres de la flotte.

La flotte est rentrée au Phalère et repartira après quelques jours pour une seconde période de manœuvres, sous le commandement de l'amiral Tufnell, qui dureront jusqu'en octobre.

Divers.

M. Sverbeew, jusqu'ici ministre de Russie à Athènes, est parti hier pour rejoindre son nouveau poste d'ambassadeur à Berlin. Son départ ainsi que son itinéraire par mer ayant coïncidé avec ceux du roi, Sa Majesté a bien voulu l'inviter à faire le trajet jusqu'a Venise à bord de son yacht "Amphitrite."

NOTES FROM SERVIA.

(From Our Own Correspondent.)

Belgrade, August 4.

Cabinet Ministers Recalled.

Taking advantage of the summer vacation, several Cabinet Ministers are absent enjoying a short holiday, but suddenly, the night before last, at a Council of Ministers, it was decided to recall all absent Ministers of the Cabinet at once. Servia appears to take a gloomy view of Turkish affairs, and if any other coincidence impelled this precipitate act of the Council it is not publicly known.

The Albanians and the C.U.P.

As there is at this moment one of the Albanian chiefs in this capital I embraced an opportunity of interviewing him. I am not at liberty to divulge his name, but he is a highly educated professional man, speaking the Servian and French languages fluently.

"We are much stronger now," said he, "than the actual governing body, so strong that 350,000 troops could not overwhelm us. We possess four mountain batteries and many field guns taken from the Turks. For the last three weeks we have been daily gaining more adherents; and we do not fear the Anatolians. Not only Albanians, but Serbs, Bulgarians, Greeks, and others are all dissatisfied with the present régime. When the Young Turks first came into power they were cordially welcomed and admired, but now they are universally hated; they have lost their influence over the people in consequence of their manner of acting, the elections proving the foulest act of injustice committed by them. It is not the Government, but the Committee of Union and Progress which governs. One does not know to whom one should address one's self. All is done in secret. None knows who is master. We Albanians consider this a reign of absolutism, more systematic and more pronounced than it ever was under the rule of the ex-Sultan.

"Parliament is packed with creatures of the Committee, and that is why they are opposed to new elections. We demand and insist on new elections, and we hope to get twenty-five members of our own into the new Parliament, men opposed to the Young Turks. The present Albanian Deputies are nominees of the Committee, and do not represent Albanian views. If we could succeed in having new elections, the opponents of the Committee, composed of many different nationalities, would, in a legal way, seek autonomy for each nationality, and being in the majority, would succeed.

"The Albanians are of three religious sects, Mohammedans, Orthodox, and Catholics, but we understand each other, and are united in the demand for autonomy for our country. The Albanians are tolerant in religious matters. With us no religious belief impedes the holding of high office—thus one high functionary may be a Mohammedan, another an Orthodox, and another a Catholic. Five centuries ago, when the Turks conquered Albania, a great many Albanians became Mohammedans on account of their personal interests. These before that period were nearly all Catholics, only a few professing the Orthodox religion. It was those residing in the valley, in constant intercourse with the Government, not those residing in the hills, who became Moslems. But the habits, manners, and customs of the Albanians remain as they were before the Occupation by the Turks.

"It is an error to suppose that we desire an alliance with Bulgaria or Servia, or with any country whatever. We wish to direct our own affairs, but always subservient to the Porte.

"As an experienced Albanian, I say that it is not practicable for us to be governed by one single ruler. Our system is that of clans, and one is equal to another. A kingdom for us is out of the question. There is no chance of success for such pretenders as Aladeo Castrioti or Prince Ghika. We should best succeed had we a Constitutional Government like that of Switzerland. We want administrative autonomy. We have abandoned our work, our fields, everything; we have taken up arms, and we must go on."

With these words the interview closed.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, August 3.

A Review.

The weather at Sinaia during the past week has been more favourable. This, together with the opening of the Casino, has had the effect of bringing many more visitors, and the town is now quite gay, without being uncomfortably crowded. On Wednesday last the King inspected the 4th Battalion of Rifles, at present doing guard duty at Castle Pelesh, and a large concourse of people gathered to witness what was really a most interesting display. The wall climbing, long-distance jumping, etc., all in heavy marching order, would have taxed the stamina of any country's troops, and afforded proof of the excellent physique of the Roumanian "Tommy" in general.

A Roumanian Aviator.

Lieutenant Constantin Istrati (of the Roumanian navy) has just left for England on a mission, with the object of studying the different systems of aeroplanes in use in our army; from thence he goes to France for the same purpose. Flying is receiving great attention in the Roumanian army, which already possesses a respectable number of machines and a goodly staff of experienced aviators among her officers.

Austro-Roumanian Friendship.

It is announced in political circles that Count Berchtold will visit this country in a few weeks' time, probably at the beginning of September, and will be received by King Carol. It is even said that the visit is by the invitation of the King himself, which is a significant proof of the value his Majesty sets on the strong friendship existing between this country and her Austro-Hungarian neighbour, and which he and his Government take every opportunity of cementing and developing. It will be remembered that the Austro-Hungarian Chief of Staff, General Schemua, paid a special visit on June 2 to King Carol at Sinaia, quite apart from the ordinary congratulatory visit paid annually by the officers of the garrison on the Hungarian frontier shortly after. Equally to be noticed by those interested in Near East politics was the audience lately accorded to Mr. Titus Maioresco, the Roumanian Prime Minister and Minister of Foreign Affairs, by the Emperor Franz Josef on the former's passing through Vienna on return from leave, and his long interview with Count Berchtold, at which General Averesco was also present, at the Austro-Hungarian manœuvres.

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, August 4.

Events in Persia.

On Monday last an additional battalion of Caucasian Infantry was despatched from Tiflis to Julfa, where it was to receive further marching orders. Two days later three sotnias of Cossacks (about 400 troopers) were, from the same base, ordered up to the Persian frontier. From these new military dispositions it would appear that not only has Russia no present intention of reducing her force in Northern Persia, but that she is intent upon increasing it. During the last week every day has brought its report of further engagements between the Russian divisions under the commands of Generals Fidaroff and Tolmatcheff with the Shahsevans, who are being everywhere routed and dispersed with but comparatively few casualties to the Russians.

A Russian colonel just returned from Tiflis, with whom I had a brief conversation the other day quite frankly expressed to me the opinion that the Russian commanders in Persia were making mountains out of molehills in their so-called punitive expeditions against the Shahsevans. Those expeditions, he said, were mere political excuses for the consolidation of Russia's military occupation of Northern Persia. The Shahsevans, who are simply a loosely organised and ill-armed rabble of freebooting nomads, are being made to serve the purpose of a political bogey. Such, at least, was the view of my unusually candid miltary informant; and he appeared to possess an intimate personal knowledge of Russia's tactics and ulterior aims in Northern Persia.

THE ALEXANDRIA TORPEDO BASE.

(From Our Own Correspondent.)

Cairo, July 30.

Last week I was only able to refer very briefly in my letter to Mr. Churchill's announcement of the forthcoming establishment of a torpedo station at Alexandria, as the news had only just arrived and it was not possible at that moment to gauge its effect on local public opinion. It did not come exactly as a surprise, for Dame Rumour had been fairly busy since the famous Malta Conference in spreading reports as to the Admiralty's intentions in regard to the Egyptian ports. It had been supposed that if any part of the British Navy was to be stationed in this corner of the Mediterranean, Sollum, about whose suitability as a naval base so much was written in the early days of the Turco-Italian War, would be the station chosen. However, we now know that Alexandria has been selected, and we are waiting to hear where the exact site is to be; for it seems to be an accepted fact in responsible expert circles that that port itself cannot become a torpedo station owing to the impossibility of sufficiently fortifying it so that it can afford the necessary protection for the flotilla. Agami, to the west of Alexandria, is currently spoken of as the destined site of the new station, and from what I know of the district it would be eminently suitable for the purpose. However, a discussion of that question must be postponed until a more definite statement of the Admiralty's plans is made public. In the meantime it may be of interest to record the opinions held on the matter by the different communities, which constitute Egypt's population.

British Residents' Views.

The British community is, of course, quite pleased at this decision; for it will certainly enhance our prestige in the eastern corner of the Mediterranean, and will considerably strengthen the hands of the British representatives. In some quarters it is regarded as but the first step towards the establishment of a larger naval base in Egyptian waters; for it is considered that far larger craft than torpedo vessels are required to meet the situation. Be that as it may, I think I am right in saying that there is a general feeling of satisfaction that the "total abandonment" of the Mediterranean has been "abandoned," thanks undoubtedly to Lord Kitchener's earnest and energetic representations, though at the same time it is very much regretted that this should have been effected at any expense to our position in Home waters. The impression here is unanimous that the Government would have been better carrying out its duty if it had made immediate provision for the laying down of more ships to fill the gap.

In foreign circles no adverse comment is to be met with. In fact, in the majority of cases approval is expressed. It is noteworthy that a few years ago a similar announcement would have evoked howls of indignation from every community. To-day it would appear that our permanent occupation of Egypt is fully recognised, and that our decision to use an Egyptian port as a British naval station is being accepted as a matter of course. Both the foreign and British colonies are of opinion, however, that while it may possibly not be the intention of the Home Government to use Egypt as a military reserve for the other outposts of the Empire, it will still be necessary to increase the Army of Occupation, so that it may be able to carry out in a satisfactory manner its police duties in Egypt, and especially the pacification of the Sudan. The recent alarming news of the vast importation of arms and ammunition into the south-eastern part of the Sudan has revealed a very serious situation, and it becomes daily more necessary that a stronger backbone to the black troops shall be afforded than can be furnished by the six hundred odd Redcoats who are stationed at Khartum.

Native Opinion.

Amongst the natives opinion is somewhat divided, and quite naturally so perhaps. The moderate and reasonable-minded Egyptian regards the matter as an inevitable result of his country's peculiar geographical position. He recognises that it is hopeless to expect that Egypt will ever be able to become an independent State, or that she will succeed in maintaining her independence once she has gained it, and he realises that if Great Britain ever evacuated Egypt one or other of the European Powers would be forced to occupy the country which holds the key to the East and West. Since he knows what benefits have accrued to him from the British occupation, and has been made aware, by comparisons made with the state of affairs in other European-ruled African colonies, of the greater freedom that falls to his lot under that occupation, he acquiesces in it. And, further, as Great Britain's position as a world Power and the existence of her Empire depend on the control which she exercises over the trade routes, he is quite willing for her to make use of his country's ports to attain that end, more especially as it is in his country's interest, and in his own, that Great Britain's predominating position amongst the nations of the world should continue.

On the other hand, the Nationalists are openly hostile to the new step, and from the tone of the articles appearing in their organs it would seem that they are preparing a campaign which has in it the making of a series of prosecutions under the Press Law. *El Alam* and *El Lewa* are in the front rank as usual, and are resorting to the time-worn custom of publishing "protests" purporting to have been received from all parts of the country. *El Alam* has even gone the length of producing a fanatical appeal to the religious feelings of the people, wherein it points out that the creation of this station is a direct encroachment on the rights of Islam. By contrast *El Ahali* has adopted a most temperate attitude. It draws attention to the fact that although the Egyptians are loyal to Turkey they realise that the Suzerain is no longer in a position to assert its authority or exercise its control over Egypt; and so, being in need of protection, they instinctively turn to Great Britain, the only nation fit or able to act as their protector. The article concludes with an exhortation to the nation, since its hopes have been in a way disappointed, to prove its manhood by regarding its political existence as a distant goal to be attained only by steady and cool-headed progress. *El Ahali* passes for being a semi-official organ, and many of its utterances are undoubtedly inspired. All the same, the article referred to may be considered as reflecting the opinion of the sensible and broad-minded section of the native community.

The Coptic and Syrian journals regard the decision as very important, and consider that it must have been taken in agreement with the Sublime Porte. All things considered, the establishment of a torpedo station at Alexandria, which may well be looked upon as a further strengthening of the Occupation, has been very well received in Egypt, if one leaves out of account the Nationalist Press, which is naturally perturbed and annoyed at this step, which it regards as a further blow to its aspirations.

THE MUSSALMAN.

An up-to-date English Weekly, conducted by a Mussalman Editor of liberal and independent views. Though all topics of special interest to the Mussalmans are discussed in its columns, social, political, and economic questions of general interest always receive due attention It is entirely free from sectarian bias and is a true exponent of the catho principles of Islam, but it advocates the Mohammedan cause boldly and fearlessly when such advocacy is necessary.

Annual subscription (inland), 4 Rs., (foreign), 8 shillings.

THE DARDANELLES ATTACK.

AN EYE-WITNESS'S ACCOUNT.

DARDANELLES, July 25.

The statements made by the two belligerents in connection with the second Italian attack on the Dardanelles, though differing widely in some things, help an eye-witness to form a very fair idea of what actually took place at one a.m. on July 19.

Lying awake with a feverish cold, I was delighted to have an excuse for going out into the cool night air when the first shots were fired. The quick-firing guns made comparatively little noise, and no other member of my household had heard the shots, so I got into my clothes as fast as I could in the hope of seeing the gun practice of the forts (as I imagined it to be) at that unearthly hour. In the street, to my surprise, I met H.B.M's Vice-Consul, and together we proceeded at once to the highest house in the place, from the terrace of which one can get an excellent view of the Straits in both directions. Within twenty minutes of the sighting of the Italian torpedo-boats I was perched on the parapet of the upper terrace, with a good field-glass in my hands, watching what I was inclined to think was some game of bluff on the part of the Turks.

The town was perfectly still, and, with the exception of a few men moving about, there was no sign of excitement or rush as on the first occasion. The firing was rapid and sounded very close at hand, but not a flash could I see. Searchlights were playing in every direction, and a good view of Havuzlar, a point below Kilid-Bahr, could be had. After remaining on the terrace for about twenty minutes, having seen nothing to speak of, I decided to return home. There was a lull in the firing, which had seemed to come from Dardanus, a fortified hill on the Asiatic side of the Straits, and from Suandéré (better known here as "Soghanli Déré"), on the European side. But when I reached the bottom of the stairs and got into the streets once more another shot or two were fired, so back I ran, and this time I saw the flashes of some quick-firing guns placed at Havuzlar. Nothing, however, was visible on the surface of the water, and, to judge from what I could see of their effect, the guns might have been loaded with blank cartridges. To be firing so near at hand, and at nothing, naturally seemed strange to me, and only confirmed me in my opinion that the Turks were shamming an attack for some purpose of their own. It was, in fact, almost impossible to believe at the time that any real attack by the enemy was in progress, and it is only since, by comparing various versions, that I have been able to form a clear idea of what actually took place. The following is, I believe, as accurate an account of the events of the night as it is possible to give at present.

At one a.m. on the 19th inst. the first quarter of the moon had set, and the night was at its blackest. The Turks, who had been keeping watch till that hour, began to feel the necessity for a little rest, so the lights were put out, and sleep soon overtook the majority of the garrison. The sentinels, of course, were at their posts, but had only their ears to help them in the event of an attack by the enemy. Fortunately, their ears were sharp, and the rush of the waters as the Italian torpedo boats passed close up to the European coast off Cape Hellas caught their attention. There was no wind, and consequently no sea. The wash of the waves was, therefore, unnatural, and one sentinel thought fit to report this phenomenon to the officer in charge.

The officer promptly ordered the searchlight to be brought into use again, and its light showed that three Italian torpedo boats, followed by five more, had got past the Seddul-Bahr forts and were steaming at top speed up the Straits. The first thing to be done was to advise his companions along the coast, and the telephones now came into use. The next was to scatter the oncoming five torpedo boats, which was done more effectively by turning the searchlight on to them than by using the quick-firing guns—which are, perhaps, *too* quick for the Turks. This done, the officer next banged away at the departing three torpedo boats, which he felt confident would not get far, more as a warning to his comrades that they were coming than in the hope of doing much damage.

At Seddul-Bahr, behind the projecting point, was stationed a small Turkish torpedo boat, with its lights extinguished and its crew in a state of much uneasiness as to what was going to happen. Her position was indeed critical, for on the one hand were the enemy's boats and on the other the guns of the Turkish forts, and a searchlight inadvertently turned in her direction might have revealed her anchorage to the enemy and brought down upon her an attack of five to one. There was also the risk of a *mêlée*, which would probably mean sinking at the hands of the Turks themselves, so silence became the order of the day.

As far as Domus Déréssi the Turks have no fortifications, so that the Italians could proceed without being molested. This quiet reassured them, and they naturally thought that they had escaped notice. On they went till they arrived half-way between Domus Déréssi and Soghanli Déré, when they were suddenly surrounded by searchlights, and the batteries from Soghanli Déré and Dardanus opened fire. On board the Italian craft everything was made ready for an emergency. Lifebuoys were unfastened and boats were kept handy in case of need, but this only tended to make the Italians nervous and to help them to realise more clearly the danger they were running. Their nerves were already unstrung before the searchlights were thrown on them, but when this was done and shots were fired in quick succession their only thought was how to get out of the *impasse*. Round they came in single file, the "Spica" taking the lead, but the channel up which they were running was too narrow to allow of their turning in deep water. To reverse their engines and manœuvre was out of the question, for there was no time for such operations; therefore round they went at top speed, leaving it to the Almighty to steer them clear of the rocks. The "Spica," more unfortunate than the rest, ran ashore, hitting a hard bottom. Putting her engines full speed ahead, she managed to extricate herself, but only to get into a worse dilemma later on, when she grounded again. This time she did not get off scot free, for a blade of her propeller was snapped off by coming into contact with a rock. However, she again disengaged herself and rejoined her retreating comrades. The Turks, whose blood was now up, banged away at the retreating enemy regardless of what might happen to their guns if they fired too rapidly, and bullets were flying everywhere. What damage, if any, was done to the unfortunate torpedo boats will probably never be known. The Turks maintain that two were sunk, and the Italians are equally positive in their assertion that they sustained no injuries.

One thing is sure—the Italians *never* reached Kilid-Bahr, as they pretend; they never sighted the enemy's ships, which are stationed above Chanak. Moreover, it is not true that the Turkish fleet took part in the defence and fired on the approaching torpedo boats, as stated by the Italians, because not a shot was fired by them; and, lastly, there were no steel ropes stretched across the channel as a protection for the Turkish fleet. The Italians were probably too nervous to realise that their ship had gone aground, and put it down to steel ropes instead. If such steel ropes existed, then every passing steamer would be fouled by them, as they follow the same course the Italians took.

GREAT BRITAIN AND TURKEY.

(From a Correspondent in Turkey.)

The altered tone of our leading newspapers with reference to the Italo-Turkish war, to which a correspondent lately called attention in your columns, is one of the curious facts of current history, which will doubtless be more illuminatingly dealt with by future annalists than we have the means of doing. The change in question has not been confined to the English Press. It has been a general *volte face* throughout Europe and America. For the sake of our good name, hitherto identified throughout the East with truth and justice, it is sincerely to be hoped that the explanation of it hinted at by your correspondent may be erroneous. But the fact itself is too glaring to admit of contradiction.

Short as our memories are in this age of rushing events, they need but a slight jogging to recall the burst of well-justified indignation which Italy's shameless act of spoliation evoked in all countries. A few short months have gone by, and there is no more any talk of Italy's guilt. Where are now the protesting voices that spoke up for elementary notions of right and wrong and the upholding of international law, the voices that called for an international boycott of this outrageous disturber of the world's peace? A mighty hush has fallen on them. Simultaneously with this condonation of Italy's crime, pressure on all sides is being exerted to compel Turkey to yield to her aggressor. Apparently, not the least urgent in exercising this pressure are our own Government and that of France. Setting aside all ethical considerations, are they acting wisely in their own interests and in the interest of the world's peace? It is permissible to doubt it. Expedient, it will be said. "Expediency," we know, or ought to know, "is man's wisdom. Doing right, is God's." In the long run, the latter, I am old-fashioned enough to believe, is apt to prove the better.

Why was pressure not employed to deter Italy from her wanton bombardment of Beyrout and the Dardanelles forts, from carrying her detestable war into the peaceful Ægean, from trying to throw her lighted torch into the powder-magazines of Eastern Europe? It is with indignation and dismay unspeakable that the English communities all over Turkey have been asking these questions and have watched the passive, complacent attitude of the home Government in presence of the selfish conduct, the cruel destruction of life and property in the Eastern Mediterranean, that Italy has thought fit to indulge in.

Boundless, indeed, seems to be the complacency of the world towards the ambitions Italy is seeking to gratify at its expense!

It is, of course, understood in Turkey that England has, so to say, or thinks she has, her hands tied; that she has her own safety to consult, distracted as she is by internal troubles and discords, and confronted with veiled menace by the real disturbers of peace, mightier than Italy, for whom Italy is but a catspaw in this game. Towards Germany and Austria, to name them, there prevails throughout Turkey a deep, ineradicable distrust. Salonika for Austria, and Western Asia Minor for Germany, for years past have been known to be the aims of the ambitions of those Powers, and nothing will avail to shake that belief. It has certainly not been shaken by the flattering words lately addressed to the Young Turks by the new German Ambassador to the Porte, Baron von Wangenheim. "Lies!" is the laconic comment on them uttered by most Turks.

The Turks, Young and Old alike, realise that their country is keenly coveted by more than one powerful State. They writhe under the grip in which Germany holds them by virtue of the railway concessions and colonising concessions which Emperor William coaxed out of his friend Abdul Hamid. For does not the Baghdad railway concession alone, by granting to Germany mining rights over twenty kilometres on either side of this 1,000-mile line, already place that Power in practical possession of a strip of territory, through the heart of Asia Minor, extending over some 30,000 square miles? A formidable wedge, indeed; and it is being utilised for all it is worth.

So it comes to pass that, in the Turks' eyes, Germany and Austria are more dreaded foes than their present overt antagonist. It is felt that they, too, will have to be confronted when Italy has done her worst and Turkey has been sufficiently weakened and exhausted. "Is England," they ask, "going to stand by and see our country dismembered, our nation, which might be for her such a useful ally, destroyed? Is she going to allow the Dardanelles to fall into hands that may at any time close it and cut off that channel of her bread supply, or to allow a pushing and powerful rival like Germany to establish herself on the flank of that yet more vital artery of trade the Suez Canal? And make no mistake about this," they say when inclined to despair, "if Asia Minor is indeed destined to become German, it will be German and nothing else, as German as Germany itself. The native races! There will be no native races to share it with the newcomers. For to us, threatened or abandoned by all Christendom, no alternative will be left but that of raising the banner of our own Faith, and, flinging ourselves on its enemies, to perish sword in hand."

One shudders to think that there might be in Europe, though one is loth to believe it, statesmen of that flint-hearted and cynical type that would welcome, if not deliberately provoke, such a hideous calamity as the means of peopling an empty land with men of their own race. But one remembers that not long ago, for reasons that can only have been political, Russian civil and military authorities looked on with folded arms for weeks while Russian Tartars exterminated Russian Armenians at Baku; that Russian battleships in Trebizond Bay refused an asylum to Armenian fugitives from the Hamidian massacre that was raging on the shore, and drove them back to their fate. And one's heart misgives one lest similar motives should again produce similar callousness, under analogous circumstances, in other than Russian breasts.

Did not our own chivalrous Jack Tars have to hold their itching hands while cruel slaughter was being perpetrated at Mersina within a stone's throw of their decks, when a single company of them landed could have stopped it? And why? Because, it was said, to our eternal disgrace, the landing of a British force would have given umbrage to Germany! That was the explanation blandly offered and meekly accepted by the dulled British conscience.

Will this dulled conscience of ours, growing duller with the passing years, justify us in our own eyes in continuing to hold aloof while the security of our communications with our outlying possessions is being threatened, while a nation of trained soldiers, who would leap to an offer of our alliance as one man, is being harried, weakened, and driven to despair, and while tragedies which we could easily avert, did we but act up to our lights, are perhaps even now in preparation?

LETTERS TO THE EDITOR.

GERMAN POLICY IN THE NEAR EAST.

To the Editor of THE NEAR EAST.

[TRANSLATION.]

Sir,—We observe with interest that you have quoted, on page 359 of your issue of July 26, the article published by us on the 19th inst., regarding the new irrigation works in Mesopotamia, under the title "Ein Fehlschlag." The critical observations on this article, which appear on page 363, lead us to point out to you that you have completely misunderstood the suggestion contained in the conclusion, in which we speak of *another Power* which could, from the direction of the Persian Gulf, bring order into the chaos. By *another* Power England is naturally meant; for, from the direction of the Persian Gulf, it is obviously (in erster Linie) only England who can intervene in Mesopotamian affairs. It was completely foreign to us to think that Germany could in any way intervene from the Gulf. Thus our words cannot be interpreted as inviting German engineers to participate in the construction of irrigation works in Mesopotamia, although we would naturally be pleased if German contractors could work there together with the English engineers. You would oblige us if you would kindly publish this correction in your journal.

In general, we would like to remark for your information that the chief of our editorial department has himself visited Mesopotamia and the Persian Gulf, and is also acquainted through personal observation with the colonising works in Australia, and has consequently been able to form a clear conception of the political conditions (Machtverhältnisse) in Mesopotamia, and also regarding English methods of work. He has therefore, for many years already, endeavoured in numerous publications to influence the limitations of German economic plans in the Near East (Mesopotamia, Persia, etc.) to those proper proportions indicated by consideration of the now historical position of England in these regions.

It would seem to us, from your publications, that you endeavour to seek in our reports a certain animus against England. Any justification for this tendency will be looked for in vain in our correspondence, for we are quite ready to acknowledge the just claims of England in the political and economic field, but we object when motives of hostility to England are maliciously attributed to German policy, in such cases where Germany, in common with every other State, is determined to defend her just rights.—Yours faithfully,

Deutsche Orient-Korrespondenz,
(Signed) DR. M. WIEDEMANN,
Editor.

Berlin, July 29, 1912.

THE FUTURE OF TURKEY.

To the Editor of THE NEAR EAST.

Sir,—Readers of THE NEAR EAST require no reminder from a correspondent that the consistent policy followed by your journal has been one of conciliation, and the cheery optimism which inspires your leading article of to-day truly reflects the sincere good wishes of many who are anxious that the internal feuds now distracting the Turkish Empire should speedily be composed in the true interests of the State itself.

It is clear, from evidence obtained from the most trustworthy sources, that the Constitutionalists in the Ottoman Empire—men who really understand the spirit and meaning of genuine parliamentary government—have still to contend with enormous difficulties, varying, no doubt, in degree or extent, but all constituting grave dangers to the stability of the Empire.

During the last sixty years there has been a steady intellectual revival in all parts of the European and Asiatic provinces and a noticeable advance in commercial enterprise. Is it too much to ask all those whose interests are humanitarian, social, and educational, and who have no concern with domestic politics or party warfare in Turkey, to support the wise counsels of conciliation which alone can save the vast dominions of the Sultan from anarchy and bloodshed?—Yours truly,

EDWARD ATKIN.

6, Adelphi Terrace, London, W.C.,
August 2, 1912.

THE PRESS ON THE NEAR EAST.

The German Wedge.

An Egyptian journal, *Les Nouvelles Egyptiennes* (German, in French guise) publishes the following:

La *Gazette de l'Allemagne du Nord* publie un appel adressé au public allemand en faveur d'un hôpital allemand à construire à Jaffa. Cet hôpital doit servir non seulement aux Allemands, mais aux malades de toutes nations. Grâce à la Banque allemande de Palestine, un terrain a déjà pu être acquis, et l'on peut compter que les diaconesses de Kaisersworth prendront la direction de l'hôpital. La colonie allemande de Jaffa, bien qu'elle soit peu fortunée, a réuni 10.000 marks.

Il reste encore à trouver environ 120.000 marks pour assurer la construction. C'est pourquoi un comité composé des personnalités notables demande à la nation allemande de soutenir cette œuvre d'humanité qui est en même temps appelée à fortifier en Orient le prestige du germanisme.

La *Gazette de l'Allemagne du Nord* invite d'une façon pressante le public allemand à envoyer son obole à cette œuvre de charité et de pénétration nationale en Palestine.

We like this. It is downright, it is frank. Why should we sneer sanctimoniously at "philanthropy and five per cent?"

Russian Troops in Persia.

The *Manchester Guardian* is not quite satisfied with what Sir Edward Grey had to say in the House of Commons on the 1st inst. concerning affairs in Persia:—

The plain fact is that but for the interference of Russia, helped by England, Persia would now be enjoying a private loan on much more favourable terms than those recently arranged with the two Governments. Nor do we understand the reasons given by Sir E. Grey for not pressing for the withdrawal of the Russian troops in Northern Persia. It is true that the disorder in our sphere in the South is much worse than anything in the Russian sphere, and that we have refrained from armed intervention. But surely that fact ought to strengthen our hands in insisting on Russian evacuation. If we had done the same as Russia we could not have protested, but our own hands are clean, or nearly clean. But there is one further reason. It is the presence of these Russian troops in the North that more than anything else is responsible for our troubles in the South. They weaken instead of help the Persian Government; they draw off Persian police from the South where they are needed, to the North, which but for Russia would be perfectly quiet. Sir E. Grey could, therefore, press for the evacuation on the ground that its postponement was injuring not only Persian but our own interests too.

New Revolution in Turkey.

The *Times* of August 3 contains a long despatch from the Constantinople correspondent of that journal drawing attention to the remarkable parallel between the genesis of the position to-day in Turkey and the chain of causes and events which culminated in the revolution of 1908. We regret that limitations of space prevent us from reproducing this very interesting and able survey of the state of affairs in Constantinople.

The Turkish Situation.

A long leading article on Turkish affairs in the *Times* of August 5 concludes:—

Now we have the alarming spectacle of rival parties in the State, each supported and largely influenced, if not controlled, by soldiers who qualify their military allegiance by their party obligations.

It is needless to enlarge upon the evils and the dangers of such a situation. No State divided against itself can long remain secure from foreign attack. All honest friends of Turkey, and of the peace of Europe, which so largely depends on the tranquillity of Turkey at home and her strength abroad, must earnestly hope that this will be the last of the civil commotions upon the Bosphorus, to be determined in the last resort by the will of the army. This time they must hope the officers will do what they wished to do, but failed to do, four years ago. If, with the help of Ghazi Mukhtar and his colleagues, a stable Government, reasonably acceptable to the Empire as a whole, be established, they can retire from active participation in public affairs and devote themselves wholly to the demands of their profession. If this object is not attained, and they continue to interfere in matters which rightly pertain to the civil administration, the parallel between 1908 and 1912 will assuredly be carried further. The Government will sink once more into a despotism controlled by a clique, and the army will advance a step further on the downward course which ends in military anarchy. The international situation, it need hardly be said, is not one with which sagacious Turks can care to trifle. The relations between Turkey and her Balkan neighbours are for the present good and friendly; but our Parliamentary correspondent referred the other day to the growing conviction amongst members of Parliament in this country that some sort of definite understanding, or even alliance, has been reached between Bulgaria and Servia and Bulgaria and Greece, and, were the con-

Digitized by Google

fusion in Turkey to be prolonged and to be increased, alliances of the kind might in certain contingencies become a serious matter for her. The war with Italy drags on, and will doubtless form one of the subjects of discussion between the Ministers of the Tsar and M. Poincaré when they meet within the next few days. We can only hope that the Sultan's new advisers will be able to discover some terms of peace acceptable to Italy and compatible, in the Grand Vizier's recent phrase, "with the rights, honour, and dignity of Turkey."

Trans-Persian Railway.

The *Aegyptische Nachrichten*, a German newspaper published in Egypt, contains (July 17) an article on the Trans-Persian Railway project, from which we extract the following:—

It thus seems very doubtful whether the projected railway will ever be built. There is, however, no doubt that Russia will build her railways in the north, and that England will construct those planned by her in the south-west of Persia. As this south-western region constitutes the so-called neutral zone, German industry has every right to take her part there. Or German policy—and diplomacy—has every justification for demanding compensation before relinquishing this right to industrial participation should England wish to monopolise the whole (construction of railways). In the north, Germany is bound by the Potsdam Agreement, for which she has received counter-value. Such an agreement is still lacking with England in the south-west. Participation by Germany in the railway construction in these regions would be better than "compensation." German interests there are, in virtue of the Baghdad Railway alone, certainly not inferior to those of France.

This is all too naïve, of course, to be taken seriously. We quote it as showing the firm hold which the "compensation" mania has obtained over the German mind.

Articles to Note.

"Crisis in Turkey: Is it Civil War?" in the *Daily Telegraph* (August 8).

"Turkey's Strong Man: Ghazi Ahmed Moukhtar Pasha," in the *Birmingham Post* (August 1).

"L'Allemagne en Turquie," in *La Nouvelle Revue* (August 1).

NEAR EAST BOOKSHELF.

NEW LINKS WITH THE PAST.*

"The monument of a vainglorious Oriental king is not less fulsome, and not more convincing, than is a modern patent-medicine advertisement." So writes Mr. Macalister in the preface of his unpretentious little book on Palestine. We by no means endorse this view; no monument of the East has been unearthed but what it has helped the student to a reading of the particular page of history with which it deals. But, on the other hand, there can be no gainsaying the interest of Mr. Macalister's writing. He has written this book with the object of, as far as possible, filling in the background of history by means of recent excavations in Palestine, and in this he has been remarkably successful. The history which he has produced will carry its appeal to many classes of readers. It is written in a crisp, bright style, which makes it particularly easy reading, although at times the author's habit of writing in the present tense of events which happened some thousands of years before Christ is somewhat confusing. Also, the writing of such expressions as *mountain system* in italics savours rather too much of a class-book and is surely out of place in a work of this description. But, taken as a whole, the book is a welcome addition to the literature on Palestine.

OLD DAYS IN TRIPOLI.†

The sorrows of Tripoli, now unnumbered, were still unborn when Mrs. Todd knew her. In those sleepy ante-bellum days the author visited the city with her husband, the astronomer, who travelled there for the purpose of making observations of the sun's eclipses of 1900 and 1905. We have reason to be grateful to those solar phenomena, as but for them Mrs. Todd might never have seen Tripoli, and her book would have taken its shadowy place among the undreamt-of might-have-beens.

The mystery of Tripoli, about which Mrs. Todd writes, is not political or criminal in character, not the mystery of the daily papers. It is the elusiveness, the inscrutableness of nature, human and, so-called, inanimate. This mystery is, of course, everywhere and in everything, but it seems to become more insistent in Mohammedan cities of Northern Africa and their surroundings, without, however, losing any of its impenetrableness. On the contrary, the apparent outward simplicity of the people and their environment serve but to tantalise by the illusion of an approach to an ever-receding "something."

Mrs. Todd has felt the most potent spells of the old-day East, and she has marvellously conveyed to us her own impressions. Direct interpretation she has wisely not attempted; that is not the work of the intellect, nor within the power of words. This book is truly a work of art, although it may be, as Mrs. Todd asserts, "an incomplete picture of the extraordinary region as I saw it, though drawn with a loving and appreciative hand."

The author naturally laments the war now ravaging Tripoli, and looks back with longing to the old Tripoli, for the most part even now in the irretrievable past:—

More picturesque under Ottoman rule than it can ever be again—dreamy, dirty, sordid, exquisite, noisy, enthralling, beautiful, unsanitary—the strange city gripped one's affections. . . .

And now again the story of Tripoli changes. But whatever the outcome, she will have still her limpid skies, her air like wine, and a climate where it is a sin to acknowledge an ache or a pain, old age or unhappiness. The charm of Orient and Islam may be less; but I can never cease to be grateful that I knew Tripoli in the days when to breathe her atmosphere and revel in her sunshine meant joy, . . . when crowding nationalities, Babel tongues, mediæval streets, brought such vivifying interest that all the years thereafter have been richer, more satisfying, and fuller of the intoxicating wine of life.

The sun has set, from the minarets the muezzins have called the Faithful to prayer, the day's work is done:—

It might have been a fairy city, beautiful beyond imagining. A palm tree showed here and there, from some hidden courtyard, gaining dark value in the silver scene, and tinkling music ascended, with no melody and no rhythm, a part of all the vague and ghostly yet exquisite beauty. . . . Glorified dust, whirling swallows, calls to sunset devotion, the silent desert close-clasping, on-coming moonlight, the coolness and blossom odour—these were Tripoli.

Mrs. Todd left Tripoli with the greatest reluctance, as one can well understand, and—

there is no oracular certainty that we shall ever return. But I feel it notwithstanding. Once more I shall see that noble bay curving to meet its dazzling sands. Once more I shall breathe that extraordinary air, fresh from the laboratory of a new creation.

We greatly hope that this conviction may prove founded, and that Mrs. Todd will write us another book as charming, as delicately beautiful and artistic as "Tripoli the Mysterious."

LONDON SCHOOL OF ORIENTAL STUDIES.

The London Institution Transfer Bill was considered on Tuesday by a Committee of the House of Commons. The measure is promoted by the Government for the purpose of enabling the Office of Works to buy the London Institution, Finsbury Circus, and convert it into a School of Oriental Studies, dealing not merely with languages, but also with other Eastern subjects. When the school will open cannot be stated at present, as the Departmental Committee which is considering the scheme of work has not finished its inquiries. There were present in support of the measure Mr. H. O. Cameron, who explained it, Mr. R. Frazer, secretary of the institution, Mr. Frank Heath, and Mr. Barber, both of the Education Board. It was originally agreed that the Government should contribute £10,000 towards the money which the proprietors of the institution will share, but on Tuesday power was taken to increase that sum, as the Bill had not become law as early as was at first expected, and thus extra expense had been incurred. The measure passed through Committee and was returned to the House.

CURRENT COMMENTS.

The *Times* correspondent in Teheran reports that eight additional Belgian officials are being engaged for the Persian Treasury service. It would therefore seem that Monsieur Mornard feels himself firmly seated in his fiscal saddle, and intends to surround himself with a body-guard of compatriots. We are inclined to view with some misgiving a tendency towards wholesale staffing of this service with officials of one European nationality. If the Treasury organisation must be supervised by foreign officials—and there is, unfortunately, no doubt on this point at present—we would prefer to see a thoroughly international personnel. To our mind the Americans, comparatively outside the possible influence of European political interests, could and would have formed a *corps d'élite*. More is the pity, therefore, that Mr. Shuster's impetuous zeal should have led himself and others into an untenable position. Still, there are some of the smaller European States, besides Belgium, from among whose officials men of character and ability could be selected for the Persian service; we need only mention Switzerland, Holland, Denmark, Norway, Sweden—all capable of furnishing officials of the highest class, and with every desirable qualification. Perhaps we will be told that our all-too-British false delicacy should close our minds to such unworthy considerations; but, alas! experience has shown that sentiment is out of place—even in political friendship.

***

Point is given to various rumours current with regard to secret agreements and even alliances between Balkan States when one remembers that a year ago power was given to King Ferdinand of Bulgaria by the Great National Assembly to conclude treaties without consulting the Sobranje. The only restriction placed on this almost unique power is a proviso that any such secret agreements must be communicated to the Cabinet. There is field for speculation in considering the possible employment of this prerogative. In some hands it might prove an instrument of ruin, but, fortunately for Bulgaria, her ruler is known as the most astute of diplomats and one of the wisest of statesmen.

***

We read that the Liberal foreign affairs group met recently and passed a resolution urging the Government to use all possible influence to carry out the policy comprised in Sir E. Grey's memorandum of December 7 last, by inviting the withdrawal of Russian troops from Persian territory, and by taking such other steps as may be necessary to enable the Persian Government to restore order and maintain the independence of the country. At the present juncture order would not perhaps be restored by the withdrawal of Russian troops, however desirable such withdrawal may be. Nebulous "policies" expressed in "resolutions"—most debilitating of futilities—will unfortunately never help Persia. Even as a factor in the formation of public opinion, such "resolutions" are stultified, hopelessly, when coupled with another which includes a truly piteous entreaty to the Government "to recognise the legitimate aspirations of Germany as a colonial Power." The Wise Men of Gotham, in their beneficence, "passed a resolution" urging the building of a wall round the cuckoo in order to secure eternal spring; and who shall assert that the Liberal foreign affairs group is less wise?

A contemporary mentions the return of a traveller from what it terms the "hinterlands" (would that we could rid ourselves of this Teutonicism!) of Egypt. What part of Africa is thereby intended to be indicated we do not quite grasp, but at any rate the traveller in question "describes the primitive barrenness and helplessness of those trackless wastes as utterly appalling. He not only enforces their Biblical character . . .," and so on. What constitutes Biblical character is not explained, and it seems scarcely a happy expression; but we cannot read so gloomy an account of the desert without warm protest. We have lived on terms of intimacy with the desert, and have never found words adequate to express its beauties. Where could one see sunrise so glorious, so inspiring? Where a sunset sky so exquisitely heartbreaking? Where in the world is so pure, so vital an air as on that African desert which we are told is "utterly appalling"?

***

A Port Said correspondent informs us that a proposal for a free dispensary for that town has been put forward by Mohammed Mahmoud Bey, Governor of the Suez Canal. Such an institution would certainly appear to be needed there, and should the proposals come to anything, it is to be hoped that it would lead to a decrease, and a substantial one, in the infant mortality of the town. For though the port is said to be one of the healthiest places in Egypt for children, the fact remains, according to our correspondent, that the mortality amongst infants is very heavy and relatively increasing. This state of affairs would seem to be due chiefly to the ignorance of the natives and to the lack of means for providing first aid to the natives and poorer class of the population. A dispensary would supply medicine and—possibly better still—sound advice to these people, and it would thereby prove a blessing indeed. For the scheme proposed, the building would cost £3,500, and the annual expenses are estimated at about £1,500. But the money would be well spent, and the work would be one of which the municipality might justly be proud.

***

In the detailed reports of the recent campaign against the Anuaks in the Sudan which arrived in London last week through Reuter's Agency there are two highly illuminating facts. The one is that the Anuaks fought in the formation adopted by European soldiers; the other, scarcely less important, is that absinthe bottles were discovered in the vicinity of their dwellings. It had been known that this tribe was in the possession of rifles, but the popular belief, shared by Government officials in Khartum, was that they would be valueless in the hands of their owners. But experience has proved that there has been more than the casual exchange of obsolete rifles for ivory and other products in Anuak territory. Everything points to the presence of one of those pitiful pariahs of Eastern life, a white man who has thrown over country, honour, and pride of race in his struggle for gain.

***

It was popularly supposed that no white man had travelled through the Anuak country until the members of the expedition were despatched to punish the tribe for their depredations in Uuer territory. But instead of an utterly savage horde of braves, a well-drilled, sober army turned out, armed to the teeth with modern weapons, which they knew only too well how to use. And close at hand lay the mark of the beast: the absinthe bottles imported by the traitor. We can imagine the interest of the Sudan Intelligence Department now that the secret of a white man's influence in this region has been found out. Who is the man, to what nationality was he born, where is he now?

***

"The Cairo police have arrested 45 individuals who have no visible means of subsistence." So runs a paragraph in one of the Egyptian papers, and every street loafer is trembling in his shoes, because the annual spring, or rather summer, cleaning of the Cairo streets has begun again. During the winter everyone can claim employment, for Cairo is full of visitors, and guides are in great demand. A great many casual workers manage to accumulate sufficient money during this season to keep them in comparative luxury in the summer months; but a great many fail, and it is upon these unfortunates that the ruthless hand of the law falls heavily at times. For to be proved without means of support means banishment from the city, and a return to real work in provincial villages. And this is a life which is by no means suited to the natural inclination of the gentle Berberine. As a servant he can, and frequently does, amass quite a respectable little fortune; as an agriculturist, he is by no means so successful.

***

We are writing now of the Berberine who has been tainted with the slackness of town life, and not of the strong, healthy individuals from whose ranks are drawn most of the capable sailors on the Nile, or the skilled agriculturalists of Upper Egypt. The Berberine is indeed a very excellent fellow until he begins to realise it; but conceit is dominant in his nature, and town life seems to draw this and all the other worse attributes of his nature out together. A Berberine once explained to the writer why the members of his tribe were exempt from conscription. "There could be found no women to resist us," said this promising youth, "and if angry with our officers we would take the rifle barrels in our hands and twist them out of shape." But that was in the days of his pride as chief suffragi, and he looked a pitiable object some months later, as, a member of the unemployed, he was marched to the station on his return to his native province. It is as well to clear the worst of them occasionally from the Cairo Streets, where, impertinent and conceited, they are plentiful as flies and even more obnoxious.

***

From British Guiana comes a suggestion which will be greatly appreciated by some of our readers in certain parts of the Near East. U.S. Consul Rea Hanna, of Grangetown, announces that he has discovered a specific which will render books exempt from, or, at least, much less liable to, the attacks of white ants and silverfish, while no cockroach will approach it. It is prepared according to the following formula:—Corrosive sublimate, ½ oz.; carbolic acid, 1 oz.; and methylated spirits, 2 pints. The covers of books should be painted with the mixture about every three months, and treatment should also be applied to the seams of both back and front covers, while a strip of two to three inches should be painted on the inside of the covers. As the mixture is of a poisonous nature, care should be taken to so mark the bottle which contains it. As all pleasure in one's library is frequently destroyed abroad by the constant damage wrought by white ants and their fellow pests, this simple method of guarding against them should be given a fair trial by all who value their books—and who that possesses them does not?

PERSONAL & SOCIAL

Writing on August 3, our Bucharest correspondent says: The young Prince Nicholas left last Wednesday morning, in charge of his English tutor, Captain Anthony, for England, where he is to be the guest for some weeks of the Royal children at Frogmore.

King George of Greece arrived at Aix-les-Bains on Tuesday morning.

Prince Christopher of Greece has returned to Claridge's Hotel.

We understand that Princess Elizabeth and Princess Marie of Roumania will arrive in England shortly on a visit to Mrs. Van Raalte at Brownsea Island, Dorset.

Viscount Kitchener has returned South from Knockenhair, where he has been staying as a guest of the Sirdar.

King Ferdinand of Bulgaria recently paid a short visit to Carlsbad, motoring over from Bayreuth on the 29th ult., and staying at the Imperial Hotel for two days.

General Sir Archibald Hunter arrived at Gibraltar on Tuesday in the "Arabia," and resumed the Governorship.

Our Athens correspondent writes that Sir Francis Elliott, H.M. Minister at Athens, left that city on the 28th ult., on leave.

Ahmed Hechmat Pasha, the Egyptian Minister of Education, accompanied by three or four officials of the P.I. Department, paid a visit on Tuesday to the Vacation School of the London County Council, which is situated in Battersea Park Road.

Sir Paul Harvey, Financial Adviser to the Egyptian Government, is, we understand, resigning that position in order to take up an appointment in the Treasury.

Mr. Ogilvie, who is a very well-known artist in Cairo, has lately arrived in London from Egypt. Mr. Ogilvie recently spent some time at Philæ painting some of the artistic gems that are shortly to disappear beneath the imprisoned waters of the Nile.

Mrs. Bennett, wife of Mr. A. P. Bennett, Commercial Attaché for Vienna, Rome, and Athens, has arrived at Sinaia on a visit to her sister, Mrs. Jean Chrisseveloni.

Baron Marschall von Bieberstein, the German Ambassador, left London on Monday for Neurshausen, his country place in the Grand Duchy of Baden, and is not expected to return for about two weeks.

Serkis Bey, Second Secretary to the Turkish Embassy, has returned to London from Paris.

General Sir Charles Whittingham Horsley Douglas, G.C.B., Inspector-General of the Home Forces, who has been gazetted Colonel of the Gordon Highlanders, in place of the late Field Marshal Sir George White, served in the Suakin Expedition of 1884-5.

Colonel Jackson, Governor of the Dongola Province, has returned to the Sudan off leave.

Major Owen, Governor of the Mongolla Province, arrived at Mongolla off leave last week.

Judge N. Davidson is acting in charge of the Khartum Civil Court during the summer months.

Colonel Phipps, Civil Secretary, Sudan Government, will return to Egypt off leave on the 23rd prox.

Phipps Pasha, Civil Secretary to the Sudan Government, has been granted a month's leave, to date from 23rd inst.

Stack Bey, Agent of the Sudan Government in Cairo, has been granted three months' leave.

Commander Grenfell, R.N., has been appointed Naval Attaché to the British Legation at Bucharest.

Mr. G. E. Iles, Senior Inspector, Blue Nile Province, Sudan, has been transferred to Halfa Province as Senior Inspector and Acting-Governor.

Miralai Herbert Bey, Commandant Cairo District, has arrived in England on leave.

Colonel Garner arrived in Cairo on Wednesday off leave, and is acting as Director-General of the Public Health Department during the absence on leave of the Director-General.

Mr. Charles Poole has arrived in England on leave from the Sudan.

The engagement is announced of Mr. George Evelyn Arthur Cheyne Monck-Mason, of the Levant Consular Service, second son of the late Col. G. G. Monck-Mason, R.A., and Mrs. Monck-Mason, of St. Jean-de-Luz, France, to Jeanne Antoinette Isabelle, second daughter of M. and Mme. Szymonska-Lubicz, of Beyrout.

A marriage has been arranged between Arthur Norman Wilkinson, Sudan Civil Service, youngest son of the late Colonel Berdoe A. Wilkinson, R.E., and Dora, second daughter of the late Arthur Niblett, J.P., formerly of Haresfield Court, Stonehouse, Gloucestershire, and Mrs. Arthur Niblett, of Bonville, Park Road, Winchester.

A marriage has been arranged, and will take place in February, between Lieutenant-Colonel E. A. Dickinson, Sudan Civil Administration, son of the late Rev. C. J. Dickinson, vicar of Bodmin, Cornwall, and Lucy, youngest daughter of Colonel Boileau, C.B., of Elstowe, Camberley.

An engagement is announced between Captain the Hon. M. P. Macnaughton, late Royal Scots Fusiliers, and of the Sudan Civil Service, and Sybil Torbock, only daughter of Colonel Henry Graham, late 16th Lancers, of the Castle House, Hampton.

Colonel J. F. Burn-Murdock, who has just been retired from the Royal Dragoons, served in the Sudan in 1884, and with the Dongola Expedition in 1896.

Mr. Dudgeon, Director-General of the Egyptian Department of Agriculture, left Cairo on July 29 for Upper Egypt on a tour of inspection, to ascertain the condition of the crops and the progress of the campaign against the cotton worm.

Among Egyptians at present undergoing the "cure" at Carlsbad are Khalid Pasha Loutfy, member of the Legislative Council; Gamil Bey Sabet, Chef du Parquet at Alexandria; Dr. Alfred Eid, the well-known Cairo financier; Mohammed Bey Orfi, Mohammed Bey Wassif, Mr. Richter, manager of the Deutsche Orient Bank at Cairo; Mr. S. Wellhof, managing director of the Egyptian Bonded Warehouses; M. Alfred Lian, M. Heogner, Zeki Bey, E. Stross, etc.

The death occurred last Saturday, at Ashstead, Surrey, of Mrs. L. H. Clarke, widow of the late Mr. G. Somers Clarke, F.R.I.B.A., who was so well known in Egypt.

The death occurred on Wednesday, at Manor House, Malmesbury, of Colonel R. S. Hall, late Coldstream Guards. Colonel Hall saw service in the Egyptian Expedition of 1882, when he took part in the action of Mahuta and the battle of Tel-el-Kebir, and received the medal with clasp and the Bronze Star. He was employed also in the Sudan Expedition of 1885, and was present at the action at Tamai, for which he received a clasp.

We learn, with great regret, of the death of Mr. P. G. Michaelides, assistant manager of the Imperial Ottoman Bank in Cairo. Mr. Michaelides, whose death took place suddenly on July 30 at sea, just before arrival at Port Said, came of a well-known Cyprus family, and was for many years manager for the Imperial Ottoman Bank at Mersina before being transferred to Cairo.

The annual meeting of the London All-India Moslem League was held at the Westminster Palace Hotel on Wednesday. The Right Hon. Syed Ameer Ali, the President, was in the chair, and said the League sought to assist in the political training of Indian Mussulmans to work for the communal and national welfare under the ægis of the British Crown. A further object was to serve as the exponent to Government of their legitimate feelings, aspirations, and claims. The adoption of the report was moved by Sir William Bull, M.P., and seconded by Dr. Deva Persad Sarvidihicary. Mr. Harold Cox said that it seemed to him that by far the most important work of the Moslem League for many years to come was to be done in London. They had to inform and influence public opinion, and they could not do so better than by publishing annual reports such as the present, which was drawn up in extremely moderate language, and was cogently and temperately argued. The report was adopted.

Mr. George Sholto Douglas Murray, aged 68, St. Albans, lately Assistant Charity Commissioner, formerly private secretary to the Parliamentary Secretary to the Local Government Board, and prior to that Governor to Prince Hassan, of Egypt, left £4,580.

Mr. Liddel has been appointed Chief Engineer to the Municipalities and Local Commissions Department of the Egyptian Ministry of the Interior.

Lieutenant Charles W. Edwards, Army Service Corps, has been seconded for service with the Egyptian Army.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

ROSS TAYLOR.—On the 5th inst., at Kinnaird House, Larbert, Stirlingshire, the wife of Walter Ross Taylor, Cairo, Egypt, of a son.

FRIDAY, AUGUST 9, 1912.

THE BULGARIAN ANNIVERSARY

Next week King Ferdinand of Bulgaria will have completed the twenty-fifth year of his rule over his adopted country, and the occasion is rightly to be observed as a national celebration. The present reign not only covers most of the more important landmarks in the history of this youthful and virile State, but it has synchronised with that steady progress in material development which has brought Bulgaria to the position of being a power to be reckoned with in any possible solution of the Near Eastern question. With more political shrewdness than was displayed by their Servian neighbours, who have clung to domestic dynasties, the Bulgarians resolved to look abroad for their ruler. Prudence and the specific injunction of the Treaty of Berlin debarred them from accepting a member of the reigning house of a Great Power, and their choice fell upon Ferdinand of Saxe-Coburg-Gotha. He was elected Prince of Bulgaria by a unanimous vote of the National Assembly on July 7, 1887, and on August 14 he assumed the government of the country. In the twenty-five years that have elapsed there has been no breach of the business contract then entered into between the nation and its ruler by which each party tacitly undertook to work whole-heartedly for the interests of Bulgaria. If the glamour of close personal sympathy and affection may appear at times to have been lacking, it is probable that the dispassionate understanding between monarch and people based on mutual confidence has by no means been unsuited to the temperament of both. With a stolid thoroughness the Bulgarians have set about to qualify for that hegemony of the Balkan Peninsula to which they aspire, while King Ferdinand no less has worked hard and conscientiously to stamp their efforts in that direction with the hall-mark of success. By personal endeavour he has won for himself and his country the recognition to which the potentialities of Bulgaria entitle them; he has held his own in the diplomatic game that is continually being played on the European chessboard, and at the psychological moment he took his place at the head of the movement that gave Bulgaria its independence. History is not likely to confirm the common belief that Prince Ferdinand in proclaiming himself King was actuated mainly by motives of personal vanity, but it will rather seek to prove that he was constrained, not altogether easily, by his Government to take the one step that promised to save Bulgaria from the threatened danger of political absorption.

It is to the old capital at Tirnova that the Bulgarian naturally directs his thoughts on occasions connected with expressions of national sentiment. On August 15, when King Ferdinand celebrates in that town his accession in 1887, the nation, in spite of the curtailed programme of festivities which the present situation in the Near East has enjoined, will be reminded of the past glories of the race, and will receive fresh encouragement to compel the revival of those glories in its future destiny. Of the subtleties of the diplomatic game as played by their sovereign the rank and file of the Bulgarian people may have little appreciation; but the basis of King Ferdinand's policy can only rest, if success is to attend his efforts, on the instinctive predilections of the nation. These, from considerations of race and language, must lean towards the greater branch of the Slav people, and, despite frequent misunderstandings of a temporary character, the Bulgarians will always regard Russia as the more natural ally of their two powerful neighbours in the north. The uncertainty now attending the situation in the Near East brings this subject into close connection with the celebrations of next week, the more so as the recent activities of Bulgarian diplomacy are interpreted as an attempt to translate into some concrete form the brotherhood of the Slavs. King Ferdinand, however, is too astute to risk all his fortunes on a single throw. Trouble with Russia in the past has centred in the eagerness of the St. Petersburg Government to make Bulgaria a mere advanced post of All the Russias instead of an independent ally whose support on such terms would be none the less valuable. This danger might possibly recur, and King Ferdinand for that reason has never failed to cultivate the friendliest relations with the Triple Alliance. During his recent visits to Vienna and Berlin it seemed as if the conspicuous cordiality of his reception at each capital must have been intended to indicate something more than the kindly interest of the two monarchs in their guest. But there is no sign that Bulgaria is aiming beyond the maintenance of good relations with Austria-Hungary or is tempted to do violence to the policy that experience has mapped out as the wisest programme for the Bulgarian people.

If the Bulgarians no longer hesitate to testify to the solidarity of the Slav race, it is because they are confident that for the present the fear of absorption by Russia has been removed. To what extent the declaration of independence of four years ago has brought about this state of affairs or whether extraneous circumstances are wholly responsible for it we need not stop to inquire. The attitude is in the interest of peace in the Balkans, and for that reason may be welcomed. Whatever may be the precise nature of the understanding arrived at between Servia and Bulgaria—which must clearly be defensive in character—we may see in it a development of the policy which King Ferdinand has set before himself as the natural course for Bulgaria to adopt. The war between Turkey and Italy, even without the subsequent complications in the former's domestic affairs, has probably served to remind the Balkan States that the often prophesied cataclysm in the Near East may yet be regarded as a possibility, and that it behoves them to forestall the consequences. If it should come when they are divided amongst themselves, there would be little chance of their own territories being rescued from the melting-pot. On the other hand, if they are forewarned and forearmed, they will be able to offer sufficient resistance to render of some avail the active support of others, in whose interests it is that some of the main features of the present *status quo* in Europe should not be materially modified. It is not difficult to discover obstacles in the way of a Balkan alliance, and there are certain features in the situation in Macedonia where the various nationalities are brought into contact with one another that make for permanent estrangement. But, as we have seen, this condition of things is prejudicial to the interests of the States concerned, and it should not require any remarkable degree of statesmanship to bring home to the respective Governments a true appreciation of the position. To what agency we may attribute the forces that have brought Servia and Bulgaria together has not been revealed; but if it be found that simultaneously negotiations to the same end have been started between Bulgaria and Greece, it may reasonably be supposed that King Ferdinand has recognised, if he has not actually prompted, the logical outcome of the policy which he has steadily pursued in the interests of Bulgaria for the twenty-five years during which he has directed the destinies of that country.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Under date of August 4, our Odessa correspondent writes as follows:—"Mr. Waller, the manager of the Odessa branch of Messrs. Lever, of Sunlight fame, informs me that the operations of the firm in this country are steadily progressive and eminently satisfactory. The duties on the various Sunlight products are very high, but this notwithstanding, their superior quality is steadily gaining for them an increased demand on the Russian market. Branches are now established in Odessa, St. Petersburg, and Moscow, and I believe it is the intention of the firm to form other centres of distribution." Such a report should surely encourage other British traders to adopt a more progressive policy.

***

I see by the returns to hand for Egypt's trade during the month of June that the decrease in textile imports continues, having dropped by £E166,898. The decrease during the first six months of the year is £E787,681.

***

This naturally affects our own trade returns with Egypt. I have on more than one occasion referred to the decrease in our exports to Egypt—a decrease which is becoming characteristic. But, though in previous months German exports showed no decline, they are now affected in the same way as ours. In June, 1911, we exported to Egypt goods to the value of £E680,303—a figure which has now dropped to £E602,353. Germany's figures are £E130,811 for June, 1911, and £E103,534 for June, 1912. As a matter of fact, Turkey is the only country to show an increase, and this in spite of the war—or perhaps it would be more accurate to say, on account of the war.

***

September 26 has been set aside for the inauguration ceremony of the new Assouan dam. This will mark a new era in the development of the country's economic prosperity, and is memorable, moreover, as the completion of one of the last big enterprises of the Cromerian epoch.

***

In connection with the Assouan dam, my readers will remember that THE NEAR EAST was the first paper to announce the Government's intention to devote some of the hydraulic power of the water in the dam to industrial purposes—namely, for the manufacture of nitrates. Though nothing definite has been decided yet, the matter is, I know, occupying the attention of the Egyptian Government, which has sent Mr. Macdonald, Under-Secretary of the Public Works Department, to Sweden to study the manufacture of nitrates by hydraulic means in general use in that country.

***

Dr. Zechlin, the German Minister at Addis-Abeba, who was previously attaché at Cairo to the German Agency, has published an interesting report on the economic and commercial outlook in Abyssinia. In his opinion trade is still in an embryonic state, and it is most unlikely that there will be any significant development until existing means of transport have been radically improved. French, Greek, and Arab traders seem to be the only ones doing any regular business with the interior.

***

The greatest prospects of trade with the western interior of Abyssinia are across the Sudan. This is a point which must not be lost sight of by Anglo-Egyptian officials in Khartum, especially when the border tribes have been pacified. It is from the Sudan, and along the Blue Nile, that the forests and lands of Western Abyssinia will have to be exploited. We have an excellent opportunity here, and it is to be hoped that it will be taken advantage of by us.

***

I see that the most recent addition to motor traffic in out of the way places comes from Aden, where a skin exporter has introduced a 3½ ton 22 h.p. truck, with a capacity of 15 bales of skins. She can make six round trips daily between Aden and Steamer Point, whereas camel carts can only make two round trips. The cost of the truck was £800, and it consumes five gallons of motor spirit, valued at 6s. 6d., per sixty miles. Up to the present it has given excellent results, and promises well for the introduction of more motor trucks in outlying districts throughout the Near East.

***

Writing under date of July 8, a Baghdad correspondent informs me that trade is beginning to revive in the "City of the Caliphs," thanks to a cessation of disturbances in Persia and to the trade routes being comparatively safe once more. This is good news indeed, for something like £500,000 worth of goods had been hung up in Baghdad for several months, waiting for the roads to be opened and business in Persia to be resumed. About 60 per cent. of these goods consisted of Manchester cottons, and 20 per cent.—perhaps more—of goods financed by British firms; so that British commerce was the most severely hit by the disturbances in Hamadan and Kermanshah. At the time my correspondent wrote there was "a brisk demand for all kinds of commodities," and prices were "showing a handsome profit."

***

Mention of the trade of Baghdad reminds me of a curious item of information that reached me lately. The Arabs of Lower Mesopotamia all wear a headdress consisting of a folded cloth, known as the Kefiyeh, held in position by a twisted fillet, of wool or of hair, which is called 'agal. The most common form of the Kefiyeh, I am told, is a thin cotton cloth with a slightly raised pattern, made in shades of red and blue. And the curious thing about this is that the first of these Kefiyehs found its way to Baghdad as a tablecloth, being imported from Manchester by an English lady. Her servant took a fancy to the cloth as a head-covering. It was given to him as a backsheesh; he wore it in the bazaars, and it took the fancy of the local Arabs by storm. Thereby a fashion was set which has since resulted in a large trade in this class of goods springing up, for of course, the British merchants were not slow to seize the opportunity offered them, and Manchester has benefited not a little as a consequence.

I have on several occasions referred to the arms traffic in the Persian Gulf, and now note in the recently published Foreign Office report on the trade of Muskat for the year 1911-1912 that, notwithstanding the repressive measures adopted, the traffic seems to flourish. The figures of the imports for the year show the large increase of £51,380 over the previous year's figures of £68,075. According to a statement furnished by the principal French arms trader, England supplied 14,000 rifles out of the total of 29,705 imported. Germany supplied 7,000 rifles, but the total value of these weapons exceeded that of the English import by £13,000, the reason being that the German rifles were of a much more costly description. France, to whose protection the existence of the traffic is due, comes fourth in the list of importing countries. The value of the French trade is £11,000, out of a total of £126,000, so that the financial interests which are alleged to account for the reluctance of France to discountenance the traffic are of very slight nature. I am therefore forced to regard the difficulties raised by our friends as inspired by political motives solely.

***

I notice with pleasure that once again British firms have been successful in tendering for Egyptian Government contracts, Messrs. Hinshelwood and Co. and Mr. Jeffery W. Eady having been entrusted respectively with the supply of canvas mailbags and boots required by the General Post Office.

***

The editor of the *Deutsche Orient Korrespondenz* finds fault with my comments in an article published in his journal under the title of "Ein Fehlschlag." I accept without reserve the editor's explanation and his recognition of England's long-established rights in the Persian Gulf and certain countries as yet undeveloped, but I deny the attribute of "malicious" levelled at my comments.

***

The article "Ein Fehlschlag" was in the nature of a reminder to Turkey that if she did not provide for the irrigation of Mesopotamia, "another, coming from the direction of the Persian Gulf," will not only give the country its canals and water, but will "bring order into this confused business." In other words, Mesopotamia will fall under British sway. Now, the above innuendo (and the editor of the *Deutsche Orient Korrespondenz* will have to allow that these innuendos are often characteristic of German policy) must inevitably tend to engender in Turkey a feeling of uneasiness and mistrust of English policy in the Near East which would certainly prove detrimental to our interests.

***

The editor of the *Deutsche Orient Korrespondenz* will, I believe, see the line of thought followed by me—I did not criticise his article on account of its contents, but on account of the impression it would create in the mind of the Turk. From this point of view I must continue—not maliciously, but in all good faith—to condemn it as containing an innuendo which I considered it my duty, as *Realpolitiker*, to expose.

COMMENTATOR.

Constantinople Business Letter

(From Our Special Trade Correspondent.)

Constantinople, August 3.

Great Britain's Trade with Turkey

In my letter of July 6 I referred to the fact of Great Britain's trade with Turkey not having grown in the same ratio as Turkey's imports had increased during the last twenty-five years, nor in the proportion of the increased trade with Turkey of her commercial rivals; and in this connection I quoted from an article appearing in the twenty-fifth anniversary number of the trade journal of the British Chamber of Commerce of Turkey, and also from an address made twenty-five years ago by the late Sir William Whittall (then Mr. J. W. Whittall) on this subject. I therein stated that all the phases of the question had not been exhausted, and that I should return to the subject on another occasion. It was my intention to do this at some later date, but in quoting the "copy-book platitudes" of the *Mercantile Guardian* in regard to a statement which had recently been made in reference to Great Britain's trade with Turkey being to a great extent in those goods which this country could not advantageously buy elsewhere, I qualified that journal's observations as "the most utter trash I have ever read" in a trade paper; and as this oracle now comes back to the charge I revert to the subject earlier than I had purposed doing.

On reading what is intended as a reply to my intentionally severe criticism I was reminded of the old legal adage, "when you have no case, abuse the other side"; for the journal in question, after giving me credit for manners which it says are bad, indulges in personalities, with the intention, I presume, of setting me an example in what it evidently considers to be good manners. In regard to its charge that I am not upholding the reputation of representatives of the Press for being well-informed, I observe on the same page on which this statement appears a paragraph to the effect that those shippers having rail connections with Turkey are in a more favourable position than those who employ ships, the Turkish War Office buying munitions, boots, tent and uniform cloths, but that this business has not been placed in England, which statement is taken almost verbatim from the leading article of the *Quarterly Trade Journal of the British Chamber of Commerce of Turkey*, December issue, 1911. In the paragraph that follows, from a German source, reference is made to the intentions of the Turkish Government in the matter of naval arsenals and the building of a new arsenal "at the smidt" (wherever that may be, or whatever it may mean). The next paragraph, in reference to gloves in Constantinople, is taken from the French Chamber of Commerce Bulletin of November, 1911, since which date I have read it in various trade papers both in England and America. As if this were not sufficient evidence how well-informed (?) this authority is, in the paragraph following its reference to my humble self the statement is made that there have been some increases in British exports to Turkey, and then follow a number of articles in which increases have occurred since 1907, taken from a table of exports drawn up by myself in that form at the cost of several hours' labour, and appearing in my letter of June 14. Considering the charge it makes of my not being well-informed, the *Mercantile Guardian* should have remembered the proverb about those living in glass houses not throwing stones, before quoting from ill-informed persons, and that without even the courtesy of stating the source of its information.

I hold no brief for local "representatives" (as the *Guardian* calls them), and in quoting the opinion of two local business men in widely different positions it was done merely to show that British firms are able to compete in price, and at the same time to supply goods of better quality. I might have added the opinions of others to the same effect, but the two extremes served my purpose. If, then, British firms can compete, and instead of waiting for that business "which cannot more advantageously be placed elsewhere" to come to them, home manufacturers had adopted more aggressive methods, does it require a very vivid imagination to suppose that our exports to Turkey, which were six millions in 1887, might, had they grown in anything like the ratio of Turkey's imports, have been to-day somewhat nearer twenty millions than ten?

The Question of Quality.

I note "that British industry is not in such straits that it needs to outdo everyone in degradation of quality and the prolongation of credit terms," and "that sooner or later Constantinople will be driven to admit that a manufacturer's best course is not necessarily the one arranged for him by his foreign representatives," and a lot more in the same strain. I hasten to admit that this is essentially a market for cheap goods, and *en passant* I have seen British-made knives that would not cut, and pens at a few pence a gross with which one could only write with difficulty, but it does not follow that only the most inferior goods find a sale Many manufacturers learn that this market, like most Oriental markets, knows very clearly what it wants, and what the dealers do not know, a manufacturer will tell you, is not worth knowing. It also has the very worst of reputations, not entirely deservedly, of which the few failures during the past twelve months are striking evidence I again hasten to admit, however, that a large class of agents and dealers thrive by "chicane," and it is just these undesirables that I, a disinterested party, and others, equally disinterested, excepting in the development of our country's trade, would like to see given the go-by.

On the other hand, if this market were of no interest whatever to home manufacturers and safe trade were impossible, we should not see some of them starting their own branches here, as has been the case of late. At the risk of being told that "one drop of water does not form the ocean," I will mention the case of one manufacturer who has done an average turnover of £50.000 per annum with this country for the last seven years, and whose bad debts have amounted to less than ¾ per cent. I should like to add that this was not in goods that could not advantageously be bought elsewhere, but in a line which required continual attention and pushing. This is due undoubtedly to a good agent, but what one can do it should be possible for others to do also. Where we do fail is in our methods of doing business, and here I could give hundreds of instances of mistakes made, in which may be found the reason for the ten-fold increase in the trade of one of our commercial rivals during the last twenty-five years. To begin with, not many years ago a British commercial traveller was seldom seen in this market, although we have made some progress in this direction. The general policy of our manufacturers has been to wait for trade to come to them, while our rivals have gone after it. As regards credit terms, undoubtedly Continental firms are more "coulant," but even in this matter British firms are nothing if not inconsistent. A manufacturer doing a small but steady cash trade with a British importer, on being approached by a foreigner with a military title and a name which looked aristocratic, sent him goods on consignment, and actually subscribed in cash towards the expenses of exhibiting the same, but never received a penny in return, and, besides discrediting his own goods on the market, which were disposed of at less than cost, ruined the trade of the first importer.

I could mention other similar experiences, but will relate one diametrically opposite in character. A patriotic Britisher, regarding whom a firm write me, "He is a man we hold in high esteem on account of his personal character and as an able salesman," has rented very extensive premises and showrooms for the display of British goods in another city in this Empire. He has had to pay cash for all the goods he exhibits, although he has had offers from foreign travellers to fill his warehouse with similar goods of their manufacture, for which payment need only be made as the goods are sold. In another case a local limited liability company, with a reserve fund of over £10,000 and an open bank credit, approached British manufacturers for a line of goods for which they had a very large sale, mentioning the orders they were prepared to place. These goods they were then obtaining from Germany, a traveller regularly calling upon them and booking their order. In each case the British manufacturers replied offering their nearest approach to the goods, but not what was actually asked for. After repeated vain attempts, the manager of this concern, when on a visit home, offered to pay for the requisite dies and first cost for change of wrappers and packing, and on these conditions a leading manufacturer consented to make what was required, and has since had the business, which might have been his years earlier, declining to make any charge for dies or any expenses in connection with change of packing. The article is supplied at the same price as was the German and is better in quality. This again was not "business which could not advantageously be placed elsewhere," and yet with all due deference to the opinion of the *Mercantile Guardian* that "the manufacturer has to recognise what he is best equipped to produce," it necessitated the bringing of the business to his very doors, and his being urged by the patriotic dealer abroad at his (the dealer's) expense to supply what the market required, and not "our article nearest to it."

This is a market the requirements of which have to be studied in a thousand and one little ways, and even in questions with which I have become acquainted between manufacturers and tricky and undesirable agents, I have often found that the manufacturer has ignored what may have seemed to him an unimportant detail, either through carelessness or through the mistaken principle that he knows what is best for the buyer, and has brought trouble upon himself, of which such an agent is every ready to take advantage.

In conclusion, it would seem to me that there is a peculiar incongruity in the fact that anyone interested in the lost millions of British trade with Turkey should be disparaged for "their zeal for statistical exhibitions" by a trade journal which with all seriousness publishes a seven-month-old paragraph on "Gloves in Constantinople," of which the total imports from all countries into Turkey amounts to a paltry £6,000. With this reflection I take leave of my academic theorist.

STATIONERY FOR TURKEY.

It is stated that at Trebizond, Turkey-in-Asia, the import trade in paper is extremely active just now. Over 200 bales of writing paper were imported during the first three months of this year, about half of that quantity being supplied by Austria-Hungary.

Another line in which there appears to be an increasing demand is note-books, chiefly, apparently for school use. These are said to be imported into Turkey to the tune of about £22,500 per annum. Before the outbreak of the war Italy had perhaps the largest share of this trade, but lately France and Belgium have been securing important orders. There is, however, no reason whatever why British firms should not secure a good share of the market, which is a steadily increasing one. The wholesale prices c.i.f. Smyrna are from 22s. 4d. to 24s. a 1,000, according to the number of leaves in the books. The retail prices in the Smyrna bookshops range from ½d. to 2d.

Native purchasers, it may be observed, generally put the question of price before all other considerations. A thin, fairly rough paper is preferred, and that ruled feint, either horizontally or both horizontally and vertically, appears to be most in demand in most parts of Turkey.

RAZORS FOR TURKEY.

According to the *Oesterreichisch-ungarische Konsular-Korrespondenz*, Vienna, the present is a very favourable time for the importation of razors into Salonika, where stocks are said to be exhausted. Razors of German make are sold at the rate of 3½m. to 20m. per dozen; those of English manufacture are disposed of at from 3s. per dozen to 10s. apiece. Safety razors, up to now, are not much in request at Salonika; they generally come from Germany, France and Great Britain. The annual sale of these articles is valued at 3,000 frs.

Openings for Business.

CEMENT IN BULGARIA.

In a recent report the U.S. Minister at Bucharest writes :—"It is said that the importation of cement into Bulgaria has practically doubled during the past ten years, and that it is now increasing owing to building activity. At present the consumption is stated at about 15,000 tons per year. There are, I understand, two cement factories—and the industry is capable of developing—in the country itself, Bulgarian cement selling at Sofia for $14.67 per ton. At the same place Hungarian cement sells for $16.21. At Varna and Burgas (Black Sea ports) Belgian, English, and French cement brings $14.48 to $15.44 a ton. It is usual to allow credit for four months or 3 per cent. discount for cash."

SOFIA TRADE EXHIBITION.

The Agence Telegraphique Bulgare state that from October 26 to November 17 an exhibition of Arts, Crafts, and Trades will be held in Sofia. The exhibits will include articles of cutlery, furriery, tannery, saddlery, shoe-making, glove-making and other leather products, as well as accessories for leather working. Space will be allotted to exhibitors free of charge. Exhibits should be despatched not later than October 8, addressed to the Museum of Commerce and Industry in Sofia, or to some person in whom the exhibitor has confidence, who should deliver such exhibits to the Commission not later than October 14. The transport charges must be defrayed by exhibitors. Foreigners may exhibit machinery and tools employed in the industries and trades mentioned, as also raw material used, but they will have no right to participate in the distribution of awards.

PROPOSED DANUBE BRIDGES.

The American Minister in Bucharest reports that the question of bridge construction across the Danube, from Roumania to Bulgaria, is beginning to receive serious attention. The points under consideration for such a bridge (or eventually bridges) are from Kalafat to Vidin, Corabia to Gigen (Guiguen), and Turnu Magurele to Nicopolis. Roumanian railways already touch the Danube at Kalafat, Corabia, and Turnu Magurele. The Bulgarian line to Vidin is nearing completion and the connection of Gigen and Nicopolis with existing lines is contemplated. Although the Roumanian bank of the Danube is generally much lower than the Bulgarian, it is thought that this difficulty can readily be overcome.

OIL MOTORS FOR BAKU.

From the Washington *Daily Consular and Trade Reports* we extract the following :—Despite the large number of motors already sold at Baku, a larger future market remains. Many firms have been slow to discard their expensive steam plants, but are now doing so, and are substituting motor power for steam. Nobel Bros., for instance, one of the largest oil producers in the region, have just purchased their first oil motor. For their various wells Nobel Bros. could use about 600 motors should they decide to substitute gas and oil motors for their steam equipment.

The present tendency is to use motors of high horse-power, and those of 40 to 60 horse-power are supplanting the 20 to 30 horse-power motors formerly used. As the oil wells become exhausted they are driven deeper and higher-powered engines are required. The price of the motor is of little importance to the operator so long as he obtains an engine that will accomplish satisfactorily the work he will put it to.

It is noted that some of the European manufacturers sending engines to Baku are having some of the heavier parts, such as fly-wheels, made in Russia, thus effecting a considerable economy in freight and duty charges. The duty on motor engines coming into Russia is 3.20 roubles per pood ($4.563 per 100 pounds).

The use of oil and gas motors in the regions around the Caspian Sea is not confined to the oil-producing fields. Motors using crude oil are in demand for all purposes. Crude oil is cheap and easily procurable throughout the countries bordering the Caspian. The oil, cotton, and agricultural districts of the trans-Caspia are supplied from Baku, as are also the cotton and agricultural districts of northern Persia and the trans-Caucasus. The demand for gas motors is limited to those wells actually producing sufficient gas for fuel purposes. The crude oil motor finds a market wherever motor power is required, and in the countries bordering the Caspian Sea is used for driving cotton and agricultural machinery, mills, and irrigation plants.

One of the big motor-importing firms of Baku is now seeking a crude oil motor tractor of from 45 to 60 horse-power and capable of drawing gang ploughs with from 6 to 10 ploughs. This firm says such a tractor would have a large sale from Baku. Motor tractors are attracting wide interest throughout the Caspian region; they are just coming into the market, and a couple of American makes are having success. The real demand, however, will be for tractors using crude oil, and it is understood a large American firm is experimenting on a tractor especially adapted to meet this demand.

IRON PLATES; TOOLS.

There is a good demand for iron plates in Bulgaria. The United Kingdom supplies the greater part of the imports, notably plates 28 ins. by 20, 25½, and 14 ins., weighing 85, 100, and 130 lbs. per case. Prices are from 13s. 8d. to 20s. a case c.i.f. Verna, with four months' credit. Iron tools, hammers, etc., which are also in good demand, are supplied by Germany.

SOFIA ARCHITECTURAL COMPETITION

Referring to the notice of the architectural competitions for a new Royal Palace and new Law Courts published in our issue of July 19, we learn that the conditions have undergone some modification. Architects who wish to compete can obtain full particulars on application to the Section d'Architecture au Ministère des Travaux Publics, Sofia. A copy of the revised programme, with drawings, etc., may be seen by British architects at the Commercial Intelligence Branch of the Board of Trade, Basinghall Street. The prizes offered are substantial, and it is much to be hoped that British architects will not be entirely unrepresented in the competition, which closes on December 1.

CEMENT FOR ADEN.

The U.S. Daily Consular and Trade Reports advise that cement is proving very popular for construction in Aden, although its use there is still in the experimental stage, due principally to intense heat. A row of cement houses was recently erected by the Aden Settlement Office for office clerks, and it seems to give entire satisfaction. The claim is made that cement is cheaper than stone, and that it lends itself to quick construction. Masons are slow workers there, especially since the best were called to Jibuti and Abyssinia in connection with the construction of the Jibuti-Adis Abeba Railroad (now about half finished).

On the other hand, cement has not been a big success in French Somaliland, where a building was recently erected at a cost of approximately £5,000. Shortly after its completion so many cracks appeared in the walls that the building has been regarded as unsafe, and now remains unoccupied. Native contractors are disposed to blame the intense heat and the moisture in the air. At any rate, they are not enthusiastic on the subject of cement structures any longer, although a more expert knowledge of the material and its preparation undoubtedly would produce better results.

The better grades of cement are imported from England (6,381 cwts. last year), although Belgium also has shipped some high-priced cement to Aden. Austria and Italy also furnish small quantities. The cement prices of the several importing countries, per barrel of 400 lbs., are: Belgian, 2.27 to 2.59 dols.; Austrian, 1.94 to 2.27 dols.; and English, 2.75 to 2.91 dols. A slight increase has been noted in 1912 prices.

ELECTRIC LIGHT AND POWER.

We understand that tenders will very shortly be invited by the municipality of Botoshain (Roumania) for the erection and equipment of an electric light and power station and for a complete installation for lighting the town.

TENDERS INVITED.

EGYPT.

Supply of Articles for Ghafirs.—Tenders will be received by the Under-Secretary of State, Ministry of Interior, Cairo, for the supply of the following articles required by the Stores Department for the Provincial ghafirs, viz. :—4,000 bandoliers, 2,000 slings, rifle, Remington. Samples may be examined at the Police Stores, Bulaq, and at the office of Mr. A. L. Webb, C.M.G., Queen Anne's Chambers, Broadway, Westminster. Persons wishing to tender for these contracts can obtain a copy of the conditions of tender at the Stores Department, Ministry of Interior, Bulaq, Cairo, or at the office of Mr. Webb, at the above-mentioned address. Tenders must be submitted on the printed form provided for the purpose, accompanied by a covering letter on stamped paper (30 mills.), and should be addressed to the Under-Secretary of State, Ministry of Interior, Cairo, enclosed in a sealed envelope marked: "Tender for the supply of articles for ghafirs." Date, September 23 (noon).

Clothing, Equipment, General Stores.—Tenders invited by the Ministry of the Interior, Department of Public Health, Cairo, for the supply of clothing, equipment and general stores (including saddlery, stable necessaries, hose, shovels, baskets, brooms, candles, soap, oil, etc.) required by the Scavenging and Water Service during 1913. The goods supplied must be exactly similar to the sealed patterns kept at the stores of the Scavenging and Water Service, Boulac, Cairo. Sealed tenders, made out on the proper forms, will be received by the Director of Stores, Department of Public Health, Cairo, from which specifications and forms of tender can be obtained. A deposit of 2 per cent. of the value of the offer is required with each tender. Note.—Domicile (legal) in Egypt is necessary. A statement of the conditions of tender, together with a specimen form of tender and a list of the articles required, may be seen by British manufacturers at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C. Date, September 10 (noon).

Cotton Sheets.—The London Agent for the Egyptian War Office (Mr. A. L. Webb, C.M.G.) notifies that the Department named invite tenders for the supply of 1,000 pairs of cotton sheets. Tender forms and all particulars may be obtained at Mr. Webb's offices, Queen Anne's Chambers, Broadway, Westminster, S.W., where tenders will be received. Firms who have not previously held a contract with the Egyptian War Office must enclose with their tender two references, one of which is to be a bank. Date, August 19.

Supply of Copying Ink Pencils and Carbon Paper.—Tenders will be received at the Economat Central of the Ministry of Finance for the supply of copying ink pencils and carbon paper necessary to this department. Persons wishing to tender should apply to the Economat Central at the Ministry of Finance in order to consult the conditions and specification of the supply. Date, September 9 (noon).

Supply of Envelopes.—Tenders are invited for the supply of envelopes required by the Printing Department, Finance Ministry, during the years 1913-1914-1915. Conditions may be obtained at the Secretariat of the Ministry of Finance and at the Printing Department, Bulaq. Tenders to the Director, Printing Department. Date, September 26 (noon).

ROUMANIA.

Electrical Lighting.—Tenders invited by the municipality of Targu Ocna (Bacau) for the electrical lighting of the town (about 18 km. of streets) and the erection of central electric station. Estimated cost is: Mechanical portion, 110,000 frs.; electrical portion, 205,067 frs.; constructional portion, 40,000 frs. Deposit, 10 per cent. Provisional ditto, 18,000 frs. (£720). Particulars from the Maire. Date, August 20.

Supply of Sulphuric Acid.—Tenders invited at the Ministry of War for the supply to the Dudeshti powder works of 382,000 kil. of sulphuric acid and 138,000 kil. of oleum, the former in returnable demijohns. Date, August 21.

Engineering Notes.

Agricultural Machinery for Adrianople.

Of late years there has been a marvellous reaction amongst the Adrianople agriculturists in favour of up-to-date implements and machinery. The richer landowners started first, but now even the smallest landholders are adopting the imported modern implements, especially ploughs, which are imported for the most part from Germany, and cost about £2 each. Seed classifiers and cleaners are supplied principally by French manufacturers. The few sets of steam-threshing machines that are in use at present in that district have been supplied by Lincolnshire engineering firms. For these threshing sets a good many more orders might be secured if British manufacturers would show more energy for that purpose; but as their travellers seldom go through that important agricultural district of European Turkey, and apparently never think of bringing their goods and addresses to the notice of such likely buyers so that the said buyers may communicate with them, there is no doubt that even this class of expensive machinery will fall into the hands of Continental manufacturers.

Straw Presses for Russia.

In Russia the threshing is often done in the field, and great inconvenience is experienced after threshing in carting the straw to the homestead, where it is largely used for winter fuel. A straw press, made in Germany, is now supplied for coping with this inconvenience. The straw is delivered from the thresher direct into this press, and is there slightly pressed and bound for convenience in carting to the homestead. It packs the straw into oblong string-bound trusses about 6 ft. long and 18 ins. high, not so tightly but that the hand can be easily introduced. The price of this kind of press is from £65 to £120, and although it is stated that this particular press (of German manufacture) does not work very successfully, the general opinion is that a good press on this principle would be sure to sell well even at a higher price.

Gulf of Suez Minerals.

The *Board of Trade Journal* publishes some advance information from the report of Mr. F. M. Lockwood, British Pro-Consul at Suez, on the trade of that district in 1911, which will shortly be issued. After describing the work of exploration in the Egyptian oilfields, the report states that active development of other mineral products has taken place in the part of Egypt surrounding the Gulf of Suez and north end of the Red Sea. Two companies are stated to be prospecting large occurrences of manganese ores on the western side of the Sinai Peninsula, north of Tor; and a large deposit of phosphate ore is now being worked on the western coast of the Red Sea to the north of Kosseir, at Safaga. This, adds Mr. Lockwood, appears to be capable of great development.

Greek Torpedo Boats.

The *Times* correspondent in Athens reports that the contract between the Greek Government and the Vulkan yard (Germany) for the construction of six torpedo-boats was signed on the 5th inst. These torpedo-boats, as well as the two torpedo-boat-destroyers which were ordered some days ago from the same firm, will be delivered before the end of the year. The contract for the cruiser will be signed within a few days.

British Bridge-Building.

We are glad to observe that British bridge builders are more than holding their own in competition with American, Belgian and German constructors. The Cleveland Bridge and Engineering Company, of Darlington, and Messrs. Braithwaite and Kirk, of West Bromwich, have jointly secured the largest individual bridge contract which has been placed in Great Britain since that for the Forth Bridge. The contract in question is for the whole of the steel work required in the new railway and road bridge which is being built to carry the Eastern Bengal State Railway over the Lower Ganges between Damukdea, distant 120 miles from Calcutta, and Sara Ghat, between which places traffic has hitherto been conducted by means of steam paddle ferries. The bridge, exclusive of approaches, will consist of fifteen main spans, each no less than 359 ft. in length and 52 ft. in depth at centre and weighing 1,500 tons each. There will be provision for a double broad gauge railway track and also a footway carried upon cantilevers outside the main girders. The foundations for the masonry piers upon which the fifteen spans will rest are to be carried 150 ft. below the bed of the Ganges in order to guard against the deep scour of the river. Early completion was an important feature in the award of the contract.

PORT SAID TRAMWAYS.

(From Our Own Correspondent.)

Port Said, July 27.

Towards the end of April, 1911, the dossier connected with the electrification of the Port Said Tramways was, at the request of the Commission, sent to the municipality by the Ministry of Public Works through the Ministry of the Interior. The Commission had no previous knowledge of the contents of this pile, but it was found to contain a vast amount of correspondence between the Public Works Department and the Société des Chemins de Fer de la Basse Egypte, some of which dated as far back as 1906. There was also a scheme for the electrification of the tramways. At a meeting in the following month these documents were submitted to the Commission, and it was decided that the discussion of the subject should be delayed until after the summer holidays. On October 7 a special committee was appointed to study the subject and report thereon, and eventually an elaborate report was drawn up which contained amendments valuable both from the technical and from the financial point of view.

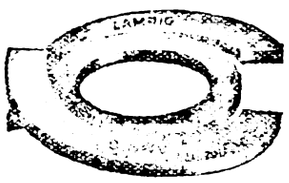
At a meeting held last November, which was attended by M. Migourski, the representative of the Société Anonyme des Chemins de Fer de la Basse Egypt, all the important points in connection with the project were thoroughly discussed. The matter was then referred to Brussels for consideration there, the company being a Belgian one, and the required funds were guaranteed.

At the last meeting of the municipality the subject was once more examined. The observations made by the company and by the Ministry of Finance were considered, and such modifications of the project as seemed necessary and advisable were made. The matter was then left over for still further discussion at the next municipal meeting, to be held on August 3.

The existing tram service is of a primitive description, the motive power being supplied by mules; and the innovation of electricity is looked forward to with lively impatience by the majority of the people here. It is expected that the work will be put in hand shortly—or comparatively so, if the expression may be allowed—probably at the beginning of next year.

HARNESSING OF RUSSIAN WATERFALLS.

(From Our Own Correspondent.)



Odessa, August 4.

Early next year an attempt will be made to electrify the railways converging upon St. Petersburg by power derived from the three waterfalls of Narova, Imatra (Finland), and Kivatch. The Narova fall is 100, and the Imatra and Kivatch falls 140 miles distant from the metropolis. The author of the scheme is M. Rukhloff, Minister of Ways and Communications. A series of experiments was commenced six weeks ago in the park of the Polytechnical Institute, near St. Petersburg, where a special laboratory and other appliances have been installed. So far as they have already gone, the tests appear to prove the possibility of obtaining from the combined waterfalls a constant current of sufficient power for the object in view. It is believed that the Imatra fall itself is capable of generating a current of 250,000 volts, but this remains to be demonstrated. The laboratory is for the moment more particularly engaged upon the production of insulators impervious to the weather variations of rain, fog, snow and frost. The experiments will be continued throughout the summer and winter, and if they prove successful, as it is confidently hoped and believed they will, the work of electrifying the northern railway systems will be commenced early in the spring of next year.

Oil Topics.

Maikop's Misfortunes.

Maikop is certainly a most unfortunate place. Last winter its oil production was stopped by tremendous snowstorms and all work was delayed. It was declared that there had never been so bad a winter in the memory of the oldest inhabitants of the Caucasus. The expense to the companies was prodigious. A cable has now been received from the general manager of the Anglo-Maikop Corporation as Apsheronskaya which states that a cloudburst had occurred, that the rivers were in flood, that bridges had been swept away, that loss of life was heavy, and that the Black Sea Oilfields' lower well had been flooded and it would take some time to pump the water out of the strata. The wells will, no doubt, recover. A flood will not wash away the piping, and oil managers know how to pump out the water. Nevertheless delay means expense, and pumping water is not as profitable as pumping oil, especially when that oil is quoted 37½ copecks at Baku. The news had no effect on the market for Maikop shares. The quotations are low enough as it is.

Important Amalgamation.

The Maikop and General Petroleum Trust, the Maikop Apsheron, the Maikop Areas, and the Maikop Hadijensky Syndicate are to be reorganised and amalgamated by the Anglo-Maikop Corporation. Thus four more companies will be merged into the Tweedy group. The terms of the scheme provide that the capital shall be cut down from £1,255,000 to £512,500, which includes £102,750 new working capital. The Maikop and General Trust was formed in February, 1910, and the last report showed that it had an insured shares capital of £305,000, of which £130,186 had been issued. Mr. F. W. Baker was the chairman. The company's assets were entered in the books at £183,558, against which there was a loan of £60,000. Cash in hand amounted to £12,644, no profit and loss account was submitted. The company was interested in Maikop Oil and Petroleum Producers, Maikop Areas, Maikop Apsheron, Maikop Valley, Maikop Mutual Oil Transport and Maikop Hadijensky. It was not a very successful concern, and it is probably a good thing that it will come under the Tweedy regime. The Maikop Apsheron report was issued on December, 1911, and showed that six wells had been drilled, but that none of them had reached the oil. The company had only £1,406 cash in hand, it paid £349,158 for its properties out of an issued capital of £400,000. Altogether it was in a hopeless position. Maikop Areas report issued June 13, 1911, had an issued capital of £450,000 and held 32 plots, on which it had drilled three wells. Like the Maikop Apsheron, it was interested in the Maikop Mutual Pipeline. It paid £300,000 for its property, and had spent about £70,000 in development. It owed about £7,000 and had £13,000 in cash. Here, also, the position was quite hopeless. Maikop Hadijensky report was issued at the end of December, 1911, and showed an issued capital of £22,400, but practically no work had been done on the eight plots beyond the necessary drilling required to hold the otvods. This company had also got rid of most of its cash, but it is to be treated better than the rest of the concerns, for it will receive fully paid shares for its interests. The other companies will be allowed to subscribe for partly paid shares in the new enterprise. Whether the working capital to be provided will be sufficient it is impossible to say. In any case, it appears that the new capital is excessive, and that the working capital will be quite insufficient to open up more than a dozen or fifteen wells.

Galician Production.

The production of oil in Galicia for the first six months of 1912 amounts to 560,720 tons, of which about 82 per cent. came from Tustanowice. Boryslaw only turned out 80,420 tons, and the Shodnika district 72,630 tons. Comparing this production with the same period of 1911, there is a slight falling off. It is a curious thing that March was the best month both at Boryslaw and Tustanowice. At the latter place no less than 84,200 tons were pumped during the month, whilst 14,120 tons were pumped in March from the Boryslaw wells, as compared with 11,890 tons in February.

New Roumanian Co.

The refinery belonging to Dr. Aisinmann at Ploeshti has been sold to a company with a capital of 2,500,000 francs, divided into 12,500 shares of 200 francs each. The name of the company is the Standard Société Roumaine de Petrole, its offices are at Bucharest, and the capital has been allotted as follows:—Dr. Aisinmann, 11,875 shares; M. I. Goldschmidt, 250 shares; Messrs. Scherr and Seceleanu, 100 shares each; Monsieur M. C. Panaitescu, fifty shares; and M. Thenen, fifty shares. The refinery has a capacity of 42,504 tons a year and a participation in the burning oil cartel to the extent of 1,647.46 tons a year. The first directors are Messrs. Aisinmann, Goldschmidt, and N. Seceleanu. This news is interesting, as it is stated that some English financiers have been allotted shares in the new company, probably with the idea of floating the business in London later on.

The Constantza Pipeline.

With regard to the pipeline to Constantza, some of the critics are pointing out that it need not be built after all. They argue that the capacity of the railway to Constantza is twenty-seven trains a day, and, setting aside eight of these trains for passengers, eight for the wheat traffic, there are left eleven trains that could be utilised for carrying oil. But up to the present only four trains a day have been dispatched to Constantza. The reason why so few trains have been dispatched is lack of locomotives. Each oil train requires five engines. If the line from Cerna to Constantza were doubled, the Ploeshti line extended to Tzandarei, and some of the stations enlarged, the whole of the alterations would not cost more than 2,000,000 francs; and it is argued that with a proper number of locomotives and these improvements on the line the whole of the oil trade of Roumania could be carried to Constantza without any difficulty. As the railway belongs to the Government, and as the pipeline will also be a Government enterprise, the matter should be easily settled.

Red Sea Oilfields.

The current number of the *Board of Trade Journal* contains the following information from the report by the British Pro-Consul at Suez (Mr. F. M. Lockwood) on the trade of that district in 1911, which will shortly be issued:—"During 1911 the work of exploration in the Egyptian oilfields was pushed forward with energy. The one area which appears to have proved to be productive on a commercial scale is that comprising the peninsula of Jemsa. Nine wells have been completed in this area, most of them yielding oil of good quality, and in quantities highly satisfactory; other wells are being sunk, tanks of large capacity are being erected, and, in fact, all preparations are being made to market the crude product at an early date. Exploratory work is in progress at Zeitia, by a company which has also carried on work by means of borings at Ras Bahar to the north of Jemsa, Ras Dhib, and on Gaysoon Island. Another company has continued its work on the Island of Jubal, around the north end of which strong evidences of oil occur in the sea. Encouraging indications have also been met with from time to time during boring operations on the island. On the mainland to the south of Jemsa some work has been done, whilst on the opposite side of the Gulf of Suez, on the coast of Sinai, indications of oil have been met with in borings at Abu Zenima. Meanwhile the work of prospecting is being carried further afield, and it is most probable that at an early date actual development will be undertaken in areas other than those mentioned above."

NEWS FROM ALL SOURCES.

During the week ending July 14 169 fatal cases of cattle plague were reported in Egypt.

In consequence of great activity in the building trade, all Roumanian saw-mills are fully occupied.

The Servian Ministry of Commerce has opened a commercial agency in Brussels under the supervision of a Servian engineer.

The Sultan of Lahej has presented Arab horses of purest blood and high pedigree to Lord Kitchener and to the British Consul at Port Said.

The importation of coal to Roumania during last year amounted to 308,125 tons, the principal part of which was from the United Kingdom.

The Servian Council of Ministers decided on July 29 on a reduction in the Customs duties on raw sugar of from 20 dinars to 10 dinars the hundred kilos.

A sign of developing commerce in Bulgaria is the recent decision of the Railways Administration to construct a second station for Sofia to serve solely for goods traffic.

Russian coal is making a determined bid for the Bulgarian market. It is reported that the State Railways and the Sofia Municipality have both placed considerable orders for Russian coal, which is said to equal Cardiff in quality at one-half the price.

A notice has been issued by the Turkish Direction Générale des Contributions Indirectes, requesting shippers to Turkey to mark on all packages both the gross and net weights in kilograms, so as to facilitate the work of checking and weighing of imported goods.

Mr. Benjamin Carver, J.P., of Prestwich, Lancs, cotton merchant, of Messrs. Carver Bros. and Co., Ltd., of Manchester, Liverpool, and London, who died on July 11 last, aged 89 years, left estate of the gross value of £173,648 19s. 7d., of which the net personalty has been sworn at £172,672 13s. 8d.

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondents.)

Varna. July 31.

All business in cereals is at a standstill here on account of the dead season we are now passing through. Arrivals from the interior are very limited. To-day there arrived from the interior only one car of rape seed, which was sold at 29.30 frs. the 100 kilograms. This year the crop has been damaged in several districts, especially in Sofia and Varna, that in the latter district having been destroyed by hail. This year's production will be 20 per cent. less than that of last year, which was a record year. The really active season begins in the middle of August, and lasts till May.

Odessa. August 4.

According to some official data just published, Russia's grain exports in the first half of the current year show an enormous decrease as compared with those during the same period of last year. The total exports for the first half of this year were 459.2 million poods, and for the first half of last year 863.4 million poods. The Russian pood is equivalent to 36 lbs. English; there are 62 poods in the ton. This remarkable decrease included all cereals, but more largely those of wheat and rye, in which two grains the falling off was 35 per cent., as compared with last year. The cause of the striking decrease is, of course, attributable to the failure of last year's crops in the Volga and eastern provinces, a failure which brought in its train a lamentable famine in no fewer than twenty-two governments.

The new season's grain is now arriving by rail, road and water (barge), but not as yet in very large quantities. In another fortnight the export shipments will be in full swing in all the Black Sea and Azoff ports. The general yield in these provinces is a fair medium one. During the past week harvesting operations have been favoured by fine and dry weather. Had not torrential rains supervened three weeks ago, there would have been an all-round bumper crop. Under the abnormal weather conditions agriculturists are thankful that the result is as good as it is, and it is a fair medium *récolte* that generally proves the most lucrative to the grower.

The following information is compiled from the weekly bulletins received at the London offices of the Imperial Ottoman Bank from its correspondents in the Near East :—

Angora. July 27.

Mohair.—The market has been calmer than during the last fortnight, for the reason that exporters, having accumulated considerable stocks, are disinclined to continue purchases at the prices demanded by holders; also the volume of business has somewhat diminished, and it is thought that the calm will continue until sellers decide to reduce their prices. It should be noted that the arrivals of mohair from the interior have greatly decreased, and it is thought that only small quantities of this year's production are still outstanding for delivery. The production will thus be about 30 per cent. less than that of 1911. This it is principally which leads local holders of some quantities to hope for better prices.

Cereals. — Local stocks are — barley, nothing; wheat, tender and hard, about 3,500 tons, all destined for export to Constantinople. Prices, with small daily variations, are maintained. Estimates of crops are still pessimistic, and it becomes more and more certain that there will be a considerable deficit on last year's figures.

Our station and several neighbouring ones will not be able to despatch more than 2/2,500 wagons of fifteen tons each.

Beyrout. July 29.

Market.—The local situation is approximately the same as last week, the market being with difficulty sustained.

Imports and Exports.—Transactions are characterised by a certain slowness, showing the fatigue from which trade is suffering in consequence of the present situation.

Cereals.—Cereals have slightly risen.

Cocoons and Syrian Silk.—Export of dry cocoons to Europe is rare, sellers preferring to export in spun bales, which show a better profit. For this reason the exports of spun silk have exceeded those of last year.

Mitylene. July 27.

In consequence of unfavourable rumours regarding the approaching olive crop, prices of oil have risen 20 per cent. on those of the beginning of the month.

Export.—Rather limited. Holders show no disposition to sell. 383 barrels of oil, value £3,000 about, and 450 sacks of soap, value £900, have been exported.

Imports.—500 sacks Triest sugar, 400 sacks rice Rangoon No. 3, 160 sacks coffee Triest.

Damascus. July 27.

Export.—Wheat, G.P., 70/90 per 100 kgs., market feeble. Barley, G.P., 64/74 per 100 kgs.; buoyant tendency.

Imports.—No change.

Jaffa. July 29.

Wheat.—Prices well maintained. Superior qualities, P.J., 39/40 per kg. Daily sales, 1,000-1,200 kgs.

Barley.—Prices tending higher. Superior qualities (gazaoui) P.J., 21 per kg.

Flour.—Import for fortnight, 380 sacks (Roumanian).

Olive Oil.—Prices rising; P.J., 123 per jar. Importation for fortnight, 35,000 okes.

Stamboul. July 27.

Cereals.—No change in market generally. Buyers are very reserved, fearing fall in prices which might follow arrivals of new crop.

Canary Grass.—Slightly better, buyers being again on the market.

Opium.—No modification in week's prices.

Mohair.—Sales continue in same conditions as last few weeks.

Sugar.—Prices weakened again slightly. This tendency is attributed solely to speculation.

CONSULAR AND OTHER REPORTS.

Sennar Province.

During June the price of dura was reported to be still very high, says the *Monthly Report* of the Sudan Central Economic Board. The highest and lowest prices for the ardeb (of 216 kilos.) during June were PT180 and PT175 respectively. Fatarita was PT185 and PT180.

The highest and lowest prices of sesame at Singa during June, per ardeb (of 216 kilos.), were PT280 and PT300 respectively.

Kordofan Province.

With regard to Kordofan Province, the Central Economic Board's *Monthly Report* says: "A little more dura has been arriving in the market during June, and the price has eased slightly to PT140 to PT145 the ardeb (of 135 kilos.). Now that the rains have broken more should come in from surplus stocks, and it is hoped that the price will fall still further. During the month a certain amount has been imported by rail from the Blue Nile Province and Sennar."

Sudan Castor Seed.

A consignment of castor seed (decorticated) from Upper Nile Province has been sold in England at the rate of £12 5s. per ton, net weight including bags, free delivered Hull, less 2½ per cent. discount, this price being the current rate for Bombay castor seed. The net weight of the consignment as received was 17 cwt., 19 lbs.

Servian Prunes.

The hon. correspondent in Belgrade of the London Chamber of Commerce reports that Servia can scarcely be satisfied with the prospects for the prune harvest of 1912. A good harvest is expected only in the district of Oujitze and an average one in the districts of Tchatchak, Roudnik and Valievo, while a bad harvest is expected in the districts of Podrnie, Belgrade, Kragujevatz, Morava, and Krouchevatz. The total product of prunes is estimated for this year to be about 1,600 to 1,800 wagons, and of prune-jam about 150 to 200 wagons. The sales have not begun yet, and the nominal prices for sets of autumn prunes is 54 kronen, and for prune-jam 54-56 kronen for 100 kilos. franco Kragujevatz.

PRODUCE REPORT.

London, August 8.

The markets continue to show only a moderate amount of activity, and quotations show irregularity. With the resumption of work at the docks much better deliveries are obtained, and business has improved. Sugar is lower. Coffee unchanged. Currants are firm. Sultanas slow. Seeds unchanged. Corn barely steady. Linseed favours buyers. Seed oils are cheaper.

Sugar.

Beet is fully 4d. and refined 3d. lower per cwt. Interest was aroused in the market by the report that the British Government have decided to withdraw from the Brussels Sugar Convention from September, 1913. The terms of the new protocol, lately signed by the other members of the Convention, were not satisfactory to H.M.'s Government. This decision, however, makes no change in the general position of sugar. Except when the European beet crops have been a failure—as was the case last year, from natural causes, when prices consequently advanced through shortage—the Sugar Convention has not attracted much notice. The primary aim of the Convention was to abolish the bounties, which produced artificial prices not warranted by the legitimate laws of supply and demand. Beet sugar :—Closing prices : August, 12s. 4¾d.; September, 12s. 3½d.; October-December, 10s. 2½d. f.o.b. Hamburg. Refined :—English, Tate's No 1 cubes spot, 22s. 6d.; September-October, 22s.; foreign, Say's cubes prompt, 18s. 9d. f.o.b. Paris. Dutch, 18s. 6d. f.o.b. Amsterdam. German and Austrian, cubes, Meyer, November-December, 14s. 7½d. f.o.b. Hamburg.

Coffee.

Only small quantities were offered at auction, and met with fair competition. East Indian small to mid, 76s. to 82s.; Costa Rica, low to ordinary, 76s. to 80s.; Mocha, 80s. to 85s.; Mexican, 76s. to 86s.; Brazil, 68s. to 86s.

Currants.

The market is firm, with more business doing. Bags, provincial kind, at 25s.; also ¼-cases at 25s. 9d. to 26s. 3d. Patras and Panariti, 27s. 6d. to 29s. Vostizza, 30s. to 32s.

Sultanas.

Not much demand has been experienced for Smyrna fruit, but Samarkand bags have gone freely from 39s. to 42s. Further news from Smyrna states that the crop will be much shorter, and very high prices are anticipated.

Figs.

The only business doing in bags, naturals, is at 20s. to 21s. New to arrive are quoted at high prices, with very little forward business done.

Seeds.

Canary seed is in poor demand : Turkish 61s. to 62s. per quarter; Spanish, 85s. to 92s. Linseed meets with a fair demand, but prices are easier. Russian, 71s. to 73s. per quarter; Calcutta, 60s. to 61s.; River Plate, 56s. to 57s. Cottonseed, per ton, Egyptian, £8 18s. 9d.; Bombay, £7 5s.

Oils.

Linseed oils :—Spot pipes, £33 5s. to £33 10s.; barrels, £33 15s.; August, £33. Cotton oil in poor request : spot £27 5s.; sweet edible, £30 10s. to £31 10s. Olive oil : Prices have an upward tendency, and there is more inquiry. Spanish, spot, £48 to £50; Levant, £46 to £48. Shipping markets have a strong tone.

Oil Cakes.

Linseed : Russian, £8 17s. 6d. to £9; Cotton : London made, £5 17s. 6d.; Egyptian, £5 15s. 5d. to £5 17s. 6d. Soya bean meal, £7 17s. 6d. to £8. Cotton cake meal, decorticated, £7 10s.

Gum.

Animi, Zanzibar, washed, is quoted £12 to £14; bean and pea, £3 15s. to £9 10s.; Arabic, East India, £1 15s. to £2 5s.; Kowrie, common, 50s. to 75s; scraped, 95s. to 250s.; Olibanum, drop, 35s. to 50s.

Various.

Beeswax, per cwt., £5 15s. to £8 5s. Ground nuts, E.I. kernels, £16 5s. Cream of tartar (foreign) powder, per cwt., 87s. 6d. to 88s. Alum, per ton, £6 5s.; ground, in bags, £6 15s.

Cotton and Cotton Goods.

EGYPTIAN COTTON MARKET.

(From Our Own Correspondent.)

Alexandria, August 2.

Prices are hardening in spite of the brilliant crop outlook, which is estimated generally at eight million cantars. If this estimate is realised, as seems quite probable, the country will receive more than £40,000,000 for the crop. This figure exceeds the normal amount of our imports, so that the commercial balance will leave a considerable surplus in favour of Egypt. A country which is not afflicted with the evils of militarism, and whose exports exceed considerably the amount of the imports, may look forward to a high degree of prosperity. Speculation is very active, and growers, encouraged by the present rise, are selling their crops on a large scale. The advanced state of our crop gives ground for the hope that the first picking will take place at the beginning of next month. We will receive at the end of this month several lots of new cotton. The demand from the spinners is very active, and it is certain that more than half the crop is already sold.

Cotton Seed.—The market is calm and prices are gradually falling. Local demand absorbs each year the greater part of the supply. Speculators maintain an expectant attitude.

MANCHESTER REPORT.

Messrs. Reynolds and Gibson telegraph :—"The two chief factors disturbing us at present are the holidays in various districts and extreme fluctuations in prices of the raw material. It is impossible to establish a stable basis for prices with the Cotton market moving 20 points a day. Buyers show no anxiety to rush in, and decline to do business, preferring to rest on their oars owing to the holiday and the unsettled state of the American market. Business in Egyptian spot cotton is but limited, and quotations are reduced ¼. Estimated sales, 1,400 bales (for four days)."

Sudan Cotton.

According to the *Monthly Report* of the Central Economic Board of the Sudan Government, the highest price of unginned cotton at Tokar (Red Sea Province) for the week ending June 22 was 780 milliemes, and the lowest price for the same period was 600 mms. per kantar of 45 kilos., the average price for the period being 634 mms., while the average for the previous week was 630 mms. For the Red Sea Province the report states: "The season has ended with a total crop of 112,669 kantars (of 45 kilos.)."

With regard to Sennar Province, the report states: "Efforts have been made to induce a few more prominent natives to conduct some small trials of American cotton under the supervision of the Agricultural Inspector. The highest and lowest prices of cotton during the month were 20 P. and 19 P. per kantar (of 45 kilos.) respectively."

U.S. Cotton in Turkey.

During the last six months American grey sheeting (3 yards per pound) have been sold to the Ottoman Army to the extent of 900,000 yards. This American business with the Ottoman Government in cotton fabrics, which is a new departure entirely, is certain to develop, says the U.S. Consul-General in Constantinople, as the Turkish Army officers appreciate the durability of the American cloth. They have learned that underwear used by the Ottoman soldiers made from American all cotton sheeting lasts a year, while that made from European starch-sized sheeting wears out in three months, and they therefore are willing to pay the higher price (about 2 per cent.). The Ottoman war department requires from 20,000,000 to 35,000,000 yards of cotton cloth in a year. Efforts are being made to introduce American khaki and duck into the Ottoman Army and Navy.

Egyptian Trade in 1911.

In an interesting review of Egyptian trade, Consul Birch, of Alexandria, states that the year 1911 was begun in optimism and ended in disappointment. The view that the effects of the financial depression which hung over the country since 1907 had at last disappeared was too sanguine. The year began with the marketing of the largest crop of cotton that had ever been produced in Egypt—a yield of over 750,000,000 pounds. It realised about £36,000,000, or some £5,900,000 more than is recorded in any previous year. The effect upon the prosperity of the country is evident in the fact that the value of imports in 1911 reached a higher total than any previously recorded, while of the £13,000,000 of gold introduced from abroad to move the crop £5,000,000 remained in the country. The railway receipts, another good index, showed the substantial increase of about 10 per cent., and would, it is believed, have been much greater but for the lateness of the crop. In every one of the principal articles of import the 1911 purchases exceeded those of previous years. The top mark in cotton textiles, known locally as "Manchester goods," was reached in the value of £4,100,000, chiefly the product of English mills.

Turkish Cotton Goods Market.

The U.S. Bureau of Manufactures, Department of Commerce and Labour, has just issued a timely and useful report, in which Commercial Agent Ralph M. Odell, who for over a year has been investigating the cotton goods trade of various European countries, gives the result of his study of the Turkish market. The report is eminently practical. Mr. Odell describes in detail the classes of goods in demand, quotes prices and terms on which they are sold, and tells how they are packed and shipped.

BULGARIA'S SUGAR FACTORIES.

(From Our Own Correspondent.)

Sofia, July 28.

Until a few years ago the whole of the sugar consumed in Bulgaria, amounting, in round numbers, to 10,000 tons yearly, was imported from Austria; but in 1837 a Belgian company, with a capital of 4,000,000 frs. (£160,000), obtained a concession for a sugar refinery in Sofia, and in two years the first production of home-made sugar was put upon the market. For the first five years the Sofia refinery could produce only 5,000 tons yearly, because the farmers and peasants were not accustomed to cultivate the sugar-beet and could not provide a sufficient quantity of the raw material for the factory, although the high price of 25 frs. (£1) per ton was paid for the beetroot. Consequently, some 5,000 tons per year had to be imported from Austria. During the last five years the factory has been enlarged and further equipped to meet the requirements of the market, and the farmers and peasants have been convinced that it is more profitable for them to cultivate the beetroot instead of maize and wheat. The combined efforts of the factory and the cultivators were crowned with success, and for the year 1911 the Sofia refinery was able to produce 8,000 tons of sugar, while the plant was actually capable of producing 12,000 tons in the twelve months.

In the meantime, the consumption of sugar in Bulgaria was rapidly increasing, in consequence of the growing prosperity of the population and the establishment of confectionery and biscuit factories. In fact, the increase surpassed the combined efforts of the Sofia refinery and the beet cultivators. The annual consumption of sugar has doubled and even stands at 20,000 tons, and there is a pronounced tendency towards further increase, the average increase for the last five years amounting to nearly 2,000 tons per year.

The great success of the Sofia refinery and the continual increase in the consumption of sugar in the country have paved the way for the erection of new sugar factories, and in a few years more Bulgaria will become independent of the Austrian sugar market. Four new concessions have been granted this year for the erection of sugar factories in different parts of the country. Belgian companies have obtained two concessions, one at Rustchuk, on the Danube, and another at Philipopolis, in Southern Bulgaria. The first company has a capital of 9,000,000 frs. (£360,000), the second has a capital of 6,000,000 frs. (£160,000). A Tcheck company, which has its headquarters at Prague and has obtained another concession at Gorna-Orehovitza, has a capital of 5,000,000 frs. (£200,000). With the full development of the new sugar factories, which will be reached during the year 1914, it is supposed that they will be able to produce from 30,000 to 35,000 tons of sugar yearly, that is nearly the quantity which will be necessary for local consumption at the above date—and that for a population of 4,500,000. Therefore, for the exportation of sugar to Turkey or other countries there is ample room for new factories and new concessions, which will be granted very soon.

There is a great future for sugar factories in Bulgaria, for the price of sugar on the Bulgarian market varies from 80 to 100 frs. per 100 kilogrammes, while the price of beetroot is low. In the Sofia district beet costs 25 frs. the ton delivered at the factory, while in the districts of Rustchuk, Gorna-Orehovitza and Philipopolis the price is 20 frs. per ton, and in the districts of Bourgas it is only 12 frs. per ton. Then, too, there is the protection duty on imported sugar, which is 275 frs. per ton, to which must be added also 250 frs. per ton for excise and octroi duties; so that the total duties on imported sugar amount to 50 per cent. Another factor making for success is the good quality of the beetroot, which in the Sofia district yields from 100 to 120 kilogrammes of sugar from one ton of root, or nearly 11 per cent. sugar, while in Southern Bulgaria and along the Danube the beetroot is of a still better quality and yields 120 to 140 kilogrammes of sugar from one ton of beetroot, or an average of 13 per cent. of sugar obtained from the raw material. Again, not only has the cultivation of the beet proved to be more profitable for the farmer and peasant, but the lands which are under beet cultivation are taxed 50 per cent. less, thus affording a second, indirect, encouragement for the sugar industry. All these encouragements have resulted in the rapid erection of the new four sugar factories, and will secure Bulgaria's future independence of the Austrian sugar market.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ending July 26:—We have again to report a quiet week, owing to the tenacity of holders who still maintain very high pretentions. Buyers came forward at 16s. to 18s., as to quality, for new and old stuff, but sellers demand fully 2s. per lb. higher. The news from Salonika this week report a lower estimate of the crop, the highest being 251,000 lbs., and the lowest 168,000 lbs., but we are inclined to believe the former, which is equal to about 1,600 cases. The sales on our market this week amount to only four cases of common low grades at 13s. 6d. to 14s. 8d. The arrivals are 602 cases against 245 at same date last year.

During the week ended July 25 the number of bales of Egyptian cotton imported at the various ports of the United Kingdom amounted to 6,445, while the number exported was 1,116. During the thirty weeks ended July 25 there were 403,713 bales imported and 154,474 exported.

The Bulgarian Government, on May 4, 1912, promulgated the following regulations for the admission of edible cottonseed oil, as provided for in a recent law: Cottonseed oil shall have the following qualities: It shall be clear, almost odourless, yellowish in colour, with taste similar to that of walnut oil; it shall not be bleached with chemicals (chlorine and the like); it shall not contain more than 2.5 per cent. of free acid; its density (at 15 deg. C.) shall be from 0.922 to 0.93; its refraction index at 40 deg. C. shall be from 58 to 59; its iodine index shall be from 101 to 117; it shall give Halphen and Becchi's reaction.

Shipping Intelligence.

BRAILA NOTES.

(From Our Own Correspondent.)

Braila, August 3.

The labour difficulties in the harbour are at an end, as the men decided to accept the settlement effected by their delegates, and work in port has been going on without any interruption. Owing, however, to a shortage of railway trucks, grain has not been arriving very freely, only about 2,500 tons a day, and in consequence the open tonnage that had accumulated here during the strike has been exercising a depressing influence on the market. The rate of freight to Antwerp receded to 11s., and for Rotterdam 10s. 6d. is the utmost obtainable.

Fixing prompt tonnage in London is at present out of the question, as the rate at which it can be secured cannot be obtained here.

Italy, and more especially Naples, is still the most important buyer of Roumanian new wheat, and spot rates to Mediterranean ports are keeping firm at 13 frs., with a fair amount of inquiry.

The Sulina market is still inactive, rates remaining nominally at 10s. Antwerp or Rotterdam, with no inquiry.

The water in the Danube has risen since last week, and steamers can load at present at Galatz or Braila down to 23 ft. 6 ins. Sulina bar draft remains unchanged at 23 ft

MISHAP TO THE "PERSIA."

Writing under date of July 26, our Port Said correspondent says:—The P. and O. liner "Persia," which, it will be remembered, had an accident on her voyage out, met with another mishap outside Port Said Harbour at the beginning of this week. The damage, which was to her steering gear, was, fortunately, very slight, and she was able to repair it herself and to come into harbour under her own steam.

BULGARIAN SHIPPING EXPANSION.

Bulgaria's efforts to improve her commercial position are now being directed to her shipping. The *D.O.K.* learns from Sofia that well-known merchants and financiers of all the Bulgarian towns situated on the Danube have united in order to promote the formation of a Bulgarian commercial fleet on that river. The undertaking is to receive the support of the Government. In all probability a Bill dealing with this project will be submitted in the autumn to the Sobranje.

COAL IN THE MEDITERRANEAN.

"Is America likely, in normal times, to prove a competitor with British coals in the Mediterranean market in the near future?" asks a writer in the *Liverpool Journal of Commerce*. This is a question, he continues, which demands the earnest attention of all coal exporters in the country, particularly those of South Wales. American coal competition in the past has been due to opportunism. In periods of extreme activity and prosperity in the British coal trade prices for Welsh and English coal are driven to such comparatively high levels that the competition of American coals in foreign markets is rendered possible. The shipments of American coal to the Mediterranean markets during March and April of this year are now available. During those months in which the strike occurred here the exports were:—In March of this year, 255,259 tons, as compared with 116,522 tons in March, 1911; and in April, 371,293 tons, as compared with 93,501 tons in the same month of last year. There has thus been an increase of 416,529 tons this year for the two months referred to.

Mr. Alexander Moffatt, of Edinburgh, formerly manager of the Anchor Line, with Messrs. Henderson Bros., of Glasgow, who died on June 18 last, aged 81 years, left personal estate in the United Kingdom valued at £25,692.

SERVICES TO ROUMANIA.

It may possibly be worth while to call the attention of exporters to the fact that there is a regular Roumanian freight service between Rotterdam and Black Sea ports. During the summer vessels go up the Danube as far as Galatz and Braila, where merchandise can be transhipped to smaller steamers which go up the Danube into Germany, touching at Roumanian, Bulgarian, Servian, Hungarian, and Austrian ports. In winter, when the Danube is frozen, vessels coming from the Mediterranean discharge at Constanza, from which port (as well as from Galatz and Braila) there are railway lines which serve the whole of Roumania.

Among other vessels calling at Constanza, Galatz, and Braila are those of the Johnston Line from Liverpool, the Ellerman Line from London, the German Levant Line from Hamburg and Antwerp, the Adolf Deppe Line also from Antwerp, the Fraissinet Line from Marseilles, and the Austrian Lloyd from Trieste. In addition to these regular lines many tramp steamers, especially British, go to the Black Sea (Odessa, etc.) for grain, and are always in search of cargoes for the outward voyage.

STEAMSHIP MOVEMENTS.

P. & O. Steam Navigation.

"Arabia."—Left London for Bombay August 2. "Assaye."—Left Bombay for Shanghai July 31. "Delta."—Left Shanghai for Bombay July 30. "Devanha."—Shanghai for Bombay. At Colombo July 31. Stock and Share Markets.

LONDON, August 8.

Considering that we are at the tail end of a nineteen-day account, and that we have just finished a holiday, the Stock Markets are remarkably firm. There is no bull account, consequently every small buying order tends to harden prices. The promoter is giving the public a rest, and it is unlikely that there will be any issues of importance for a month or six weeks. It is clear that when people come back from their holidays we shall have a revival in speculation; everybody has made money, and the general tone is optimistic, so optimistic that even disappointments such as the London and North-Western report are passed over.

Money is Plentiful.

Money is easy, but is not likely to remain so for any length of time, trade is good, the crops all over the world promise well, and there seems very little doubt that the Bank of England will be compelled to raise its rate in the autumn. The position in Berlin is somewhat changed, the loans to the United States are being gradually paid off, and the speculative account is being reduced. In Paris, in spite of the holidays, everybody is optimistic.

Foreigners.

In the Foreign market some small changes occurred during the week, but none of them are of any great importance. Bulgarians are unchanged at 91½. Egyptian Unifieds show no alteration. French Rentes are being gradually pushed up, and it is clear that the French Government are determined not to allow the credit of the nation to deteriorate in the same manner as that of Great Britain and Germany. Rentes are quoted 92, whereas German Threes are only 79. Greek Fours are hard at 53½. Hungarians have not moved since the carry over. Italians are gradually strengthening, in view of the certainty that the war between Turkey and Italy will shortly come to an end. Perus are idle, the little spurt in Prefs shows signs of dying down. Turkish Unified, in spite of the political crisis, remain firm, indeed they are being dealt in at 89½, whereas the last make-up price was 89. Russians are steady, but Tintos have been banged for some reason, and they look to-day an excellent purchase.

Home Railway Expenses.

Home Rails are spotty, but the general tone is good. The London and North-Western report was distinctly bad, and showed that the company had made no savings, whereas the Great Western report was good, for the company faced the coal strike with courage, and by dint of stringent economy cut expenses down to a minimum. It is believed that the expenses for the current year will be higher than usual, consequently the Home Railway market is in a hesitating condition.

Yankees look the best market in the House. Indeed, it is quite clear that we shall get a big rise all along the line.

Rubber requires no mention, and Oil shares at the moment of writing look definitely weak. The excitement created by the Emba Caspian flotation has died down, and both Urals and Embas have been sold. There is a move on in Chelekens.

South Africans Promising.

The Kaffir market, which last week looked very firm, now hangs fire, but it is definitely certain that the Barnato group intend to make a move. Modderfontein Deep Levels send good news. Those who hold Kaffir shares should certainly not let them go at the present moment, and the same may be said of Rhodesians, for Sir Abe Bailey has decided to take Amalgamated Props. in hand. Chartered have been inquired for on a story that the Government intend to take over the company on a basis of £2 a share. No doubt inquiries are being made officially with regard to the scheme, but at the present moment nothing is settled.

The Tin market is lifeless. Miscellaneous stocks remain firm. The brewery reports are nearly all good. There is some movement in nitrates, and P. and O. deferred have jumped ten points. The Waring and Gillow scheme is not liked, and the debentures have fallen five points.

Egyptians Harder.

Egyptian securities are harder, but very little business has been done. Aboukirs show no change from last week. Agricultural Banks are just under 6, and have been bought. Beheras are 14, Delta Lands 15s., Delta Light Railway prefs. cannot now be purchased under 8¼. Abdys are round about 3s. Markets are just firm at 24s. 6d., Salt and Soda hold their own at 15s., National Banks have improved to 17½, Sidi Salems are unchanged, but Union Fonciere are a turn harder.

COMPANY NOTES.

Threlfall's Brewery.

The twenty-fifth annual general meeting of Threlfall's Brewery Company, Ltd., was held on the 1st inst. at the Cannon Street Hotel. Mr. Charles Threlfall, J.P. (Chairman of the company), who presided, said it was a source of gratification to present such a satisfactory account of the company's business for the past year. The profit from trading account amounted to £193,742 9s. 1d., as against £185,598 0s. 11d. last year, being an increase of £8,144 8s. 2d. The sum of £40,335 15s. 4d. had been written off for depreciation, an increase of £10,230 13s. 5d.; £1,000 had been added to the employees' compensation fund, and £38,893 6s. 4d. had been carried forward to next year. Trade generally had improved during the past year, and there were indications of a continuance of this improvement, which he hoped would compensate them in a measure for the increased cost of materials. He had pleasure in moving the adoption of the report and accounts, and that dividends be paid at the rate of 6 per cent. per annum on the Preference shares, and at the rate of 8 per cent. per annum on the Ordinary shares for the year ended June 30, 1912. Mr. P. J. Feeny, J.P., seconded the motion. Mr. John Hedges congratulated the directors, considering the labour unrest and the difficulties they had had to contend with, upon presenting such a favourable report. Taking everything into consideration they certainly had reason to congratulate themselves upon the results of the past year's working. The Chairman thanked Mr. Hedges for his congratulatory remarks, and added that the fact that he himself had made the shortest speech he had delivered since he had been chairman was in itself a good sign. The motion was carried unanimously. Mr. Feeny moved: "That Captain C. M. Threlfall and Mr. George Barker, the retiring directors, be and they are hereby re-elected." With reference to the first name in that resolution he was pleased to state on behalf of his co-directors, that they much appreciated the services which Captain Threlfall had given to the company since he was elected to the board. He had been a very able, conscientious, and hardworking director, and would prove a worthy successor of their late esteemed chairman, his uncle, Mr. Thomas Threlfall. The second name in the resolution was one which would appeal to all in that room, especially at this their twenty-fifth annual meeting. Mr. George Barker had a marvellous record in connection with the company, since the incorporation of which he had never missed a single board meeting, and during that time he had always had the friendship of his brother directors, as well as of the very able and energetic staff with which he was associated. He (the speaker) was sure that the earnest wish of shareholders and directors alike was that Mr. Barker might have many re-elections in connection with this company. Mr. William Griffin seconded the motion, and it was unanimously agreed to. On the proposition of Mr. Hedges, seconded by Mr. Master, Messrs. Broads Paterson and Co. were reappointed auditors. Mr. Buszard, K.C., moved that the best thanks of the shareholders be given to the board and to the employees of the company for the satisfactory results which had been placed before them. The results achieved reflected the greatest credit not only upon the board, but also upon the humblest individual who worked under them, and the shareholders would be indeed ungrateful if they did not recognise the fact that the directors were working under great difficulties. They were labouring under a taxation which undoubtedly, as far as this trade was concerned, was undue and disproportionate to the manner in which the rest of the community was taxed. In spite of all this, they had achieved a result which was very satisfactory, and he was sure all the shareholders felt extremely indebted to the directors for their exertions. Mr. Higgin seconded the vote, which was unanimously accorded. The Chairman briefly thanked the shareholders on behalf of the directors and staff for this vote of thanks, and for the kindly reception they had given to the report. The proceedings then terminated.

Kent Central Coal Estates.

On another page will be found particulars regarding the public issue of 35,000 7 per cent. cumulative participating preference shares of £1 each, at par, of the Kent Central Coal Estates, Limited. The company was registered last May, with the principal object of acquiring the freeholds, including both the surface and mineral rights, of part of the well-known Broome Estate in Kent, together with the manorial rights of Elham and Wingmore, representing in all about 3,580 acres. It is stated that the director's intention is to consider propositions for the formation of subsidiary companies for the development of portions of the area and for the granting of leases to boring syndicates for the purpose of forming coal companies in Kent, retaining for the company a share and royalty interest in addition to any cash consideration. It is further stated that the company has no dead rents or royalties to pay, and stands therefore in an exceptionally favourable position. The purchase consideration has been fixed at £104,000, including mortgages amounting to £71,500. Arrangements are being made to reduce these mortgages, by means of this issue and the sale to the mortgagees of shares to the sum of £40,000, at 4 per cent. per annum for a fixed period, with the right to the company to pay off the whole or part as the surface lands are sold.

Messrs. Bennett and Straton have made a valuation and report for the purposes of the minerals, and they say:—It has now been proved beyond all shadow of doubt that there are large mineral deposits in the east of Kent. At the Shakespeare Mine, near Dover, seams to the total depth of over 13 ft. have been proved, and coal will be raised from this pit shortly at the estimated rate of 150,000 tons per annum. These seams have been found at a depth of between 1,200 and 2,200 ft., quite a reasonable proposition as mining goes. Other collieries have been opened at Ropersole, Guildford, Snowden, and Tilmanstone. A boring has also been sunk within a short distance from the Broome Estate at Shepherdswell, and we understand that the results here are also satisfactory. Assuming that the coal deposits are similar to those existing at Dover, the amount of workable coal would approximate 16,000 tons per acre. This should sell at from 5s. to 6s. profit, based upon normal prices, or, say, £4,000 per acre. Further particulars will be found in the prospectus advertised in another page, and we may mention that it states that no part of the issue has been or will be underwritten, so that the company have confidence that the public will appreciate the investment.

National Bank of Greece.

The report of the National Bank of Greece for the first half of the present year states that the gross profits amounted to Dr.9,482,101, as compared with Dr.9,228,191 in the second half of the previous year and Dr.8,746,841 in the first half of 1911. After writing off Dr.440,000 depreciation and other charges, the net profit is Dr.2,104,000, as compared with Dr.2,103,000 for the first half of 1911. The dividend is maintained at Dr.100 per share of Dr.1,000 nominal. The carry-over is Dr.32,411, as compared with Dr.31,483. The balance-sheet shows liabilities as follows:—Capital, Dr.20,000,000; reserve, Dr.13,500,000; lottery loans, Dr.60,280,000; enforced note currency, Government account, Dr.61,770,000 (unchanged); bank account (authorised up to the amount of Dr.66,000,000), Dr.29,690,000, as compared with Dr.42,720,000. In virtue of last year's

Digitized by Google

law for the improvement of exchange, there is also an amount of Dr.35,000,000 issued in notes covered by gold. Private deposits on call are Dr.43,630,000, for a term Dr.130,040,000; savings bank deposits, Dr.25,040,000; public deposits, Dr.20,370,000 Government and Dr.1,760,000 International Finance Commission. Assets are:—Cash, Dr.9,820,000; in banks abroad, Dr.76,180,000; coupons and other securities, Dr.2,550,000; Greek Government securities, Dr.65,890,000; bills discounted, Dr.18,500,000 (as compared with Dr.25,260,000); overdraft and advances on security, Dr.21,540,000 (as compared with Dr.30,110,000); mortgage loans Dr.70,300,000; loans to municipalities, harbour boards, etc., Dr.60,490,000; advances on land, Dr.22,210,000; partnerships in banks and companies, Dr.9,450,000; bank buildings, Dr.5,370,000; landed property from forced sales, Dr.5,710,000.

Clayton and Shuttleworth.

Under date of August 3, our Bucharest correspondent writes:—The Society "Hofherr Schranz Clayton Shuttleworth Landwirtschaftliche Maschinenfabr. A.G.," with head office in Vienna, has been authorised to trade in Roumania with a branch office in Bucharest. Mr. Robert Cope Blakey is named manager for this country with residence in Bucharest.

Tramways de Salonique.

An extraordinary meeting of shareholders is called for September 14 next to consider a proposal to increase the capital of the company and certain modifications of the statutes. The meeting will also be invited to confirm the decisions of the general meeting held on June 4 last.

PERSIA'S FINANCES.

According to official telegrams received in London from Teheran, the chief difficulty confronting the Persian Government at the present moment is the financial one. Some three months ago an advance of £200,000 was made by Great Britain and Russia, and since then no money has been forthcoming. Of this £200,000 one-quarter was retained by the Russian Bank in settlement of outstanding claims, while a similar amount was expended in the pension of the ex-Shah and payments of his followers. This only left £100,000 for the administration of the country, the Government being absolutely without funds. Of this sum a considerable amount had to be expended in the cost of the expedition against Salar-ed-Dowleh, who has now been thoroughly defeated by the Government troops. Notwithstanding the best intentions of the Persian Government, there was little left on which to maintain tranquillity in the country. The question of a further small advance has been under consideration for some considerable time, says the "Financial Times," and every moment's delay in facilitating this advance weakens the hand of the administration. The Persian Government during the past few months has exhibited the friendliest feeling towards Great Britain and Russia, and confidently hopes that the two Governments will give both moral and material support in maintaining authority in the country, and that a further advance will be speedily made without the imposition of conditions which a constitutional Government cannot accept without the approval of the Mejliss. The latest telegrams from Teheran state that even with the small means at its disposal the Persian Government is doing its best to maintain order. Unremitting attention is being given to the position in the South, and many measures have been duly carried out for the preservation of order. The situation is not entirely satisfactory, but there is every likelihood of an improvement.

NOTES FROM ALEXANDRIA.

(From Our Own Correspondent.)

Alexandria, August 2.

The market is more active, and although several descriptions are still slightly weak, the tone in general is very firm. It is nevertheless necessary to await the autumn for any considerable improvement. Meanwhile, those having capital at their disposal can make some very advantageous purchases.

Petroleum Trust.

The price of petroleum suddenly rose from PT6 to PT15 per can. This rise is due to an agreement between the Vacuum Oil Company, Worms and Co., and other large importers, who, in fact, hold the monopoly of Egyptian sales. Not only have domestic consumers been seriously alarmed at this rise, but also owners of machinery, mills, etc., who have spent considerable money on installations of petrol motors. The Egyptian Government has approached the importing companies, but the latter have refused to lower their prices. There is now a question of the possibility of legal proceedings being taken against these monopolists. It appears that the mixed code is not without weapons for the repression of such abuses. In any case, the Egyptian Government could submit to the Mixed Court of Appeal a Bill, such as has been passed in the United States and elsewhere, for the suppression of illegal profits of this nature.

Cassa di Sconto e di Risparmio.

The fall in the shares of this bank merits attention. The preferred shares are quoted at 102 frs. only, notwithstanding that next year they are to receive a dividend of arrears of 15 frs. The ordinary shares are quoted at 35 frs., so that the price of the new shares is about 50 frs. Now this price represents an intrinsic value of 100 frs., in consequence of the amortisation of 25 per cent. of the share capital. Besides, these shares will probably commence in the year 1914 to receive a dividend regularly.

New Company.

Holders of debentures of the Société des Biens-Fonds Urbains et Ruraux have just formed a company for the purpose of uniting and centralising the rights and guarantees attached to the debentures.

New Shipping Lines.

The Austrian-American Line, of Trieste, has just inaugurated a direct service to America. Attempts of this nature have, of course, been made on several previous occasions, but have always resulted in failure owing to organised opposition by the other companies. In addition, the Achaia Steamship Company of Patras intends to inaugurate a new line between Greece and Egypt.

New Model Market.

Mr. G. Kardahi, a rich Egyptian, is building to the north of the French market a large new market having ninety stalls. It is to be hoped that the French market and the Ratib Pasha market, which constitute a danger to the public health, will consequently be closed.

Bankruptcies.

The difficulties of H. J. Kerr and Co., Ltd., have been settled to the satisfaction of the creditors, who have obtained the payment of the sum of £5,000 cash, in addition to the abandonment of the whole assets of the company in Egypt. Barbaresso Frères have deposited their balance-sheet. Their assets figure for 106,000 frs., and the liabilities for 104,000 frs. Jean Fotios and Fils, steam flour millers, of Tantah, have been adjudicated bankrupt, with liabilities of £E22,058 and assets of £E18,015.

FINANCIAL NEWS IN BRIEF.

The receipts of the Egyptian Delta Light Railways for the ten days ended July 20 amounted to £E6,305, being a decrease of £E51 as compared with the corresponding period of 1911. The decrease in passenger receipts is said to be due to two mouleds having been held during this period of 1911 which augmented receipts then, also to the prevalence of cattle plague restrictions.

The numbers are published of the bonds of the Chemins de Fer de la Turquie d'Europe, drawn for repayment on September 1.

Rentes Roumaine amortissable 4 per cent. 1905 and 1910.—The numbers of the bonds of these issues, which have been drawn for repayment on October 1 and September 1 respectively, are published.

The following coupons of the Suez Canal Company will be paid on the dates mentioned in Paris at 9, Rue Charras, and at the company's agencies: September 2, 3 per cent., first series (coupon 65); 3 per cent., second series (coupon 51); and 3 per cent., third series (coupon 8). October 1, 5 per cent. (coupon 90).

The receipts of the Roumanian Regie of State Monopolies for the three months ended June 30 amounted to 20,701,931 frs., an increase of 2,254,751 frs. over the corresponding period of last year.

A Constantinople message states that a local financier proposes to form a bank with a capital of £500,000, under the style of the Banque Ottomane de Commerce.

As from the 6th inst., the debentures of the 4½ per cent. Gold Loan of 1911 of the Credit Foncier du Royaume de Serbie are no longer negotiable except as "titres definitives unitaires."

The receipts of the Egyptian Markets for the week ended July 25 amounted to £654, a decrease of £65 on the corresponding period of last year, and the total receipts since January 1 amounted to £32,370 (decrease, £1,882).

The final figures for the Servian Budget of 1911 show a surplus of 6,299,102 dinars. Moreover a portion of the debt, 8,107,511 dinars, has been amortised.

The recently founded State Mortgage Bank in Cettinje commenced operations in June last. The capital of this institution is furnished mainly by the Montenegrin Government—namely 2½ million perper of the three millions which constitutes the total capital.

In Bucharest has recently been founded the "Viticola Banca," a financial institution having for object the advance of funds to vine cultivators. The capital of this new bank is one and a-half million lei.

Negotiations have recently taken place to secure the participation of the Länderbank of Vienna and the Kroatische Escomptebank of Agram in the proposed new Moslem Central Bank of Bosnia-Herzegovina. The Länderbank is said to have subscribed one million kronen of the new bank's capital.

The rose crop in Bulgaria this year has turned out better than last. The Government has disposed of the yield of its estate at 95 centimes per kilo.

THE EASTERN BANK, LIMITED.

Head Office: 4, CROSBY SQUARE, LONDON, E.C.

Subscribed Capital, £1,000,000. Paid up, £400,000. Reserved Liability of Shareholders, £600,000.

Branches:

BAGDAD. BOMBAY. CALCUTTA.

35,000 7 PER CENT. CUMULATIVE PARTICIPATING PREFERENCE SHARES OF £1 EACH.

PROSPECTUS.

FORMATION AND OBJECTS OF THE COMPANY.—The Company was registered on the third day of May, 1912, with the principal object of acquiring the freeholds including both the surface and mineral rights of part of the well-known Broome Estate in the County of Kent, together with the manorial rights of Elham and Wingmore, representing in all about 3,580 acres. It is stated that the Directors' intention is to consider propositions for the formation of Subsidiary Companies for the development of portions of the area and for the granting of leases to boring Syndicates, retaining for the Company a Share and Royalty interest in addition to any cash consideration.

SITUATION.—The Estate is in the Kent Coal area and within a few miles of the shaft sunk by the Kent Collieries, Limited, which as described in The Finance, Commercial, and Shipping Supplement of the *Times* newspaper of April 24th, 1912, has recently commenced delivery of coal. It is in close proximity to the Tilmanstone, Guildford, and Snowden Collieries, which are rapidly completing shafts to the various coal-seams, and adjacent to other coal borings now being made by both British and Continental Syndicates, and also to some property owned by the Ecclesiastical Commissioners and recently leased to an English Syndicate partly controlled by German capital, as well as to other Estates to the South and West, the Mineral rights of which are believed to have been leased by influential Coal Masters in Wales and the North of England.

RAILWAY FACILITIES.—The Property is most conveniently situated regarding railway facilities. The Elham Valley Branch of the South-Eastern and Chatham Railway (Canterbury to Folkestone) runs through the greater part of the property, whilst the same company's line between Canterbury and Dover is in close proximity, the nearest station being Barham.

VALUE OF SURFACE RIGHTS ALONE.—As previously stated, the Company acquires not only the freehold but also the mineral and surface rights of part of the Broome Estate. With regard to the estimated value of the latter, Messrs. Bennett and Stratton have made a report and valuation under date 8th of May, 1912, to the effect that the value thereof, exclusive of the manorial rights, is in their opinion £60,704. A copy of the full report is open for inspection by intending subscribers.

Since the foregoing valuation was made, provisional contracts for the sale of about 53 acres or thereabouts to Viscount Kitchener and the East Kent and Mid Kent Water Works Companies (or their nominees), have been entered into approximately at the price of £35 per acre, which bears practical testimony to the conservative basis on which the valuation was made; and various negotiations are now in progress in respect to the sale of surface lands and farms, the benefit of which will be transferred to the Company.

VALUE OF MINERAL RIGHTS.—The Company has no dead rents or royalties to pay and stands therefore in an exceptionally favourable position. While it is impossible to form a definite estimate of the worth of the mineral rights of the Broome Estate, there is very reason to believe, having regard to its position, that the development will prove the Estate to be rich both in coal and ironstone (*vide* the reports of various experts who have closely followed the growth of the Kent Coal industry), and therefore of enormous value.

The following is a copy of the valuation of Messrs. Bennett and Stratton on the Minerals :—

VALUATION AND REPORT FOR THE PURPOSES OF MINERALS.

It has now been proved beyond all shadow of doubt that there are large Mineral deposits in the East of Kent. These deposits are considered by Geologists to be part of a general Coalfield extending from the Midlands to Germany and France.

At the Shakespeare Mine near Dover seams to the total depth of over 13 ft. have been proved, and coal will be raised from this pit shortly at the estimated rate of 150,000 tons per annum. These seams have been found at a depth of between 1,200 and 2,200 ft., quite a reasonable proposition as mining goes. Other collieries have been opened at Ropersole, Guildford, Snowden, and Tilmanstone. A boring has also been sunk within a short distance from the Broome Estate at Shepherdswell, and we understand that the results here are also satisfactory.

Assuming that the coal deposits are similar to those existing at Dover, the amount of workable coal would approximate 16,000 tons per acre. This should sell at from 5s. to 6s. profit based upon normal prices, or say £4,000 per acre. One has to consider, however, that coal mining is essentially of a speculative character, and that large outlays for plant, light railways, borings, etc., have to be made before any return is obtained.

We should not, therefore, feel justified in placing a higher value upon the Estate for Mineral Rights than £150 (one hundred and fifty pounds) per acre.

(Signed) BENNETT AND STRATTON.

REPORTS.—A number of reports by mining experts have been made for the various companies interested in the development of the coal supplies in Kent, extracts from which have appeared from time to time in the public Press and elsewhere, and are common knowledge, and the well-known paper of Professor W. Boyd Dawkins, M.A., D.Sc. Oxon, F.R.S., read by him before the Society of Arts on March 6th, 1907, and published in the Journal of that Society issued on March 8th, 1907, gives the history and facts relating to the question up to that date, and a map showing that the boundary of the coal fields includes the property to be acquired by this Company.

Mr. G. P. Simpson, Consulting Mining Engineer, has reported to the Directors of this Company as follows, under date June 12th, 1912 :—

RE BROOME PARK ESTATE.

Referring to the particulars and maps of your property which you were good enough to place before me, I now beg to state that I have an intimate knowledge of the coal district in Kent, and as a result of careful studies of the various reports (Government and otherwise) that have been made on these Coalfields, and from personal inspection, I have formed the opinion that the Iron and Coal measures which as a result of boring tests in the immediate vicinity of your property, have already been found to unquestionably exist, run through it; and I am quite inclined to think that it is quite possible that the Iron and Coal measures will be found at a lesser depth than has been found at other borings, and that the water difficulty is not likely to so seriously affect your property, lying in the position it does, as has been the case in many other parts upon which shafts have been sunk in the Kent Coalfields.

It may be claimed that another "South Wales" has been located in Kent which, as will be seen in examining the following table, should give better results than those obtained elsewhere :—

South Wales	73 seams	120 ft. average	1 ft. 6 ins.
The Mons Coalfield ..	110 ,,	250 ft. ,,	2 ft. 4 ins.
The Liège Coalfield	85 ,,	212 ft. ,,	2 ft. 6 ins.
Somersetshire Coalfield	55 ,,	98 ft. ,,	2 ft.
Kent Coalfields	111 ,,	373 ft. of which 74 seams are 2 ft. upwards averaging 4 ft. 4 ins.	

The above statistics are quoted from the Monthly Circulars for August-September, 1911, and January-March, 1912, issued by Kent Coal Concessions, Limited.

Kent Coal is reported to be Steam, Household, and Gas coal of first-class quality, and many of the thickest seams are Navigation Steam Coal.

The sum realised by the sale of surface rights after redeeming the Mortgage will add considerably to the capital that will be at the disposal of the Company, and the present rent roll of the Estate is more than ample for the payment of all interests on the Mortgages hereinafter referred to.

The Purchase Consideration has been fixed at £104,000 (including Mortgages amounting to £71,500). Arrangements are being made to reduce these mortgages by means of this issue and the Sale to the Mortgagees of Shares, to the sum of £40,000, at 4 per cent. per annum for a fixed period, with the right to the Company to pay off the whole or part as the surface lands are sold.

Each share of either class entitles the holder to one vote on a poll.

The minimum subscription as prescribed by the Articles of Association upon which the Directors may proceed to allotment is 7 shares.

A brokerage of Sixpence per Share, payable by the Company, will be paid on all Shares alloted in response to applications bearing Brokers' Stamps.

Application will be made to the Committee of the London Stock Exchange for a special settlement in the Shares of this issue.

Prospectuses and Forms of Application can be obtained from the Company's Bankers and Messrs. Bourke Schiff and Co., Stockbrokers, 28, Throgmorton Street, E.C., and from the offices of the Company.

Applications for Shares should be made to the Company's Bankers, together with a remittance for the amount payable on application. Where no allotment is made, the deposit will be returned in full, and where the number of shares allotted is less than the number applied for the balance of the deposit will be applied towards the amount payable on allotment, and any balance remaining will be returned.

Failure to pay any instalment when due will render payments liable to forfeiture.

3rd August, 1912.

NOTES OF THE WEEK.

The domestic situation in Turkey is taxing the capacity of the new Ministry to the utmost. Martial law has had to be proclaimed at Constantinople and Salonika, and is threatened in other provincial capitals, should the necessity arise. In the capital it has been found politic to modify the original stringent provisions, and with the beginning of the month of Ramazan, the hour until which the inhabitants are allowed to remain in the streets has been extended from midnight to 2 a.m., while the embargo on attendance at political clubs has been removed. In other respects, however, the customary regulations are being enforced, particularly in regard to the holding of meetings, the formation of political clubs, and the freedom of the Press. The organs of the Committee of Union and Progress have suspended publication, and that body has transferred its headquarters to Salonika. It was doubtless from fear of the activities of this organisation that the Government was persuaded to extend martial law to Salonika as well; but the measure can only be regarded as unfortunate. Hussein Kiazim Bey, the capable Vali of Salonika, has resigned his post in protest, and it is reported that the proclamation of martial law has annulled the satisfaction hitherto expressed with the Government. The temptation to do everything to strengthen its position in the interests of internal peace must have been strong with the new Cabinet, but, as it has been called into existence to undo some of the mistakes of the Committee of Union and Progress, it must avoid as far as possible such measures as are associated with the worst features of the Committee's administration. The Government's difficulties are, perhaps, reflected in the changes that have been or about to be made in the composition of the Cabinet. Zia Pasha has resigned the portfolio of the Interior, and rumours of further changes are current owing to differences of opinion that are said to have arisen between Hilmi Pasha and several of his colleagues.

The Committee of Union and Progress would seem to be occupied in a painstaking analysis of its following in the country. A number of army officers who have remained faithful to it have attempted to secure the adhesion of the divisions of Monastir, Janina, Uskub, Smyrna, and Adrianople to their protest against the formation of the Ministry and the dissolution of the Chamber. They have not, however, been successful, and the present indications are that the army as a whole remains loyal to the Sultan and the new order. Meanwhile the leaders of the Party of Union and Progress are holding prolonged meetings daily in Salonika. Their attitude, as far as it is known, is obviously tinged by realisation of the fact that the measure of support on which they can count, is for the moment, a negligible quantity. The most they can venture to hope for is a revulsion of feeling caused by mistakes on the part of the new Government. They hold that the formation of the Ministry and the dissolution of the Chamber were accomplished by illegal methods, but they announce that for the present they do not intend to add to the difficulties with which the Government is overwhelmed. In regard to their future policy it is stated that two opinions prevail: one section advocates abstention from the coming elections, the other would offer the stoutest opposition. The Committee is likely to prove a severe critic of all the Government's measures, and it is to be feared that a not unnatural exasperation on the part of the latter, coupled with complete inexperience of the advantages of freedom of speech as a political safety valve, may lead to the vigorous reprisals that the Committee itself adopted in a similar position. From such methods of administration, however, Turkey will never attain peace and good government. If the new Cabinet is satisfied that it can count upon the loyalty of the army, it is in a strong enough position to ignore the hostility of the Committee. Without that loyalty its days are numbered, and it had better refrain from exasperating its political enemies.

To the Albanian problem, which called urgently for a solution on the accession of the new Ministry to power, have now to be added complications with Montenegro and Bulgaria. The Kochana incident of August 1, to which reference was made briefly in these columns last week, has proved to be more discreditable to the chief protagonists than was realised at first. On the one hand, we have the dastardly outrage of bombs exploded in the crowded bazaar; on the other, the wholesale butchery of Bulgarians by bands of Mussulmans under the eyes of the authorities and of the Moslem notables. The first explosion is reported to have killed five Bulgarians, two Moslems, two Jews, and two gipsies; the second explosion took place five minutes later, and a general stampede ensued. According to a Bulgarian report, it was just as the people were returning to the bazaar that the armed bands appeared on the scene, and the massacre of Bulgarians began. The bands are stated to have been companies of gendarmes and soldiers. Some three hours later officers made their appearance; they restrained their men to some extent, but set them on to a house to house search for Bulgarians. This search, it is stated, continued until nightfall, but subsequently a number of the prisoners were released. It is presumed that the original explosions were the work of the Bulgarian revolutionary organisation, which, with a cynical disregard of the consequences, is engaged upon the task of embittering Bulgarian feeling against the Turkish Government to the point of war. Under this provocation the anger of the

Digitized by Google

Moslem community is at least comprehensible, but there can be no excuse for the authorities, who appear to have looked on and done nothing while one section of the community was butchering the other. The Turkish Government has undertaken to investigate this terrible affair by means of a Commission, on which Bulgarians will be represented. If complicity in the explosions can be fastened upon the Bulgarian revolutionary organisation it would be well that the Sofia Government should realise its responsibilities in allowing this body to operate from Bulgarian territory. At the same time the penalties imposed on the local authorities for their failure to intervene should be drastic enough to convince all Turkish officials that the methods of Ishtib and Kochana will no longer be tolerated in Turkey. In Bulgaria every effort is being made to convert the incident into a *casus belli*, but it is not probable that the Government will allow itself to be carried away by the movement. The understanding that has been arrived at between Servia and Bulgaria does not preclude a lively appreciation of the fact that neither Russia nor Austria-Hungary is inclined to favour hostilities in the Balkans at the present moment. On the other hand, the Macedonian Bulgar revolutionaries may be relied upon to do their utmost to improve the occasion, and in some quarters the explosion of a bomb in the Austrian post office at Salonika on Saturday is regarded as an attempt on their part to embroil Austria-Hungary with Turkey. Two Bulgars have been arrested in connection with this incident. Meanwhile, the campaign of outrages continues. Two infernal machines were discovered on Monday placed under the rails of the Salonika-Constantinople Railway, near a bridge fifteen miles from the former town, and an important seizure of a large number of bombs is reported to have been made on the Turco-Bulgarian frontier.

The fighting on the Turco-Montenegrin frontier, which wore such a threatening aspect when we went to press last week, subsided as suddenly as it had arisen. Both the Turkish and the Montenegrin Governments discovered that they were equally desirous of peace, and it was agreed that a mixed commission should be appointed to inquire into the dispute. The action of the Turkish Minister at Cettinje was attributed by the Porte to excess of zeal at a time when telegraphic communication was interrupted, and after he had broken off negotiations with the Montenegrin Government the usual relations were maintained by the Porte with the Montenegrin representative in Constantinople. The friendly advice of foreign Governments contributed to bring about this satisfactory solution of what appeared for the moment to be a grave *impasse*. Some further fighting was reported on the frontier, but it would appear that even the actual combatants have now accepted the principle of an amicable settlement.

With a marked improvement in the Albanian situation the whole outlook of the new order established by Mukhtar Pasha's Ministry has materially brightened. The dissolution of the Chamber was accepted as an earnest of the Government's intentions in regard to meeting Albanian wishes, and the main forces of the insurgents began to disperse. Those who were concentrated at Prishtina left delegates to continue the discussion of reforms with Ibrahim Pasha's Commission. The Sultan has been exonerated from all blame for the despatch of troops against the Albanians, which is laid wholly at the door of the late Cabinet. As a result of the negotiations at Prishtina the Government has accepted nearly all the demands submitted by the insurgents. Their programme stipulated for twelve "reforms":—(1) Inauguration of a special system of administration of justice, that in vogue at present being out of harmony with the requirements of the country. (2) The military service of Albanians to be effected in times of peace in the European vilayets. (3) The nomination of capable, honest, and experienced functionaries, speaking the national tongue. (4) The creation in Yanina, Monastir, Skutari, and Kossovo of agricultural schools similar to that existing at Salonika. (5) An increase in the number of schools devoted to instruction in science and religion. (6) The teaching of the several languages in the schools. (7) The construction of roads and railways. (8) Absolute liberty to establish private schools. (9) Organisation of *nahiehs*. (10) The impeachment before the High Court of the Cabinets of Hakki Pasha and Said Pasha. (11) A general amnesty. (12) Restitution of arms to the Albanians. To ten of these measures the Government has agreed. It declines, however, to impeach the Cabinets of Hakki Pasha and Said Pasha, on the ground that the Chamber alone is capable of taking such a step. On the question of the restitution of arms it is proposed, by way of a compromise, that the villagers on the frontiers, together with shepherds and forest workers, should be armed, and, according to the Salonika correspondent of the *Times*, there is reason to suppose that this arrangement will be accepted. If the Turkish Government is able to carry out the terms of this agreement efficiently and to approach the Macedonian question in the same spirit, offering some measure of local government that will meet the legitimate requirements of the various nationalities, a fresh lease of life will have been secured for the Ottoman Empire in Europe.

In addition to its other troubles, Turkey has been visited by a severe earthquake, which was felt on Thursday of last week over the whole tract of country from Adrianople to Constantinople. The southern shores of the Sea of Marmora experienced the worst effects of the shock; in a number of towns a great amount of damage has been done, and whole villages in the Troad country are reported to have been destroyed. In Adrianople, Chanak, and Gallipoli churches, mosques, and public buildings have collapsed. The Greek Vice-Consul at the Dardanelles reports the destruction of the Consulate; the British Vice-Consulate at Chanak was badly damaged. It is estimated that a thousand people have been injured in the earthquake, and that two hundred others have been killed. Greeks have been the chief sufferers, and the Œcumenical Patriarchate has addressed an urgent appeal to the Porte for the relief of the victims. Food and medical stores are being sent from Constantinople, and the Government has given £T1,000 as a first instalment.

Increasing attention is being paid in the European Press to the informal peace negotiations that were being conducted recently at Lausanne between Italian spokesmen and some Turkish emissaries. While it is generally allowed that there is a growing desire for a settlement on both sides, there is no reason to suppose that any actual basis for peace has yet been discovered. These conversations, however, even if they are not vested with official authority, may well help to pave the way towards the "formula." In the meantime, the situation in Tripolitania, as far as is known, remains unchanged. The attack on the Italian lines at Zanzur last week showed that the Turco-Arab forces have lost none of their courage and determination. In spite of the heavy fire of the Italian infantry and mountain batteries the enemy were only checked and not driven back, while at daybreak they retired in good order.

It was announced by Reuter's Agency that the British Government had agreed to make a further advance of £100,000 to Persia for the purpose of enabling the central and local authorities to deal more effectively with the situation in the South. According to a later telegram to the *Times*, however, the British proposal that two advances of this amount should be made by Great Britain and Russia did not carry the approval of the latter, and the dole that is now to be made by each Power is limited to £25,000, of which £10,000 in the case of the British advance is to be earmarked for Shiraz. Russia makes her advance conditional upon the granting of concessions by Persia for the Tabriz and Urumiah railways. This policy of small doles can only be prejudicial to Persian interests, and reflects little credit on the capacity of the British and Russian Governments to evolve a constructive policy to deal with the abnormal situation in Persia.

CONSTANTINOPLE LETTERS.

(From Our Own Correspondent.)

Constantinople, August 6.*

The Government and the C.U.P.

During the past week it soon became evident that the Committee majority in the Chamber of Deputies had no real intention of working with a Government which desired its dissolution and was casting about for the best means of obtaining its desire. On the other hand, the Government, threatened by the excited officers of the Military League and faced by a most dangerous revolution in Albania, dared not temporise, lest the malcontent elements should get out of hand, and was forced to adopt energetic and barely legal measures in dealing with the recalcitrant Chamber. The Government's programme was accepted by the Chamber by 113 votes to 45. Then came the question of the modification of Article VII. of the Constitution. The Ministry proposed that the article in question should be modified in such a way as to empower the Sultan to dissolve the Chamber under exceptional circumstances. After a stormy debate the Chamber sent the Government's proposal before the Commission for the revision of the Constitution. The Government, realising that the Commission would certainly reject its proposals after delaying its reply as long as possible, had recourse to the Senate, and summoned it to a special sitting on Sunday morning.

The Senate first passed the modified version of Article XXXV. It then passed a modified version of Article XLIII. enacting that the duration of a Parliamentary session should be for six months; that a session could be prolonged, but could not be prolonged more than once; and, furthermore, expressed its opinion that the present Parliament was a continuation of the Parliament in 1908, and not a new National Assembly. By what process of reasoning it considered the last elections to be null and void is unknown; at all events its decision authorised the Government to dissolve the present Chamber. At midnight an Imperial irade was issued to that effect. This morning the comedy terminated. The President of the Chamber did not communicate the Imperial irade to the House, but simply referred to the news that it had been issued. Djavid Bey, after the usual scenes, ascended the tribune and made a theatrical speech concerning the benefits conferred on an ungrateful country by the Committee of Union and Progress. Next came a scene of great melodramatic value when Rahmi Bey (Committee) and Shahin Bey Dino (Albanian) attempted to draw revolvers on one another and were dragged apart by anxious friends. Finally the House, which had taken no sort of cognisance of the Imperial irade ordering its dissolution, passed a vote of want of confidence in the Government, and adjourned "till summoned by its President." The Government intends to read the irade at 1 p.m. to-day to the two Houses.

Constantinople, August 9.

In my last letter I described the scenes that marked the sitting of Monday morning and the exit of the Committee Deputies from the Chamber. To resume my narrative from this point. Ahmed Mukhtar Pasha kept his promise, and arrived at the Houses of Parliament at 1 p.m. Here he read the decree of dissolution to a handful of Senators and a dozen Deputies. He informed the latter that the Government refused to recognise the morning's proceedings in the Chamber. Meanwhile, Halil Bey repaired again to the Palace, where the Sultan refused to see him. Finally, after another scene in the Speaker's room, in which Essad Pasha Toptan behaved with such violence that Halil Bey was compelled to summon the police, the Chamber of Deputies was locked up by Ferid Pasha and the Council of Ministers met to discuss an extremely disagreeable situation.

To revert to the question of "illegality," of which much is being made by both parties, there can be little doubt that the Government and the Senate went much further than the spirit, if not the letter, of the Constitution, authorised them, in their definition of the Parliament of 1912, as being simply a continuation of that convoked in November, 1908. The elections of 1912 may have been marked by scandals and illegalities, but they were not *all* illegally conducted, and most foreign observers regard the Senate's action as having been dictated by political rather than by legal considerations. Faced with the danger of civil war, the Upper House preferred the accusation of anti-Constitutionalism to that of anti-patriotism. As regards the Chamber, even if it be assumed that Halil Bey did not receive the official communication of the Imperial irade before the opening of Monday's debate, there can be no doubt whatever that he visited the Palace on Sunday night and implored the Sultan not to issue the irade of dissolution, and did not leave Yildiz till he knew that His Majesty had signed the decree. Again, assuming the House to have had no official cognisance of its dissolution, its vote of no confidence in the Government on the ground of its dissolution of Parliament and in the absence of the Ministry was in accordance neither with the letter of the constitution nor with the forms of ordinary logic. To sum up the situation, it is obvious to all who are not blind partisans that both sides employed political rather than strictly legal means to defeat their adversaries, and the stronger side won.

The North West Frontier.

The dissolution of the Chamber came just in time to prevent the Albanian advance upon Uskub. The Committee Press still tries to maintain that any such advance would have been impossible in face of the military opposition that awaited the insurgents, but it is held by foreign military observers that the probabilities of the attack succeeding were very great. The Kotchanik Pass was held by five battalions of regulars with artillery. Three more battalions were at Uskub. On the other hand, even if it be assumed that none of the mutinous troops of the 1st and 21st Divisions, the garrison of Prishtina, and the deserting gendarmes would have taken part in an attack on their old comrades (which is a large assumption), Hassan Bey and his fellow-chiefs had at least 20,000 rifles, with several cannon and Maxims, in front of the Katchanik-Eleshan Pass, while Idris Sefer could bring 5,000 men over the Karadagh Reka on the right flank of the Uskub garrison, and General Mehmed Pasha of Kalkandelen had 5,000 more in the left rear of the pass within a day's march of Uskub. Finally, 1,000 Albanians had entered the town, and were being harboured by local sympathisers. Moreover, the Albanian, encouraged by success and maddened by hate of the Young Turk régime, would have been a most formidable opponent on the broken ground north of Uskub.

There was, however, one moment when the Committee hoped for a diversion. I refer to the period of frontier hostilities near Gusinjé, when a large Montenegrin force attacked and captured some Turkish posts, which they alleged had been pushed across the frontier. At this moment a telegraphic breakdown prevented Alfred Rustem Bey, the Ottoman Minister at Cettinje, from communicating directly with the Porte. He presented what amounted to an ultimatum to the Montenegrin Government, and departed for Cattaro on his way to Constantinople. The Government luckily succeeded in getting into communication with Montenegro, and the incident was settled by the withdrawal by both sides of their troops from the disputed area and the appointment of a joint military Commission to inquire into the causes of the collision. At the moment of writing it is uncertain where Rustem Bey is, but the Porte has telegraphed to him to return immediately to his post, and so ends an affair the circumstances of which "give furiously to think." The reports of a Bulgarian mobilisation in consequence of the Kotchana outbreak are false. The attitude of the Turkish Government is most conciliatory, and, unlike its predecessor at the time of the Ishtib massacre, it will raise no difficulties to the despatch of a Bulgarian medical mission to Kotchana. However much one may deplore the outbreak which followed the bomb explosion and cost the lives of so many Bulgars, one must admit that the Anarchists of the Internal Organisation are alone to blame for the tragedy.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 7.

The Trial of the Conspirators.

The trial of the three natives accused of conspiring against the Khedive, Lord Kitchener, and Said Pasha has been fixed for Sunday, the 11th inst., and the writs have already been issued to the witnesses, who include the Mamur Zapt and the three Mamurs who overheard the conspirators at Shoubra—Mohammed Effendi, El Sabahi, and Mahmoud Effendi Ramzi Nazim—who were arrested at an early stage in the inquiry, and were then released, as their evidence was against the other men in custody; Messrs. Chini and Yakoub Dahan and Sheikh Mohammed Mustapha Risk, who saw Waked in Alexandria; Mustapha Effendi Kamel, editor of *El Lewa*, who was at one time suspected of being the mysterious fourth conspirator who escaped when the arrest was made; and Hassan Nafeh, the student, whose case was filed provisionally for lack of sufficient evidence. The authorities are still waiting for the evidence of M. Joseph Mosseri in regard to Hassan Effendi Kamel, and until it is received no further action will, I understand, be taken against that accomplice. The police want to be certain about obtaining a conviction, and, as M. Mosseri's evidence, if it bears out what he is understood to have said already, is the one necessary and convincing link in the proofs against Hassan Kamel, the authorities are quite justified in delaying the case.

It seems that the police are not resting from their labours. Extensive inquiries are still being made, and the clues, concerning certain persons who are said to have financed the conspirators, which came to light during the examination of the documents seized are being actively followed up. It would appear unlikely, however, that for the present any further action will be taken in the courts—at any rate, until the present case has been definitely disposed of.

False Rumours of Sudan Expedition.

Rumours have been current in Cairo this week that the Sudan Government had arranged to send another expedition against the Anuaks next October and had decided to make a demonstration on the Abyssinian frontier. This news, which seems to have been founded on the recent communication made by Reuter on the subject of the introduction of arms and ammunition into Uganda and the Sudan, has now been contradicted by the authorities. A demonstration on the Abyssinian frontier would, of course, be ridiculous, as the relations between the two countries are excellent. But as far as an expedition into the Anuak country is concerned, certain military circles hold that it will have to come sooner or later as a natural consequence of the expedition which went there a few months ago.

The "Homestead" Law.

On Wednesday last another interview took place between the Minister of Justice and the representatives of the Chambers of Commerce. The subject was the new Five Feddans Law. It would appear that there is complete agreement between the Government and the commercial community on the question of the period during which those who became creditors prior to the enactment of the law will still preserve their rights of expropriation. Another question has now arisen. It will be necessary for the Government to state clearly in what respects the new law will render five-feddan holdings undistrainable; for, as the delegates pointed out, it is quite possible for a landowner holding ten feddans, on which he contracted an unsecured (but all the same a morally secured) loan, to dispose of half his holding before the debt falls due and then to shelter himself behind the new law in so far as his remaining five feddans are concerned. This aspect is being carefully studied, and another conference will take place between the Minister of Justice and the Chambers of Commerce. The opinion seems to be that the point must be clearly dealt with, and that it must be decided in favour of the lender, as otherwise the small holders' credit will be very materially affected thereby.

The Mediterranean Question.

Lord Cromer's letter to the *Times* on this subject has attracted much attention out here. Although all Anglo-Egyptians—and, indeed, all foreign residents—have a great respect for the former British Agent, and are ready to admit that his knowledge of Egyptian affairs is without equal, there are many men of weight who disagree with the views expressed by him in his letter. The reply from the military correspondent of the *Times*, in which he joined issue with the great Pro-Consul on the question of the rôle of the Army of Occupation, was, therefore, very welcome, and has been cordially approved of in all circles.

Whilst from the point of view of the number of prisoners that our opponents would make if they invaded Egypt after we had undergone a serious naval defeat, it may be desirable to keep the British force as small as possible, it has been felt all along that the maintenance of a weak garrison was simply placing temptation in the way of our various rivals, and was bound to facilitate the task of invasion. It is therefore very satisfactory that the *Times* correspondent has forcibly drawn attention to this aspect of the question. It is all very well for Lord Cromer to quote the views (in which he shared) held by successive Governments under whom he served with regard to the strength at which the Army of Occupation should be maintained; but since the days when those views held good Egypt's position has changed considerably. At that time she had little reason to watch her eastern and western frontiers more than superficially. On either side she was bounded by Turkish vilayets, and, beyond the Tabah incident of 1906, she has had no grounds for any anxiety with regard to those boundaries and the danger of an invasion from those directions. To-day Egypt has on her western frontier a Power which is a signatory to the Triple Alliance, and on the east the construction of railways is gradually transforming the strategic situation and bringing Constantinople daily nearer. Opinion here is, therefore, quite in agreement with the *Times*—that the "Cromer military policy should be reconsidered, and that a strong permanent force, capable of taking the field in co-operation with the Egyptian Army and of harassing and delaying the enemy's troops until reinforcements arrive from the east or west, should be maintained in Egypt." The existence of such a force on the banks of the Suez Canal might conceivably make all the difference to us in the case of a war with the Triple Alliance."

From Lord Cromer's letter one may deduce one fact, and that is that the Army of Occupation must be increased for internal reasons. He admits that the British garrison should be maintained at a sufficient strength to aid in the maintenance of order. So much has been written on the subject of the inadequacy of the Army of Occupation to cope with the conditions existing to-day in Egypt that nothing more need be said in support of the plea for an increase in the garrison. Even the economical conditions of the "Cromer military policy" impose such an increase.

Canadian Visitors.

The two contingents of Canadian teachers, to whose visit I referred last week, are now in our midst, one party having arrived on Wednesday night and the other on Saturday night. They number altogether 157, mostly ladies. Despite the heat and the damp, they are displaying the greatest energy and adhering to their programme with commendable tenacity. Everything is being done by their local educational colleagues to enliven their stay, and on almost every excursion they have been accompanied by members of the Ministry of Education specially delegated for the purpose. The official reception at Shepheard's Hotel on Monday night was a gigantic success. The speeches made on behalf of the visitors by Mr. Ney and the Rev. Eber Crummy were particularly fine, whilst the speech of welcome delivered by Ismail Pasha Sirri, the Acting Minister of Education, was one of the best efforts of that nature that it has been my good fortune to listen to for many years. Yesterday afternoon Mr. Milne Cheetham, the Acting Agent and Consul-General, received the Canadians on behalf of the British colony at the Gezira Sporting Club. Open-handed hospitality was dispensed, and our visitors thoroughly enjoyed the delightful gymkhana which was held.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, July 9.

Kotchana—The Bulgarian View.

In my letter dated July 11 I wrote: "Everyone sees clearly that the scapegoat for all the troubles in Turkey will be again the Christian population, and especially the Bulgarian population." Scarcely three weeks have passed, and my words are all too fully justified.

From an European point of view, wholesale massacres, arranged for the purpose of exterminating the Christians in Macedonia, or of forcing them to turn Mohammedans, if they wish to save their lives, are all impossibilities. Such proceedings no European can understand, because according to his understanding it means that the Turks are really bent upon ruining their own country. From a Turkish point of view, it means, on the contrary, the salvation of their country. The best proof of this we see in the Turkish army, which refuses to fight against the Mohammedans of Albania, although they are in open revolution, but is still ready for any extravagances against the Christians in Macedonia. The worst feature of the situation is the Turks' knowledge that Europe will remain deaf and blind, because the Great Powers are mutually bound by the principle of the *statu quo*.

Origin of the Trouble.

Kotchana stands seventy-five miles east of Uskub, sixty miles north-east of Kuproulou, and twenty miles to the south of the Bulgarian frontier. It lies in the fertile valley of Brégalnitza, on the right bank of the river bearing the same name. This small town was the theatre of the tragedy that took place on August 1. The original cause of the bloodshed was the explosion of two bombs on the market place. As to the origin of the bombs there are two accounts in circulation. According to the first the explosion was an attempt of the Inner Organisation of the Macedonian Revolutionary Committee to revive a campaign of outrages in Macedonia. Against this assertion stand two facts: (1) The late manifesto of the Bulgarians issued from Salonika, which prohibited any misdeeds and crimes against fellow-countrymen in the province; and (2) the Bulgarian population in the valley of Brégalnitza suffered so much during the massacres of Ishtib that it is impossible to imagine a repetition on their part of the same mistake at Kotchana, which is not far from Ishtib. Nor would any of the members of the Inner Organisation dare to undertake such action without the cognisance and approval of the local population. According to the second account, the outrage was due to the secret instigation of some of the members of the Committee of Union and Progress, who lately, at a secret meeting held in Uskub, decided to create difficulties and embarrassments for the present Cabinet by all possible means. In support of this assertion it is pointed out that on the day when the explosions took place most of the leading Mohammedan families were absent at a village called Zornovtzi, seven miles off, although the day was the weekly market day. It is too early yet to give credit to either of these accounts; but one fact seems to stand out clear above discussion: that the gendarmes and military, instead of trying to establish order, took part in the looting of private property.

The First Alarm.

According to the official reports received in Sofia from the Bulgarian Consuls at Uskub and Seres, and to others coming from persons who have escaped from Kotchana and crossed the frontier into Bulgaria—and who were eye-witnesses of the horrible scenes—what took place was as follows:—At nine o'clock in the morning, on the market place, opposite the Han of Adib Beg, a violent explosion was heard, and about five minutes later a second explosion took place at a spot about one hundred yards distant from the first one. The victims of the two explosions were eight persons—one gipsy, one Turk, one Jew, and five Bulgarians. The people present at the market place were panic-stricken at first, and fled at once in different directions, trying to save themselves. The shops were closed at once. But twenty minutes later calmness and tranquillity were established; the people began to return and collect on the market place again, and some of the shopkeepers began to re-open their shops. Half an hour later a body of gendarmes with drawn swords, followed by a mob of gipsies, Jews, and Turks, attacked the southern part of the market place; and almost at the same time the soldiers, headed by their officers and with bayonets fixed, appeared from the north side. Attacked from both sides, the people rushed again into the side streets, trying to escape, but the soldiers opened fire upon them, and the gendarmes, helped by the fanatical mob, did the rest. It was during this period that the shops were looted by the soldiers, the gendarmes, and the mob. Three hours later the Kaimakam appeared on the market place and gave orders to the gendarmes and soldiers to clear the market place and return to their barracks. The first order was executed at once; but instead of returning directly and quietly to their barracks the soldiery found their way in parties into the different streets and quarters of the city, and attacked the isolated houses of the Christian population.

During this second attack, which continued till four o'clock in the afternoon, the greatest havoc and mischief were done. Anybody who tried to defend himself, or was seen looking out from a window, was fired upon at once, and many were shot dead instantly. Whole families were slaughtered; and after seven hours of regular and systematic looting, accompanied by every sort of barbarism, the town was surrounded from the outside by military patrols, and none were permitted to go out or enter the city for two days.

Feeling in Sofia.

As soon as the news reached Sofia, on August 4, the Ministers held a council, and it is reported that they formulated and addressed a strong note to the Turkish Government. At the same time instructions were sent to the Bulgarian Ministers accredited to the European Courts to report the deplorable events at Kotchana. What are the consequences of the first steps taken by the Bulgarian Government it is yet too early to know. But the Turkish Government has already appointed a Committee to investigate the matter. According to yesterday's telegrams from Constantinople, the above Commission will be headed by Ghalib Pasha, the Vali of Uskub, the Kaimakam and the chief of the gendarmery of Uskub, and the counsellor of the Court of Appeal at Salonika, Mr. Laptcheff. The Bulgarian Exarch at Constantinople, as the head of the national Church, has also lodged a protest with the Minister of Justice, Hirmi Pasha, and has obtained permission to send to Kotchana an ambulance party composed of three doctors and two sisters of charity to help care for the wounded. This party is drawn from the staff of the Bulgarian hospital in Constantinople, and it is said that two other Bulgarian doctors will be added from Salonika.

Public opinion is naturally very much excited over the case at present, and the Press is voicing the public indignation in forcible style. Even the *Mir*, the organ of the Prime Minister, which has been consistently Turcophil for many years, has suddenly changed its tone. The reasons for such a change must be strong indeed.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, August 10.

The Autumn Manœuvres.

The Roumanian Army manœuvres will commence on October 1, and will terminate October 9. The "Blue" Army, which will be considered as the enemy, will consist of the second army corps, with a division of "Rosiori" (Hussars), and will commence operations by crossing the Danube at Macin and Hirsova, where it will be assisted by the river division of the Navy and the pontoon regiments. The "Army of the South" will consist of the fifth army corps, with a division of cavalry. The march past will be held on the plateau to the north-east of the town of Medjidia.

The scheme of the manœuvres may be said to be a reconstruction of the first operations of the war of 1854. They will have an advantage over all previous manœuvres in that every military element will be employed, and much will be made of the use of aviation, for which preparations have been going on at the military flying ground at Cotroceni. The principal commanders will be Crown Prince Ferdinand, General Alexander Averescu (who is attending the British autumn manœuvres), General Remus Boteanu (who commands the "Army of the South"), General Crainiceanu (commanding the "Blue" Army), General Mihail Boteanu (Inspector-General of Engineering, who will command the party engaged in the bridging of the Danube), and Admiral Eustatin (who will command the naval division on the Danube). It is believed that the King will also take part, but this is not yet officially confirmed.

The manœuvres promise to be extremely interesting, especially as the scene of action is the Dobroudja, which would no doubt be the field of operations in the event of hostilities with an enemy coming from the South. The campaign of 1854, it will be remembered, forms the setting of several episodes in Whyte Melville's book, "The Interpreter."

France and Roumania.

It is announced that after the autumn manœuvres Crown Prince Ferdinand will pay an official visit to Paris. There has for some time been a feeling that the intimacy existing between the two peoples, French and Roumanian, should be strengthened by something more deep and serious than the mere love of everything French on the part of the latter. It was in France that Roumania found the fountain of her intellectual progress, and she looks upon herself as the advance guard of Latin culture in the Near East and as a factor for the maintenance of that general peace which France so strongly desires.

Earthquake and Storm.

On Thursday last, at 3 a.m., there was an earthquake here, one of the most violent felt for some time in the capital. It was also felt throughout the country at about the same time. Earlier a terrible dust storm, followed by a hurricane and rain storm, swept over Bucharest and other parts of the country, doing much damage. Telephone and telegraphic communications were interrupted all over the country for some hours. At Buzen many houses were damaged by hail, which was of unusual size, and one man was killed and several men injured by lightning; at Jassy the hurricane lasted two hours, and 200 houses were damaged; and at Foscani, Rimnic Serat, and other places the streets were flooded and much damage was done. The damage is reckoned at many million francs.

NOTES FROM JERUSALEM.

(From Our Own Correspondent.)

Jerusalem, August 2.

"Give us Water."

"Give us water," said the people of this land to the Roman Emperor Diocletian, "in order to make this barren land of ours a paradise." But I do not think they ever imagined that their brothers in Jerusalem would be crying to the Sultan's Government in the twentieth century for water to drink. Jerusalem not only lacks men to keep the machinery of business going during the summer months, but it also lacks water, not for irrigation of lands, but to wet the tongue and throat of many a poor inhabitant of the town. The price of a petroleum tinful of water is two *metliks* (about 1½d.), which is something considerable to a poor labourer who earns only three piastres (6d.) a day, or even less, for a family of six or seven. There has been a great deal of talk about bringing water to the city from Al-Arroob, a small stream on the way to Hebron, or from the Pools of Solomon, near Bethlehem. There is at present a water supply from the latter spot, but it is very scanty. Many schemes have been projected for drawing the water from one of the above-mentioned springs in iron pipes, but not one has as yet been realised, and when such a scheme will be accomplished no one can tell.

The Roads.

Another serious problem for our municipality is the roads. Though a steam-roller has been bought and carts for sprinkling water in the main streets have been imported, the state of the roads is far from being satisfactory. Dust fills the air and blinds the passer-by. It also spreads the germs of disease from one quarter to another. To check it, water is sprinkled on the principal roads, but this water simply makes matters worse because of its evil smell. It is drawn from pools in the town that are filled by rain during the winter, and generally get dry in the summer. These wells also harbour great numbers of mosquitoes, and malarial fever is consequently spread. One of these pools—the largest of them—is Birket-us-Sultan (the Sultan's Pool), known in the Bible as the Pool of Gihon.

The Bishop Gobat School.

On June 22 the midsummer Speech Day of the Bishop Gobat School took place. Unfortunately, the British Consul, Mr. McGregor, was not able to be present on account of illness. The Rev. Henry Sykes, Secretary of the C.M.S. in Palestine, was chairman, and a large audience, including the boys' parents and relatives and a number of British residents, attended. After all the items on the programme had been performed, certificates and prizes were distributed by Mrs. Ellis.

MOSLEMS IN BOMBAY AND MADRAS.

The *Comrade* has a grievance against the local government in Bombay regarding its alleged disregard of the Moslems' view on their educational requirements. The following are extracts from an article which appeared in the *Comrade* of July 20:—

We would point out the manner in which the Bombay Government has almost consistently disregarded the views of the Mussulmans, particularly on their educational requirements. Sir George Clarke and his advisers cannot do better than compare their own attitude towards Moslem opinion with that recently shown by the Madras Government in its treatment of the question of Moslem Education in Southern India. The Muhammadan Educational Conference of the province had made certain strong representations, calling for reform in several matters connected with Moslem education. Though all the demands of the conference have not been granted, a great step forward has been taken by the Government in recognising some of the most pressing needs of the community. The Director of Public Instruction has been asked to permit the teaching of the Koran out of the regular school hours to all Moslem students who may bring the written permission of their guardians. . . . The need for the special treatment of the Moslem educational questions in other directions has also been recognised. The Government has ordered the payment of half fees by Muhammadan boys in aided schools, the other half being borne by the State. Hindustani classes are to be opened in the schools containing any considerable number of Moslem boys. . . . We are glad the Madras Government has freely and sympathetically considered Moslem views on education, and we trust that it will not be long before we will have the satisfaction of noticing the growth of such attitude in certain other quarters which have so far been conspicuous only for stiff-neckedness.

NOTES FROM PERSIA.

(From a Persian Correspondent.)

Tabriz, July 13.

A Frontier Rumour.

It is reported here that some 300 Persian *fedayis*, well-armed and equipped in Turkey, have crossed the frontier in the north-west of this province, near the River Araz, and have come into conflict with the Russian frontier guards in that neighbourhood. One or two of their leaders are said to be Young Turks who have a dislike for the Russians. No details have, however, been received here yet.

Local "Spy" Case.

A week ago an Armenian photographer and two companions went to Khoy on business, and on returning they stopped for a few days at Marand, where, with a marked lack of prudence, they photographed some of the Russian officers, the Russian camp, and even one or two guns. Thereupon, being suspected of being spies in the pay of the Shahsevans, they were very quickly placed under arrest, and were sent on here under a guard of Persian cossacks. As soon as the news of their arrest reached here there was a great scene at their houses, and the wives of the unfortunate men, weeping and wailing, hastened to the Russian Consulate to beg for mercy. It seemed almost certain to everyone here that, being branded as spies, the men would most probably be hanged as soon as they arrived. The Russian Consul-General is said to have told the wives: "Ladies, you must wait until the prisoners are brought here. They are charged with more than one offence. They have photographed the Russian camp without permission; they have arms (revolvers) on their persons without permits; and they may be spies sent by the Shahsevans. You must therefore wait until their case has been investigated." The prisoners were brought to the Russian Consulate, and, after a brief investigation sent over to Shuja-ed-Dowleh. Yussuf Khan, a brother of the arrested artist, who is a photographer himself and was formerly photographer to Mohammed Ali Shah, went and explained to Shuja-ed-Dowleh that his brother was not a spy, and that he had gone to Marand simply to earn some money. He said: "As artists, it is our business to photograph any man and any object. Only they have omitted to get special permission for photographing the Russian camp." This explanation being satisfactory both to the Russian Consul-General and to Shuja-ed-Dowleh, the prisoners were given their liberty, being cautioned, however, that they should never again take the photograph of any Russian soldier or officer.

Symbols of Law and Order.

The arrest of these men was the cause of much apprehension among the Armenian community, although since last December no Armenian has been hanged, except Petros-Khan Malik-Andreasian. This apprehension was due to the fact that both the Russian scaffold and the "hanging pole" of Shuja-ed-Dowleh are still standing in position. The former is not working; no hanging has been done by the Russians since the hanging of *fedayi* leaders. But the hanging pole of the Persians is not permitted to "rust" for lack of work. Once every week or ten days a guilty person swings on it out in Sheshgilan, just to let the population know that there is an authority and a law in the city, and to remind them that no lawlessness will be permitted. A week ago there was hanged Mami, a nephew of Aydin Pasha, a *fedayi* leader, who was a Persian with a Turkish title; and yesterday another *fedayi* leader, named Taghi-Bay, was hanged.

A Post Office Robber.

Three days ago an Armenian, named Avedis Khan, who is assistant postmaster in the Tabriz post office, was arrested in connection with the disappearance last December from the post office of stamps to the value of 6,000 tomans (£1,200). Two Moslem clerks were arrested at the same time. After being kept in chains and in prison for one night, Avedis Khan was liberated the next morning, being innocent, no doubt. I hear that the Russian Tajir Bashi (head of the merchants, an office which corresponds to the office of the President of the Board of Trade in England, plus political powers) and some of the foreign Consuls interceded on his behalf. Avedis Khan was made a Khan by Mohammed Ali Shah, and has been serving in the local post office for over twenty-five years. Vram-Khan (Armenian), the Chief Postmaster, could not be arrested, because he is a Turkish subject.

The post offices in this province (like the Customs) are under the control and direction of Belgian officials. If anything "muddy" has taken place in the Tabriz post office, why could *they* not look into it and clear up the mud? Why should they not?

Mirza Firooz Khan.

NOTES FROM ODESSA.

(From Our Own Correspondent.)

Odessa, August 6.

A recent telegram from Teheran stated that two emissaries from Mohammed Ali Shah had arrived there and been arrested. So far as I can learn no emissaries or courtiers have left the household of the ex-Shah here during the last two months. Captain Khabaeff, the Russian adjutant attached to Mohammed Ali's suite, was last week granted a month's leave of absence, and, for the time being the ex-Shah is released from that officer's surveillance. A few days ago it was rumoured that the Royal exile had surreptitiously left Odessa for an unknown destination, but the statement was promptly and officially denied. The ex-Shah has just placed his elder daughter, a girl of thirteen, in the local ladies' institute, where she will receive a European education. His two younger sons—boys of two and ten respectively—are being educated by private Persian, Russian, and French tutors in the Royal villa.

Græco-Albanian Refugees.

During the last few weeks some 700 Greek Albanians, women and children included, have arrived here, and they are proceeding in several parties to Semipalatinsk, where the Crown is granting them land on very easy terms. The refugees are all of the fairly well-to-do agricultural class, and are buying here stocks of husbandry implements; horses and cattle they will procure at moderate prices in Siberia. These 700 refugees are forming a settlement at Balaschoff in the government of Semipalatinsk, and will be followed by other compatriots who are leaving Albania. They evidently place no faith in the promise of Albanian autonomy and the pacification of that restless country.

THE TRANS-PERSIAN RAILWAY.

In dealing with the Persian problem generally and the Trans-Persian railway in particular, last Friday the *Times* in a leading article said: —

There is something about every great railway scheme which seems to arouse, in its early stages, a cloud of opponents. . . . We do not say that direct and rapid railway communication between Europe and India will come in our time. We only say that, the project having been submitted, the Government are right in acquiescing in a careful and systematic inquiry into its possibilities. There were no tremors when this country took the lead in investigating the scheme for a railway to Mesopotamia. That scheme was relinquished, not through apprehension, but because it offered no advantages which were not at length furnished in greater measure by the opening of the Suez Canal. The Trans-Persian scheme will probably have to stand or fall, in the first instance, by the prospects it offers as a business enterprise. If after inquiry the promoters are ready to pursue their scheme, it will then be time enough to consider the series of strategic objections which have been so ably stated in two recent letters by our Military Correspondent. In the long run it will probably be found that the governing factor will be the steady spread of railways throughout Asia. It may be decided that the risks are too great to face in the near future; but the Persian situation seems likely to demand at no very distant date a rather more constructive policy on the British side, and it is quite certain that, through sheer force of circumstances, India will not be able for ever to remain in her present condition of landward isolation.

"THE UNITED INDIA & NATIVE STATES."

"A high-class weekly organ devoted to social, moral, political, educational and economic problems of the day, including that of the Native States. It is edited with great ability, and the fairness and moderation of its view are most conspicuous."—*Epiphany*, Nov. 5, 1910.

"*The United India and Native States*, of Madras, is perhaps the only [illegible] journal in the country that has steadfastly refused to be swayed [illegible] feelings, and has been conspicuous for its sober views on public [illegible] particularly those bearing on the relations between Hindu [illegible] man."—*Muslim Review* for Feb., 1912.

PALESTINE EXPLORATION.

P.E.F. EXCAVATIONS AT BETHSHEMESH.

The work of the Palestine Exploration Fund in Palestine, extending over a period of nearly forty years, is well known to the public, and the results of Prof. A. S. Macalister's five years' continuous excavation of the site of ancient Gezer has just been given to the world by the P.E.F. in three sumptuous volumes. Dr. Mackenzie and Mr. Newton, on behalf of this society, are now engaged upon the excavation of a site which is confidently believed to be that of ancient Bethshemesh, a city of no small Biblical associations (Josh. 19, 41, 1 Sam. 6, 2 Kings 14, 11-13, 2 Chron. 28, 18). The site, which is known as Tell el Rumeileh, adjoins an extensive modom Arabic ruin known as Ain Shems (the spring of the sun), a name which appears to preserve an echo of the ancient Bethshemesh (the house of the sun). This spot has for many years been identified as that of Bethshemesh, and it may be said at once that the excavations, as far as completed, abundantly support this view. The site is situated on the southern slopes of the Vale of Sorek (Wady es Surār), up which the Jaffa-Jerusalem Railway runs. It is about a mile from Deir Aban, the last station before the line plunges into the winding gorge by which it reaches the plateau around Jerusalem.

Periods of Occupation.

The first efforts of the explorers were engaged upon a ruined Byzantine Convent, which was found to lie under the soil at the highest part of the hill; this has proved to be a massive building, probably scarcely complete when Islam here overwhelmed Christianity in the seventh century. With the exception of this extensive convent and the crumbling walls of some huts of mediæval Arabs, who squatted amongst its ruins, the archæological remains on the whole *tell* prove to be all ancient Semitic, from the pre-captivity Hebrews, backwards into the dim ages of the early Canaanites. The stratification of the remains shows three distinct periods—an early one, going back 1500 to 2000 B.C., with débris of no great depth lying upon the original rock surface; a middle one, which by the great thickness of the accumulation must have lasted many centuries; and a third one, extending practically to the surface. The earliest period is characterised by very primitive types of "Amorite" or "Canaanite" pottery (of which much has been found intact in tombs); the middle period is marked by the presence of painted pottery, which is a local imitation of Cretan, and which there is strong reason for believing is Philistine. Between the middle period and the latest there is a marked break, when the whole city appears to have been captured and devastated by fire; quantities of sun-dried brick are found everywhere scorched by heat, and a black layer of charcoal appears at this level all over the site. Tentatively, it may be concluded that this destruction marks the capture of the city by the Hebrews; for all above this layer belongs to this age, and the pottery, of which great quantities have been found intact, is characteristic of the early Hebrew period. The close of this period is again marked by the final destruction of the city, and the archæological evidence would point to about 700 B.C. when we read (2 Kings 18, 13), "Sennacherib, King of Assyria, came up against all the fortified cities of Judah and took them." From this time the hill has never been the site of a town.

The First Season's Work.

During the first season's work the foundations of the ancient city walls were followed round the whole summit of the hill; they consisted of rough megalithic blocks of unsquared stones; the complete circumference was 670 yards. From the evidence of the massive foundations and the fragmentary remains of the superstructure, the wall must have been a magnificent work, quite comparable with the contemporary great wall of Gezer. So far as can be ascertained it had only one gate—on the south—and this was flanked by powerful bastions. The distinction of this gate would appear to coincide with the end of the middle period, *i.e.*, the capture and burning of the city by the Hebrews. During the summer of 1911 a great many tombs in the N.-W. necropolis were opened; one large grotto (from which already much pottery had been recently plundered) was found to belong to the middle period, and yielded many Egyptian objects; the others belonged to the time of the Hebrews.

Some Recent "Finds."

During the present summer, particularly during the later weeks of July, a number of most interesting features of the city have been revealed. In the centre of the city, on what was probably originally the highest point, immediately to the north of the great Gate, has been found a "high place" with five "pillars" (*masseboth*) thrown down and one intentionally broken. (See Ex. 34, 13, etc.) In close proximity to this area on the east is a tomb grotto containing a mass of human skulls and bones and pottery, in good preservation, belonging to the earliest period; these vessels held originally the "food" and "drink" offerings for the dead; it is interment going back before 1500 B.C. A little to the west of the "high place" a circular shaft, surrounded by several layers of large blocks of stone, has been found to lead, by means of a rock-cut opening, furnished with steps, into a large double grotto, now silted up to within four or five feet of the roof. This may prove to be another primitive place of interment or a grotto-sanctuary connected with the "high place" (though far older than the existing remains which, in their present position, belong to the middle period). One branch of this grotto lies immediately under the pillars, but the other branch may be the beginning of one of those "water passages" which excited so much wonder at Gezer, and which have been found also in the ancient site of Jerusalem ("Warren's Shaft") and at el Jib—ancient Gibeon. The necessity of closing the work temporarily at the end of July prevents the full examination of this fascinating site. Some twenty-five yards south of the "high place"—and in the Hebrew stratum—has also been found a large well-mouth, lined by megalithic blocks, and further surrounded by an outer circular enclosure. That this leads to a well of considerable depth is manifest from the enormous amount of limestone detritus excavated in its formation, which now covers the whole neighbourhood outside the before-mentioned barrier to the depth of many feet. It has only been possible to follow the well down for a few feet, but one of the first objects of an autumn campaign must be to clear out its whole depth and reach, it is to be hoped, the source of the city's water supply. There must have been some source of water within the city walls, and it is an attractive theory that the before-mentioned rock-cut grotto and the well were both designed, at different periods, to reach it.

Need of Public Support.

It will be seen that much has yet to be done. The Hebrew remains (say, 1,000-700 B.C) lie over a great part of the *tell*, immediately under the surface, and can be reached in a few minutes. It is probable that a few weeks more of "digging" in these layers of archæological remains, of such interest to the Semitic or O.T. student, will throw a flood of light upon the civilisation of early times. This is the only excavation of the sort belonging to any nation now going on in Palestine, and it would be a discredit to British archæology and a sad disappointment to all those interested in Palestine exploration if the work had, as is threatened, to be suspended for want of support. It has been a great misfortune that the excavation of so many ancient sites in Palestine has been abandoned when only very partially completed. Although the site is a considerably smaller one than Gezer, the traces of the ancient massive walls, the high place, and the accumulated remains of three successive archæological periods all show that it is a site well worth a thorough examination.

Those wishing for further information on the work of the Palestine Exploration Fund are recommended to see the newly published "Annual" (1911) and the quarterly statements, and those wishing to further the objects of the fund are asked to communicate with the hon. secretary, J. D. Crace, Esq., F.S.A., 2, Hinde Street, Manchester Square, London, W.

NEAR EAST STATESMEN.

No. 2.—M. TRIKOUPIS.

To the untiring labour, the world-wide knowledge, and the life-long devotion of Charilaos Trikoupis the kingdom of Greece owes a great debt, although it was not granted him to achieve all that he desired. Paradoxical though it may seem, the very characteristics which assisted him in his political dealings only increased his unpopularity and established the position of his opponents. Open indifference to praise or censure and a mien so haughty that it won him the title of "The Englishman" are traits which do not easily gain friends among a people like the modern Greek. The difficulties of his task, already vast enough, were doubled. It was his misfortune to be cast to play his part upon a stage too cramped for his genius.

Trikoupis' ambition was to see Greece respected and powerful, to augment her resources, and to enlarge her boundaries, until something of what is now known as "the great idea" had been actually realised. His plans for the attainment of this end, such as his suggestion of an offensive alliance between the Balkan States, were bold and far-reaching, and he pursued them with an energy and self-restraint which had seldom been seen in the foreign policy of Greece. He maintained that if his country were destined to play any material rôle in Near Eastern affairs she must be strong, financially and morally, and that only a patient, sober, and moderate attitude could achieve this end. The spectacle of Bulgarian progress within the last decade is an admirable illustration of the truths he sought to teach.

Circumstances, however, were against him. It is just possible that by remaining permanently in power he might have converted his idealistic programme into a living reality; but the continual changes of Ministries neutralised his efforts.

Charilaos Trikoupis, who came of a family which had old associations in Missolonghi, was himself born at Nauplia, July 11, 1832; and it is said that the name, which means "joy of the people," was given to him at his mother's express desire, since she believed that he was destined to do great things. A year later his father was appointed to a diplomatic post in London, and so it came about that the child spent the first, most impressionable years of his life in England—a fact which had no little bearing on his later days.

At the age of eleven he was sent back to Greece for his education. He passed through the ordinary schools and entered the University, but in 1849 was removed to Paris, where he completed his studies. Throughout this period his vacations were spent in England, and finally, in 1852, he was appointed Secretary of Legation in London, and entered upon a residence in England which extended through eleven years and developed the qualities of persistence and tenacity gained in childhood from his foster-country.

His opportunity came ten years later, when he was Chargé d'Affaires during his father's absence. Negotiations were begun for the cession of the Ionian Isles to Greece, and the detailed arrangements, which favoured Greece to a marked degree, were in no small way due to his skilful handling of the negotiations with Lord Palmerston. His work was a signal and eminent service to his country, and it was generally felt that he was needed nearer home.

He returned to Greece in 1865, was elected member for Missolonghi, and entered the Chamber as a partisan of Koumoundouros, becoming Minister for Foreign Affairs in 1867. But the political situation throughout the country was chaotic, and after being defeated at the polls in 1874 at Missolonghi he published an article entitled τίς πταίει; ("Who is to blame?") It created almost as much sensation as the famous letter of Zola, "J'accuse," since it pointed out without any concealment that the apathy of the Crown was responsible for the Constitutional abuses. Trikoupis was sent to prison, but was liberated after undergoing only a brief period of his sentence.

As in France after the Commune, so in Greece at that period there was a general feeling "*il nous faut un homme.*" Thenceforth Trikoupis was recognised as the man, and in 1877 he was a member of the "Great Ministry" during the Russo-Turkish War. Despite his continued advocacy of a pacific policy the country became attached to the warlike tactics of MM. Koumoundouros and Deliyannis, and it was not until 1882 that Trikoupis found himself once more in office, this time as Prime Minister. He now opened a strenuous campaign against official corruption, and strove zealously to improve the economic and political condition of his country. But the proverbial fickleness of the electorate prevented any sane legislation; and until the day of his death he and his life-long adversary Deliyannis were engaged in a fatal game of political see-saw. In 1885 Deliyannis again started a polemic movement which caused such financial trouble that only a vigorous scheme of taxation instituted by Trikoupis averted national bankruptcy. In 1890 he was again succeeded by Deliyannis; but two years later the imminence of another catastrophe induced King George to recall him to power, and though Trikoupis dealt with the currency question in the only way which seemed in his opinion to promise solution, his plans failed to win converts in Athenian circles, and he resigned. The worst was now realised, and Greece actually became bankrupt.

Only once again was he persuaded to resume office. Elections in the autumn of 1892 restored the majority to his party, and once again he submitted a financial policy. This time, however, he had not only to face personal reproaches in the Boulé, but doubts on the honour of his country from abroad. He was defeated at the polls in 1895, and determined to close a political career which had done little but bring him sorrow, misrepresentation, and contempt.

For the next few years he lived at Cannes with his devoted sister, Sophia, who had remained staunch to him throughout the bitter periods of his life; it was there and in her company that he died in 1896.

The Empress of Austria once remarked that it seemed the misfortune of Greece to be always in trouble when M. Trikoupis was out of office. The observation was shrewd enough, although it almost seemed as if she might have been confounding cause with effect. It is at least certain that in a Chamber constituted more like the German Reichstag he would have achieved wonders; for he was a great man, the greatest that Greece has known since 1821.

Unlike his illustrious Bulgarian contemporary, M. Stamboloff, he was actually able to achieve little; like him, however, he experienced to the fullest extent human favour and human ingratitude, and it is a curious fact that in two Near Eastern countries should be lying the remains of two eminent statesmen whose real work should only have been valued by their fellows when they had passed away from among them.

ENGLISH BOYS' SCHOOL,
CONSTANTINOPLE.

The New School Building will be opened on September 15th. The School House has accommodation for forty boarders. Resident staff, six English masters and English matron.

Healthy situation on Nishantash Hill, facing open country; drainage sanitary fittings, bath- and lavatories by English sanitary engineers Preparation for Commercial Education Examination of London Chamber of Commerce. French and Turkish visiting masters. SPECIAL ATTENTION TO FRENCH. Turkish and Latin optional. English games. Fees moderate.

PROSPECTUS can be had on application to the Chairman of the School Committee—

A. T. WAUGH, Esq., *British Consulate-General,* **Constantinople.**

ENGLISH SCHOOL,
NICOSIA, CYPRUS.

Preparation for Public Schools and for Commerce Modern Languages. Turkish and Arabic if desired

ENGLISH GAMES.

Complete charge taken. Very healthy climate. Boys remaining for the summer holidays are taken to the Mountains. Moderate Terms.

Apply REV. CANON F. D. NEWHAM, B.A.Cantab., Director.

THE PRESS ON THE NEAR EAST.

Turkey's "Crisis"—A City View.

After inquiries "made in competent sources of information in the City," the *Financial Times* is of opinion that the sangfroid with which the Stock Exchange has regarded the course of recent political events in Turkey is justified:—

The fact that the crisis has so far left the civil and commercial life in Turkey unchanged certainly discounts its seeming importance. . . . Trade is absolutely normal. Money circulates freely. No commercial bills have been protested. There is no sign of any want of confidence between banks and merchants. Specie is sent freely up the country with perfect safety, even as far as Scutari, in the disturbed district. The collection of Government revenue proceeds as usual and with the same satisfactory results as those to which the recent reports of the Council of Administration of the Ottoman Public Debt have accustomed us. No doubt there will be much shifting and changing before the excited elements in military and political circles simmer down into quiescence, but there can be little doubt that the Great Powers will "keep the ring" with determination until Turkey has arranged its internal affairs as best it may. Meanwhile the calmness of commercial circles seems to suggest that, if the party of "Progress" has fallen, it is that of stability which is now in the ascendant.

This is an optimistic view, but, we believe, not too optimistic. After all, the City is no bad judge of such matters.

Policy in Persia.

The *Times* of August 14 contains an important despatch from Teheran concerning the finances and administration of Persia, from which we give the following extract:—

Lord Crewe sees "signs of improvement." One wonders where. With all respect to Lord Crewe, there is no improvement and there can be no improvement. The material for it does not exist. Whether even a large loan would now benefit Persia is doubtful. There are strong signs that it could only be made on condition that it went to the payment of foreign claims and the maintenance, not of *Gendarmerie*, but of a profitless army, objects which would leave little for productive expenditure. If, however, a sufficient fund of good will, both internal and external, can be counted on, a loan large enough to secure the establishment of order, the collection of revenue, and the undertaking of some productive expenditure, represents Persia's last chance. Northern Persia is now, and must continue to be, a Russian dependancy, and the sooner it has Russian administrators the better. On no other condition is progress permissible. For cognate reasons Persia would do well to employ English administrators in the south, and that on no finicking scale. Thus only can the Persian Empire be kept on the map.

The most disquieting feature of all is the British Government's apparent lack of any definite policy. Lord Crewe has told us that Britain will do her utmost to avoid anything like military occupation of Southern Persia. That, we may be sure, is true. Not less pathetically true is Lord Curzon's reply that our attitude is inevitably leading to occupation. Those who care for such matters will do well if they insist that the Government shall find itself a policy.

Egyptologists and Excavators.

The current number of the *Nineteenth Century and After* contains an interesting article by Mr. Arthur E. P. B. Weigall, the famous Egyptologist, on the "Morality of Excavation," from which the following are extracts:—

The main argument in favour of the excavation of tombs by archæologists is easily stated. The careful opening of an ancient Egyptian sepulchre saves for science information and antiquities which otherwise would inevitably be scattered to the four winds of heaven by native plunderers. In spite of the strenuous efforts of the Department of Antiquities, a considerable amount of robbery takes place in the ancient cemeteries. Tombs are rifled, coffins are broken open, mummies torn to pieces in the search for gold, heavy objects smashed into portable fragments, and valuable papyri ripped into several parts to be apportioned among the thieves. . . . Compare this with scientific excavation. The archæologist records by means of photographs, drawings, plans, and copious notes, everything that there is to be recorded in the tomb. There is a rough decency in his dealings with the dead, and a care in handling the contents of the graves which would have been gratifying to their original owner. Every object is taken from the sepulchre in an orderly manner, and the body itself is either buried once more or is sent to the workroom of the archæologist or anthropologist. . . . Which, then, is the better course: to leave the tombs to be rifled by ignorant thieves, or to clear them of their contents in an orderly manner? I do not see how there can be any doubt as to the answer.

There is, however, a very widespread feeling against any meddling with the dead. A sentiment which has a large part of its origin in the belief that the spirits of the departed have still some use for their bodies forbids one to disturb the bones which have been committed to the earth. There is the fear lest the disturbing of the dead should offend the susceptibilities of the living members of the family to which the deceased belonged. A body from which the life has gone assumes, also, a sanctity derived from the mystery of death. . . . The question, however, is a somewhat different one in the case of the embalmed bodies of the ancient Egyptians. No modern family traces its descent back to the days of the Pharaohs; and the mummies which are found in the old tombs, although often those of historical characters, and therefore in a special sense the property of the Egyptian nation, compel the family consideration of no particular group of persons.

By admitting the right of non-Egyptian scientists to excavate in Egypt because all the world has the right to hold shares in these mines of information, one admits the existence of the excavator's duty to the world. Any excavations authorised in Egypt which are not of an absolutely scientific character are injustices to the Egyptians and to all men. It is an unfortunate fact that high principles on the subject of excavation are conspicuously absent among all but a small group of Egyptologists. The savant . . . rushes into excavation like a fighter into the fray, and the consequence is disastrous. He should realise far more keenly than he sometimes does the seriousness of his undertakings and the great responsibilities which are involved. It is only by this realisation that he can justify his labours in the field. It is only by the most scrupulously conscientious work that he can convince the interested public at all of the morality of excavation.

Near Eastern Crisis.

The *Daily News and Leader* devoted a leading article to the Crisis in the Near East last week, concluding an examination of the situation in the following words:—

It should not be imagined that Turkey's internal troubles make Turkey a very much easier nut to crack. Those troubles would in great part vanish if Bulgaria broke across the frontier. Even the Albanians would probably join with the army in repelling the invaders. That is another factor which works for peace. In any case, Turkey's neighbours are hardly likely to try the issue unless they have arranged beforehand how the spoils are to be distributed. It is stated as a fact that Servia and Bulgaria have made an arrangement, and it has been reported that Greece and Bulgaria have also come to terms. But behind these lesser States are the Great Powers, Italy, Russia, and Austria. Italy certainly does not want the Turkish Empire in Europe to collapse just now. Russia, again, is too much occupied elsewhere to desire it. The decisive voice, however, rests with Austria. If Austria permits, then Bulgaria may safely, and probably will, strike. If Austria vetoes, then Bulgaria is hardly likely to move. The reason why Austria's weight counts so heavily is that she is the best prepared of the Great Powers to move, and if the lesser States strike against her will she will step in and appropriate the lion's share of the spoil. There is good reason to believe that Austria does not want the Turkish crisis to come just now, and if that be so the Ottoman Empire, which has before won through as perilous times, will come through the present crisis also.

Austria in the Near East.

The *Neue Freie Presse*, in discussing a recent *communiqué* of the Havas Agency on the subject of the recent conversations between the Entente Powers on matters affecting the Near East, draws attention to the fact that no mention is made of the direction in which those conversations have moved, and concludes its discussion of what it regards as a disquieting omission with the following warning:—

So far as Austria-Hungary is concerned, she will say to herself that the best guarantee of her interests in the Near East lies in herself. The world knows that no one can ignore her, and we, as neighbours of the Ottoman Empire, must be asked our opinion in the first instance. We have the first voice in Oriental questions. One need only refer to the annals of history to find this proposition confirmed, and the fact clearly set out that without us nothing can happen. Austria-Hungary, however, as has repeatedly been assured and proclaimed from authoritative quarters, wants the Ottoman Empire to continue to live and grow in strength, and she is consequently anxious that Turkey should survive the present grave crisis, and find her right way through her internal organisation. . . . Austria-Hungary will know how to protect her interests, and it is scarcely to be supposed that an attempt should be made to initiate important decisions without Austria-Hungary.

Articles to Note.

"The Balkans," in the *Manchester Guardian* (August 9).

"Will Turkey Throw up the Sponge?" by Dr. E. J. Dillon in the *Contemporary* (August).

"Excavations in Palestine," letter to the *Times* (August 14) from Mr. E. W. Gurney Masterman.

"The Turkish Crisis," in the *Spectator* (August 10).

"The Trans-Persian Railway," a letter from Lord Curzon, in the *Times* (August 10).

"Liberals and British Foreign Policy"—Russia in Persia—a letter from Professor E. G. Browne to the *Manchester Guardian* (August 13).

NEAR EAST BOOKSHELF.

A LINKING OF EAST AND WEST.*

The first question, instinctive on the first glance at such a title, is What has the Pacific to do with the East, Near or Far? But the first glance beyond the title and into the pages of this book very soon shows that there is a very strong connection between the Old and the New World. Even so futile and inconscient a line as that on the survey of mankind from China to Peru has its hypothetical explanation in those far-off Western lands; Egypt and even Assyria are almost definite! Nay, those mysterious islands between the two worlds are fashioned by surmise and discovery into strong arches of a mighty bridge. And for these last it was a surprise and a pleasure for us, a few days after this work of Mr. Enock's came into our hands, to observe in the daily Press the promise of Mr. Scoresby Routledge's journey to Easter Island.

But to turn to the book itself—our one complaint (and that same is perhaps rather a confession) is a certain apparent lack of plan. It is a little hard for those who have not the expert knowledge and exact local experience of Mr. Enock (who has made the Pacific coast his special study) to find their way clearly among the multitudinous records of Mayas, Aztecs, Toltecs, Incas, and other races who built up those wondrous civilisations that flourished before even the Dragon-ship of Eric the Red touched the northern shores of America.

But his chief argument is unmistakably the practical certainty that there is a very real connection between the West and the East, that great civilisations are not and cannot be wholly spontaneous and independent one of another. It is a question, almost an axiom, of evolution, and forces itself on the mind even apart from the connection to be inferred from similarity or development in art, religion, and other features. And it is backed by another most convincing argument:—How can one suppose that the Great Ancients confined their ambitions to their own lands or those immediately near them? The longing for the far side of the Unknown is as old as humanity; and the more developed is humanity the more powerful and immediate in essay is that longing.

But there is full confirmation of such an idea in the relics themselves as we find them in the West. What of the pyramids, the temples, the sun-worship, the sculptures, the pottery? Many of us will remember the pages of one of the great illustrated papers which showed what wonderful, vivid, humorous conceptions were not merely held but exquisitely carried out by men who must have lived nearly 8,000 years before our day. These same illustrations appear in the present work, together with many others, of stelæ, of figures, of wall decoration, of the universal and world-old swastika (taken from who knows what presentment of the Southern Cross?), and the more we look at them the more our conviction grows of the inevitable connection between East and West.

But which came first? Naturally everyone—or nearly everyone—says the East; even the Lost Tribes come in to the count! But Mr. Enock—if he is not with them—is not against those who plead for the West. He remembers the Timæus and the Atlantis, that land drowned, its inhabitants flying East and West at the hazard of the waves and winds.

We would go a step further and recall the Great Sphinx. We have but the record of an unobservant Moslem for its features (then unspoilt by cannon target practice or axe blows of the famous "hungry saint") of "marvellous beauty." Was that Eastern or Western beauty? After all, it is too long a subject for discussion here. But the very antiquity of those Peruvian potteries prompts the idea.

We could have wished that Mr. Enock made more of the comparison of the *æsthetic* side of West and East in art. A selfish wish prompted by our certitude that he could have done it so well! But we will perforce venture on it ourselves! We notice—or think we notice!—two points, the one in connection with the Peruvian remains, the other in a more general sense.

The Peruvian remains show a boldness, a vigour in the portrayal of actual, moving life which seems almost unequalled; we find similarity only here and there in Egypt; the gazelle-handled drinking-cup in the Cairo museum, certain spoons for unguents and pastes of the toilet table, a relief (or rather wall-painting) at Beni-Hassan of two ibexes gnawing the upper branches of a lemon tree—these occur to us; but, good as they are, they have not quite that Western perfection. The Western spirit (if we allow ourselves to dwell on the theory we have outlined) has, as it were, been quenched by the strength of the clerical officialism of Pharaonic art!

That is one point. The other is a certain tendency towards the florid. We may here, perhaps, be allowed to "air" a favourite notion, that of the influence of external conditions on art.

In Egypt—and possibly even in parts of Asia—there is a measure of artificiality in Nature, if we may so put it; almost everything of consequence is cultivated by man, or at least developed by man; Nature is deficient, or even antagonistic!

In the West, amid the great uplands, in the mighty valleys, is a wealth of wholly natural fertility, independent of man.

Now to us it seems that the antagonism—the withholding, so to say, of nature—must react on man, must constrain him; he has to draw on himself, to force himself to the exotic, the colossal, the formal, the extra-human; his gods are looking not to this life but to another life outside his insufficient world. He is severe in his decoration, confining himself to the little from which he can draw in his surroundings.

Give him a riotous field of multiplied nature, and he, too, will run riot in his fancies. This is but a mere germ of a theory, but it does seem to fit at times, and it does seem to fit here! Man seems to feel freer, more active in his imagination; he has the sense of inspiration that flowered in many a Renaissance craftsman; we remember the passage in John Inglesant on the Duke's palace, and we yield to the temptation of the description and its main idea, to the thought that, wherever ancient civilisation may have had its birth, and whithersoever it may have been spread and by whom, it underwent inevitable modifications from the nature of the environments in which it grew and flourished. And we cannot avoid the thought that there is proof of this in these civilisations of East and West.

We cannot pretend to have dealt with Mr. Enock's work as it merits; there is so much suggestion, so wide a field of thought in every page, that we give up the attempt in despair. We can only recommend those who are interested in all that is ancient in this world—in whichever hemisphere!—to read the book for themselves, and we feel sure that they, like ourselves, will have the same impression of wonder and fascination as before a doorway opening to strange fairy lands.

If they have knowledge of these, it will surely be increased and strengthened; if not, here is a new and great sphere of thought—of discovery, maybe!—revealed to them.

CURRENT COMMENTS.

Agricultural Egypt should now be happy, for the Nile flood is well on its way down, and it is almost certain that it will prove to be above the average of recent years. Abnormal rains have fallen in Abyssinia, and the levels at Roseires and Khartum are slightly higher than usual, whilst the White Nile, although still below normal, is rapidly making up for lost time. It is therefore evident that the country is certain of an abundance of water when basin irrigation starts. The fears of a disastrously low flood expressed earlier in the year have proved unfounded, and Egypt is once more assured rich crops, on which everything and everyone in the country are more or less dependent.

***

Attention has been drawn to the fact that the Nile flood is tending to become later and later of recent years. This tendency is apparent from the diagrams issued by the Survey Department. The question which naturally arises herefrom is whether this lateness is an accidental occurrence or whether in ancient times the same phenomena occurred and spread themselves over a cycle of years, at the conclusion of which the flood dates gradually returned to their normal position in the calendar. A publication of the details regarding the floods in years gone by would not only be interesting, but it might prove exceedingly useful to all who are interested in agriculture in Egypt.

***

The latest circular of the Egyptian Ministry of the Interior shows that a practical spirit is pervading that administration. It will be recollected that when a dearth of labour threatened to prevent the execution of the construction of the Helouan road, Lord Kitchener ordered that the convicts, who were overcrowding the prisons, should be put on the work. This laudable initiative is now to become a regular practice, and arrangements are being made to employ convicts on cotton-worm destruction work and on road construction and land levelling. Of the great advantages which will accrue from this innovation there can be little question. In the first place, the public works will get their labour at a moderate cost and the Prisons Department will derive material benefit instead of a loss from the hordes of prisoners that it has to look after; and, secondly, the occupation of convicts on work outside the prisons—they will have to be accommodated at or near the site of their labour—will relieve the overcrowding of the prisons and obviate the necessity of having recourse to fresh constructions or to special legislation. It would not be at all surprising if this decision to make convicts work on the roads, canals, and other public works were to result in a decrease in crime—petty, if not serious—for the one difficulty up to now has been that life in prison was easier than that of the average fellah in the field, and the criminal has never regarded imprisonment as a hardship.

***

A few weeks ago, commenting in these columns upon the establishment of a casino at Sinaia, we expressed the opinion that the innovation was hardly likely to increase the amenity of Roumania's favourite summer resort. Now we learn that King Carol has already had enough, and more than enough, of the proximity of the undesirables of both sexes who have been attracted to the neighbourhood by the opening of the gaming establishment. The *Standard's* Vienna correspondent reports that His Majesty has found the presence of these people so objectionable that he has left his summer palace and betaken himself to a villa at Curtoi, belonging to the Queen. His Majesty, we learn, objected to the establishment of the casino when the project was first mooted, but he was powerless to prevent it. Now, evidently finding his worst anticipations realised, he has marked his displeasure in most emphatic wise, and the residents of Sinaia are, in effect, invited to decide whether they desire the presence of their King and his Court or of the gambling fraternity, their dupes, and their parasites.

***

The Deputy of Acre, Sheikh Awad Effendi Shoucair, is a most ardent Mohammedan, and upon three occasions he has, on his return from the capital, brought sacred relics of the prophet—in each case a hair—as a gift to the citizens of the state which returned him as deputy. These are now in safe keeping at the principal mosques of Acre, Safed, and Haifa. The Sheikh's political opponents affirm that his popularity is in no small measure due to these gifts. But there would seem to be evidences that the affection of the people for their deputy is founded upon personal grounds, and the inhabitants of Acre are now building a residence, which they propose presenting to Sheikh Awad in recognition of his work in Parliament and his efforts on behalf of the people whom he represents.

***

We have frequently referred to longevity among the inhabitants of Egypt, particularly in the rural districts of the country. A correspondent, Mr. R. de Rustafjaell, the well-known author and archæologist, writing from Luxor, sends us an interesting account of one old lady with whom he was personally acquainted. "Longevity is not uncommon in Upper Egypt," he writes. "We have had several old people passing away within the last few years. One old woman I recollect very well, in the person of Fendia, the mother of Abdel Rassoul, the discoverer of the thirty odd royal mummies at Deir-el-Bahari. I saw her three years ago, a few months before she died. She was a bit hard of hearing, but had good sight, and had new teeth, which, she told me, began to grow about twenty years ago; her memory was fairly good. But she was all shrunken, and as she walked, aided by two sticks, with a son supporting her on either side, one could almost imagine hearing her bones rattling inside the parchment skin. During the conversation that took place she said she remembered as a little girl hearing that the English had fought a great battle with the French at Alexandria—this was Nelson's victory over the French in 1799. After some further conversation with her I caught at the word 'Backsheesh,' to my great disappointment, thinking she was asking for a present, but immediately afterwards she turned round in her little dome-shaped hut, about 5 feet wide by 5 feet across, built of Nile mud, and handed me a small reed tray with half a dozen new-laid eggs on it. This was the 'backsheesh' she intended for me." The order of things is changed indeed.

***

Our Roumanian correspondent writes: In August of 1908, at the Blessing of the Banner of the "Smirdan" Society at the town of Craiova, the capital of Muntenia, which is the ancient name for the western portion of this country, the idea was mooted of erecting a monument to those who fell in the War of Independence of 1877-78. Craiova and its district gave relatively many more lives in the cause of the country's liberty than other parts, and hitherto no recognition had been made as in other towns. General Gigurtu took the cause up actively, and the result is that by far the most beautiful commemorative monument in the country is completed and will shortly be erected.

***

It is the work of a Roumanian sculptor, M. Pavelescu, of Calafat, and represents the (then) Prince Carol giving the order for the firing of the first cannon shot on Widin, then occupied by the Turks. On the principal façade is a bas-relief in bronze of an incident which occurred a few days later, when the Prince, whilst standing on the fortifications on the Roumanian bank of the Danube and directing the bombardment of the Turkish works, narrowly escaped death from a Turkish shell which burst close to him. "That's the music that I like!" said the Prince with a laugh, in response to the anxious looks of those about him. On the right is represented the memorable sitting of the Chamber of Deputies when it was decided to declare the Union of the two principalities, the first step to the actual independence of the country; and on the left the engagement at Smirdan. The model in bronze was presented for approval by M. Pavelescu to His Majesty, who was so pleased with it that he asked to be allowed to retain it.

***

So Persia has taken another step along the Path of Progress! Readers of Mirza Firooz Khan's letter, which appears on another page, will see that, in spite of her troubles, she has—thanks to the hearty co-operation of her Russian visitors—succeeded in making a quite creditable start in the fashionable pastime of Spy Detecting. Certain European nations must look to their laurels.

The unusual preparations made for the reception of the Khedive on his arrival at Alexandria show with what affection he is regarded by his people, and therefore do credit to his Highness and his subjects alike. But as the verdict in the conspiracy trial had not been given at the time, was it not just "a trifle previous" of the numerous deputations to offer their congratulations on the frustration of the plot against his life when they did? The verdict was no doubt a foregone conclusion. But we think the eagerness of the deputations did more credit to their hearts than to their heads.

General Barron, Governor of Tasmania, has addressed a letter to the *Malta Chronicle*, which is now, according to the *Daily Telegraph*, the absorbing topic of conversation in the island. It appears that fifteen Maltese emigrants have arrived in Australia, and so happy has the result apparently been that there is now a demand for four times that number. General Barron advocates the inauguration of a financed scheme of emigration which, he declares, would be advantageous both to Australia and to Malta. It is probable that this letter, coming from such a man, will be fraught with the very best results in Malta itself. Over-population stands in the way of the Maltese at the present day, and their characteristics of industry, thrift, and sobriety, together with the fact that climatic conditions in Australia would not be altogether different from that to which they have been accustomed, seem to mark them as the chosen people to colonise successfully in North Australia. The idea is not a new one, as it had already been voiced by the President of the Immigration League of Australasia, but coming in the form of a letter to the local newspaper, it appears to have excited the enthusiasm of the general public, and in this way it will possibly bear immediate fruit.

PERSONAL & SOCIAL.

It is reported that Prince Yussuf Izzeddin, the Turkish Heir Apparent, will leave Constantinople for a European tour in about a fortnight's time.

The Bulgarian Telegraphic Agency states that King Peter of Servia is to undergo a fortnight's "cure" at the Arandjelovatz baths.

Lieutenant-Colonel W. G. Lawrie, R.E., has been appointed to perform the duties of Chief Engineer, Malta Command, until further orders.

Lieutenant-Colonel G. F. H. le Breton-Simmons, R.E., relieving Lieutenant-Colonel Baker-Brown, R.E., at Malta, arrived in the island on the 4th inst. by the P. and O. s.s. "Namur."

Dr. Ruffer arrives in Europe from Alexandria this week.

M. Alexandre Georgevitch, Secretary to the Servian Legation, left London on Tuesday for Servia on leave.

Baron von Richthofen, first secretary of the German Diplomatic Agency in Cairo, has arrived in Europe.

M. de Smirnow, Russian Diplomatic Agent, has left Alexandria for Odessa.

The Hon. Anthony Pelham, formerly assistant traffic manager on the Sudan Government Railways, has been appointed to the surveyor's staff of East Sussex County Council. Mr. Pelham is a brother of the Earl of Chichester.

Sir Francis Elliot (His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Athens) had an audience of His Majesty at Buckingham Palace on Sunday.

Lord Edward Cecil, the present Under Secretary in the Egyptian Ministry of Finance, has been nominated to the post of Financial Adviser to the Egyptian Government, rendered vacant by the appointment of Sir Paul Harvey to a post in connection with the administration of the Insurance Act.

By command of the King, the Hon. Richard Moreton called on the Persian Minister at the Legation on Sunday, and offered His Majesty's congratulations on the occasion of the anniversary of the Shah of Persia's birthday. Cards were left on behalf of the Secretary of State for Foreign Affairs, the Lord Chamberlain, and Colonel Sir Douglas Dawson, Comptroller of the Lord Chamberlain's Department.

The Khedive arrived at Alexandria on Monday afternoon, on board the "Helouan." He was met by large numbers of native notables from all parts of Egypt, including members of the Legislative Council, the Chancellor of El Azhar University, and the Grand Kadi, who offered their congratulations on his escape from the recent plot to take his life. His Highness drove through the streets, which were brilliantly illuminated, to the Sidi Gaber Station, *en route* for the Montaza Palace, amid the acclamations of dense crowds.

His Majesty the Sultan has conferred the Order of the Osmanieh, Third Class, upon Mr. Leon Zorayan, of Eastcheap, in recognition of his services to the Ottoman Empire. This is the second Order to be conferred upon Mr. Zorayan during the last four years.

Our Bucharest correspondent, writing on the 10th inst., says:—Crown Prince Ferdinand and Crown Princess Marie, with their children, Prince Carol, and the Princesses Elizabeth, Marisara, and Ileana, left Sinaia on Thursday evening, bound for Munich, whence the Prince, with his son, goes to Sigmaringen, on a visit to his family, whilst the Princess, with her daughters, will make a lengthened stay at Tegernsee. Prince Ferdinand had intended making the whole journey to Sigmaringen by motor, but being delayed on account of the indisposition of Princess Marie, abandoned the idea, and travelled with his family. He will return to Roumania in time to take part in the autumn manœuvres in early October.

In the autumn the hunting lodge at Sinaia will be transformed into a residence for Prince Carol, who will be nineteen years of age on October 16 next. On that date the Prince, who at present holds in the Roumanian Army the rank equivalent to a second lieutenant, will be promoted to a full lieutenancy, and it has been decided that shortly afterwards he shall go for a year at least to Berlin, to complete his military training and studies. He will there be attached to one of the Guards' regiments.

Herr von Waldhausen, the new German Minister to Roumania, has arrived at Sinaia, and was received by the King at Castle Pelesh, when he presented his credentials. His Excellency was afterwards received by Queen Elizabeth and the Crown Prince and Princess, by whom he was retained to luncheon. The new Minister, who has previously represented Germany at Bombay, Buenos Ayres, and Copenhagen, is a great traveller, and has made several long, and sometimes dangerous, journeys, notably in India and Persia.

Little Prince Nicholas of Roumania, whose departure for England was duly chronicled by our Bucharest correspondent, is now staying at Frogmore. Last Saturday he accompanied Prince Henry and Prince George on a ride to Virginia Water, when they all lunched in the well-known Fishing Temple, and afterwards went boating on the lake. Two charming photographs of Prince Nicholas in fancy dress appeared in last week's *Sketch*.

We are glad to record the appointment of Mr. S. A. T. Rowlatt, junior counsel to the Treasury, to be a Justice of the High Court, King's Bench Division. Mr. S. A. T. Rowlatt is, of course, the brother of Mr. F. T. Rowlatt, governor of the National Bank of Egypt in Cairo. These two distinguished brothers, both of whom were born in Egypt, are the sons of Mr. A. H. Rowlatt, at one time manager of the Bank of Egypt. Mr. Justice Rowlatt is one of the youngest High Court judges, being just 50 years of age.

The King has granted permission to Lieutenant-Colonel Cathcart Garner (reserve of officers), Sub-Director-General of the Public Health Administration, Egypt, to accept and wear the Insignia of the 2nd Class of the Order of the Medjidieh, conferred upon him by the Khedive.

The following honours promotions are gazetted in the Cairo *Journal Officiel*:—In the Imperial Osmanieh Order: Third Class, Major H. G. J. de Lotbinière, Director of Topographical Service in the Survey Department, on retirement; Mr. Ellison Marten, ex-Director of Police Stores in the Ministry of the Interior, on retirement. In the Imperial Medjedieh Order: Third Class, Mr. Gaston Buhl, ex-Director of the Public Health Department, on his retirement.

The King has been pleased to approve of Luke Z. Pierides as German Consul at Larnaca for the Island of Cyprus.

El Kaimakam MacEwan Bey, Senior Inspector and Acting-Governor, Halfa Province, Sudan, has been placed on pension, owing to ill-health.

The Egyptian War Office *Gazette* of July 14 contains the notification that El Bimbashi J. Powell, Medical Corps, is promoted to be Kaimakam.

Mr. E. N. Corbyn, junior inspector, Kordofan Province, Sudan, has been appointed Senior Inspector in the same Province.

Mr. J. E. Henderson, President of the Edinburgh University Union, has been appointed to the Egyptian and Sudanese Civil Service.

Second Lieutenant J. G. Steel, 1st Battalion Argyll and Sutherland Highlanders, will embark for Malta about September 4.

Mrs. Hazel, wife of Mr. Hazel, of the Ministry of the Interior, Cairo, won the open mixed doubles championship at the recent tournament at Redhill.

The death took place on Tuesday of another Crimean veteran, Major-General Thomas Prittie Cosby. Joining the 14th Foot as ensign in 1852, he served before Sebastopol from January, 1855, until the fall, and took part in the assault on the Redan of June 18, being mentioned in despatches, and receiving the medal with clasp and the Turkish medal.

The death occurred on Sunday at 24, Norland Square, W., of Lieutenant-Colonel Herbert Duncombe Armstrong, late of the Queen's Own Royal West Kent Regiment, who in 1882 accompanied the Egyptian Expedition—for which he received a medal—and in 1884-5 was present with the Sudan Expedition. For his services in the latter campaign he was mentioned in despatches and received a clasp.

The Cairo *Journal Officiel* states that the following transfers have been approved:—El Bimbashi F. J. M. Postlethwaite, Deputy Assistant Adjutant General, to Sudan Government; El Bimbashi C. Graham, Upper Nile District, to Mongalla district; El Bimbashi C. R. K. Bacon, Mongalla district, to Upper Nile district.

It is rumoured that Sir Henry Babington Smith is shortly retiring from the chairmanship of the Constantinople Board of the National Bank of Turkey, but no confirmation is forthcoming from official quarters.

From Malta, Mr. H. V. Soler, Inspector of Police, and Mr. Emmanuele Galea, Sub-Inspector of Police, have been selected to proceed to Dublin to undergo a course of training with the Royal Irish Constabulary Force. They left Malta on the 12th instant.

Mr. Meyrier, French Consul at Port Said, has been raised to the dignity of a Consul-General.

Mr. M. Pacliano, Roumanian Diplomatic Agent and Consul-General in Cairo, has been transferred to Berne, and will be succeeded by Mr. Biesowsky, Chancellor of the Roumanian Embassy at Constantinople.

Mr. Constantine Anastasio Michalopulo, of 3, Singleton Road, Kersal, Manchester, shipping merchant, who died on June 27 last, left estate valued at £18,865 gross, with net personalty £5,978.

FRIDAY, AUGUST 16, 1912.

GREAT BRITAIN AND EGYPT.

The trial of the three men accused of conspiring against the lives of the Khedive, Lord Kitchener, and Mohammed Pasha Said, the Prime Minister of Egypt, was concluded on Tuesday, and resulted in the conviction of all the prisoners. Mohammed Imam Wakid, a student at the French School of Jurisprudence, was sentenced to fifteen years' hard labour. Mohammed Abdel Salam, the editor of *Al Lewa*, and Mahmoud Taher el Arabi, who was also connected with the same journal, were sentenced to fifteen years' imprisonment. A very clear case was made out against the accused. They were associated with a secret society, the aims of which appeared to be primarily anarchistic. By assassinating the Khedive they persuaded themselves they would advance the Nationalist cause, because the grandmother of the Crown Prince, who would succeed to the throne, was supposed to be Nationalist in sympathies. The murder of Lord Kitchener was held to be necessary in order to overawe the British. From their methods of deduction and political wisdom a fair estimate of the mentality of the accused can be formed. Of themselves they were unlikely to approach any process of reasoning that would convert them into political conspirators; but their minds must have offered favourable soil for the seeds of criminal agitation sown by astuter members of the Nationalist Party. The very senselessness of the conspiracy carries with it the severest condemnation of Nationalist methods, for the action of the three prisoners can in no way be connected with any patriotic motives. By general consent the Khedive is regarded as a staunch believer in Egyptian ideals, and Lord Kitchener has worked hard during his short tenure of office to promote the interests of the fellaheen, to a degree never attempted before in the same space of time. Yet both these were marked down for assassination, apparently from the conviction that their removal would open the door to the granting of Nationalist demands. Boutros Pasha was sacrificed to the same fatuous theory; but the British Occupation remains, and the sentences now passed on the three conspirators bear witness to that strengthening of British control that must inevitably follow such manifestations of the incapacity of the people for self-government.
